It is instructive to look at the cost of World War II and of the Korean war in the terms in which the cost of national defense has been analyzed in the preceding discussion. In these terms we ask the question, What relative shifts out of other sectors made possible an enormous expansion of defense spending in World War II and a significant, if lesser, rise in the Korean war? After answering this question, we can better judge the impact of current and proposed levels of defense spending. In making these judgments, however, we will also have to note carefully the difference between the new situation and the earlier ones.

The cost of World War II

In table 1, the national income accounts are classified in such a way as to bring out what shifts took place in nondefense sectors to make possible a huge increase in defense spending during World War II. (Note: Items do not add to totals due to rounding, and due to exclusion of net foreign investment, a relatively minor item.[25])

TABLE 1.—*World War II*

Year	Gross national product	Consumer expenditures	Private investment	Nondefense Government	Defense
Dollars (billions):					
1940	100.6	71.9	13.2	11.9	2.2
1944	211.4	109.8	7.1	9.1	88.6
Percent of total GNP:					
1940	100	71	13	12	2
1944	100	52	3	5	42

Source: Council of Economic Advisers.

This table shows that in 1940 we devoted only 2 percent of our gross national product to national defense. In 4 years, this proportion was raised by 42 percent. The table shows that, in order to do this, all other major sectors were scaled down. Private consumption expenditures fell from 71 percent of gross national product to 52 percent. The biggest impact proportionately was felt in private investment which was cut from 13 percent to 3 percent. Government spending for purposes other than defense was also cut way back, from 11 percent to 5 percent.

It should be noted, of course, that a very large part of the defense effort, in absolute terms, came from resources which were unused in 1940. Much of the defense manpower, for example, came by reemploying unemployed workers, expanding the labor force, and increasing the workweek substantially.

The cost of the Korean war

The shifts which took place for the limited mobilization of the Korean war were less pronounced than for the all-out World War II effort.

TABLE 2.—*Korean War*

Year	Gross national product	Consumer expenditures	Private investment	Nondefense, Government	Defense
Dollars (billions):					
1953	284.6	195.0	50.0	24.9	14.3
1953	365.4	232.6	50.3	33.9	58.0
Percent of total gross national product:					
1953	100	69	18	9	5
1953	100	63	14	9	16

Source: Council of Economic Advisers.

Here again we observe shifts away from all other sectors—vagaries of the statistics hide a minor shift out of the nondefense Government sector—to make possible a relative increase in the defense sector from 5 percent of gross national product to 16 percent. Again, it is private investment which falls most, relatively.

Current sector shares

For purposes of comparison and conjecture as to the appropriateness of our current allocation of resources it might be added that the 1959 gross national product was divided as follows:

	Percent
Gross national product	100
Consumption expenditures	65
Private investment	15
Nondefense Government	10
Defense	10

Similarities and differences: World War II, Korea, the present

The all-out defense effort of World War II and the more limited mobilization of 1950–53 show that this country has an enormous capacity for arming itself, if it decides to do so. We are now devoting roughly 10 percent of our gross national product to national security purposes. In World War II, we committed 42 percent and in Korea, 16 percent of our gross national product to these purposes. Clearly this affords us a substantial margin of extra effort should we decide that it is needed.[24]

While the World War II record is some indication of what we can do in a full-scale effort, it is crucial to avoid the fallacy of supposing that it even suggests a measure of what kind of effort can be sustained on a plateau of preparedness for a protracted national security posture. Similarly, the Korean war is no guide to the present problem.

It probably is superfluous to point out the essential difference between a defense effort designed for a temporary war and the kind of long-range challenge we face today. The principal difference is in the timespan involved, what CED has termed the "perspective" of our present position, which is "not merely the crisis of the moment, but the continuing situation of constant danger with which we apparently must live for many years."[25]

The wartime mobilization was impressive, but it would clearly not be an appropriate course to pursue today. During World War II (and to a lesser extent, this point applies to the Korean war as well), our goal was immediate production, and we achieved it. But the spectacular increase in output was not on a sustainable basis. The reasons for the spectacular rise in production included:

1. The wartime expansion started from an extremely low depression base, a fact which exaggerates the magnitude of the upswing;
2. Millions of persons were called into the labor force who do not normally work and most of whom (but, significantly, not all) retired from working after the war;
3. The workweek was fairly generally 6 days instead of 5;
4. Patriotic appeals made some extraordinary measures possible which could not have been done in anything less than a shooting war;
5. To an amazing extent, our effort was channelled into the huge current production effort, with little attention to capital formation—we were, as a Nation, "living off capital;"[26]
6. Production was expanded, but not productivity—output was raised almost entirely by an increase in man-hours, while output-per-man-hour was largely ignored.

An important point to observe with respect to the World War II step-up in defense spending is the drastic cut in private investment. In dollar terms, private investment fell by $6.1 billion—more if changes in the value of the dollar (due to inflation) were considered. In the relative share of the economy, the drop was most spectacular—from 13 percent of GNP in 1940 to a mere 3.3 percent in 1944. In other words, when all-out defense spending was necessary, the sector which had to go was private investment.

The significance of this observation is that private investment is the essential element in economic growth. A rapid growth rate comes about fundamentally not because the labor force works harder or longer hours, nor because Government programs are expanded, but because the labor force expands and, most important, productivity is raised, primarily as a result of capital formation—investment in new machines and methods, modernized plants, replacement of obsolete facilities and techniques with more efficient ones. While many public services contribute to the growth process—certainly, education has an important role[27] the really big factor is investment.

Without a high level of capital formation, economic growth cannot be sustained. A society that diverts resources from investment either to current consumption or to military defense—however, enjoyable the former or essential the latter—pays a penalty in terms of relatively slower expansion of productive capability over a period of years.

Thus, many of the reasons for a successful war record, while entirely appropriate in that context, suggest that a short-range all-out war effort and long-range economic growth may be competing, not complementary goals.

Preoccupation with long-range growth considerations would have limited somewhat the success of the war effort. The corollary of this point, however, in the present situation, is that excessive preoccupation with immediate defense needs could limit our long-range growth potential, and thus hamper our long-range national security capability.

The lessons of World War II and Korea are helpful largely as indications of what we could do if the present international situation radically changed (for the "worse"). Those experiences, however, are

Footnotes at end of speech.

poor indications of what to do if, as most observers would suppose, our current posture must be maintained for a long drawn-out response to the challenges of our international adversaries.

5. ECONOMICS OF NATIONAL SECURITY ON A "PLATEAU OF PREPAREDNESS"

As we indicated at the start, economic policy on a "plateau of preparedness," plays a more crucial role than it does in perhaps any other international setting. When national security needs make large and continuing demands on the system, economic growth and efficiency are at a premium. When the Soviet challenge takes, as one of its many channels, the form of economic and trade competition, our response must be swift, strong, and sustainable. As George A. Lincoln put it, "Peace must be waged by economic power." [2]

Anticipating that the demands of national security will remain high for the indefinite future, we need to consider how these demands affect the economic system and what overall policies will enable us to satisfy these demands best. We need to place a very high value on economic efficiency and on economic growth. We also need to insure a stable, expanding system and a free one.

National security and economic growth

Economic growth, valuable on many counts, makes a strong national defense easier to finance. The growth of resources and know-how that accompanies economic growth permits a more efficient defense effort. Because of the long-range nature of our security needs, growth must concern us.

For these reasons, it is imperative to retain and strengthen the dynamic, growth-giving elements in the system. It is also important to make some meaningful progress toward removing roadblocks to expansion.

The importance of economic growth suggests that short-range emphasis on defense spending should not be permitted to detract unduly from capital formation and private investment. It also suggests that research and development in purely military technology must not be permitted to detract unduly from research which is more directly related to advancing productivity, from basic research, or from science education. It is axiomatic in economic development that future growth depends on partially foregoing current consumption. In an analogous fashion, it might be argued that future security depends in part on balancing current defense efforts with long-range strength.

An added consideration affecting growth is the question of how national security expenditures are financed. The tax system is important from two standpoints. First, the structure of taxes must be examined in light of whether it facilitates or needlessly obstructs growth; most economists argue that effective tax reform could significantly improve the impact of the tax structure on growth. Second, the overall level of taxation must be considered in terms of the effects on incentives. The impact of the tax level on incentives has never been agreed on. There probably is some level at which the disincentive effect would become pronounced. We cannot know where that breakingpoint is, other than that we do not appear to have struck it yet.

Furthermore, we may suspect that it changes over time: in World War II it was surely higher than it is now. It is precisely the indeterminacy of the incentives effect which makes it doubly important to bear in mind.

National security and economic efficiency

Aside from economic growth over time, the demands of security also suggest that we should be concerned about how much we are getting out of the system at any point in time.

There is ample reason to examine closely the effects of a high rate of defense spending on the efficient performance of the economic system. Defense spending is not subject to the market test. One of the chief functions of competition is the pressure it puts on competitors to keep costs down and find more efficient methods of production. The market ruthlessly punishes or even eliminates the inefficient producer.

In the defense field, as in most public programs, the discipline of competition is lacking. The resulting laxity regarding costs is one of the major disadvantages of public management. The problem is thought to be especially acute in the defense budget.

Concern with efficiency suggests a careful eye on results being achieved from dollars spent on defense. It also suggests, of course, attention to a host of built-in or pushed-in inefficiencies in the private as well as public sector—lack of competition in some product markets, government subsidies and special advantages for particular producers, union activities from featherbedding and encouragement of slowdown all the way through to crippling industrywide strikes capable of closing vital production for a period of months, and other obstacles to effective functioning of the system.

Effects of defense spending on research and development

It is a widely held view that defense support of scientific research and development is a beneficial side effect of a high level of national security expenditures.

Certainly the volume of research and development generated during World War II must have stimulated the pace of scientific advance. One obvious case is the development of atomic energy, but there would be many less dramatic instances. The aggregate figures suggest that the war must have very favorably affected scientific developments. It is estimated that total spending on research and development, as late as 1940, amounted to less than $500 million. As a result of the great surge of Government-supported research during the war, research and development spending rose to an approximate $2 billion level in the early post-war years. It is safe to conclude that the wartime military effort made a major contribution to the pace of scientific progress.

Evaluating the impact of post-war defense spending for research and development is more difficult. Undoubtedly, defense-supported research continues to contribute to scientific advances. But that is not the question. The question is, if the military were not supporting this research, what would happen? Would the net scientific progress be greater, the same, or less than it is at present? Merely listing scientific discoveries which originated in a laboratory doing military contract work does not enable us to compare what would have happened under different circumstances.

The research performed by and supported by the Defense Department is in part competitive with other scientific efforts which might have greater overall scientific significance. The gobbling-up of scientific talent and resources for strictly military purposes (even granting some nonmilitary side products) may in some measure prevent the use of those talents and resources for more productive uses. This is not to contest the priority of defense needs; it is simply to caution against assuming that a high level of military-supported research and development may not necessarily accelerate technological advance as a whole, and may actually retard it.

One way to focus the problem is by an illustration. Consider three alternative hypothetical levels of defense support of research and development from 1946 to the present: (a) For the first, assume that the military supported no research at all from 1946 on, leaving all of the country's scientific resources to find their way into other uses; (b) for the second, assume that the proportion of scientific resources used by the military remained at the peak war-time level from 1946 on; and (c) for the last, take what actually occurred from 1946 on, which would lie somewhere in between (a) and (b), and a fair distance from either extreme. Now ask the question: Would the Salk antipolio vaccine have been developed at the same time under each of these three assumptions? Only conjecture is possible, of course. Furtheremore, to consider the question fully, we would need an agreed-on measure of scientific progress.

Another consideration is that the bulk of defense-supported research is on the development end of research, rather than basic research. Many informed observers have contended that the ratio of basic to applied research should be raised. If proportionately more scientific resources were channelled into basic research, the pace of progress over the long run might be quickened. In this respect, too, the military's research support may have a retarding rather than accelerating effect on scientific advance.

On the other hand, one other effect of the research activity stimulated by the defense program should be noted. While military research competes for the available supply of scientific manpower, it also adds to the total supply. The high demand for scientists and engineers on the part of defense-related research and development activity unquestionably exerted a major influence in expanding the total number of scientists and engineers, especially since 1950.

National security and inflation

A high level of national security expenditures, sustained over a period of years, imposes on policymakers an added reason for vigilance concerning inflationary pressures. If care is taken with the financing of large defense spending, inflationary pressures can be dampened, though they will still very likely be a threat. Arthur F. Burns has noted that, "huge Government spending, even when it is fully met from tax revenues, is likely to release inflationary forces in the economy." [3] Wise fiscal policies, featuring restraint in nondefense spending, together with firm and flexible monetary policy and debt management offer much promise for holding the line against serious inflation. The last few years have provided encouraging evidence. It would appear, however, that should sizable increases in national security be contemplated, one of the costs to consider would be the inflationary pressures which any increase in their present high level would imply.

National security and freedom

Ultimately, perhaps the most important concept which ought to underlie our national thinking about security in a protracted conflict is the relationship of survival and freedom. As we mentioned at the outset, it would be tragically self-defeating to forget what it is that makes national defense worth billions of dollars—or, enlarging the frame of reference, what makes mutual security worth while for all of Western civilization, as well as the emergent nationalities seeking a goal which has to do with liberty.

This question needs to be thought out on two levels. The first must carefully evaluate specific controls and restrictions with the question as to whether the contribution each proposal makes to national security is "worth it" in terms of the freedoms given up. The second must look beyond the specific series of proposals currently under consideration; the second and broader level must constantly reappraise

Footnotes at end of speech.

how effectively we are balancing the twin requirements of security and liberty.

With defense spending at a high level, some measure of specific economic controls and restrictions appear inevitable. They are part of the price of security. It will be noted that when defense spending consumes 10 percent of the Nation's gross national product, the proportion must be markedly higher in certain product lines. And when the Federal Government sits over a large share of particular product markets, controls—for example, allocations systems for private users of the product—become very tempting if not actually necessary. The continuing debate over patent policy in defense-supported research and development is one indication of how growth-inhibiting controls tend to be associated with high defense activity.

The problem of economic controls is especially relevant in thinking about a long-range security posture. In World War II and Korea, we took on an extraordinary burden of defense—but, note the controls we incurred also. In World War II we had—

Allocation of scarce materials.

Curtailment of plant expansion without approval.

Prohibition against use of certain scarce materials.

Limitation on use of certain materials to military contracts.

Priority orders for producers.

Centralized scheduling of war-related production.

Ceilings on prices, wages, and rents.

Rationing of many consumer goods.

Comprehensive direction of production, refining, treating, storage, shipment, and distribution of petroleum.

Complete authority over manufacture of rubber.

Priorities over food imports.

Production quotas for farmers.

Control of shipbuilding.

Operation and maintenance and allocation of all shipping.

Regulation of civilian hiring.

Employment ceilings for employers.

The draft.

Jurisdiction over labor disputes.

Consumer and real estate credit controls.

Authority to require temporary rearrangement of electrical facilities.

These comprehensive controls applied only during World War II. However, it is instructive to note that during the Korean War, when our total defense effort was not a great deal larger than it is today, many of these same controls were invoked. It is also instructive to note how certain steps undertaken in wartime become well rooted and remain after the war. Experience with consumer credit control in World War II and the Korean war has left many people interested in reinvoking it today. A classic example was the Government control and operation of the synthetic rubber industry. This was launched in World War II, but it was 1953 before a program was developed to get the Federal Government out, and several years later before the deed was accomplished.

Constant vigilance with regard to specific controls appears to be necessary as long as a high level of national security is required. Beyond that, there needs to be a broader evaluation of the relationship of economic freedom and survival.

Public spending as a whole, including national defense, can be differentiated from private spending in one important and relevant respect.

In the case of public spending, decisions to spend are taken collectively and then enforced on a compulsory basis—in the nature of the case, not because of any alleged evils of bureaucracy or anything of that kind. The mechanism for assuring democratic control is the political process.

In the case of private spending, decisions to spend are made individually and remain voluntary and always subject to change at the individual's discretion. The mechanism for assuring democratic control is the market.

Neither the political process nor the market work smoothly at all times; but we tend to accept them in the spirit of Churchill's celebrated comment, until anything better turns up.

There is an essential difference between the public and private sectors in one key point.

In the public sector, when the political process has made its decision, everyone including a minority of as many as 49 percent must accept the decision. If, through the legislative process, we decide to have a $10 billion highway program, then everyone enjoys that highway program, whether or not 20 percent of the taxpayers would have gained greater satisfaction from an alternative use of that $10 billion, such as school construction.

In the private sector, when the market has made its decision, everyone exercises his fairly free choice as to what kind of product he buys, where, and when. If 51 percent of the consumers want to buy a General Motors car, this in no way requires the other 49 percent to do so. They may splinter their dollars among many other brands, while some buy no car at all and others buy two or three.

These examples may seem a trifle pat. But they do help to bring out a point which is too often overlooked. The political process as we practice (or at least preach) it and the market as it is (or should be) prevalent in most of the private sector—both are essentially democratic. But clearly the market provides a far better defense of individual rights, safeguard against the tyranny of the majority, opportunity for the nonconformist. Of course, many expenditures most logically fall in the public sector for practical reasons. Our concern for freedom, however, ought to give us a constant bias in favor of the private sector as against the public sector, whenever hard choices must be made.

This kind of framework is helpful in relating the needs of national security to the underlying objective of maintaining, enhancing, and enriching individual freedom.

[5] Except under certain assumptions which it is not reasonable to anticipate would be borne out fully in the present situation.

[6] As stated, of course, this catch phrase would be endorsed by nearly everyone. Clearly, however, it misstates the alternatives.

[7] An interesting analysis recently by Boris P. Pesek compared the relative impact of inflation and higher taxes on income distribution. Pesek found that, as a means of financing increased Government spending, inflation was the most regressive of the alternatives. The most progressive method, of course, was the income tax; next, a sales tax with food exempt; next, a straight sales tax; and finally inflation. This conclusion would presumably lessen the political attractiveness of financing higher Government outlays for defense (or other) programs via deficits and inflation. (See Pesek, "A Comparison of the Distributional Effects of Inflation and Taxation," American Economic Review, March 1960.)

[8] "Washington Post and Times Herald," Apr. 3, 1960.

[9] One Senator, as recently as Sept. 5, 1959, was perfectly candid during debate on the Senate floor. He stated: "The reason why it will not be possible to * * * (cut) the 27½ percent oil depletion allowance is that there are not enough votes in the Senate to do it. It is just that simple." (CONGRESSIONAL RECORD, Sept. 5, 1959, p. 16738, temporary RECORD.)

[10] The House Ways and Means Committee, in which all tax legislation must originate, has underway a full-scale study of tax reform. It is widely hoped that this study will ultimately produce the major overhaul of the code which all observers agree, on principle at least, is needed.

[16] Ibid.

[17] Eckstein includes a "very high" projection of $115 billion.

[18] Eckstein projects receipts, with present tax rates, to a level of $104.6 billion in fiscal year 1968.

[19] "Trends in Public Expenditures in the Next Decade." April 1959.

[20] Under exceptional circumstances, a reduction in disposable personal income which resulted from a tax increase could be associated with an absolute increase in consumption expenditures. This would occur if the tax increase was coincident with a bad inflation scare, or with public anticipation of controls and rationing. An international crisis precipitating a boost in defense spending and therefore a tax increase could conceivably be tied to either or both of those two effects. They, however, appear to be remote from the present discussion.

[21] The adverse effect on growth referred to here is entirely apart from possible effects of a tax increase on incentives, a matter discussed later. The effect discussed here is almost a technical function of a tax increase, as opposed to the more intangible effect on incentives.

[22] February 1958.

[23] This breakdown of gross national product is rather crude; for example, in terms of our analysis, it would be more appropriate for housing to appear as a consumption rather than investment expenditure. However, the general points stand.

[24] It might be observed that 42 percent of our current gross national product might exceed the total Soviet gross national product, were safe, comparable measurements available.

[25] "The Problem of National Security," July 1958, p. 2.

[26] The value of industrial construction actually declined after 1941, reaching a low in 1943 and not regaining the 1941 level until 1946.

[27] During World War II, of course, education was also set back. The gap in classroom construction has still not been made up.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. WILSON. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL

RECORD study papers Nos. 15 and 13: "An Extension of National Security Council Machinery," by Dr. William Y. Elliott, professor of government, Harvard University; and "The Economic Challenge of the Soviet Union," by Dr. Don Paarlberg, Special Assistant to the President for Economic Affairs:

AN EXTENSION OF NATIONAL SECURITY COUNCIL MACHINERY: THE CREATION OF A HIGH-LEVEL CONTINUING ADVISORY BOARD TO REVIEW NATIONAL SECURITY PROGRAMS FOR POLICY PRIORITY TREATMENT

(Summary of paper by William Y. Elliott, professor of government, Harvard University)

The progress that has been made in the National Security Council machinery is generally admitted, even by its critics. Yet, many of the participants in NSC procedures have recognized that in the absence of a high-level reviewing staff to relate programs of an interagency import to policies, and to establish priorities for support and follow-through, the Council machinery ground out policies that were too much the product of people who acted as the interested spokesmen for agencies rather than as a unifying policy staff for the President. The problem of getting a high-level staff review always presents, however, the danger of second guessing the responsible high officials whom the President alone controls. To substitute the judgment of any staff for review of basic national defense and foreign policies or programs runs the risk of delaying or of undoing costly programs before they can bear fruit; or alternatively, of encouraging inaction until the review group has given its sanction. It is arguable that the only feasible preclearance is by the Bureau of the Budget plus congressional authorization; and that these hurdles are hard enough to operate under with efficiency and speed, without adding another. Yet the fact remains that the Bureau of the Budget and the Appropriations Committees almost never ask and never answer the basic positive question: Are the programs in the national security area which affect and depend on several agencies getting the right priorities of attention to see that they effectively carry out the President's national security objectives and policies?

The very substantial achievements for improving the National Security Council mechanism and procedures have introduced occasional reviews by groups of outsiders. This method of getting independent high level advice to help the President, as suggested in Eisenhower's first campaign, could be improved by getting some continuity for a single group, and by the selection of people who were more nearly insiders in terms of past experience. This would mean creating a regular program review board to advise, rather than a whole series of ad hoc groups, like the Draper Committee. Many of the same people appeared from committee to committee; so that the experience was not entirely wasted. But there was no continuity through a permanent staff such as there would be in any kind of adaptation of the wartime model of a continuing requirements committee for program review such as we developed in the War Production Board. Priorities set by the Board were translated into allocations by the program vice chairman after the hearings by this requirements committee.

Furthermore, the very necessary effort to see that the sum total of programs would not be beyond the capacity of the country to bear would seem, particularly in this era of advanced costs because of the complexity of technical improvements, to require even closer attention to a discriminating treatment of weapons systems—in terms of time phasing as well as of enemy capabilities and some concern for policy priorities as well as investment efficiency.

Professional political scientists generally underestimated, until after World War II, the degree to which any basic national security policy must transcend party politics. If an agonizing reappraisal is to be made by a change of parties, or if we must, at every change of party control, "pull up by the roots" every basic policy in order to reexamine it, we do have an impossible situation from the point of view of the continuity of policies and of the type of planning that has to be made when we are expending something around two-thirds or three-fifths of the national budget on the long-term security sectors of policy. The machine cannot be reversed without chaos, even though it must be flexible enough to change direction, or take a new tack. Enormous waste is possible through either over insurance or the bad habit of building on existing, though obsolescing programs that should be phased out in favor of new ones.

The contribution of the agencies to the formation of national security policy must transcend jurisdictional and departmental attitudes, and their spokesmen, both in the Council, in the Planning Board, and in the Operations Coordinating Board, which follows up programs, must be kept under continual pressure, both by the President and by their own sense of national responsibility, to achieve this attitude.

However, it is clear that no Department can, of itself, be expected to exercise the necessary self-criticism to make a fair assessment of its programs in relation (a) to other programs, or (b) to be really aware of or frank enough about the shortcomings in its own achievement of programs.

What seems to be lacking is something in the nature of a sort of continuing and expansible "Requirements Committee" which could be called an Advisory Review Board for the Special Assistant (NSA) that could do a comparative evaluation job before the budget ceilings were set. It would have the requisite powers to obtain the necessary supporting data to criticize both the voluminous programs and unscreened financial appendices submitted by the agencies; and the status reports to the Operations Coordination Board that are ordinarily put in on a unilateral basis, and get no real NSC scrutiny at an effective level helpful to Presidential decision.

If it proved to be possible to enlist the part-time services, with periods of concentrated sustained effort, for special evaluations and studies by a half-dozen leading figures, broadly experienced in high governmental responsibilities, preferably through training at the top policy posts in several agencies, these board members would really be insiders to the problems of the five or six major areas concerned. These areas are the broad policy priorities as applied to defense, diplomacy, and foreign programs, fiscal and economic policy, mobilization and procurement programs, psychological and cultural programs associated with the cold war, the basic research needed and technological phasing of programs to the areas of pure and applied science in their application to growth as well as to defense policies. The Review Board should be headed by someone familiar with the entire organizational programs of the Federal structure and with the procedures for achieving staff integration. The Special Security Affairs Assistant to the President, with the help of advisory recommendations for emphasis by such a Board, might present something more simple, selective, and useful than unilateral or ex parte evaluations of the many separate reports to the President and the Council.

It should also have the additional sanction of having its opinions probably (and in practice ordinarily) affect the allocation of budgetary support and other resources to the programs of the interested agencies. It should, therefore, have the power of recommending, through symbolic priority systems or other methods of comparative evaluation involving time-phasing and orders of magnitude, an overall judgment on the importance of major programs. This evaluation should necessarily stress the essential elements of programs that must be given top priorities and the downgrading or phasing out of other aspects of programs which will keep them in balance with the total framework of national security policy.

This evaluating function for allocations by priorities explains why such a group is spoken of as a sort of requirements committee on the analogy with a well tried and highly developed wartime method of reviewing programs to assure both efficiency in the investment of resources, and conformity to policies. If programs cannot be worked out to support policies, policies must be revised. Its members must be sufficiently sympathetic and acquainted with the areas that they are treating to realize the practical problems confronting the Cabinet Secretaries and agency heads. Otherwise they will be treated simply as ignorant meddlers. They must have been high-level operators. They must understand the difficult management component of the struggle to give sound administration to these areas, and yet be able to take the kind of broad overall view which will assist the President in his own superhuman effort to hold all this great apparatus to a single stream of unifying purpose and policy.

It is in this light that a review of the framework and the evaluation of national security policies in relation to budgetary and other resources would afford the necessary and helpful guidance to the Budget Bureau for a task for which it is presently unequipped, namely, for the presentation of a selective frame for the implementation of policies through fiscal support. In the process after policy guidance has been established, the Budget Bureau can furnish a large part of the continuing staff mechanism of scrutiny and support for the Program Review Board (proposed) as can the OCB and the other institutional staff arms of the President, including the National Security Council staff itself.

The great advantage of this approach to extending the range and effectiveness of the National Security Council's staff support is that it could bring in people who are acceptable to both parties in Congress in the light of service to previous administrations and their independent attitude as public servants.

Free from the pressure of departmental duties and controls, these advisers could furnish that long-range view of national security policy that has to take into account, above all, balance and importance for the essentials. They should be able to assist the President first of all in his own formulation, and then in his control and followup of policies, by really comprehensive, critical and simple reporting of the main issues with which the President must be concerned. In this way they might restore to the National Security Council the overall integration and evaluation which has, so far, been sought, not always successfully, by multiplying new agencies or adjunct committees for specific problems.

No mechanism, of course, can do more than assist the President to make decisions in time and in anticipation for the prevention of crises. But it can help to escape the dead hand of merely multiplying administrative mechanisms at levels which tend to delay decisions until crisis action is the only remedy, or to provide a framework in which remedial rather than preventive action becomes, through sheer volume of crises, the

principal preoccupation of the Secretary of State.

Immediately after the presidential elections, the incumbent President should invite his elected successor to all Security Council meetings. With no change in party control the transition is natural and simple because of the Vice President's experience with the Council. But the dangerous interregnum of breaking in a party out of power would require special efforts. It would appear also possible to expand the consultants staff of the NSC to bring in designees of the incoming President for the sort of requirements committee appraisal of programs previously projected to meet NSC policies. An indoctrination course by bringing in such assistant-secretaries as had not previously served, to learn the ropes as part of a training in office prior to January 20, would also help.

This country could ill afford an interregnum of even a few months after the period of cramp and added strain to which it has necessarily been subjected by the fact that this is the year of presidential elections.

The new Vice President would be a useful person to preside over the proposed Program Review Board. It would be the best way quickly to bring him up to date and to broaden his education for the responsibilities which Presidents must increasingly devolve on the only other official of super-Cabinet rank who naturally presides in the absence of the President both over Cabinet and NSC meetings. The job is one for decisions by one man; but it is of such a complex magnitude today that a wise President will have to find someone, or perhaps several men, to share the framing of the issues on which he alone must decide. If his Vice President has been well selected, both because of his sharing the only national mandate, and because his future, too, depends on the success of the administration, he ought to be as useful as anyone available for chairing this very important advisory Program Review Board, loyally taking a great load off the President. But his effectiveness, like that of the Board, will depend on his own caliber experience and ability to learn.

The Economic Challenge of the Soviet Union

(By Don Paarlberg [1])

Among the many economic problems which we have confronted in past years a few have been of great importance and high visibility. They dominated a considerable span of years before we finally overcame them, wore them out, or learned to live with them. These dominant problems differed in their nature, their intensity and their duration. In a manner convenient to the historian, they have roughly associated themselves with 10-year chunks of history.

During the thirties, the dominant economic problem was depression and the fear of secular stagnation.

During the forties, preparation for war, the waging of it, and its aftermath were the overriding features of economic life.

The fifties were characterized by efforts to lift the level of material well-being, both at home and abroad.

What will be the dominant economic problem of the sixties? A number of subjects have been nominated for this role:

Efforts to achieve further advances in living levels and a broader sharing of the fruits of technological change.

The curbing of concentrated economic power, and a better harmonizing of group objectives with the public interest.

Cushioning the sometimes harsh adjustments in economic life which flow from the onrush of technology.

An attack on inflation, with something approximating the diligence and resourcefulness that was employed in combatting depression three decades earlier.

Efforts to aid the underdeveloped countries, in a manner similar to the recently accomplished rebuilding of wartorn Europe.

There are other economic problems which might be appended to this list.[2] But there is one which in a broad sense includes within it all of the foregoing; that is our response to the economic challenge of the Soviet Union.

Everyone has heard of the challenge issued to the United States by Chairman Khrushchev—his frequently stated goal of first equaling and then exceeding the United States in the output of goods and services. "We will bury you," he has said, and there can be little doubt that he means it.

U.S. and Soviet Economic Comparisons

Much has been said and written comparing Soviet economy with our own.[3]

Any economic comparison is made difficult by the inherent awkwardness of measurement, by the uncertainties which surround Soviet statistics, and by the lack of comparability between the two economies. To chart accurately the size of our own product is itself a difficult statistical operation. How does one add together such unlike things as crude oil and college training? To compute the output of the Soviet economy from the fragmentary and unquestionable figures available is far more difficult. To compare these two approximate quantities is to run the risk of compounding the errors in both.

Once economic output has been estimated, the calculation of trends in the growth rates inevitably follows. Once trends have been computed, the urge to project them into the future is irresistible.

The projection of trends is one of the most fascinating and hazardous occupations known to man. The first year of my life I gained 20 pounds. If I had gained that much each year, I would now weigh half a ton.

Despite all the difficulties of making comparisons of the two economies, comparisons of of some sort must be made. Lengthy hearings have been held during this past year by the Joint Economic Committee of the Congress, and the most expert people in the country have given testimony.[4]

Well-qualified people differ in their estimates of Soviet capabilities. But a composite of the testimony of able persons perhaps would reach the following conclusions.

The gross national product of the United States, the sum total of all goods and services produced, is presently at least twice that of the Soviet Union. But our rate of economic growth, in percentage terms, is much less than theirs. During the last decade or so the best computations show that our economy has been advancing at rate somewhat in excess of 3 percent annually. The consensus of informed estimates is that the Soviet Union has been growing at something like twice that percentage. In absolute amounts, say those who have studied this problem closely, the yearly increment of growth in this country is roughly comparable in volume with that of the Soviet Union, though greatly different in composition. Our own economic output is weighted heavily by consumer goods and services; the Soviet economy is heavily weighted by capital investment and military outlay.

Last year the rate of economic growth in this country, in real terms, was 7 percent, this being larger than usual by virtue of the fact that we were emerging from a recession. In 1960 the American economy is generally expected to advance by an additional like amount, reflecting full recovery. While we are very happy to have them, these favorable figures are related to a particular phase of the business cycle and are not to be interpreted as the long-run prospect. The problem of dealing with the business cycle is related to but different from the problem of promoting long-term sustainable economic growth, with which we are concerned here.

The Importance of Economic Growth

What is the meaning of growth rates in this country and in the Soviet Union? Are differential rates of growth a matter of real significance? Or is this just some sort of numbers game?

The rate of economic growth has great meaning. For one thing, it is from increments in economic growth that a country achieves improvement in the well-being of its citizens. Our people aspire to further advances in the quantity and quality of goods and services available to them; if the economy grows these will be forthcoming. Advances in living levels have to do with better education, improved health, and better housing for larger numbers of our people. Thus, a high, sustainable rate of economic growth is for us a desirable thing, good in itself, apart from any consideration of what goes on in the Soviet Union.

The Soviet Union also wishes to lift the living level of its people, and has recently emphasized this aspect of economic life. Since the average person in the Soviet Union has available only about one-fourth of the goods and services enjoyed by the average American citizen, the drive for improvement is probably greater there than here.

The rate of economic growth is also important in that it is a measure, though not by any means the sole measure, of the growth of military potential. The greater the greater the total output of goods and services, the greater can be the military effort. Our military effort amounts to about 10 percent of a large gross national product; the military effort of the Soviet Union is a much larger percentage of a much smaller product. Our present economy is well capable of supporting such military effort as our needs prescribe. A marked and sustained advance in the Soviet economy would lift the level of that country's military capability and hence is of concern to us.

Finally, there is an element of prestige and leadership involved in having a high economic output, and in having a high rate of economic growth.

One-third of the world presently enjoys free government. One-third is regimented. The remaining third is to some extent uncommitted on this issue. This third, including parts of Asia, Africa, and Latin America, presently underdeveloped, aspires to lift its level of living. Many underdeveloped countries, anxious to advance themselves, may be more inclined to embrace a regimented system if one of its attributes is a rapid rate of economic growth.

To an underdeveloped country, a high level of economic output, such as we have in the United States, is not as impressive as one might think; such a high level is often viewed as simply unattainable. A high rate of economic growth, however, beginning from where they are, is more readily translatable into meaningful terms.

[1] Special Assistant to the President (Economic Affairs). This paper was originally prepared as an address before the University of Chicago Graduate School of Business.

[2] An interesting panoramic view of the range of candidates for the role of dominant economic problem in the years ahead was put together by the Committee for Economic Development. See "Problems of U.S. Economic Development" (two volumes).

[3] This paper is concernd exclusively with economic comparisons, not military capabilities, though the two are related to a degree.

[4] Background studies and hearings of the Joint Economic Committee are available. No report was issued.

For these obvious reasons, we wish to have a high rate of sound, sustainable economic growth. There may be much that is odd and ludicrous in computations and discussions of economic growth, but our interest in a high growth rate is wholly clear.

If the Soviet Union were to use its increments of economic growth for advances in the well-being of its people, we would, of course, be happy. But if it uses them to threaten us militarily, or to subvert the underdeveloped and uncommitted nations, then the matter is a serious one indeed. The significance of economic advances in the Soviet Union depends upon Soviet objectives. The counsel of history is that we consider the Soviet Government as not being exclusively concerned with the living level of its citizens.

MEETING THE SOVIET CHALLENGE

For a long time there was little attention paid to the economic challenge laid down by the Soviet Union.

It is not surprising that this would have been the American reaction. The enterprise system of the United States has made us the most productive country on the face of the globe, and has given us the highest level of living ever enjoyed by any people. It is a deep-rooted American belief that the enterprise system is able to outproduce a regimented economy.

It is true that we have had periods of time, as during World War II, when we temporarily and partially regimented the American economy, and thereby much changed and increased its output of basic items. But our whole history has been such as to cause us to question the idea that a regimented economy could seriously challenge the economic supremacy of this country.

However, the economic challenge of the Soviet Union has reached such proportions that it must be taken into account. This appears from such statistical comparisons as we have. Even if we totally discount the statistical comparison, the economic advance of the Soviet Union is evident in judgments made by visitors to that land, who compare present conditions with the remembered circumstances of former years.

AVOIDING THE WRONG APPROACH

Those who characterize the economic challenge of the Soviet Union as a serious threat may be classified in two broad groups.

First, there are those whose primary interest is in other matters, but who use the rise of the Soviet economy as a new rationale for the promotion of programs they have long held dear. Chief among these are the proponents of pet spending schemes. Their programs have, during the past 30 years, been successively rationalized on the basis of overcoming the depression, winning the war, and expanding social services. Now they are rationalized on the basis of promoting economic growth so as to match the Soviet standard. These pet schemes are hooked onto whatever is the prevailing public concern. They should be discussed on the basis of their merits or demerits, not on the basis of some alleged association with whatever is currently regarded as a problem. These over-rationalized proposals are therefore not discussed here.[5]

Second, there are those who endeavor, from honest motivation, to deal constructively with this problem. These people and their proposals merit consideration.

Whereas formerly the tendency was to play down the economic challenge of the Soviet Union, some people now overplay it. They counsel us to accept the Soviet challenge on whatever terms it is laid down. If the Soviet Union generates a certain rate of economic growth, we are told that we should strive to equal or approach it. If they set up specific objectives, industry by industry, we are told that we should adopt a similar approach. If they issue an economic challenge in any field, it is said that we should automatically accept it and try to outdo them. "Whatever you can do, I can do better."

This form of strategy would have the leaders of the Soviet Union selecting the area of competition, choosing the issues they wish to raise, and naming the field in which we are to contend. Inevitably they would choose such objectives and name such areas of competition as were advantageous to them, as had for them a natural competitive advantage.

To accept a challenge in this form would be like playing cards in a game in which your opponent always names trump.

If we allow the Soviet Union to name the area in which our two nations are to compete, we would in effect make their objectives our own. We would in time take on their image.

The reason for our rivalry is that we don't want to be like they are; if in order to overcome them we become like them, then our cause is lost as soon as the issue is joined.

The rapid rate of economic growth in the Soviet Union is a matter of concern, and it is a foolish man indeed who would shrug it off. But it would be an even more foolish man who would accept the Soviet objectives and emulate the Soviet technique of regimentation in an effort to beat them at their own game. Such an effort is not likely to win, and if it were, the fruits of victory would have been foregone bofore the battle began. Far more is at stake than merely to see which country can post the largest statistic, measuring the annual rate of growth.

There are various ways of trying to register the larger percentage increase in the rate of growth. We could lengthen the workweek, recruit millions of women and old people for the labor force, reassign half of our clerks and waitresses to other duties, squeeze down the level of consumption, dispense with certain of our frills, and forcibly extract savings from the people to spend on capital investment. This is what the Soviet Union does. But if we were to imitate them, we would lose our character as a free and independent people.

The rapid growth rate achieved by the Soviet system with its regimented system is accomplished by the suppression of individual rights, a technique made easier by the fact that their people have never known freedom to the degree we have. They went from autocracy under the czars to regimentation under the commissars.

Our people have a heritage of freedom. Individual rights in this country will not easily be relinquished. The point of the matter is that any attempt at central direction of this country's economy will encounter political, economic, and sociological obstacles unknown to the Soviet Union. We cannot succeed with their system.

This kind of argument is being made: By central direction of its economy, the United States vastly increased its output during World War II. Now, it is said, we are faced with a similar challenge. We should, it is maintained, prune away, by government action, some of the frivolities of our free economy, adopt a program of austerity, and by some form of central direction channel a greater share of our resources to capital investment.[6]

Let us examine this argument carefully; there is a persuasive sound to it.

The United States temporarily adopted central direction of its economy during the two great wars, firm in the belief that freedoms temporarily surrendered would be taken up again at the close of the war. The first war lasted 2½ years; the second one lasted 4½ years. The desire for freedom was kept alive during these relatively short periods; when the wars were over we again took up our freedom, only slightly impaired by its temporary and partial eclipse.

What is the probable duration of the economic rivalry between the United States and the Soviet Union? This may be a rivalry whose duration is to be measured in decades or generations rather than in years. No man can say how long it will be; no man would predict that it will be brief.

Could we put freedom aside for decades, and then reinstate it? If a whole generation were deprived of freedom or had its freedom substantially impaired, would freedom be sufficiently cherished so that we would return to it? Would we remember the rewards of freedom? Would the desire for freedom be strong enough to shatter a pattern of regimentation, laid down and congealed over a period of decades? Would looking to Central Government become so habituated that local government and indeed the capacity for local governing would whither and die? To put these questions to the test would place in jeopardy our most precious heritage. It would demonstrate that we hold in low esteem the capabilities and the merits of our free system.

We need to be reminded that economic freedom, extended to all the people, is a relatively new concept in the world's history. It has emerged only in recent centuries, only in parts of the world, and only at immense cost. It is not the kind of system which can be put in escrow. It must be practiced if it is to be kept alive. This system, which has rewarded us beyond our brightest dreams, deserves better than that we should voluntarily impair it through fear of a still-distant competitor.

While we should recognize and respect the economic capabilities of the Soviet Union, we should not underestimate our own capabilities and our own strength.[7]

Put into the terms of a baseball game, the situation is somewhat as follows: Early in the game, we are ahead four to two. In the next inning, each team adds a run. For us this additional run was a 25-percent addition to our score; for our opponents it was a 50-percent increase. Some clever fellow might calculate that if the visitors kept increasing their score by 50 percent every inning, while we increased ours by only 25 percent, then in time they would be ahead. No sensible manager would basically change his strategy on the basis of such a computation. Least of all would he adopt the strategy of the opposing team. He would follow the best strategy he could, and make as many runs as possible. He would not underestimate the strength or the threat of his opponent, but neither would he underestimate his own strength.

POLICIES FOR GENUINE ECONOMIC GROWTH

To promote the right kind of solid growth is a shared responsibility, a responsibility which rests upon private persons and local and State governments as well as the Federal Government.

The Federal Government cannot long force a high rate of economic growth upon us unless basically the people want it. And if we want it, which we should, there are many ways to bring it about besides making it the sole responsibility of the Federal Government. These include:

[5] For a full discussion of this controversy, see Max Ways, "A New Mark for Big Government," Fortune, April 1960.

[6] For an exposition of this argument, see Leon H. Keyserling, "Is Inflation the Problem?" New Republic, Feb. 9, 1959.

[7] Presently more than twice those of the Soviet Union.

The business community can enhance economic growth by adopting new techniques, by more competitive pricing and by a more open stance with respect to the entry of new firms.

Labor can promote economic growth by acepting the consequences of technological change and by accepting the responsibilities as well as the benefits of size and power.

Local governments can promote economic growth by providing adequate education and community services.

State governments can help equalize educational opportunities, provide better roads, and better social services.

The Federal Government can help provide a climate within which enterprise and economic growth can flourish. It can round out and supplement the efforts of State and local governments in the development of human and natural resources, being careful in the process not to preempt, substitute for, or discourage local and State efforts. It can pursue sound fiscal and monetary policies. It can develop realistic price and production-control policies in agriculture rather than perpetuate nonsensical and costly distortions. But the Federal Government cannot, singlehanded, take responsibility for producing a specified rate of economic growth.[5]

Our capabilities have made us the most productive and most powerful Nation in the world. They have given us the highest level of living ever achieved by any nation at any time in history. They have given us a measure of individual freedom unmatched anywhere on the globe. We should be heartened by this tremendous accomplishment.

Great though our performance is, we should not be satisfied with it. The key to improving the performance of the American economic system is to be found in the preservation of the initiative, vitality, energy, and resourcefulness of our people. We can improve our economic system through the development of our human and material resources, through better and broader education, more research, inducement for saving and investment, better use of the incentive system, less indulgence of special interests, and responsible fiscal and monetary policies. Enhanced economic performance comes from these solid sources, not from politically motivated spending in behalf of ever-greater centralization of governmental power and authority, and certainly—most certainly—not from the adoption of techniques alien to our system.

MORE THAN AN ECONOMIC CHALLENGE

This final and major point: We would be terribly wrong if we accepted the Soviet view that the contest between us is solely an economic one.

Theirs is a philosophy of dialectical materialism. They count materials goods to be of overwhelming importance. In fact, history is explained in terms of one discipline only, economics. Human rights are considered wholly subordinate, God is said not to exist, and human life itself is considered a luxury indulged by the state.

Our country, on the other hand, was founded on belief in the sovereignty of God and the dignity and rights of man. The marvelous economic productivity of our system is essentially a byproduct of these strong beliefs. If we should now forget the central theme of our country, and be persuaded to defend its byproduct rather than its substance, we could be terribly and tragically wrong. It is time to reexamine fundamentals.

What are the major attributes of the American system? What are the things to which the American people truly aspire? Despite our occasional preoccupation with other matters, respect for the individual, for his fulfillment, for his capabilities, his rights and aspirations, for his freedom and responsibility, for his efforts to achieve an understanding with his God, these are the distinguishing features of the American system.

In these matters we excell the Soviet Union by so wide a margin as to be completely unchallenged. Freedom is meaningful not only in the United States, but in any country in the world. We have so long enjoyed this great blessing that we have come to take it for granted. But in many countries of the world it is not taken for granted; it is greatly desired and much sought. Freedom is still the most revolutionary concept on the face of the earth.

Freedom, indeed, is our trump; we ought to recognize that we have a strong hand and bid so that we can name trump.

We should strive constantly to improve the performance of our economic system, but we should do this within the framework and not to the detriment of our free institutions. We should do it without depriving the individual of his rights or of his responsibility. This is not to be accomplished simply by appropriating more money, launching more bureaucratic schemes, or trying to match the Soviet Union in competitive areas of its choice. Nor will it be done by taking on the image of the evil we would like to overcome. It will be done by cultivating the creative energy of people, which our system is uniquely capable of doing.

In the last analysis, the rivalry between the Soviet system and our own is not merely economic, it is also ideological and spiritual. If we remember that, we can win.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. JUDD. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD study papers Nos. 18 and 14, "Disarmament: Problems and Prospects," by Congressman CRAIG HOSMER, member of the Joint Atomic Energy Committee, and Arthur Peterson, of the University of Wisconsin; and "The Impact of Inflation on America's Balance of International Payments," by Dr. Rita E. Hauser, author and lawyer:

DISARMAMENT: PROBLEMS AND PROSPECTS

(By CRAIG HOSMER, Congressman from California, and Arthur Peterson, University of Wisconsin)

The problem of regulation, control, and reduction of military power took its place at the forefront of U.S. foreign policy following World War II. American leaders clearly foresaw the consequences in the development of nuclear energy without international control and inspection. A distinguished group of American scientific, legal, and industrial leaders, in consultation with U.S. congressional committees on atomic energy, developed a series of comprehensive proposals for international development and control of nuclear energy for peaceful uses. These proposals contemplated the establishment of an International Atomic Development Authority whose functions would have included:

1. Control or ownership of all atomic energy activities potentially dangerous to world security.

2. Control, inspection, and licensing of all other atomic activities.

3. Fostering of the beneficial uses of atomic energy.

4. Research and development activities enabling the Authority to comprehend and detect any misuse of atomic energy.

5. Power to control nuclear raw materials and primary nuclear production plants.

"Immediate, swift, and sure punishment" was to be assured violators through the organization of an inspection and enforcement team of international civil servants.

Under this proposal the manufacture of atomic weapons would have ceased, all existing weapons would have been destroyed as weapons, and the useful nuclear material transferred to the international agency for peaceful purposes.

This offer, at a time when the United States alone possessed the atomic bomb, could have meant the removal of the nuclear threat at the very beginning of the nuclear age. Unfortunately, the offer was rejected by the Soviet Union.

The failure to get the Soviet Government to negotiate seriously on the overriding problem of atomic controls in the years immediately following World War II inhibited any real efforts in the area of conventional armaments as well. The Soviet Union maintained its conventional military forces at a high level: The United States, on the other hand, reduced its forces from a World War II peak of 12,124,000 to a total force level of 1,459,000 by May 1950.

Then in June 1950 the Communist aggression against the Republic of Korea was launched. Unilateral conventional arms reduction by the United States had been answered by the Communist world with the aggression against Korea. Korea thus became a grave reminder that would-be aggressors are often tempted by thoughts of what they assume will be sudden and easy conquests.

To many it appeared that the Soviet answers, in word and deed, to all serious disarmament efforts had rendered any further negotiations in this area futile. And yet the phenomenal growth of firepower capability and the ever-increasing efficiency of the means of delivering this firepower upon a target did give rise to the hope that even the Soviet leaders would be forced to give more serious thought to a reasonable system of arms control. Upon this hope was based our continuing efforts in the disarmament field.

In 1955 President Eisenhower, concerned with the increasingly difficult problems time and technology have raised for arms control, called for a thorough analysis of the problems, requirements, and methods involved in achieving an international arms limitation system fitted to the existing situation.

After long and intensive study the newly appointed White House Disarmament Staff recommended a set of principles to serve as a guideline for U.S. disarmament policy. These principles were:

1. The United States should not accept an agreement for arms limitation or control unless provision is made for effective inspection of each phase of the agreement.

2. The United States should never agree to make any reductions or accept any controls in regard to its own armaments unless other signatory powers agree to carry out comparable reductions or controls in regard to their own armaments.

3. In the existing state of scientific knowledge, there could be no safe agreement to

eliminate nuclear weapons. It is not possible by any known scientific or other means to account for the total previous production of nuclear weapons material. The margin of error in existing methods is sufficient to allow for clandestine fabrication or sequestering of enough nuclear weapons to constitute a devastating power advantage to the possessor.

4. The problem of controlling nuclear weapons would be complicated enormously, if not made impossible, once the capability to produce such weapons spread to many additional countries.

5. Widespread fear of nuclear surprise attack exacerbated international tensions and was a principal motive for a continuing and accelerating competitive arms buildup.

6. The United States should never cease searching for a sound agreement and should always be willing to enter serious discussions in pursuit of such an agreement.

7. Because of the development of missiles of intercontinental range and the proliferation of the means of nuclear production, the need for a solution to the armaments problem was increasingly urgent.

Based upon this set of principles the present administration has at every opportunity advanced specific proposals designed (1) to help prevent war by relaxing tensions and fears created by armaments and (2) to provide for a balanced and coordinated progressive program which would avoid any aggression-inducing disequilibrium of power.

Among the specific plans advanced was President Eisenhower's proposal in 1955 of "confidence through disclosure" or what became known as the "open skies" plan. The heart of this plan was unrestricted but monitored reciprocal aerial inspection by visual, photographic and electronic means. Mr. Molotov, for the Soviet Union, rejected the President's plan.

The years 1956–60 have seen the United States and her allies continue to advance concrete bases of discussion for disarmament negotiations. These specific proposals have generally included as interdependent, beginning steps:

1. Cessation of production of fissionable materials for weapons purposes.
2. Cessation of testing of nuclear weapons.
3. Reduction of existing nuclear stockpiles.
4. Proposals for specific force and armaments levels.
5. Inspection safeguards against surprise attack.
6. Agreement not to use atomic weapons except in situations of self-defense.
7. Measures to control the outer space missiles.
8. Development of a system to regulate the import and export of armaments.
9. The creation of an international control organization.

At times during these years it has appeared that the differences between the Western Powers and the Soviet Union on various of the disarmament proposals have narrowed. These periods of seeming progress, however, have ultimately all proved illusory. The record is indeed disappointing from the standpoint of the Soviet response to the Western intention and hope that international accord on the limitation of armaments can be reached. And yet we must not overlook the fact that during the past few years the Allies have welded into one unified and practical policy their individual proposals for arms control. Never before in history have so many nations of such great military power joined to make such far-reaching proposals.

But it also must be remembered that the drive for disarmament, no less than the armaments race itself, is a reflection of the intricate power relationships among the major nations of the world. And though the control of armaments is an indispensable step in a general settlement of international conflict, it cannot be the first step nor can it be conceived apart from the other weapons used in the waging of the peace.

It must be established at the outset that men do not fight because they have arms. Rather they have arms because they find it necessary to fight.

In the past disarmament efforts have too often been based upon the assumption that if men would give up their arms all fighting would be impossible. History clearly demonstrates, however, that if we do take away their arms men will then either fight with their bare fists or find new weapons with which to fight.

Reducing the quantity and quality of weapons available at any particular time thus is no sure guarantee that war will not come. And yet disarmament efforts nevertheless can contribute much to the improvement of the political situation by lessening political tensions and by helping to create some confidence in the stated purposes of the respective nations. Moreover, weapons-control efforts in our time could well determine the very nature of a future war.

For these reasons the decade ahead must see intensified efforts to achieve an international arms agreement. Our approach must be geared to the realities of the nuclear age and must include periodic reevaluations in the light of changing political and military conditions brought about by the vast growth of technical and scientific knowledge. At all times we must proceed on the premise that any disequilibrium in total military power vis-a-vis the Soviet Union might prove fatal to the free world.

The task of remaining strong enough to deter aggression while striving to reduce, stage by stage, man's ability to destroy himself is obviously one of utmost complexity.

But we have no other choice than to continue on our pathways to peace. For as President Eisenhower said in his second inaugural address:

"We know clearly what we seek and why.

"We seek peace, knowing—as all ages of man have known—that peace is the climate of freedom. And now, as in no other age, we seek it because we have been warned by the power of modern weapons that peace may be the only climate possible for human life itself."

The Impact of Inflation on America's Balance of International Payments

(By Rita E. Hauser, author and lawyer)

Few economists will disagree with the premise that continued deficit spending will, in the long run, produce an inflationary situation domestically which, in turn, yields higher prices for export as well as other goods.[1] Nor will many economists take issue with the statement that a higher price level for export goods will, in a competitive world market, greatly reduce the salability of these products. This paper is concerned with the extent to which the world market for most American export items has become more competitive in the last few years, and with the impact of higher American prices (or lesser ability to compete in world trade) on our balance of international payments and on the solidity of the dollar as the major world currency.

I. Increased world competition

The first 10 years of the post World War II era were marked by one dominant economic phenomenon: the absolute supremacy of the dollar in world trade. The formerly great mercantile competitors of the United States—Western Europe and Japan—found their economies in 1945 either in total shambles or nearly so, with production at a standstill and with capital markets destroyed. Because a healthy world trading situation was necessary not only for the well-being of America but for continued world peace, the United States early adopted an unprecedented economic policy destined to facilitate the recovery of Western Europe and Japan. The tale is so familiar that one need only cite the organizations and programs created to achieve recovery and the picture immediately comes into focus: the Marshall plan and its counterpart, the Organization for European Economic Cooperation (OEEC), the International Cooperation Administration and its predecessor bodies, the General Agreement on Tariffs and Trade (GATT), the point 4 program, the Development Loan Fund—these are but some of many.

These various programs were markedly successful—much to the surprise of many an American who, suddenly, in 1958 found that his dollar bought less and less abroad as the dollar gap slowly closed or that his once secure export market was lost to the West Germans, French or Japanese. Indeed, by 1958 the former needy nations were not only able to end most restrictions on dollar-area products as their stock of dollars and gold reached substantial proportions, but they also witnessed an enormous spurt of economic growth that surpassed our own. Concomitant with this growth were far-reaching measures taken to prevent the return of inflation in order to ensure continued expansion both at home and abroad. And further, rather bold measures to promote increased expansion were inaugurated in Western Europe in January 1959 with the advent of the European Common Market which, in itself, poses the most serious economic challenge American business has faced in recent years.

The European Common Market, or European Economic Community as it is formally named, grew out of various movements to achieve a politically strong, united Western Europe, or as some people have termed it "the United States of Europe"; its immediate predecessor is the European Coal and Steel Community (Schuman plan) which makes one the market in coal and steel of West Germany, France, Belgium, Italy, Holland, and Luxembourg—the member nations.

In a strict economic sense, the immediate purpose of the European Common Market is to obviate all impediments to trade among the Six by the elimination of tariffs, quotas and other restrictive practices. When this purpose is achieved, the goods produced in each member State will move freely in a market much greater in size than the territory of any member—the total area of the Six or the heartland of Western Europe. As a consequence, the goods of France, for example, will sell more cheaply in Italy because the current Italian tariff now added to the base price will be eliminated. Similarly, many more French goods will be sold in Italy because all quotas will be removed. In effect, the Six hope to create a trading area similar to that existing among our 50 States as a result of the constitutional prohibition on any State from affixing export

---

[1] This is true even if the Government exercises the utmost prudence in the management of its debt and borrows in the least inflationary manner, e.g., through the sale of Government securities with supporting revenue derived from higher taxes. Sooner or later, and the time depends on the general state of activity of the economy, the Government's continued competition with private enterprise in the money market will, by the lessening of available capital for private investment purposes, produce an upward price cycle. And needless to say, the amount of Government securities that can be issued at reasonable rates of interest is limited as is the demand for them; at some point, then, resort to the easier, but more inflationary avenue of created bank reserves will occur.

or import duties. Steps have already been taken by the Six to achieve this complete trade freedom, for in 1959 an across-the-board reduction in tariffs was effectuated as well as the conversion of all bilateral import quotas into global quotas available without discrimination as to any member. Further reductions are expected shortly.

The immediate and natural effect of the operation of the free trade provisions of the European Common Market is a discrimination against American goods entering its territory. While tariffs and quotas will be dropped on Italain or German goods, they will still remain on American goods entering the Common Market area. Indeed, the very feature of the Common Market that distinguishes it from the Free Trade Area sponsored by Britain is that a uniform tariff wall vis-a-vis the outside world must be maintained; Belgium and West Germany both were thus forced to raise the tariff on many of their goods in order to meet the higher common level set out in the Common Market Treaty. As a consequence, many American goods greet the Western European consumer with a higher price tag on it than its counterpart Common Market product. This higher price tag is due both to the initial fact that the cost of producing an item in the United States is greater than the cost incurred in producing a similar item abroad, mainly because of higher American wage levels, and to the added cost imposed in the form of a tariff when an American good enters the European market.

This natural trade discrimination hits hardest at the American manufacturing community whose goods, in general, face high duties in Western Europe (this as distinct from exports of food and raw materials which now largely enter duty free or at low duties). These same manufactured items also bear the highest costs of production among American export items, and to add further to the competitive situation, the production of these items constitutes Western Europe's economic forte.

While it is true that at present regional markets in areas less economically developed than Western Europe would not pose as stiff a competitive situation at least for manufactured goods, the tendency to group regionally into one trading unit of fairly large size is most prevalent in the more highly industrialized nations. If, for example, the free trade area comes into being, its members, although not bound to a common external tariff, will afford each other mutual benefits by virtue of a reduction, if not a total elimination, of tariffs and quotas inter se. This, again, places American goods at a natural competitive disadvantage. Moreover, it should be noted that the Common Market Treaty calls for the eventual coordination of labor, fiscal, investment and antimonopolistic policies. If and when this total economic unity comes about, presumably reinforced by uniform commercial laws, then the price of these various factors of production will decrease as their supply is more readily assured by the elimination of artificial impediments to their mobility. And with a declining cost for these factors, the competitive situation will shift even further in favor of America's trading partners. As is now becoming clear, disfavorable terms of trade will reduce America's trading competitiveness not only within the area of the regional markets but elsewhere in the free world. West Germany, for example, has now replaced America as the leading exporter of certain manufactured goods in both the Middle East and in Brazil, just as Japan is duplicating this pattern throughout Asia.

It can, then, readily be seen that the free trading world in 1960 is infinitely more competitive for American business than it was but a few short years ago—and the trend will continue. This hard, sober fact of economic life has recently been appreciated by the administration. Under Secretary of State Dillon, at a meeting this year of the OEEC, offered suggestions to expand the scope of operation of this body and to permit a limited affiliation or participation by the United States. The latter measure was intended to prevent the application of any possible discriminatory measures against American goods and to erode the natural discriminatory effects flowing from the operation of the regional markets. Dillon called for a greater reduction of current tariffs and quotas for all trading nations. In effect, the administration is working toward the promotion of greater free trade on a worldwide basis.[2]

Since world competition has so sharply developed in recent years, it is obvious that any further increase in the cost of production of American export items brought about by a general rise in the domestic price level (inflation) will add further to America's trading disadvantage.

II. THE IMPACT OF INCREASED PRICES ON AMERICA'S BALANCE OF INTERNATIONAL PAYMENTS

Because America is both a substantial importer of foreign products and an exporter of dollars through investments, tourist spending, defense and other Government expenditures, a large number of dollars flows out of the United States each year. If income from American investments abroad and foreign spending here, as well as from American exports to other nations, equaled the outflow, America's total position would be that of equality in its balance of international payments. As a matter of statistical fact, however, at no time, save for 1957, did America's balance of international payments show an equal position; to the contrary, we ran a deficit of slightly over $1 billion a year from 1950 to 1956.[3] This deficit was considered salutary because it was due, in large part, to our defense spending and economic assistance abroad and was not correlated to any adverse trading situation. This small deficit was but a way of aiding our trading partners to build up needed dollar reserves; America's payment of this deficit barely reflected itself in any gold loss since our creditors were quite contented, if not anxious, to take dollars as payment.

As of 1958, however, America's balance of international payments showed a marked increase on the deficit side. The balance of payments for that year looked as follows:

U.S. balance of international payments, 1958

[Billions of dollars]

PAYMENTS OF THE UNITED STATES	
Purchase of goods and services	16.7
Income on foreign investments in United States	.6
Unilateral transfers	2.3
Private capital outflow	2.9
Government capital outflow	1.0
Military expenditures	3.4
Total	26.9

U.S. balance of international payments, 1958—Continued

[Billions of dollars]

RECEIPTS OF THE UNITED STATES	
Sales of U.S. goods and services	20.2
Income on U.S. investments abroad	2.9
Errors and omisisons	.4
Long-term capital inflow	
	23.5
Deficit	3.4
Settlement of the deficit was made by:	
1. Transfer of gold to foreigners	2.3
2. Foreign acquisition of short-term dollar assets	1.1

Source: Committee for Economic Development, 1960.

The source of this deficit can be readily seen by glancing at the following table:

[In billions of dollars]

	Average			
	1951–53	1954–56	1958	1959[1]
Net U.S. receipts for goods and services	2.6	3.0	2.8	0.5
Net U.S. payments for grants and investments	3.8	4.2	6.2	4.6
Deficit	1.2	1.2	3.4	4.1

[1] Estimated figures.

As the table shows, while American grants and investments abroad increased in 1958, to the contrary the rest of the world did not increase its purchases of goods and services from us. Indeed, in 1959, as compared with 1951–56, it reduced its purchases from America. Thus, America continued to make greater payments to the rest of the world while its payments to us decreased—hence an increased deficit over earlier years.

In 1958, our total external deficit equaled $3.4 billion; in 1959, it grew to a record of $3.7 billion. As illustrated by the charts, America's increased deficit was due largely to a decline in American exports abroad. This decline, according to several recent studies, may be attributed to the following causes:

1. The recession of 1957–58 cut capital expenditures in Europe as well as here to a far greater extent than consumer spending. Thus, while America maintained its general level of imports from abroad, which consist primarily of consumer goods, Europe reduced its imports from the United States since capital goods make up a good share of America's exports. The recession also caused a decline in the earning power of raw material producing countries, such as the Latin American nations, which in turn caused a drop in their imports from the United States.

2. American investments abroad have generally been more directed to the purchase of foreign securities than to the direct establishment of a subsidiary company. Indirect or portfolio investment is not likely to result in an increase in American exports, whereas the establishment of an American subsidiary abroad does produce exports since a subsidiary generally "purchases" equipment and other goods from the parent and other American companies. In 1958, indirect investment in Europe alone jumped to $1.4 billion a year from the prior $400 million annual figure for 1954–56.

3. American competitiveness in certain items has fallen generally, resulting in their replacement by local products or products of other exporting nations. A recent Department of Commerce study bears this out. It showed that if in 1958 the United States' share of world markets for the export of manufactured goods had been as large as in 1954–56, America would have exported some $500 million more in 1958 than it did.

[2] The United Nations Economic Commission for Europe, in its last annual report issued in April 1960 urged Western European nations to open their doors to American imports to prevent a worsening of America's negative balance of trade. Concern was reported over the constant drain of American monetary reserves which will, in turn, produce a loss of confidence and declining liquidity for the dollar.

[3] In 1957 we had a small surplus chiefly because of the Suez crisis when Western Europe turned to the United States for certain basic products, such as coal. Nineteen hundred and fifty-seven, then, represents an abnormal year not at all representative of the general pattern of post-1950 trade.

Moreover, if one traces the direction of the international flow of dollars, it clearly appears that in 1958–59 a large part of the dollars received by Asian, African, and Latin American nations have not been spent or deposited in the United States; rather, the dollars appear to have moved primarily to Western Europe from which these nations are now purchasing a large amount of their imported goods and services.

In sum, then, it is clear that the recent marked increase in Americas external deficit is due primarily to a fall in exports. While a part of this drop had unusual causes engendered by the recession of 1957–58, it seems evident that even absent these circumstances the deficit would still have shown a marked rise. This is borne out by the fact that America's exports in 1959 exceeded its imports only by some $900 million, whereas in earlier years the excess was running more than $6 billion. During this same period, American imports remained at a relatively stable level, so that the narrowing of the excess is largely attributable to a decline in exports.

A continued large-size deficit reflects itself ultimately in a loss of gold for America. In 1958 alone we exported over $2 billion in gold to make up part of our deficit of that year. When America's deficit was small, the rest of the world was willing to incur dollar liabilities to fill the narrow gap since most nations were anxious to build up their dollar reserves. As the deficit increases, these nations will want to balance their dollar and gold holdings and will be inclined to take less dollars and more gold. Moreover, this shift to gold is accentuated by a growing loss of confidence in America's continued willingness to convert all dollars into gold, and indirectly into foreign currency, without restrictions and at a fixed price. As confidence fails, more foreign dollar holders convert to gold or other currencies, such as the deutschemark or the Swiss franc, which they now feel are safer, and therefore stronger currencies. Thus, were America to permit a serious increase in its external deficit, the dollar would be gravely undermined and so too the effective operation of the existing international gold exchange standard. This standard is necessary for an organized international payments system, and at present it rests primarily on the continued strength and stability of the dollar which is the world's trading currency. Should the dollar and the gold exchange standard be undermined, there undoubtedly would be grave political consequence for the free world.

If these rather drastic results are to be avoided, the United States must decrease its current international deficit, or at the least, prevent any further increase. This, of course, can be achieved in many ways, and it is not the purpose of this paper to discuss the policy implications of the various alternatives. But for the sake of analysis, the author presumes that current levels of Government spending for defense and economic assistance abroad will be maintained. With this assumption in mind, it is obvious that a reduction of the deficit will come either from a diminution on the payments side (reduced imports or investments and tourist spending abroad) or by an increase on the receipts side of the Balance of International Payments (increased American exports or greater investment and tourist spending by foreigners in America). It should be noted, however, that any reduction on the payments side will have a counterpart effect, for the reduction translates itself in reduced income for other nations which, in turn, obliges these nations to diminish their purchases of American goods and their investments in American companies. The end result of this pull-in is a general reduction in world trade in which no nation benefits as each attempts, in the words of Joan Robinson, to beggar-his-neighbor. This was the situation which existed between the two World Wars, and few would wish to see the return of this period.

Efforts to reduce the deficit and thereby to avoid the erosion of the dollar, should, then, be made on the receipts side of the international ledger. This means, essentially, that America must increase its exports abroad. And only by maintaining, rather than diminishing American economic assistance to other nations, especially to the less-developed countries, will the ability to expand American exports without undue harm to our trading partners come about. Continued economic assistance, if properly used, should cause the economic expansion of the less-developed nations and lead eventually to their greater ability to both import and export—thereby bringing about higher levels of world trade.

How, then, can American exports be increased? Part of the task is, as the ad man would say, a "harder sell," that is, a more aggressive attitude on the part of American exporters who must, as the European has learned, acquire language and other skills in order to compete effectively. The President recently recognized this need to sell more, and announced a new program to stimulate exports by expanding the activities of the Commerce, Agricultural, and State Departments and by establishing oversea trade centers in order to better assist American firms selling abroad. But, fundamentally, American exports will compete well abroad only if their prices are rigorously held down. The first and major line of defense against a continued rise in America's external deficit, pregnant at it is with serious political dangers to the free world, is a domestic anti-inflationary policy. The maintenance of production costs and prices is the essential ingredient in any effective export program for American business. This, as well, is indispensable if the erosion of the dollar is to be prevented.

By a full return to our opening premise, we can now conclude that continued deficit spending, which results ultimately in an inflationary situation, will undermine the dollar as the world's major currency. This will, in turn, destroy the international gold exchange standard the maintenance of which is essential for the continuance of free trade, economic prosperity and, in the final analysis, the political integrity of the free world.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mrs. BOLTON. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD study paper No. 16: "Some Psychological Aspects of Soviet Propaganda," by Prof. Malcolm Smith:

SOME PSYCHOLOGICAL ASPECTS OF SOVIET PROPAGANDA

(By Malcolm Smith, office of Senator THOMAS H. KUCHEL, formerly on faculty of Leland Sanford University)

One must have a great deal of temerity to undertake to write about a topic of such vast dimensions within a few pages. In order to get into this topic as quickly as possible, let me state by way of preface a few postulates about the topic, which should serve to delineate the principal areas of discussion with which we are concerned.

First, we are dealing here primarily with the techniques used by the Soviet Union and the Communist bloc countries to influence the minds of men throughout the free world. While important, and highly desirable, we cannot direct our attention to the use of propaganda within the territories occupied by the Soviet Union and Communist China. Our major interest is directed to the use of propaganda by the Sino-Soviet bloc throughout the free world, and the as yet uncommitted nations of Asia, Africa, and Latin America.

Secondly, the author has approached this subject with certain preconceptions about communism, and the use made of communism by the Soviet Union in particular, as a tool for the achievement of certain ends. There are, as lawyer friends are wont to say, points about which reasonable minds may differ. Thus there are several leading scholars in America whose special field of study has been the Soviet Union, who still maintain that Soviet aggression and the use of Communist parties throughout the world are merely means of insuring the Soviet homeland against aggression.

The invasion of Finland in 1940, the annexation of the Baltic States, Latvia, Lithuania, and Estonia in 1940, the partitioning of Poland in 1939, the Postwar occupation of East Germany, Czechoslovakia, Hungary, Rumania, Bulgaria, Albania—the satellites—Tannu Tuva in 1944, Sakhalin Island, and Kurile Island—are justified in terms of historic Russian interests, essentially defensive in nature. Even the bloody suppression of the Hungarian revolt in 1956, and the earlier uprising in East Germany in 1953, are rationalized by this school of thought as being defensive moves only. Let me hasten to state that the author totally rejects this particular interpretation of Soviet foreign policy. No doubt, many of those who still adhere to this convenient view of Soviet policy, do so out of honest conviction. At least I feel more secure in holding this belief about some high level Foreign Service officers and ICA officials (all on active duty) who have expressed this interpretation of Soviet actions privately.

Third, for our purposes, it may be well to restate what are probably very simplified observations about communism, generally understood, I trust, by most Americans. Nonetheless, a fairly short restatement at this juncture may be helpful. Within this third point, I will discuss in ever so summary a fashion, communism in terms of doctrine and deeds, its growth and present physical resources.

Communism is both a theory of history and a revolutionary movement, whose purpose is the overthrow and replacement of the present world economic and political structure.

This theory, originally formulated by Karl Marx (who borrowed extensively from others, notably Hegel), claims to be scientific. Because it is "scientific" it is an "infallible" guide to the future. In the words of Friedrich Engels, Marx's longtime collaborator, this theory was "destined to do for history what Darwin's theory has done for biology."

Marx was by no means the first Communist or advocate of economic change. Many reform movements appeared in Europe in the early 19th century. Some of the movements led to the establishment of the "utopian communities," in Europe and America—societies in which all property was owned communally. Other movements (some of which borrowed ideas from Marx) became modern Socialist Parties—Christian Socialists, Social Democrats, Labor Parties, and so forth.

The majority of these parties diverted from the action program of their more militant cousins, at least insofar as total overthrow of existing institutions was concerned. Marx, Lenin, Stalin, and other Communist theoreticians demand a total overthrow of the existing economic and political system everywhere. Violence, the use of terror; these are the means to achieve the end of revolution. Lenin's comment 1 n1918 following the Treaty of Brest-Litovsk, that now there would be time for consolidation by terror, indeed a necessary adjunct in Lenin's view; complete control of the machinery of the state.

The relation of action to theory among Communists was begun early in the second quarter of the 19th century when a secret revolutionary group with branches in London, Paris, and Brussels met to draft a program for revolutionary action. The resulting Communist manifesto has been the basis for Communist action groups ever since. Written by Marx and Engels, the document contained two basic theories: The labor theory of value, and the economic interpretation of history. The scientific theory cannot detain us long, except as it relates to the later uses made of it.

According to the Marxian theory, the political, social, and cultural characteristics of any period in history are nothing more than a reflection of the existing economic system—the manner in which goods are produced and exchanged. Thus, what a society does depends upon who owns the property in that society, which came to mean the means of production.

History then is simply a record of endless struggle between different economic classes, with one economic class replacing another. History does support, or at least can easily be made to support this facet of the Marxian doctrine in a general way. For example, no great ingenuity is required to show that in the Middle Ages the chief source of wealth was certainly land; and it was obvious that the great land owning aristocracy was the ruling class. Nor is any great ingenuity required to show that political, social, and religious customs and ideas of that time were suited to maintaining the political and economic ascendancy of the aristocracy. Likewise, it is fairly obvious that during the last three centuries land has gradually been replaced by capital as the chief source of wealth; and the history of the time may easily be regarded as a struggle between landowners and capital owners, as a result of which the latter have replaced the former as the ruling class and have substituted, in their interest, a net set of institutions and ideas—representative government, individual liberty, popular sovereignty, free competition—for the old.

Marx of course went on to predict that the final struggle in the evolution of civilized society would be the struggle between capitalism and the new proletariat societies. While this struggle has been, and will be, a violent struggle, it will ultimately free "society at large from all exploitation, oppression, class distinctions, and class struggles."

Marx maintained that the capitalist regime would by its own nature destroy itself. Its nature is to be ruthlessly competitive, so that in any industrial society the tendency is for wealth to be more highly concentrated in the hands of a few, while the mass of the people tend to fall into the condition of wage slaves, or so runs the Marxian argument. When this process reaches a certain point, the system breaks down. Moreover, when the system ceases to work the people will necessarily take control, and since it is their interest to do so, they will establish a classless society based upon the common ownership of the means of production, and a more equitable distribution of the product. This was the social revolution Marx predicted.

Of course there was one condition central to the achievement of the ultimate utopia. In order to insure a rational transition from the "socialist" period to full blown communism there would be a temporary dictatorship of the proletariat. A one-party, closed society, would be necessary, so Marx thought, in order to effect the consolidation of the state, and to prevent counterrevolutionary activity.

Of course Marx's prediction went astray at the outset. The revolution did not come in a highly industrialized society like pre-World War I Germany—a nation that had one of the largest, most articulate Marxist Parties in the Reichstag. These same Marxists were persuaded to vote for the German naval and military appropriations increases in 1913, on the ground that they were going to have the opportunity of fulfilling an old prediction of Karl Marx—they would help to overthrow the czarist government and free the Slavs.

But the revolution occurred in Russia, that is to say, not the most highly industrialized society but the least highly industrialized society. The social revolution clearly occurred before its time in Russia. Whether providence, or dialectic materialism, or military defeat, or whatever it is that regulates such social changes, certainly performed a strange feat in bringing the revolution to this agrarian society before it brought it to more highly industrialized countries, like England, Germany or France. But the cataclysmic event of the Russian revolution doesn't do anything to verify the predictions of Marx; what it does indicate is that in a country in which the people were accustomed to being ruled by a dictatorship, a country moreover in which the prevailing form of dictatorship was especially corrupt and incompetent, it was very easy to establish a dictatorship of a different sort.

But there is a more fundamental basis for questioning Marxian doctrine than the Russian accident. One is that it is extremely difficult to predict the future of the basis of past experience; or rather it is extremely easy to find in the past support for diverse predictions of the future. The other difficulty is to understand why a persistent economic class conflict in the past justifies us in predicting a classless society in the future.

This prediction, based upon the "objective realities of the past" as the Marxists might say, takes an idealistic view of the future. During the last 2,000 years, from Jesus' tortured march to Calvary, to the present day, all the saints and sages of the world, deploring greed and strife, poverty and injustice, have looked forward to the time when a more just society would be established. They have many times predicted the coming of a classless society in which everyone would have enough; but the course of events has never yet verified their hopes. In fact, Marx's interpretation of the past, if projected into the future, seems to refute his own prediction.

For Marx's interpretation of the past is explicit and realistic; his forecast of the future is vague and idealistic—utopian. It may be a tautology and a dubious denial. Marx finds that in the past the effective force that has determined a social change is the economic class conflict.

He goes to great pains to point out that this economic class conflict explains the rise of the present capitalist societies. He shows, or at least his disciples claim to show, how this economic class conflict is working to undermine our capitalistic society. From this historic experience, it would seem to follow that there will be in the future what there was in the past—a never-ending class conflict, an endless replacement of one dominant class by another, an endless transformation of institutions and ideas in accordance with the changes effected by the class conflict. But this precisely is not what Marx predicts. What he predicts is the end of the economic class conflict, the establishment of a classless society. What happens after the revolution has established a classless society? Here we are left to our own devices. For after having developed a law of history to interpret the past and predict the future, Marx apparently abandons the law at a fixed determinate point in history. The profound conviction of Communists that the proletariat is destined to establish a classless society on the ruins of the present capitalist regime is not justified by Marxian philosophy: if you interpret Marx in terms of mechanistic determinism, this profound Communist conviction is a pure delusion; on the other hand, if you interpret Marx in terms of free will, this conviction is no more than a splendid hope.

But consider the methods the Communists have chosen as the path to a better world. Using the experience of the second Russian Revolution in 1917, the Communists claim that nothing really worthwhile can be done until conditions are ripe for the application of a revolutionary technique. And that technique, as we well know, is to seize control of the government, forcibly expropriate the bourgeois class, and ruthlessly suppress the expression of all opinion that a dictatorial government judges to be hostile to the welfare of the community. Now this is the central fact of Communist doctrine: the use of force to obtain power and ruthless repression as the means of sustaining it. The resort to force as a means of persuasion, as a means of obtaining consent, this has been the nature of the Marxist theory in practice. Marxist-Leninist doctrine calls, ultimately, for the "withering away of the state", in theory the disappearance of the vast administrative machinery and the institutional devices for controlling the people. The Communists have been willing to justify the most incredible tyranny as the necessary road to utopia. Yet the tyranny of the Soviet Union, especially during the despotic rule of Stalin (and here we have only to read Khrushchev's speech in denunciation of Stalin to the 20th Party Congress to know just how much Stalin had tyrannized over them all) not only has not withered away, but has developed a super state "the mightiest and strongest state power which ever has existed" (Stalin's words).

It is very difficult for the Western democracies, whose essential test of civilized society is the extent to which law and public authority rest on free discussion and voluntary consent, to comprehend how this massive tyranny, justified on a specious philosophy, dependent upon the "big lie," violence and terror to sustain it, can continue to challenge the West in every area of the globe.

The answer lies, I believe, in this: Communism is theory of history (however false); it is a worldwide revolutionary movement; and it is the power resources and strategy in world affairs of the Soviet Union, Red China, and their allies and satellites. And, in the fact that Soviet officials are not inhibited by the use of any method best calculated to achieve a given end. If Paul Joseph Goebbels could say: "Propaganda built the Third Reich," we can say with even greater force: "Propaganda built the present complex of Sino-Soviet power." Not propaganda alone, of course. Behind the propaganda techniques are the solid achievements of transforming their economy into a highly industrialized society in a relatively brief period of time. The transformation, however, has come only at the cost of millions of human lives, deemed expendable in the interests of a presumed better life for the survivors. Yet, even the reconstruction of

society has been dependent upon the skillful use made of every minor, as well as major success in any field, and the willingness of Soviet officialdom to exploit occupied territories until brought under total control.

In support of Soviet objectives, the U.S.S.R. has been able to profit immensely from the organization of Communist parties in 26 countries, including about 20 free countries with a membership of 6 million people of which 3½ million are in "5 mass parties (France and Italy are 2 examples among NATO countries), 2 million in the 20 or so "sturdy little parties," and half a million scattered in very small groups. Each of these organizations includes hard-core professional revolutionaries—paid agitators—trained in special schools which may be fairly elementary or very advanced institutes, technical schools and universities. Their size is no determinant of their significance and ability to take advantage of every crisis, indeed to foment the crisis first. These cadres will vary in size, depending upon the Kremlin's current foreign policy commitments. But they are always in a position to use the facilities of auxiliary organizations, either existing or created to meet a current need.

One of the most exportable items of propaganda used by these organizations to convince underdeveloped countries that history is on the Communists side is the economic growth record within the Soviet Union.

It is this record, coupled with the development of a new capability in rocketry and thermonuclear weapons that has awed the rest of the world. And if the rest of the world were not fully aware of these developments, the Soviet's affiliates overseas have made certain that every last propaganda advantage was wrung from each new development, Sputnik I being a characteristic example.

The Soviet message is simple. To the people of Africa, struggling to form new governments for their new states, to the backward countries of southeast Asia where famine, death, pestilence and disease are life's boon companions, to the have-nots in every country of the world, the Soviets offer new hope. "Look what we have done in 40 years. If we can do it so can you." And the price they ask isn't much, or so the would-be benefactors are led to believe. "Let us show how to organize your State, to produce a new abundance. Join us, and we will lead you into a new world of peace, abundance, and happiness." Communist China, which managed to drive the United Nations back in their first major aggression, is not overlooked, as part of the evidence of what a "temporary dictatorship" and reorganization of society can do.

It is the strategy of the Soviets and the Chinese Communists to concentrate first on the weak and then to encircle us, the strong, by penetrations in Asia, Africa, Latin America. A central part of this strategy is to deprive us of bases, essential raw materials, and any and all military allies in these areas, as well as in Western Europe.

Let's take a characteristic technique which serves the interest of Soviet propaganda in a very effective way: Importation of students from non-Communist bloc countries to be educated in the Soviet bloc.

Approximately 3,000 students from free world nations—mostly from the underdeveloped areas of the Near East, Asia, Africa, and Latin America—and 19,000 from bloc countries attended Soviet and East European satellite institutes of higher learning during the 1958–59 academic year. Some 15,000 of these were studying in the U.S.S.R., which despite increasing attention to student exchanges is still far behind the United States in this field. There were 46,500 foreign students in the United States in 1958–59. Czechoslovakia and East Germany each had some 2,000 foreign students resident last year. Students in Czechoslovakia are divided about equally between those from the bloc and from underdeveloped areas.

Nonbloc foreign students are recruited in three ways: Through scholarship and educational aid offers from the bloc to underdeveloped countries, through mutual exchange agreements between bloc countries and Western nations, and through scholarships offered by the bloc countries to proteges of nonbloc Communist Parties.

The bloc is gradually increasing its mutual exchange programs with Western countries, but the number of students involved is still small—little more than 100 this year. The U.S.S.R. has exchange agreements with the United States, Britain, France, West Germany, and Norway. Poland has exchange agreements with the United States, Britain, and France.

Scholarships and educational aid for proteges of Communist Parties outside the bloc are not reciprocal and in many cases are made without the consent of the student's home government.

Many of the Africans now studying in bloc schools were recruited while at school in Cairo and are "illegal." Such students, as well as a number from Latin America, are chosen initially for their sympathy toward communism and are heavily indoctrinated during their stay in the bloc.

The main type of foreign student program—unilateral offers by bloc countries of scholarships and other types of educational aid—is directed primarily toward the underdeveloped nations of the Near East, Asia, and Africa. Scholarship offers are made through the U.N. and its specialized agencies, such as the World Health Organization and UNESCO, and are also offered directly on a country-to-country basis.

The U.S.S.R., for example, has offered 15 medical scholarships to Nepal and 21 scholarships to Egypt for study in the arts. Such scholarships are for 5 to 6 years of study and cover tuition, free medical care, and free trips during vacations. They include 1 year of intensive language training and, in the case of Soviet scholarships, a year of remedial education if the student fails to meet academic standards. The U.S.S.R. also provides transportation from and to the student's homeland at the beginning and end of his schooling.

Satellite scholarships also are generous, although only a few provide transportation expenses. Soviet stipends granted to nonbloc students are at least double those of Soviet students.

The Soviet Union has also offered some 550 "accommodation" scholarships, mainly to underdeveloped areas. These are reserved places for 3 months to 5 years in higher educational institutions for students whose expenses are borne by their homelands. Few such scholarships are available in the satellites, although there is evidence that Poland may be adding some to its program.

After a full academic year of language training, the students enter their specialized courses of study, the most popular being engineering, the humanities, and agriculture. Fields of major study for exchange students are stipulated in the official agreement, as are those for "accommodation" offers. Some of the unilateral scholarships are made for specialized fields, as in the case of the 15 medical scholarships offered to Nepal. In others the decision as to the field of study may be made by the student's homeland on the basis of its needs.

Living accommodations for foreign students in the Soviet Union are equal to those of the local students.

Foreign students in the U.S.S.R. usually eat with their Soviet fellows. Where there are unusually large numbers of one nationality, a separate canteen may be established and some effort made to serve foods characteristic of the student's homeland.

Social life among the students often reflects the political atmosphere existing between their homelands.

One avowed aim of the program is to inculcate foreign students with Communist doctrine. Typical is the statement of Dr. Ludek Holubeck, chairman of the Division for Relations With Foreign Countries of the Czech Ministry of Education and Culture, who wrote in an education monthly last January that the foreign student program of the universities must support the political and educational activities of the Communist Party and state administration. "We will increase our political and ideological demands in the evaluation of every foreign operation," he said, "so that anything we organize shall by its contents and methods have a distinct socialist character."

Holubeck charged a special institute at Charles University in Prague—set up to deal with the training of foreign students—with "evaluating the methods of instruction, political work, and ways and means of influencing the culture and social life of the students in Czechoslovakia. We want foreign students to return to their countries as dedicated adherents of socialist ideas," he stated.

This training has not been universally successful in creating the desired effect on nonbloc students, for there is evidence that "socialist reality" is sometimes educational in ways Moscow never intended.

An additional problem for the bloc in sponsoring the training of students from underdeveloped areas through government-to-government programs is the instability of the national governments involved. While foreign Communist Party proteges are not affected by changes in the government at home, the 3- to 6-year programs of the government-sponsored legal students bridge potential changes in national attitudes such as have taken place in the U.A.R.

Despite these difficulties, however, there is no evidence that Moscow is sufficiently dissatisfied with results to drop its educational aid programs. There have been some successes.

Bloc offers are gaining in respectability—the son of Nepal's former foreign minister is studying in Prague at the present time—although where offers of stipends and other assistance from the bloc and from the West are equally advantageous, the West is still overwhelmingly preferred. Acceptances of Soviet scholarships in 1958, however, were double those accepted in 1957.

The Soviet Union is directing special attention to Africa. It has recently established diplomatic relations with Tunisia and offered aid and favorable trade agreements. Diplomatic representations were established in both Morocco and Libya shortly after these countries attained their independence. The Soviets have been active with the Communist Parties in these areas, especially in Libya where they have concentrated not only on Libyan Communists, but also on the Italian Communist group. And the Chinese Communists have extended official recognition and offered arms and financial aid to the provisional Algerian Government in exile.

In Ethiopia, a permanent Cultural Exhibition in Addis Ababa disseminates Communist propaganda, offers courses in Russian language, and generally seeks to indoctrinate its visitors—mainly young Ethiopians and students from East Africa. A strong indication of the active Soviet interest in Africa and the heavy selling job being done by the U.S.S.R., are the offers of "aid without strings" to this ancient land. An aid agreement of $100 million was signed between the Soviets and Emperor Haile Salassie last year, and an oil refinery and technical school staffed by Soviet representatives are planned. This month, a Soviet industrial

exhibition will be held in Addis Ababa with high Soviet officials in attendance.

In West Africa, the Soviets are planning to construct a polytechnical institute in Guinea, which will accommodate from 1500 to 2,500 Guinean students. Soviet personnel will comprise the staff. This is a very effective means for influencing long-term economic planning and planting intelligence experts to work with the local Communist Party apparatus.

We may soon expect dramatic moves in our own backyard. For years, the Soviets maintained the largest Embassy staff of any nation in their Mexican Embassy. The Mexican Communict Party has long served as an agency for exploiting the differences in wealth between the United States and Mexico. Every source of friction is kept alive by a continuous barrage of charges, lies, distortions of would-be facts, half-truths, and the theme of "you are poor because you have robbed" repeated in a fashion reminiscent of Hitler's classic charges that Germany was not defeated in World War I, but was the victim of traitors, treason, and the "stab in the back".

But in Cuba, the revolutionary fervor that led to Fidel Castro's victory over Batista, has been directed at fever pitch against the United States. The recent sugar agreement between Cuba and the U.S.S.R. was only the beginning. Khrushchev plans a state visit to Cuba, and no one can be certain what consequences will flow from this visit. In all likelihood, there will be a stepped-up program of infiltration by Soviet agents in Latin America, the Caribbean, and Central America. We may expect a more extensive, centrally coordinated drive against American control of the Panama Canal, a demand that we evacuate the Guantanamo Naval Base in Cuba, as well as demands that we evacuate Air Force and naval installations in Puerto Rico and the Virgin Islands. These demands will be conducted by the native populations, and flames of nationalism will be fanned by the agent provocateur. The distinguished Brazilian sociologist, Gilberto Freres, in his brilliant analysis of Brazilian society a few years ago in "Casa Grande and Senzales" ("The Masters and the Slaves") suggests some of the soft spots Communist propaganda may be expected to concentrate on. The ethnic, racial, and cultural groups which comprise the Brazilian population will hear and see distorted scenes of racial discrimination in the United States. To the Amerindian Indian of Brazil, the poor, illiterate Indians of Peru, Bolivia, Paraguay, and Colombia whose marginal existence is barely at subsistence level, this "colossus of the north" is little known, and even less understood.

But the Soviet inspired Communist propaganda comes in simple messages so all may understand through the eye and the ear.

Throughout the free world, to every level of society, to the intellectual, the working man, the white collar worker, the young and the old, the Communists broadcast the arguments for communism from within the Soviet Union, their European satellites and Communist China. Millions of words are spewed out in scores of languages, each broadcast designed to exploit local conditions to the recipient country.

Moscow is highly selective in disseminating propaganda. An infinite variety of types and roles are played by the U.S.S.R. particularly in broadcasts, for external consumption. If it is the Middle East, one propaganda play for a particular audience may be used. If it is to Western Europe, quite another line may be stressed, such as the attempt to arouse French fears of West German rearmament. Or then again, it may be broadcast only to the peoples of the Soviet Union or to the Soviet Union and the satellites.

Then there is the use of literature, particularly technical and scientific publications, which are published in every inexpensive paperback editions, easy to read and yet technically accurate. The importance of these materials to the U.S.S.R. results from the fact, that directly or indirectly, they stress the growing competence of the Soviet Union in the fields of science, engineering, technology, and the Soviet-asserted lead in explorations of outer-space.

It is difficult to compete with these publications because the Soviet Union and Red China not only can produce them at minimal cost, but cost to them is not an object of concern. They are determined to achieve a given end, and their energies can be directed toward that end without the limitations a free, democratic society must inevitably encounter.

The Internal Security Subcommittee of the U.S. Senate recently published an English translation of Mme. Suzanne Labin's paper, "The Technique of Soviet Propaganda." The author, a graduate of the Sorbonne, a journalist who has published four books, one of which, "Must We Grant Freedom to the Enemies of Freedom," won the French literary award, the Prize of Freedom for this book "which best defends the principles of liberty." Senator EASTLAND'S subcommittee has performed an invaluable service in making Mme. Labin's paper available, and especially if it can have the widest possible distribution.

Mme. Labin uses the name "auxiliaries" to identify people who serve the ends of Communist propaganda by echoing Soviet positions in international affairs. Thus, on page 5 of the committee's translation, the author has indicated some of the variant positions taken by "auxiliaries" in international politics. ("For some, the labels of 'crypto-Communist' or 'fellow traveler' are too mild, for others too strong. In this paper (Mme. Labin's), the more neutral term 'auxiliaries' will be used.")

"The assertion that Soviet propaganda uses auxiliaries as various as they are concealed makes it essential to be able to recognize them despite their concealment and their multiformity. Two traits constitute their distinctive mark: on the one hand, the auxiliary always supports all the positions supported by the Soviets in international affairs and changes them the very moment the Soviets do; on the other hand, toward the Soviet and Western regimes he adopts an attitude which systematically tends to blacken the latter and whitewash the former."

A partial catalog of these positions as prepared by Mme. Labin "with no claim to exhaustiveness" follows:

Against building Europe and especially a European army.

For withdrawal of American troops from Europe.

Against NATO and SEATO.

For the right of veto at the U.N.

For abandonment of Berlin and disengagement in Germany.

Against the Federal Germany of Bonn and the "revengemonger" Adenauer.

For recognition of the Hankow and Peiping governments.

For cessation of nuclear tests and disarmament without further control arrangements.

Against installing missile-launching platforms directed toward the U.S.S.R. in Western Europe, but not against launching platforms directed toward Europe in the U.S.S.R.

Against the "feudal and corrupt dictators" Chiang Kai-shek, Ngo Din Diem, and Syngman Rhee, but for the anti-American dictators of Latin America, Peron and Vargas.

For surrendering Quemoy and Matsu to Peiping.

Against the Franco-British action at Suez, but for the anti-Franco-British action at Baghdad.

Against Israel and for Arab nationalism, against France and for the FLN, against Britain and for the Mau-Mau, but in Moslem Kashmir for India against Pakistan.

For a summit conference at any price.

For "cultural exchanges" but without demanding that book censorship and radio jamming stop in the U.S.S.R.

For total independence of the peoples of Asia and Africa from the West, but for total dependence of Eastern European satellites on the U.S.S.R.

Against free elections under international control in Germany, but for "elections" in Vietnam under the established governments, one of which is Communist.

Against "dollar imperialism" all over the world, but for "ruble aid" to underdeveloped countries.

Against American bases in Europe and Asia, but for freedom of Soviet bases (Communist Parties) in every country.

"It is quite clear that an independent mind can very well come (rightly or wrongly) to the same conclusions as the Soviets on one or another of these points, but it is impossible to be in systematic and synchronized agreement with all the positions of the Kremlin. It is by this kind of agreement that the auxiliary can be recognized."

Most of Madame Labin's "auxiliaries" work through front organizations, some well known, some not so well known. Some of these functions on a worldwide scale, others spring into being for a short time like the "committee to save the Rosenbergs" and to achieve a limited, immediate objective.

While never having tolerated free trade unions in the Soviet Union, the U.S.S.R. has nonetheless sought through the World Federation of Trade Unions to control the trade unions of the free world. Here they have succeeded in controlling some of the largest of the trade unions, for example in France, Italy, Japan, Indonesia, and several other countries. But their claims to have 92 million members through the world are generally discounted by intelligence experts. Nonetheless, they will have many millions of members and this threat to free labor cannot be overlooked.

Another area of intensive cultivation by the Soviet Union is the World Federation of Democratic Youth, a major Communist front which has claimed a membership ranging upward from 86 million in 96 countries. We have already noted the use of scholarships, grants, and courses available within the U.S.S.R. to selected students. The WFDY, working closely with another front in this student field, is the International Union of Students, which produces 2 major publications in 11 languages, together with hundreds of pamphlets, and a weekly radio broadcast in 7 languages from Budapest.

There is the Women's International Democratic Federation to reach audiences of women throughout the world with the theme that the living conditions of women and children, particularly in underdeveloped areas, are far behind those in Russia. This organization has claimed a membership of over 200 million.

A number of other front organizations have been developed to reach and influence particular professional audiences. These include the World Federation of Teachers Unions, the International Association of Democratic Lawyers, the International Organization of Journalists, the International Medical Association for the Study of Living Conditions and Health, and the International Federation of Resistance Fighters. Add to this the phony "peace committees" in 47 countries, and one begins to have some idea of the use of organizational devices operating in behalf of Soviet objectives.

Increasingly, the Soviet Union has begun to concentrate on the trade policy as a means of disrupting the economies of largely one-crop, or one-product nations. Tin in

Malaya, cotton in Egypt, coffee in Brazil, and copper in Chile, are examples of commodities which are vulnerable to disruptive trade practices. In this respect, the Soviet Union, with much greater sophistication, is following in the footsteps of Hitler's Germany. The German tactic was to offer to buy all of a nation's principal export commodity—Rumanian wheat for example—at roughly twice the world market price. Hitler's finance minister would arrange a barter-cash deal, but payment was usually delayed. Once the wheat was in German storage bins, payment would either not be made at all, or only token payments would be made. The next year the Germans would come back to Rumania and demand all the export wheat available, at any price the Germans were willing to pay—aspirin tablets, bicycles, sewing machines—but at a rate about one-half the world market place. If the Rumanians protested that they hadn't even been paid for last year's crop, they were bluntly told that their year's crop was all still in storage, and available to be dumped on the world market at one-fourth the world price. Confronted with a Hobson's choice, the Rumanians capitulated. This is the kind of tactic which Khrushchev may have had in mind when he said "we'll bury you—in the field of trade, that is."

And a new dimension to the use of trade policy as a propaganda device has emerged with the serious bid by the Soviets to become the world's leading maritime power. There are two phases of this development: (1) Construction of a modern, powerful navy relying on submarines, cruisers, destroyers and auxiliary craft to penetrate the ocean seaways and support Soviet maritime power; (2) development of a large, modern, fast and, in the future, nuclear powered merchant marine to carry on Soviet trade in ships manned by personnel from the U.S.S.R.

The National Academy of Sciences recently prepared a special report on the U.S. merchant marine in comparison with the U.S.S.R., under the chairmanship of Admiral Radford. The substance of this report is frightening, and indicates how important an immediate change of policy with regard to our own merchant marine is, if we hope to have any merchant ships flying the U.S. flag at all in another 10 years. At the very time the Soviets are launching an aggressive, all-out drive to control the seas, our merchant shipping is declining, with 70 percent of our ships flying "flags of convenience" and manned by foreign crews. While still available for defense, it is doubtful how useful these ships would be. Our nuclear powered *Savannah* will help to offset some of the propaganda gains made by Soviet ships beginning to appear in the major parts of the world, but we will have a hard time competing after 1963 unless the recommendations of Admiral Radford's distinguished panel can be implemented beginning now.

We, with the greatest technology and productive capacity the world has ever seen, have tended to let the Communist bloc countries seize the initiative in areas of the world where we ought to be conducting an offensive for freedom unparalleled in human history. As one example, on March 8, 1955, Stewart Alsop reported in the New York Herald Tribune that the United States would launch the world's first artificial earth satellite in 2 years. His description was most accurate. Unfortunately, the Russians knew our plans and simply determined to score a propaganda victory throughout the world by launching a larger satellite first. Our immediate response was to overreact to this Russian coup. We simply did not equate a scientific development of our own with the impression it would have on other men's minds.

We must not underestimate the appeal of Soviet propaganda to the new nations in Asia and Africa. Their agents are dedicated, they think conceptually, and they never neglect their main objective; ultimate world control, by force if need be, by infiltration, subversion, and treachery if possible. It is difficult at best to explain the complicated devices of a free nation. We are not at liberty to fashion our every move in international affairs to conquer the world. We have never sought to do so. But we can perhaps develop an offensive policy to strengthen and enlarge the free world, to challenge communism everywhere—in the East, in Latin America, in Africa, in Asia. This suggests a new look at our "informational services," at our whole scheme of values in relation to the U.S.S.R. But we will not stop Communist aggression by waiting until they move, before we sluggishly respond.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mrs. ST. GEORGE. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD, study paper No. 17, "Civil Defense Policies," by Dr. Donald A. Melnick, Scientific Planning Associates:

CIVIL DEFENSE POLICIES

(By Donald A. Melnick, operations analyst, Scientific Planning Associates)

A. INTRODUCTION

1. Previous impressions

When I began writing this paper I had the impression that there was something lacking in the civil defense program. From the little I had known about questions of fallout and nuclear attack it seemed as if the measures that had been taken were surprisingly short of what was necessary. I had read articles which indicated that score of millions of the American people would be killed in a nuclear attack and that most of these lives could be saved with an adequate civil defense program. I had heard that fallout was a very serious problem for unprotected people but that a minimum amount of protection would save most of the people exposed to fallout who had not been killed as a result of blast and the thermal effects of nuclear weapons. I had also noted that virtually no fallout shelters were being built by either private people, industries, school systems or other branches of local and State governments, but I did not know about the complete failure of the Federal Government to do the same. Because I had received so little information through advertising media and brochures on the civil defense problem, I assumed that the Federal Government had decided that it was not a very great threat or else that nothing could be done about it.

When I decided to study this problem further, I assumed that I would quickly find out that I had misunderstood the problem. Somehow I felt that I would find out that I had miscalculated one of the aspects of the problem—possibly, that either the potential danger was much smaller than I had crudely estimated, or this danger was adequately taken care of by other measures.

However, in performing this study I soon discovered that my initial impressions were not only quite correct but that they understated the problem somewhat. Actually, there is marked agreement that our civil defense program is an important part of our total military posture; there is marked agreement that there is potential threat to the American people in case of nuclear attack in terms of scores of millions of people; there is marked agreement that quite inexpensive civil defense measures in terms of dollars per capita would potentially save a considerable number of lives; and furthermore, that in spite of the necessity for all these measures only an infinitesimal proportion of what must be done is being done.

Although the title of this paper is "Civil Defense Policies," the study is almost completely limited to the shelter and evacuation programs. Although there are other aspects to civilian defense, it is quite apparent that it is in these programs that the greatest needs lie. When the term "civil defense" is used in the text it usually refers exclusively or primarily to the shelter and evacuation programs.

2. Reasons for civil defense

There are three principal reasons for civil defense measures—i.e., evacuation and shelter measures.

1. They increase the margin of deterrence.
2. They make our diplomatic maneuvering more believable.
3. They save human lives.

It interesting to note that because of the first two reasons civil defense decreases the probability of nuclear war. It thereby saves more lives than it would in the event of war.

Deterrent Margin

There is much talk today of deterrence. There is fairly wide agreement that we owe whatever immunity from nuclear war that we presently have to the fact that in the event of nuclear attack our side will be able to destroy more of the enemy's forces than the enemy can destroy of our forces.

In the event of nuclear war a significant factor in our military strength would be the number of civilians surviving the initial attacks. Although it is probably true that the war will not be long enough for the marshaling of weapons production as in World War II, there are many other ways wherein civilian survival contributes to defense. Since there probably will not be time for a military draft, before the attack, the Armed Forces will have to be augmented from civilian and Reserve ranks after the attack. A civil population will be necessary for various functions to aid the Armed Forces, such as communications, transportation, and food preparation, not to speak of military morale. Besides, it is estimated that there would be sufficient capital remaining to provide significant maintenance functions for military equipment. This item alone is an important part of the total defense picture.

Believability of Our Diplomacy

Probably the most important contribution of civil defense is to make our worldwide diplomacy more believable. Primarily, we are able to maintain the status quo against Soviet attacks by the ultimate threat that we are willing to resort to nuclear war if necessary. This necessity could arise in any number of ways. Probably the most likely situation, however, is the Munich-type situation. This could easily happen, for example, over Berlin. The Soviet leaders could announce that they are closing down Western access to Berlin and that if any attempt were made on or part to reopen this access, they would strike with nuclear weapons against the homeland of the United States. The only thing keeping them from making such a

threat is their calculation that we would resist such an ultimatum.

Without civil defense measures, as many as 50 percent of the American population would be killed by a blast and fallout. In the latter part of this decade, close to 90 percent would be killed. It seems very likely that the Soviet leaders might miscalculate and decide that the American people would accept diplomatic defeat rather than to sustain such a high proportion of casualties.

It is quite apparent then that an appreciable reduction in the number of casualties from a nuclear attack would have the effect of reducing the chances for Soviet leaders to make such a miscalculation. As a direct result then, this reduction of casualties would decrease the chances of a nuclear war being started in this way.

Thus, by increasing our deterrent margin and our diplomatic believability, civil defense makes nuclear war less likely.

President Eisenhower was quite aware of this when he said:

"An effective civil defense is an important deterrent against attack on our country and thus helps preserve peace. In the event of an attack upon us, civil defense at once becomes one of our immediate reactions imperatively required for our Nation's survival."[1]

Saving Human Life

It is probably true that a civil defense program tends to save human lives primarily because it would decrease the probability of nuclear war. However, this program could very easily be justified on the sole basis that it would tend to save human lives in the unfortunate eventuality that a nuclear war actually did occur. Even the most optimistic admit that there is a small probability of nuclear war. Of course, some pessimists, aware of the tremendous danger of accidental war, estimate the probability of nuclear war in the next 10 years as high as 60 percent to 80 percent. Such accidents could be an irrational blunder on the part of Red China, or a technical accident such as might occur if a commander on either side went berserk and ordered the firing of a substantial number of weapons. It seems quite conservative to estimate the probability of nuclear war at 10 percent. A typical per capita investment for an adequate defense and evacuation program is $100 per person. Accepting the calculation that this may result in the saving of some 45 percent of the population who would otherwise be killed, the cost per life saved runs to only about $220. Even with the assumption of only a 10-percent risk of nuclear war, this appears to be a reasonable investment in human lives.

3. Practicability

A considerable amount of resistance to civil defense measures seems to lie in the fatalistic attitude that virtually everything and everybody would be destroyed in the case of a nuclear attack and that therefore civil defense measures are like flapping in the breeze. This is an extremely pessimistic point of view. Actually, in the case of an attack made at the present time, civilian casualties could be reduced to as little as 6 percent by the use of adequate shelter and evacuation measures. Such a small level of casualties could be achieved even in the latter part of this decade when perhaps 90 percent of the population would be killed if no civil defense measures were taken. Beside the human survivors there will be enough of other things left to make life worth living. It is estimated[2] that a sufficient quantity of capital would survive the attack so that in the first year after reorganization a per capita gross national product as high as in 1929 or 1940 is possible. There is obviously no rational justification for the fatalistic approach.

B. THE PROBLEM

A thermonuclear weapon will cause a considerable number of human casualties by the effects within the first few seconds after the blast. These casualties are caused primarily by the blast and thermal effects but partially by immediate radiation effects. While it is true that human beings are not easily damaged by the blast, the structures surrounding them are quite vulnerable. The blast effects are the same effects as are caused by any explosion; that is, a shock wave of air goes out from the explosion and it knocks down buildings, trees, and other structures in the vicinity. For example, a 1-megaton nuclear weapon will destroy brick apartment houses up to about 3 miles from the blast point. A 10-megaton weapon will destroy these buildings up to 7 miles. Obviously, most of the inhabitants of these brick apartment houses would be killed in the collapse of the structures.[3] For wood frame buildings the figures are 4 and 9 miles, respectively.[4]

The damage to persons in the open at the time of a nuclear explosion is primarily caused by the thermal effects. The nuclear blast resembles a tremendous ball of fire, literally "brighter than 1,000 suns". The clothes and the skin of a person that is not shaded from the ball of fire are burned. However; since it is expected that most people will seek shelter in the event of a nuclear explosion, this is probably not an important factor in causing death. The other effect of the blast is to set afire easily kindled material, such as curtains and trash. This in turn sets the surrounding buildings afire. These easily kindled materials are ignited as far as 9 miles from a 1-megaton burst and 25 miles from a 10-megaton burst.

There is a considerable amount of radiation which emanates from the bomb in the first few seconds, and this is quite lethal to humans. The lethal distance is only 1.5 or 2 miles for the 1-megaton and a 10-megaton burst, respectively. It will be noted that the distance for blast damage of structures is much larger than this, and therefore the damage by initial radiation is not important since it is expected that anybody who could be killed by this initial radiation would also be killed by the collapse of the structures surrounding him due to blast.

There is no question that if the enemy chooses to attack the civilian population a considerable number of deaths will be caused by these immediate effects of blast and thermal and initial radiation. However, since these reach out to 9 or possibly 25 miles from the biggest bombs that are presently available, they still affect a relatively small proportion of the country's population.

A problem of much more far-reaching importance is the so-called fallout. If a bomb is exploded close to the earth, a tremendous amount of earth is actually sucked up into the fireball and irradiated by the nuclear reaction within the burst. As a result, a considerable number of radioactive products result from the explosion. These are propelled into the atmosphere, are carried by the wind, and may later fall to the ground hundreds of miles from the point of explosion. As a result, people in areas very far from potential targets may be subjected to lethal doses of radiation from this fallout. At the end of 2 days a proportion approximating 50 percent of the land area of the United States would be covered by potentially lethal doses of fallout.[5] Therefore, the major proportion of the population would escape the immediate effects of the nuclear weapon only to die later, in the absence of a shelter, of the fallout effect.

Most of the casualties to the civilian population would occur from this fallout. Fortunately, however, fallout is by far the easiest to protect oneself against. It is quite expensive to build a shelter against blast, but if one escapes the blast effect, a rather simple shelter will go quite far toward protecting against all but the most concentrated fallout.

For the immediate future, fallout shelters are of the greatest importance. However, with the development of larger nuclear warheads and better means of delivery a large proportion of the population would be killed by the effects of blast, if no measures are taken. Therefore, in a few years blast shelters will be important.

C. THE CIVIL DEFENSE PROGRAM

Under the terms of Public Law 920 of the 81st Congress, Congress established the Federal Civil Defense Agency as an independent agency. Under the terms of this bill the responsibility for civil defense was vested primarily in the several States and their political subdivisions. The Federal Government was given the responsibility of providing coordination and guidance to the States. In considering this law the Senate Armed Services Committee declared that civil defense "is a problem of survival to be solved by the individual, the community and the State under the guidance and coordination of the Federal Government."[6]

In 1958 the FCDA was combined with the Office of Defense Mobilization to form the Office of Civil and Defense Mobilization.

In order to strengthen the civil defense program the National Plan for Civil Defense and Defense Mobilization was promulgated by the President in 1958. In this plan the responsibilities were shifted somewhat. Whereas in Public Law 920 the responsibility for civil defense was vested primarily in the States and subdivisions, in the national plan the Federal Government was given the primary responsibility for the direction and coordination of the total national effort. The State governments still retained the responsibility for the direction and coordination within the State.

In connection with this national plan the President directed the declaration of the national policy on shelters in July 1959. This national policy on shelters contained six points. The administration would provide (1) information and education programs to acquaint the people with the fallout hazard; (2) a survey of existing structures to assemble definite information on the capabilities of these structures to provide fallout shelters; (3) a research program to show how fallout shelters may be incorporated in existing as well as new buildings; (4) the construction of prototype shelters. An important role of the administration was contained in items 5 and 6. In these, the administration declared its policy to incorporate fallout shelters in new as well as existing Federal buildings. The purpose was to provide Federal example to stimulate State, local government and private investment for fallout shelters. In this national policy on shelters it was stated: "There will be no massive federally financed shelter construction program."

In spite of the President's intention to provide Federal example under point 6 of the policy, the Congress turned down the General Services Administration's request for additional funds for incorporating fallout shelters in all existing Federal buildings. GSA requested $2 million in fiscal 1960 to

provide fallout shelters in existing Federal buildings in order to set an example for both Government and industry. This request was denied by Congress in its entirety.

An insignificant number of shelters have been built by private individuals in their homes or by private parties in large buildings. A considerable amount of public apathy may be partially traced to the fact that the information and education program which is supposed to have inspired them to build fallout shelters has been nearly completely ineffective. The education program has consisted primarily of radio and television time. OCDM's budget for radio and TV for 2 years has been $871,400. Recognizing the urgency of the program, networks and local stations have donated time amounting to $57 million. Therefore, for every dollar of OCDM money, $65 worth of time was made available. In spite of this multiplication feature the public has not received enough information to make any impression, to acquaint them with the nature of the problem or its urgency, or to stir them to appreciable action.

Although the local civil defense program is not a part of the study, the writer received the impression that there is a marked lack of coordination and that local civil defense is completely spotty. The stockpiling of medical supplies and of strategic materials has gone ahead. It can be reported that the stockpiling of strategic materials has been practically completed and the stockpiling of medical supplies has made considerable progress.

D. DISCUSSION AND RECOMMENDATION

The achievement of an adequate civil defense program has as a prerequisite the congressional realization of the basic importance of such a program in the national defense picture. With this realization, the Federal responsibility should be increased, an adequate shelter program should be instituted, starting with a minimal shelter program, and a thoroughgoing attempt should be made to educate the public on the civil defense problem.

1. Federal responsibility

The present division of responsibility between the Federal Government on the one hand and State and local governments and private individuals on the other must be reinvestigated. Aside from the lack of congressional cooperation, the delegation of the principal burden to the State and local governments and to private individuals seems to be a major difficulty of the civil defense program. This delegation apparently arises from two factors. The first is that local government has an intrinsic role in civil defense. There are certain advantages in delegating the civil defense program to State and local governments. In the event of an attack the carrying out of the programs will have to be performed by the local authorities. Decisions will have to be made locally because the situation will vary from locality to locality. Besides, civil defense after an attack dovetails with the problem of reestablishing civil authority.

The second reason for the delegation to State and local governments, and furthermore to individuals, is historical. During the Second World War, and for that matter, in the early fifties, when the FCDA was first established, the number of civilian casualties expected in the case of attack would have been a small percentage of the entire civil population. In those times, therefore, it was partly a private or local matter as to whether steps should be taken to shelter the individual. That is, it made very little difference to a person in New York City whether a person in Dubuque protected himself against the enemy attack. This was of importance primarily to the person in Dubuque. However, in the sixties, the situation has changed very radically. The percentage of casualties which can be expected in the absence of civil defense measures is of the order of half or more of the population. As is pointed out earlier, the proportion of civil casualties expected is an important consideration in determining our total defense and diplomatic posture. Therefore, it is of grave importance now to citizens from New York as to whether his fellow citizens from Iowa are willing to take measures to protect themselves.

As pointed out in the first section, the ability of the country as a whole to survive a nuclear attack is an important factor in making a nuclear war less likely. There is no question then that this is a matter of national concern. If it were possible to delegate these powers to the individual or to the State and achieve satisfactory results, then there certainly would be no objection to the Federal Government's making the delegation. However, satisfactory results have not been obtained, and there is absolutely no reason to expect them in the future. And we should not consider that we have achieved satisfactory results until shelter has been provided for close to 100 percent of the population.

The writer has a strong tendency to feel that where possible it is a good policy to leave programs to State and local authorities, or to private initiative. However, there seems to be little justification for such a policy in this case.

Starting from a matter of principle, the national defense is traditionally a Federal concern. Any delegation then would be an exception to this principle. The wisdom of this principle is well illustrated in the infinitesimal success of the shelter program. It is not realistic to expect private citizens to evaluate the military, scientific, and geopolitical considerations necessary to decide whether to build a shelter or not. This is clearly a job for experts. As a practical matter, it seems psychologically impossible for people to take personal measures to prepare for war. In doing this they must admit to themselves in a direct way the possibility of their being subjected to the horrors of war. It is much easier for them to participate in impersonal decisions about war such as buying guns and airplanes.

In short, leaving the decision to build a shelter to a private individual makes as much sense as asking him whether to build an aircraft carrier or not. Achieving a shelter program by Federal example may seem like a good idea in a bargain-basement sense. It actually makes as much sense as trying to achieve a nationwide Nike defense system by building merely a Federal example system for Washington, D.C., or as trying to buy SAC bombers by taking up a private collection.

There must be a realization that civil defense is an intrinsic part of the total defense picture. Therefore, the Federal Government should assume the primary responsibility for the execution of the civil defense program. The OCDM should be given the authority concomitant with the responsibility. It should have the power to order its goals accomplished where necessary. For example, it should have the power to order the practice evacuation mentioned later. As part of that increased responsibility, the Federal Government must become the primary source of funds. These should be used for fully supporting or matching funds for its programs. Since it is important for the local governments, who in the event of emergency must exercise the civil defense authority, to have experience at exercising the authority, the OCDM should leave as much authority to them as possible. However, this should only be done where it does not interfere with the accomplishment of the OCDM's programs.

2. Shelter program

(a) Future Goal

The Federal Government should begin a program slated to achieve, later in this decade, an extensive system of blast shelters to house about 50 percent of the population and an adequate system of fallout shelters for the remainder of the population. It is estimated[7] that such a program could decrease the percentage of casualties from the 90 percent that would occur if no protective measures were taken to 45 percent in case of short warning. In case of several hours' warning this could be decreased somewhat more. This program is very expensive, costing perhaps $700 per person. However, a program of this magnitude is absolutely essential for the success of the entire defense program of the United States. It is inconceivable that an enemy would believe us prepared to engage in nuclear war if he knew that 90 percent of our population would be destroyed in such a conflict.

(b) Immediate Minimal Shelter

Meanwhile, a minimum-cost makeshift program of fallout shelters must be instituted. It would be possible to provide fallout shelters for virtually 100 percent of the population on a minimum basis.

For the next few years, it seems reasonable to give up two unrealistic hopes. The first is that private individuals, or local governments, will build enough shelters to protect most of the population. The second is that the Federal Government will appropriate enough money for really adequate shelters. Therefore, a low-cost, minimum shelter program ought to be started immediately that is completely federally financed. The primary idea of this minimum shelter would be to save lives, rather than to make people comfortable while they are being protected. The shelter OCDM suggests for a private family is quite lavish.[8] It provides a bed for each person and an area of 10 square feet per person, and suggested supplies for 14 days.

For a minimal shelter, these features are quite extravagant. A shelter could be built quite inexpensively by (1) putting it in the basements of buildings already in existence, such as schools and churches and other buildings; (2) by having the material ready for shielding the ceiling, but not installed; (3) by providing only enough food for 2 days and providing a rather uninteresting diet for 10 cents daily per person; (4) by being satisfied with shielding to cut down the radiation to only one one-hundredth rather than the one two-hundredths which is contemplated by OCDM; (5) by providing a very uncomfortable 5 square feet per person.

These contemplated shelters would be put in the basement of schools, churches, and other public buildings. The reason for using schools and churches is that these are well distributed in all areas of the country; no residence is very far from a school or church. Besides, at least for schools, people are very likely to know the location of the nearest one to their houses.

A normal basement with an unprotected ceiling cuts the radiation exposure to fallout to less than one-seventh of that received by an unsheltered person. A layer of 25 pounds per square foot (which amounts to a layer of 3.3 inches of earth or 2.2 inches of cement block) has the effect of cutting the radiation to one-half.[9] A layer of 100 pounds per square foot would cut the radiation even further, to one-sixteenth.

Ideally, a protective layer would be added to the ceiling during peacetime. However, in addition to the fallout protection, the school or other building would meanwhile have to be used for normal purposes. Therefore, it would have to be reinforced to take

[9] U.S. Atomic Energy Commission, "The Effects of Nuclear Weapons," June 1957, p. 402.

both the shielding of, say, 100 pounds per square foot plus the normal load, which is usually rated at 100 pounds per square foot. This reinforcement would involve some expense. The proposed makeshift shelter contemplates adding the shielding after the warning, and, if necessary, even after the burst has actually taken place.

Sandbags would be stockpiled in the basement, together with inexpensive racks. Hooks would be provided in the ceiling. These would be the only things installed before the attack.

The sandbag would be hung from the ceiling on these inexpensive racks. It is probably optimal to provide two or three layers of racks. In this way, a thin layer of sandbags, say, about 25 pounds per square foot (averaging 4 inches thick), could be put in in a very short time. Then with this somewhat better protection of the first layer, a thicker layer or layers could be added later. Of course, if there are any windows in the basement, these should be covered immediately with sandbags.

Since the first floor is probably reinforced to support a load of 100 pounds per square foot, such a weight of shielding could now be added to the basement ceiling since the first floor would not be in use. This layer of sandbags would average about 16 inches thick, and would cut the radiation to one-sixteenth. The effect of the sandbags and the protection of the earth surrounding the basement should be to reduce the dosage to approximately one-hundredth of the dose which would be received by an unsheltered person. The shelters suggested by the OCDM reduce the radiation to one two-hundredths [10] of the dose received by an unsheltered person. Actually, the area of the country where a person exposed to one two-hundredths would survive and a person exposed to one one-hundredth would die, is almost negligible.[11]

A minimum amount of space would be provided for each occupant—perhaps only 5 square feet per person. This is the crowding that was accomplished in overnight shelters in Europe. This is somewhat uncomfortable and would require sleeping in shifts.

Minimal food supplies for 2 days would be supplied. One pound of flaxored sugar, plus 75 grams of an inexpensive source of protein would be provided per person per day, giving about 2,000 calories per day. This would cost only about 10 cents per person per day, but would be an adequate daily ration.

One cheap transistor radio would be provided for the entire shelter and an outside aerial would have to be installed during peacetime to pick up Conelrad stations. Since this is a minimal shelter, an insignificant amount of medical supplies would have to be furnished. It seems more important to prevent people from exposure to radiation rather than to repair the damage after it has been done. Reading material could be easily supplied in the form of old magazines.

It is necessary to provide a small amount of light. In order to cut down the necessity for replacing aging batteries during peacetime, flashlight batteries would not be provided, but a few candles and matches would be included. About 10 candles per 100 persons should be adequate.

Reading material could be supplied in the form of old magazines. In addition to the regular reading material, instructions would be provided which concern the operation of the shelter. This would include information on fallout, the theory of a shelter, rules for the government of the shelter, and finally, a shopping list to be used after the food runs out in 2 days.

After the 2 days' worth of supplies is exhausted either evacuation to a safer area will be made, or an expedition will be sent out for supplies. The evacuation will be made if there is a nearby area relatively free of fallout. If there is no evacuation, members of a supplies expedition would be chosen by lot from among the more vigorous occupants. They would, of course, be instructed to run at top speed and to have the list of supplies carefully in mind before they leave the shelter. By this time, the fallout that they would receive would be only 1 percent of the first hour intensity.

One small pick would be provided in each shelter, and a stockpile of bags. With the pick the people could chop through the basement wall and dig a tunnel in the earth with their hands. They could fill the bags with dirt. They could use these bags of dirt for filling the overhead racks if they are not already filled, and also for building vertical partitions in the basement. Vertical partitions will cut down the radiation coming obliquely through the ceiling.

It would be too expensive to provide blankets. It is expected that few people would bring sufficient clothing and blankets for comfort during the winter months. However, they could probably manage to be reasonably comfortable by using each other for warmth, if necessary.

By means of such a crude shelter, the radiation which a person would receive would be markedly less than that received by an unsheltered person. If the entire ceiling shielding had been put up before the arrival of the fallout, persons in the shelter would receive only one one-hundredths of the unshetered dose. If the ceiling shielding is not put up until after a nearby burst, the occupants would receive approximately another one one-hundredths of the cumlative dose received by an unsheltered person. The dosage received by those going outside after 2 days to procure supplies is fairly insignificant.

The writer's estimate indicates that shelter could be provided for no more than 50 cents per person. In some cases the cost would be somewhat less, because of the protection inherent in the structure of the building in which the shelter is located. For example, the basement of a heavily constructed apartment building, with concrete floors, gives so much natural protection tha it is possible to do entirely without the sandbag ceiling protection provided for other shelters.

It is apparent then that fallout shelters can be provided for the most vulnerable 80 percent of the population, for a total cost of less than $70 million. This program must be instituted at once.

3. Evacuation

Very little mention has been made in this report of evacuation, since the evacuation program, though leaving much to be desired, is considerably more successful than the shelter program. However, it is quite essential that the American people be acquainted with the evacuation procedure so that an evacuation would be more effective if it were necessary. An immediate nationwide evacuation test should be ordered. The rules should be carefully publicized in advance, and the evacuation called for a time which is not specifically announced in advance, preferably during the rush hours on a weekday. In spite of doubts to the contrary, this writer is convinced that a city like Washington could evacuate more than 200,000 people per hour if an evacuation were carefully practiced.

4. Education

The present education program is so insignificant in its scope that it is probably contributing to public apathy. Since the average citizen hears so little of civil defense needs, he probably says to himself, "The danger must not be nearly so great as some of my pessimistic friends seem to think; otherwise the Government would make some strong efforts to alert me to these dangers." The education program ought to be enlarged whether or not the Government institutes the minimal shelter program outlined above. However, if the program is not instituted the educational program ought to be increased manyfold. As mentioned before, OCDM spent less than $1 million on TV and radio time in the last 2 years, although the stations and networks contributed some $57 million of time. The writer has found from questioning many alert citizens that even this larger amount of time made virtually no impression on the public. It is time for the education program to stop being a poor relation, having virtually no funds of its own and depending primarily on handouts from the stations and networks. Sufficient funds should be appropriated for a fivefold increase in the use of the radio-TV medium. Assuming the contribution from the stations remains constant, this would require $228 million per 2 years, or $114 million per year.

In addition, short, digest-style articles should appear frequently in magazines, either as paid or unpaid advertisements, and newspaper length articles should be inserted in newspapers. Most of the booklets presently in use are too long to be read by the general public. Short, readable booklets, each on a small aspect of civil defense, must be written and sent frequently to all households.

It is time for the Federal Government to play a commanding role in this important aspect of national defense. The recommended steps, small but vital, should be taken immediately lest it be said of the American people, "For want of a nail, the battle was lost."

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. JACKSON. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD study papers Nos. 19 and 20, "Soviet Subversive Forces," by Ralph de Toledano, author, lecturer, and syndicated columnist; and "Soviet Strategy and Free World Defense," by Prof. Gerhart Niemeyer, Notre Dame:

SOVIET SUBVERSIVE FORCES

(By Ralph de Toledano, author, lecturer, and syndicated columnist)

If the missile age seems to have eliminated the problem of Communist subversion, pear like horse-and-buggy concepts of civil democracies of Asia and Africa—and a closer look at the United States—will demonstrate the fallacy of this belief. All the revolutionary technology of the nuclear era has not made obsolescent what to some may appear like horse and buggy concepts of civil war and civil disturbance. The recent riots in Japan, financed and directed by trained Soviet operatives, are proof enough that the Soviet Union and Peiping still make full use of them.

The awesome destructiveness of present-day arsenals have, in fact, made Communist subversion one of the main weapons of the Soviet system. Our armies and navies, our air forces—these are vitally necessary in the elaborate process of stalemate which has become the function of Western and Soviet armed might. The use of deterrent power, as a means of holding within bounds the adventurism of Premiers Khrushchev and Mao Tse-tung, must be a basic element in the strategy of the West. But this Nation is lost if it does not understand, assimilate, and on occasion employ the methodology of applied subversion.

Americans do not understand this methodology—and in fact they resent those who devote their attention to the problem. During the U–2 episode, there were many who felt it somehow beneath America's dignity to take necessary countermeasures when faced by a closed society with a vast espionage and subversive network at its disposal. When the State Department, employing its usual understatement, noted that there were 30,000 trained Soviet agents at loose in the world, incredulity blossomed on some faces. (In fact, there are some 5,000 professional Communist agents in the United States alone.)

But to anyone whose reading of history extends beyond elementary school texts, Civil War and subversion as we know them have been endemic since the overthrow of England's Charles I. Communist revolutionists did not invent the techniques so successful today. Cromwell's seizure of power and the French Revolution, by their controlled interaction of troops and mobs, were brothers under the slogans of Lenin's seizure of the Constituent Assembly. The 18th and 19th centuries were marked by a series of internal upheavals linked by a worldwide Weltanschauung which in 1919 concretized itself in the Communist International. Today, civil war is all about us in a thousand manifestations of subversion and conspiracy, of stupid aquiescence and cynical resignation. It is the toy of millionaires and the self-abuse of intellectuals.

The H-bomb and the ICBM are, in the active sense, significant and commanding only insofar as they are not used. The arsenal of nuclear weapons serves a phychological rather than a military function. For the Soviets, it is designed to destroy the will to resist in the free world, to make American power put its head on the block and ask for a coup de grace which the Soviets cannot deliver.

Nuclear weapons serve to stir the Gargantuan mind and picayune understanding of a Bertrand Russell, who urges us to disarm unilaterally and to accept Communist domination rather than what he chooses to call the end of the human race—and millions of people throughout the world, of lesser comprehension, follow him. They encourage the outbursts of a Cyrus Eaton who rattles his dollars and rushes to Paris to kiss Premier Khrushchev's ring. Otherwise sane individuals support the insanity of the Committee for a Sane Nuclear Policy—and at every turn joggle the arm of our Government as it attempts to face Soviet propaganda on equal terms.

This is the basic fact: Communist strategists know what we do not: that the secret weapon of any state when confronted by internal subversion and disturbance is the will to resist.

It is a prime axiom that no revolution in modern history has succeeded without a concomitant destruction of the will to resist in legitimate government. There is much talk of belly-communism—as if hunger were the only source of revolutionary discontent—which derives from a complete falsification of history and facts. The semi-anarchy in Tokyo has little relationship to economic motives, and it has persisted because the government in office refused to take stern measures against it. The French Revolution, going back to history, is another excellent example.

Generations of school children, since the days of William Wordsworth, have held the passionate belief that hunger and oppression led the mobs which guillotined Louis XVI and Marie Antoinette. But the meticulous and inspired reporting of Alexis de Tocqueville (in "La Révolution et l'Ancien Régime"), ignored by the popularizers, shows conclusively that (1) the power of the monarchy was undermined first by the nobles and a rising middle class, and (2) that France was going through a period of great prosperity when sansculottism swept in, and the Bastille (presumably crowded with political prisoners) was literally empty and had been for some time when its walls were "stormed." These points, incidentally, are supported by the eyewitness accounts of Arthur Young and the British historian Lecky.

We forget that Lenin himself described the Kerensky regime which preceded his as the "freest government in the world"—whereas desperate heroism, hunger, ideological fervor, and the desire for freedom could not prevail in Hungary as long as the government's will resisted. The successful revolutionary assault, therefore, is not on the government but on the national will. Fidel Castro won few, if any battles, but he triumphed when the Batista dictatorship lost its nerve.

The immediate function of any Communist Party, therefore, is not in the violent overthrow of the government—in the limited legal sense demanded by the Supreme Court—but in the sapping of allegiances, the dissemination of confusion, the instillment of fear, the poisoning of faith in our institutions, in ourselves, in our God. Its aim is to halt the civil peristalsis. The Communist Party is a paramilitary force, true, but its ammunition is far subtler than bullets and hand grenades.

With this in mind, it becomes important to consider first the nature of the Communist who makes up this paramilitary force. For the sake of precision, let me refer to him as the Bolshevik. The Bolshevik is not a "liberal in a hurry." He is a Marxist only to this extent—that he accepts a general theory of the organization of the state. "Scientific socialism," the totality of a regimented world structure, certain outward patterns and certain semantic stridencies—all these he has incorporated into his thinking.

But the ancestors of Bolshevism are not Karl Marx and Friedrich Engels. They are two men, one hardly known to the West, Bakunin and Nechaev—two faces merged into the Janus like configuration of Leninism and Stalinism. There is no facet of the Communist world revolution which does not reflect the baleful light of these two Messianic Russians—one self-deluded, the other so obsessively evil that he served as a model for Dostoevski's "The Possessed." The Bolshevik practioners, piling faggots on the world's trouble spots, may think that they were suckled on the Communist Manifesto, but they drew their milk from a forgotten little pamphlet, 2,500 words in all. It is called "Catechism of a Revolutionist"; it was written by Bakunin and Nechaev; this is how it begins:

"The revolutionist is a doomed man. He has no personal interests, no affairs, sentiments, attachments, property, not even a name of his own. Everything in him is absorbed by one exclusive interest, one thought, one passion—the revolution."

The Byronic concept of the revolutionist—or its more intellectualized counterpart in a man like André Malraux—is cast aside. So too is the doctrinaire conformity of the orthodox Marxist. Morals, the accoutrements of culture, the softening decencies of everyday association no longer exist. The revolutionist of the Bakunin-Nechaev school—and therefore the Leninist school—makes a pact with the revolution which prepares him for torture or death (or, far more bitter, ridicule). His enemy is established society, a society he categorizes neatly. Some members of the world as we know it are to be condemned to death and ruthlessly liquidated. Those of the ruling class who contribute to the revolutionary spirit by their acts of brutality are to be encouraged and preserved—which may account for the recent secret rapprochement between General Trujillo and Fidel Castro. They will goad the "inert mass" into unreasoning violence. And, the "Catechism" adds:

"One may conspire with the liberals in accordance with their programs, making believe that one follows them blindly, and at the same time one should take hold of them, get possession of all their secrets, compromise them to the utmost * * * use them as instruments for stirring up disturbances in the state."

The Bakuninist-Nechaevist has a basic contempt for the "doctrinaires" who spend their time "talking idly in groups and on paper." The contempt we have seen in the utterances of Joseph Stalin—and latterly in those Nikita Khrushchev—which utterly disregard the Marxist dialectic. Catechism of the Revolutionist argues that these "Talmudic" debaters of revolution—the anti-Semitism was not unintentional—are to be tugged into the area of force and violence which will destroy most of them but serve as "real revolutionary training" for a hard core which will break loose and join the true faith. Agents in what Harold Laski called the "organization of catastrophe" and makers of despair, these revolutionists are urged to seek out the "bold world of bandits" and to combine with it. Have we forgotten that Stalin, the master technician of subversion, robbed banks?

Here then is the iron law which binds the Bolshevik, reiterated many decades later by J. Peters in his "Manual of Organization," a Communist vade mecum, summed up poetically by Bertold Brecht in that chillingly luminous line, "Sink into the mud, embrace the butcher, but change the world," and chanted in tender ditty by German Communists as the Weimar Republic sank into its own morasses: "Grease the guillotine with the fat of tyrants, blood, blood, blood must flow."

If we are to understand what faces the free world, we must first come to grips with this Leninist concept of the revolutionary. Not every conspirator or subversive is cut from the same heroic pattern or shares the same determination. There are time servers and bureaucrats in plenty, all helping to make up the corpus of international communism. There are weak men and scoundrels and men of soul who defect to freedom. But the weak and the dishonest do not command the paramilitary forces of communism—they are merely a part of them. If military victory were a simple function of unanimous courage, what wars would be won?

We once thought of the Communist as an unkempt type futilely debating in a Union Square cafeteria. It would be an equally serious mistake to accept the stereotype of the steely eye and the commissar manner. Alger Hiss was, and is, one of the prototypes of the Bolshevik. Yet on the surface and in ordinary discourse, he was a man of somewhat mincing step and manner and, behind the charm, a crashing bore. Richard Sorge, perhaps the most effective espionage agent turned out by the Red Army's Fourth Bureau, was hard drinking and hard lusting, yet he plundered the secrets of the very Nazis and Japanese whose whiskey he drank and whose wives he seduced. The leaders of the American Communist Party seem

flabby, even a little fey—yet the incidence of combat decorations among them is startlingly high.

It is from this diversity that communism fills its table of organization. Each comrade has his rank and his assigned role. Each comrade delivers himself to a military discipline. Thousands of intellectuals, to the lecture platform born, in 1948 accepted party orders to join the campaign of industrial concentration, a process of colonization and infiltration of the Nation's key plants and factories.

"Plant you now, dig you later," the Communist Party said. One man held in reserve until the calibrated moment can do more damage than a dozen rioting mobs, just as a single sniper can immobilize a company of troops.

A strategic minority can achieve much with little—on somewhat the same principle. Neither theory is original with the Communists, nor is it exclusively theirs. Walter Reuther, with less than a hundred men, employed the theory of the strategic minority in the 1930's. With this fulcrum he broke management resistance to the UAW and launched a powerful mass union.

Size, therefore, is secondary in Communist organization. When the revolutionary situation comes about, sergeants become colonels as new recruits are trained by the Bolshevik cadres. For those who find the size of today's Communist Party a cause for encouragement, let it be recalled that Lenin disapproved of mass membership in the precombat stages, and that he developed the technique of the continuing purge to keep the party vigorous. Organization must fit the situation, and in the CPUSA that organization is triangular.

There are, then, three Communist Parties in this country, directed by parallel chains of command from Moscow, the Soviet Embassy, and a highly mobile field headquarters. These three parties are: The so-called open party, the underground party, and the reserve or sleeper apparatus. (I have not listed any of the dozen apparatuses, working in tandam, which carry out the Soviet Union's espionage missions. These fall into the category of military intelligence and are directed by the Red army, the secret police, the Comintern, or the torture brigades known as Smersh.)

Of these three parties, the "open party" is the least important. It is made up of the expendables, the old hacks, the swing men of the front groups, the shouters and debaters. It has a double mission: To draw fire and to bring in the recruits. Its membership is estimated at 7,000 to 10,000.

The underground party is organized on Bakuninist lines, concretized by one B. Vassiliev in 1931, under the title "Organizational Problems in Underground Revolutionary Work." This Communist outline runs to five pages. It merits serious study. Vassiliev directed:

"In proportion as the legal apparatus of the party is liquidated, the directing functions will inevitably require a regrouping of party forces and the reorganization of the party apparatus. This reconstruction of the work will pass more and more to the illegal apparatus."

This has been going on, carefully and methodically, since the inception of the cold war. The underground party has been split up into several thousand fragments, the base being a cell of no more than 10, but usually five, members. Maximum security is maintained in liaison between cell, section, district, and national leaders. There is frequent use of couriers—telephones are banned—with the timehonored use of "cutouts" to evade discovery. The party's financial structure has been overhauled to make the millions of dollars previously invested in legitimate enterprises more easily available. Caches of money—one of about half-a-million dollars—are kept.

Each member of the underground party operates like a soldier behind enemy lines. The more important comrades are provided with a false identity, false social security cards, and a false driver's license. For the top echelons, party doctors are available to change the color of hair, shape of eyebrows, size of nose. In Vassiliev's detailed instructions, it was mandatory "(a) to find a building for storing party archives; (b) to organize an illegal printing plant in which it would be possible to print the party organ in case of suppression and closing of the legal party papers and journals; (c) to form an apparatus for distributing illegal party literature; (d) to prepare a definite group of leading party activists to pass into illegality; (e) to prepare addresses and houses for illegal correspondence, for secret sessions of the leading party organs and also for housing the illegal party activists and for conferences between them and the workers who continue to be on a legal footing; (f) to prepare a minimum number of workers who understand the elementary rules of the technique of underground work."

Every one of these organizational plans is now operational. Combat veterans in the party have been organized into hard-hitting flying squads for use in riot work. Beyond this, the Communists have set up a Red equivalent of the underground railroads which existed prior to the War Between the States. The policy of "industrial concentration" has put more than 75 percent of the underground party's mobile effectives into plants and factories where they can mold trade-union policy now and sabotage by slowdowns and flash strikes in times of international crisis. Today, they have successfully infiltrated the largest local in the United Auto Workers union, and have begun the slow recapture of other unions. Less muscular troops have been carefully planted in everything from Parent-Teacher organizations to the grassroots echelons of legitimate political parties—and this includes the Republican Party. For the first time in a decade, spheres of influence have been reestablished in the Congress of the United States.

The third grouping of Communists is the most dangerous and the most potent. I refer to the "reserve" or "sleeper" apparatus. It is made up of people who have never joined a Communist front or identified themselves with a secret party cell. Record of the membership is kept in Moscow, and an approach to one of them may not be made for months or years. The member of the reserve remains on tap for one great assignment which exposes him, or for the small, subtle undermining of the will to resist of the nation.

There is another function of the sleeper apparatus, effective but beyond the reach of counter-intelligence. It operated silently during the Hiss case when—from the bars of Wall Street clubs to the comfortable reaches of Park Avenue—its poison dripped down every day and in every way, never defending treason but always besmirching those who exposed it. Editors and editorial writers on great newspapers, commentators, artists, and entertainers—those responsible for the propaganda fallout which deforms the minds and thoughts of people in these terrible times—are included in the sleeper—part of the three-way drive to destroy America.

This is the paramilitary organism which threatens us. Seizure of power is its ultimate goal, but not by any frontal attack. The civil war to which it is directed has been going on for years; and, despite our smug complacencies, its victories have been considerable and steady. Let me enumerate:

1. In the past 4 years, anti-Communists in this country have been systematically discredited and destroyed. With wise looks and smart sayings, those with specialized knowledge have been driven out of the marketplace of ideas. By innuendo, they find themselves deprived of standing in the intellectual community. They are accused of being hysterical, of seeing Communists under beds, of having lost a sense of proportion. And in time, they are elbowed out of the scholarly projects, the entertainment field, the bookstores. Foundations, which control so much of the Nation's intellectual life, shun them.

This is not accident. It is all planned—the work of the sleeper, but never sleeping, apparatus—and in most cases those who carry out the plan do not know that they are being manipulated.

2. Communists and pro-Communists who were painstakingly forced out of positions of influence in the mass media and the field of communications are returning. They are back on the networks, in Hollywood, in the publishing houses. They are strong enough to keep the paperbook field relatively clean of anti-Communist material. They are back in the teaching profession. Even convicted traitors—like Alger Hiss—are now being renovated by such publications as the Saturday Review.

3. At every point of vulnerability, campaigns are being mounted and are meeting with increasing success: Stop nuclear testing, with or without adequate safeguards; recognize Red China, however it may open the way for Communist domination of the critically important oversea Chinese. Lower barriers on trade with Iron Curtain countries, even if it means stengthening their war potential. Curb the FBI, whatever the cost to internal security. Abolish congressional investigation of subversion. Rip away all forms of Government secrecy, legitimate or not, in the name of press freedom. And most of all, let's not be beastly to the Russians; turn the other cheek.

4. Coincident with these campaigns, voices urge the superiority of the Soviet system—its science, its education, its armaments, even its creaking productive capacity. At every hand so-called experts loudly deplore presumed American inadequacies—till the average citizen believes that this Nation is hopelessly weak and unable to withstand the Communist onslaught. In this context, Bertrand Russell's plea that we surrender begins to make sense.

This is not to imply that every man who raises his voice in behalf of these causes is broadcasting on a Moscow wavelength. No one asks for a nation of tub thumpers. But the fact remains that the agitation over issues which should find unanimity—at least in principle—among the American people lends credence to those who say we cannot stand up to the Soviet subversive and psychological war.

Irresponsible and purely partisan attacks on the President and on the American posture are as much a manifestation of the civil war as the drilling squads of underground party activists. Those squads exist, trained in the use of baseball bats, pickets, sticks, hatpins, and the rest of the close-order drill of riot duty. But they are used seldom—Tokyo is one example, the Peekskill riots over Paul Robeson another. When the order comes to put them into the field, the will to resist has been crushed, the true battle is over, and they become the end phase of a long struggle. The Bastille is already empty.

Civil war and the violent seizure of power are easy to understand. The will to resist is intangible. Once destroyed it may never be recreated. Not all the nuclear weapons, not all the brilliant strategic plans, not all the genius of production and logistics can prevail—once that will is gone.

This is what the Communists understand.

This is what they mean by civil war, by internal subversion.

Karl Marx once wrote: "Neither a nation nor a woman can be forgiven for the unguarded hour in which a chance comer has seized the opportunity for an act of rape." Can there be less forgiveness for those who watch the rapist at work?

Soviet Strategy and Free World Defense

(By Gerhart Niemeyer, University of Notre Dame)

BASIC COMMUNIST ASSUMPTIONS

It is often said that the Communist objective is world conquest. This is true, but in a more fundamental sense than is usually implied. Communists are not people who simply decided one day to conquer the world, and presumably could just as easily drop this objective if it does not attract them any longer. What is called the basic Communist objective is part and parcel of the entire world view in which the Communists see man, society, and history.

Communists believe that the world, as a result of inescapable social and historical laws, is embroiled in an all-pervading and irreconcilable struggle between two hostile "camps": one consisting of the forces of the future age of socialism, the other of the forces of the present age of capitalism. This struggle, rooted in the hostility between social classes, will go on for a protracted period of unknown duration, but will surely end with the total victory of the forces of the future over those of the present. Of those forces the Communists pretend to be the leaders, and the Soviet Union the foremost instrument of power.

Communists therefore assume that in view of this allpervading struggle, men are not now united by anything like common truth, common morality, or common good. Society is essentially a battlefield, the only laws being those of the class struggle. Thus, for Communists, struggle is a condition into which they were born and which they expect to continue for an indefinite time to come. Only a total victory of the Communist forces—a victory of which they do not have the slightest doubt—can put an end to this struggle. As a result of a Communist total victory, mankind supposedly would be redeemed from all the ancient curses of human existence, particularly war, oppressive power, and want. Communists believe that their victory is assured by the laws of history, and that it is the only hope for mankind.

The so-called objective of world conquest is therefore not simply a chosen goal of communism, but the logic of the entire world situation as seen by dialectical materialism. Before Communists could abandon that goal, they would have to give up their world view, a process which is rarely a success in an individual person and well-nigh impossible in a society in which that world view is authoritatively maintained.

BASIC PRINCIPLES OF COMMUNIST STRATEGY

Communists, assuming themselves to be engaged in a life-long struggle with a definite and holepful end in view, think above all in terms of strategy. The most fundamental assumption of Communist strategy is that the party is carrying on a power struggle from a position of weakness. The forces of the present age—that is, the forces contending for capitalist society—are supposedly far stronger than those of the future, Socialist, age. This is true even when and where Communists have seized the power of government. Communist strategy has from the beginning focused on the problem of how to destroy the power of a vastly stronger class enemy.

The main principles of this strategy were first conceived by Lenin, further articulated by Stalin, and later expressed in the most consistent form by Mao Tse Tung. Starting from the concept of a small, compact, tightly disciplined party which always would be in the minority, it operates along three lines: (a) The power momentum of large masses led and manipulated by the Communist Party; (b) the dissolution of the bonds of public order among the Communists' enemies; and (c) the multiplier effect of organizational key positions.

Unlike the strategic concepts developed by Blanqui and Tkachev, Lenin always insisted that Communists could not succeeed unless they managed to move and control large masses. They count on being able to mobilize a considerable part of the masses under Communist leadership, although under non-Communist slogans and appeals (e.g., land for the peasants, nationalism, democracy). Other masses they seek to neutralize, that is, to move to indifference with respect to the struggle, thus denying their support to the enemy. These principles are formulated in the concept of "alliances" and "neutralization" which first emerge in Lenin's "Two Tactics."

The Communist concept of "revolutionary situation" focuses on the kind of general crisis which would loosen the bonds of allegiance, loyalty, and order to such an extent that a minority can prevail against an enemy of otherwise superior strength. "Only when the 'lower classes' do not want the old and when the 'upper classes' cannot continue in the old way, then only can revolution conquer" (Lenin, "Left-Wing Communism"). In other words, troops, police, public institutions, laws, and funds are all of no avail when two things coincide: Panicky ineptness on the part of the rules, and lack of confidence and discipline on the part of the masses. A power structure is never stronger than the immaterial bonds holding it together. When the will to rule is gone and the will to obey weakened, power disintegrates.

The multiplier effect of organizational key positions is envisaged in the concept of "transmission belts," organizations existing for ordinary, everyday needs and ends in which relatively small cadres of Communists could wield power over vast parts of society. Without changing the raison d'être of these organizations and their appeal to the membership, the Communists in key positions would use these structures to further the strategic interests of the party.

THE USE OF FORCE

Communists believe that the class struggle can neither be fought nor won except by force. In keeping with their basic assumption that theirs is a position of weakness, however, they have used force sparingly, though systematically. Above all, force is never used apart from political persuasion and organization. A direct frontal attack on enemy positions by force is not in the Communist concept, which is based on the axiom of the adverse ratio of power. The strategy is one of loosening, undermining, infiltrating the enemy's power structure, and force is only one among several factors brought to bear on the loyalties of men to their present society and their present leaders. As Mao Tse Tung put it: "War cannot for a single moment be separated from politics. Any attitude * * * to belittle politics, to isolate war from politics, and to become advocates of 'war is everything,' is erroneous and must be corrected. * * * A gigantic national revolutionary war as ours cannot succeed without universal and thoroughgoing political mobilization" ("The Protracted War").

This principle has clearly guided Soviet practice. The Soviets have seldom sought a direct decision mainly by force. In most cases, they have employed force for its terror (threat) effect. Especially against other nations, the Soviets have preferred to use pressure for which military force provided merely the background. While brandishing a sword, they have nevertheless played on their victims' fears, reason, and moral convictions, and have obtained something like "voluntary" surrender based on such motives as resignation to the inevitable, assent to the values invoked by Communists, and fear of dire consequences.

It should also be remembered that Communist leaders acquire certain habits in the long school of internecine party struggles through which they have to pass before they get to the top. In these struggles, force is invariably used only to cap a victory already won by political means. First the opponent is maneuvered onto the wrong side of a political controversy while the ideological ground is prepared on which he can be made to stumble. By a series of maneuvers, the impression of an irresistible momentum is created, which causes the weight of numbers to shift against him. An open debate is used to force him into an admission of his error. Then, only then, does force enter into the picture. These tactics have only superficially changed since Stalin's death.

One must assume that the habits of these methods condition Communist leaders also in cold war operations, although in international relations, the disposal of an army-in-being introduces an instrument of force which is not available in party conflicts. Khrushchev's performance just before and after the abortive summit conference seemed to be an almost direct application of tactical principles learned in fighting party rivals. He prepared the ideological ground, he thought he had Eisenhower on the wrong side of a controversy, and his only miscalculation was to assume that the world would or could be united in indignation against American aggressiveness.

In general, it would stand to reason that the Soviets would incline not to commit their armed strength to expenditure in a head-on clash, but rather to use it as if it were a bank reserve. In other words, armed power would for them be more useful as an untouchable reserve enabling them to handle vastly more capital of political power than bayonets would yield if engaged directly.

THE STRATEGIC OBJECTIVE

The aim of Soviet strategy has been conceptually formulated by Stalin through the term "overwhelmingly superior strength." This concept should be taken quite literally. It connotes an edge in military, political, and social power which has overwhelming effects on those on whom it is brought to bear. Once "overwhelmingly superior strength" is attained by the Soviet, they would expect to be able to talk other countries into submission, one by one. Their methods in the case of the Baltic Republics are quite instructive as to how they would expect to accomplish this. Stalin also described the strategic objective in terms of converting the present "capitalist encirclement" into "socialist encirclement," which amounts to the same thing as "overwhelmingly superior strength." Since Stalin's death, Khrushchev seems to have come to the conclusion that the "socialist camp" is no longer "encircled," but is not yet strong enough to "encircle" the capitalist world.

CHANGE IN STRATEGY

From 1943 to 1953, the Soviets used a strategy of territorial expansion, pushing into areas which were indifferently held by the West. In response to this strategy, a tremendous strengthening of the Western Powers of resistance occurred. The West rearmed rapidly and effectively and established a series of alliance which led to the deployment of Armed Forces around the periphery of the Soviet orbit. The armed and organized strength of the Western Powers now constitutes the single most effective obstacle to Soviet policy. It is so formidable a power structure that the Soviets, in keeping with their strategic doctrine are not likely to contemplate a direct attack on it.

Since 1953, they have therefore concentrated on methods of indirect attack against the Western Power position. These methods follow, by and large, the pattern of the strategy they have used in most situations: The mobilization of large masses, simultaneously with the neutralization of other masses; attempts to deprive the ruling elements in the West of both will and capacity to govern, and the ruled elements of the will to abide by established leadership; endeavors to occupy organizational key positions.

The appeal to masses of people has been made chiefly under the slogans of peace and disarmament, which proved quite siutable for this operation in the Russian revolution in 1917. National independence and economic development are other mass appeals. The fear of atomic destruction has been the main device by which the Soviets have sought, with considerable success, to promote neutralism, that is, to move both masses of people and national governments to indifference in the struggle.

The will and capacity of the governing elements of the West has been attacked mostly through civil wars, as, e.g., in Greece, Iran, China, the Philippines, Malaya, Vietnam, Algeria, etc. It would stand to reason that the recent riots in Korea, Turkey, and Japan are another phase of the same pattern. Another form of attack against the capacity to rule is the fomentation of international tensions and quarrels in which the Western will-to-power is challenged, as, e.g., in the Near East and Latin America. Each of these attacks aims, in a different sense, at the wills of both ruling and ruled elements, with the objective of producing a process of disintegration resembling what the Communists call a "revolutionary situation."

The occupation of key positions has been the least successful part of Soviet strategy. The Soviet plan for the reunification of Germany by means of a commission composed of East and West German Government representatives is obviously designed to deliver key positions in a unified Germany into Communist hands. So have been their attempts to obtain recognition for Communist China and Communist Germany. Communist infiltration in front organizations as well as governments is, of course, an old method.

THE INDIRECT ATTACK ON WESTERN MILITARY STRENGTH

The armed might of the free world is not any more of an obstacle for the Soviets than was the czarist army in 1917. Insofar as it is strength in being, to be potentially used, it commands utter respect, a respect which no Communist is ever likely to set aside. But Communist strategy is designed to prevent the use of existing armed strength, and, by political means, to disintegrate its very existence.

The indirect attack on Western armed strength would be successful if the Soviet Union could get the key nations in the Western alliance system into one of several moods that would deprive them of the will to contemplate the use of their arms. While these moods would, naturally, vary with the circumstances, they might resemble the following:

(a) The concrete issue at hand is not worth fighting over.

(See France, 1940: "Why fight for Danzig?")

(b) In an atomic age, the use of armed force is immoral.

(c) The enemy is too strong, we cannot win.

(d) Fighting is useless, even if we win, the enemy will prevail in the long run.

(e) We dare not fight, because we have not the right to impose our society on others.

(f) The other side represents the up-and-coming force in history while we, historically speaking, are have-beens.

Once any one, or a combination of such moods would prevail in the governing circles of the key nations, the Soviets could turn to the task of detaching one or several of the minor allies. They would seek to promote any one of the following impressions:

(a) In a showdown, the United States will not come to your help, except when it is too late.

(b) The Western alliance system has already begun to dissolve, sauve qui peut.

(c) Allies are subject to atomic extinction, while neutral nations will be safe in case of war.

If such moods should result in the breaking away of a number of minor allies, the resulting effect of growing isolation could again be used to promote deepening gloom in the key nations and thus to paralyze their will to consider their own armaments as something of potential use.

Another method of indirect attack on free world armed strength is to create the impression that the entire conflict is over, in one way or another. With the cause removed, the possession of masses of armaments in an age of atomic weapons is then likely to be considered a liability rather than an asset. Disarmament would become the preferred policy and might be so eagerly sought that unilateral disarmament and disengagement might appear to some governments the supreme counsel of wisdom.

The impression that the conflict is over could be promoted in one of several ways:

(a) The free world might possibly be persuaded that the changing balance of power has at one moment definitely tipped in favor of the Soviet camp. Such an impression could be promoted by means of spectacular feats of military weaponry, as well as by economic statistics coupled with displays of alleged productive power.

(b) The free world might be convinced that the overwhelming majority of the world's population has definitely embraced the Soviet order, so that the complete communization of the world is only a matter of time.

(c) The impression that the conflict is over could also be created if the United States (or one or several of the other key nations in the free world) should, by establishing an understanding of friendship and agreement with the Kremlin, signify to the world that the days of resistance to the Soviets are past.

IDEOLOGICAL LEVERS

In all these strategies, the Soviets make use of a number of ideological levers with which they hope to pry loose the power structure of the free world. These levers can best be identified in terms of the concepts to which they are attached:

(a) Peaceful coexistence, as formulated by Khrushchev at the XX Party Congress. This includes the ostentatious abandonment of the inevitability of war concept, the doctrine of peaceful competition, the prospect of the peaceful victory of socialism.

(b) Imperialism, or the wickedness of the power of the West. The rule of the West represents supposedly exploitation, greed, selfishness, oppression, and war.

(c) Socialism as the wave of the future. The momentum of history moves against the Western World and favors both socialism and the colonial peoples.

(d) The greater efficiency of the Socialist system. Soviet Russia allegedly has made greater achievements than any capitalist country, as attested by its supposedly higher rate of economic growth and more advanced military weapons.

(e) Disarmament, as the key to enduring peace. Permanent peace between nations is possible and depends only on a universal disarmament pact.

STRATEGIC FOREIGN POLICIES

In order to be able to influence and manipulate world events with the help of these ideological levers, the Soviet Union seeks to create, through its foreign policies, repeated situations which favor the application of ideological leverage. The method can best be characterized as push-and-pull, a violent rocking movement from peace to war, tension to relaxation, accusation to conciliation, with the intent of loosening the fabric of the Western order on which the armed strength of the West depends.

This is achieved by repeated international crises, none of which is an end in itself. The crises, which might of course yield some kind of windfall gain for the Soviets, have the main purpose of shaking the confidence of the West in itself, deepening its sense of guilt, increasing its fear of war, and quickening its desire of final agreement with the Soviets. Each crisis would be followed by offers of settlement, agreement, and relaxation of tensions. The objectives, which in each case (including Berlin) are tactical rather than strategic, could be any of the following:

(a) To maneuver the West into repeated situations where it becomes persuaded that it is defending an unjustifiable cause (e.g., Berlin looked upon as an abnormal situation).

(b) To increase, for a period, and over some concrete issue, the fear of total atomic war, and to put governments under the strain of having to face the ultimate decision. The repetition of such moments could lead to nervous exhaustion.

(c) To repeat the basic moral charges of "imperialism," "militarism," "warmongering," "Wall Street wire pulling," "exploitation," and "colonialism" against the West.

(d) To display publicly the Soviet "will to peace," to insist on the practicality of peaceful coexistence and disarmament.

(e) To move the West nearer to an overall settlement with the U.S.S.R., implying "peaceful acceptance" of the Soviet empire and its interests.

The strategy of Soviet foreign policy consists in the plan to bring about, by a series of such tactical engagements, the gradual self-demobilization of the anti-Communist bloc.

SOME REQUIREMENTS OF WESTERN STRATEGY

At this point, only a few scattered conclusions will be drawn from the above analysis of Soviet strategy.

One conclusion is obviously that Western military policy should not be designed in purely military terms. Given the strategic outlook of the two main antagonists, an alout atomic war is not likely. Defense arrangements are rather likely to have considerable significance in the context of political warfare. A good case can be made for the thesis that the pattern of Soviet military policy has been designed as much for maximum political rather than purely military effect. We could not, of course, imitate the Soviet Union in this, since our political objectives are quite different from those of the Kremlin. But we would do well to realize that a most important, if not at present the most important, utility of our military preparations is their effect in countering the enemy's indirect (political) attack against the political foundations of our defensive strength. In other words, we have to learn something that is quite alien to our way of conducting our national affairs: the strategy and tactics of a special kind of limited war, the cold war.

Defensive cold war strategies include plans to keep our military capability from falling below the balance point, to guard and maintain our fighting will, and to cultivate the solidarity of the free world alliance system.

Offensive cold war strategies would aim at a reduction of Soviet power, at the recuperation of territories and peoples which have fallen under Communist rule, and eventually, at the ousting of communism from all centers of public power.

As we guard our military capability from falling below par, we should remember that political reputation for superior power is, both in Soviet eyes and in the logic of cold war operations, more important than the actual test of capabilities in open warfare. It would therefore seem highly advisable not to underestimate the effect of spectacular achievements suited to keep up the world's respect for our technological prowess.

As this would surely imply a continued arms race, a word may be in order about the contribution of arms races to the outbreak of wars. In both World Wars, arms races played an important role in the timing of hostilities. Significantly, in both cases the armaments of the two sides were not balanced when hostilities broke out. One side still had a considerable advantage, with the prospect that the balance would be restored 2 or 3 years later. The fact that both of these wars broke out before the balance was achieved suggests the possibility that they would have been avoided had a balance of armed strength been maintained. At any rate, neither war supplies evidence that a continued, even though actively competitive balance in armaments must issue in open hostilities.

A far more difficult task is the guarding of our defensive will against deterioration. Under the present conditions of public opinion, it would seem a rather hopeless task to try to get ourselves into a mood where we will bravely face atomic destruction in order to defend ourselves against the Soviet Union. The public has been too deeply saturated with the fear of indescribable horrors which the use of atomic weapons of mass destruction would bring about. Hence our continued fighting will depends decisively on the development of both clean and tactical atomic weapons. It is not so much the desirability of "limited wars" which should prompt us to develop such weapons with utmost speed, but rather the need to regain our own willingness to use modern weaponry at all. The destructive power of fission and fusion exists in our age. The problem is to get it under our control, instead of allowing it to master our will.

Apart from this, our defensive will must be guarded by a continued effort to recognize the Soviet threat for what it is, and to beware of all temptations to enter into a summit agreement that would in fact amount to a "peaceful acceptance" of the Soviet Empire.

In maintaining the solidarity of the alliance system, the deployment of our troops is of decisive importance. Our presence has a deep psychological effect. After all, nations closer to Russia than we continue to be our allies mainly on the strength of their confidence that we will fight at their side from the first day, and on the spot where they may be attacked.

Our willingness to risk a fight may need periodical demonstrations. The action in Lebanon was such a demonstration, and had a powerful effect. Reversely, our inaction in the case of Hungary has done us much harm. What was required was not necessarily a military intervention, but something other than the hands-off attitude we then adopted. Because an important part of the allies on whom we can and must count is found behind the Iron Curtain, where the captive peoples act as a deterrent that may well match the atomic bomb in effectiveness.

Offensive cold war strategies can and should not be discussed in a public document. It may, however, be said that some public preparations must be made before we can think of engaging in offensive cold war strategies. First among these is a reversal of the public sense of historical momentum.

The communist view of history has been allowed a virtual monopoly in the modern world. According to that view, we represent the (already half dead) past and the Communists, together with the colonial peoples, the budding and hopeful future. We must restore to the Western World a sense of historic reality. To this end, we must place the Soviet power itself into the perspective of history and begin publicly to envisage a world that has been delivered from the Soviet threat. We must begin to speak of a future beyond communism, of things as they would be when Communists have been toppled from their dictatorial seats of power, of the development of their social and political legacy toward justice and freedom. We must display public confidence that we shall see tthis day, and see it without total atomic destruction.

We must also publicly develop a concept of genuine peace. We seem to have left this term to the Soviets as their exclusive possession. At any rate, we have not spelled out, in fairly precise terms, under what kind of conditions peace could be restored. We no longer specify certain political terms in Central Europe as prerequisites of an acceptable order. We also should, for our own use, have a list of priorities of things we should like to accomplish internationally, as opporunities offer themselves. Such a list could begin with items like "free access to Berlin" and culminate in items like "non-Communist governments in all satellite states."

We must publicly counter the impression that has been created by a barrage of false and misleading Soviet economic statistics. The Soviet Union has not accomplished anything that can compare with the accomplishments of Western nations, both in the past and the present. Their claim to efficiency as a social and economic system must not be allowed to stand.

Our chances of winning a limited war fought by political strategies and tactics are excellent. But, first, we must develop the will to win this war. At present we have at best a will to survive.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MILLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. MILLER of New York. Mr. Speaker, as part of the Task Force Studies on American Strategy and Strength, I place in the Appendix of the CONGRESSIONAL RECORD, study paper No. 21: "An Examination of Partisanship and Bipartisanship in National Security Matters," by a symposium of political scientists

AN EXAMINATION OF PARTISANSHIP AND BIPARTISANSHIP IN NATIONAL SECURITY MATTERS

(By a symposium of political scientists: Professors James Atkinson, Karl Cerny, William Y. Elliott, Ivan Hinderaker, Karl Lamb, Stanley Parry, Howard Penniman, and Robert Loevy (secretary))

The problem of opposition criticism tempting the Russians into thinking we are not adequately defended and ready to fight—what might be called the criticism deterrent crisis—is the subject of this paper.

The paper is divided into two parts.

Part I was prepared by Robert Loevy of Johns Hopkins University, who acted as secretary for the symposium.

Part II represents the ideas which flowed out of the discussions and comments, based on Part I.

PART I

Intercontinental ballistic missiles that fly halfway around the world in 30 minutes have rendered as obsolete as the cross bow the American pastime of indulging in great internal disagreements. Gone forever are the happy days when the protective expanses of two great oceans assured the United States a large measure of leeway for internal bickering. Unrestrained freedom of criticism and other political luxuries which could be tolerated during the isolationist period today must be reevaluated to make sure they are not endangering national security.

The psychological deterrent

Irresponsible opposition criticism which casts doubt on the credibility of our military deterrent is one political luxury which could lead to national disaster. The philosophy of deterrence is based on two principles. The first is that the United States must have the military capability to destroy the great majority of Russian military targets and industrial centers should the Soviet Union be foolish enough to start a third world war. The second principle is to make sure Russia knows we have this deterrent capability and that we are ready and willing to use it. This second principle is commonly referred to as the psychological nature of the deterrent or, more simply, the psychological deterrent.

In addition to convincing the Kremlin that attacking the United States would be national suicide, the psychological deterrent serves the function of convincing our allies in Western Europe, the Middle East, and Asia that we are able to defend them from Communist aggression. If these allies should ever come to doubt our ability in this sphere, our vast system of collective security alliances, such as NATO and SEATO, would be in serious danger of disintegrating, thereby leaving the United States to face Russia alone.

The psychological deterrent must also be maintained so that the uncommitted nations of the world do not begin thinking Russia is going to be the eventual victor in the cold war. Such an illusion of U.S. weakness might tempt these nations "to jump on the band wagon" and prematurely join the Communist bloc.

Past failures of the psychological deterrent

History abounds with examples of nations who failed to maintain the psychological side of their deterrent and as a result found themselves in the middle of a shooting war. In 1914, when a crisis developed between Austro-Hungary and Serbia, Russia failed to make crystal clear its intention to come to the aid of Serbia. This failure of Russia's psychological deterrent led Austro-Hungary to expect that Russia would back down if Austro-Hungarian troops were rushed into the crisis area. But Russia did not back down, and the way to World War I was paved through a needless miscalculation.

The successful Japanese attack on Pearl Harbor in 1941 could have been avoided if the United States had let Japan know of the advanced state of her air-defense radar. Japanese admirals stated after the war they would never have struck at Pearl Harbor if they had known detection would be so easy. It is one of the grim ironies of American history that our radar picked up the incoming swarms of Japanese dive bombers but no one paid any attention to it.

The Korean war was another conflict which the United States could have avoided if full use had been made of the psychological deterrent. In outlining in 1950 the perimeter which America would defend in the Far East, Dean Acheson, then Secretary of State, made the mistake of excluding Korea. The Communists calculated from this that the United States would not intervene if they attacked South Korea. The end result was 100,000 American casualties and billions of American dollars spent to rectify an unnecessary Soviet miscalculation.

Damaging effects of criticism

These historical examples illustrate clearly that it does no good to have deterrent capability if you do not also take concrete steps to see that the enemy knows you have this capability. A serious problem arises here for democracy in terms of freedom of criticism. When the party-out-of-power criticizes administration defense policy in order to agitate public opinion, it gives the impression that our defense capability is not adequate. Such criticism, especially when it is unwarranted or untrue, has the effect of damaging our psychological deterrent and tempting the Russians to begin a nuclear war.

Opposition criticism is particularly destructive when it attacks the administration defense program on a piecemeal basis, pointing out shortcomings in one field without pointing out our advantages in other fields which compensate for these shortcomings. Thus critics dwell on the small size of our ground forces, creating an impression that the United States would come out second best in a limited war on the ground. What they fail to note is that the superior mobility of our war machine—in terms of landing craft, troop planes, and helicopters—is sufficient to make up for the relatively small number of actual combat soldiers. Also the troops of our Western European and Asian allies should be added to ours when making any comparison with Soviet Russia.

In the defense debate in the spring of 1960, opposition critics way overemphasized a leaked statement repeated by newspaper columnist Joseph Alsop that "150 Russian ICBMs could wipe out every American missile base and SAC base, thus destroying the U.S. deterrent." The article failed to add, however, that even if the Soviets had such capability, they would still have to take care of nuclear bombers launched from aircraft carriers and nuclear missiles launched from soon-to-be-operational Polaris submarines.

The problem of unity

The destructive nature of irresponsible opposition criticism is not limited to the military field. It also can destroy the national unity and firmness which the United States needs to maintain on the diplomatic front. Russia would never attack a United States whose people, politicians, and allies were firmly united. But the Soviets would be sorely tempted to attack if the United States erroneously gave the impression that her people are disunited, vascillating, and would be undecided on just how to meet such an attack. Here again recent history provides several examples of when American strength and unity were questioned at exactly the wrong time.

On election eve in 1956 the Suez crisis in the Middle East demanded national unity at home as well as firm diplomacy abroad. At that time Adlai Stevenson launched a violent attack on the Eisenhower program and called for a return to the policies of the previous administration. Mr. Stevenson charged that Eisenhower-Dulles policies had collapsed. He charged that the West was divided and predicted that the President, if he won, would not live through his next term. Naturally, this caused alarm in Europe and hindered unity within the Western alliance.

About a year ago Dean Acheson was the principal author of a pamphlet which painted a picture of disunity within the free world and claimed that our position in the world and our alliances were dissolving "as just a hundred years ago men watched the Union dissolve." The release of this pamphlet was timed to coincide with the week that the NATO ministers were meeting in Washington to reaffirm unity and solidarity. The Berlin crisis had begun, and it was necessary to our diplomacy to present Khrushchev with the picture of a united NATO. And yet Acheson turned his efforts to propagandize the line of disunity.

This statement by Acheson was described by the Washington Star as "a massive exercise in irresponsible nonsense" and brought the following comment from Mr. Arthur Krock of the New York Times:

"Since the council includes former President Truman, Adlai E. Stevenson, and a few Democratic Governors and Senators, this bitter attack on the administration's foreign policy that it authorized, for publication in the week the Ministers were gathering, might have had that deplorable consequence in the midst of the Berlin crisis. * * * Yet not only was it authorized for release, and at this time, by the distinguished council. It is the product, specifically, of the group which is the voice of the council in foreign policy matters, and the editor and principal author of this group's pamphlets is Dean G. Acheson, former Secretary of State."

The problem of leaks

Not only does overzealous criticism give our enemies erroneous estimates of our strength and wreck Western unity, but it sometimes results in critical security information being leaked to Russian intelligence. The best example of an improvident leak by a Congressman occurred during World War II. Through the incredible good fortune of breaking the Japanese naval code, the U.S. commanders were able to read every order transmitted from Tokyo. This advance information had much to do with preparing the way for the United States' great victory in the Battle of Midway. But some incautious member of a congressional committee or its staff leaked the information to a reporter, and 30 minutes after the next edition of his newspaper hit the street Japan changed her naval code and all further advantage was lost.

Leaks force out more information

After the irresponsible opposition has spilled the beans and leaked security information to the public and the enemy, the administration is forced to move in and clean up the mess. In doing so it often has to release more security information or clarify that which was previously leaked. This is done so the administration can set the record straight and adequately defend itself. In the process Russian intelligence agents pick up much useful information they might otherwise not have obtained.

An example of this occurred in the spring of 1960 when the administration was under attack for having too few ICBM's in relation to Russia. To defend itself, the defense department was forced to release classified information gained by our intelligence agents concerning the current state of Soviet rocket forces. This information revealed that the Russians were burying their missiles in well-protected underground launching pads instead of leaving them in a vulnerable position on surface launching pads.. As a result of this expensive burying, Russia had fewer missiles than the opposition had irresponsibly claimed. In the process of revealing this, however, the administration had to reveal secret information that should best have remained classified.

Opposition criticism often puts the administration in a seemingly bad position because patriotic public officials refuse to release critical security information in order to defend their policies. Certainly no American administrator would want to give away key national defense secrets simply to maintain himself politically. The bind is particularly hard on the party in power because in many cases you have to know what the security information is in order to understand why it was classified.

The U–2 affair

The recent capture of one of our U–2 intelligence planes by the Russians illustrates this point. During the defense debate in the spring of 1960, the Eisenhower administration could have defended its military policies very adequately on the basis of information gathered by the U–2 in its high level flights over the Soviet Union. To do so, however, would have exposed to the Russians and to the world an aerial surveillance program about which we had to maintain rigid secrecy. The Eisenhower administration thus had to take it on the chin from its critics, unable to defend itself without endangering the entire U.S. intelligence effort.

Problem based in U.S. politics

Any attempt to solve the problem of irresponsible criticism and the psychological deterrent runs into trouble because freedom of speech and freedom of criticism are at the very backbone of the American governmental system. The way we get things done in this country is to use free discussion to mobilize public opinion and thus produce a popular mandate on a particular governmental action. American politics—and this includes the Presidency, the Congress, and State and local government—has been rightfully described as a "gab shop." This dependence on the revelation of information is one of the great strengths of the American political system. At the same time it is the single greatest threat to the credibility of our psychological deterrent.

Most American politicians have a tendency to way overstate political arguments in order to agitate public opinion and thus get Goverment action. This is known as the consensus-building process. Every Congressman is aware that often you have to scare the people with terrorizing overstatements in order to get the consensus going. The endless leaks of secret information are thus not really evidence of blabbermouthed irresponsibility but attempts by the opposition to force an issue to decision or outflank an opposing point of view. Steeped in our traditions and customs, it is these consensus building distortions that do the greatest damage to the psychological deterrent.

Distortions from the compromise system

The U.S. political system is also firmly based on compromse. This has created a tendency for American politicians to overstate their arguments so that the compromise consensus reached is close to the politician's original position. Here again statements and press releases become distorted and shed doubt on the credibility of the deterrent.

The need for security puts a horrible strain on the politician brought up under the American tradition of seeking publicity whenever and wherever possible. Unfortunately, the most critical security information is also that which will get the best press run throughout the news media of the country. The temptation is often too great to bear. Congress and other American legislative bodies simply are not the sort of organizations that lend themselves to keeping secrets and maintaining tight security.

Political campaigns create worst abuses

The worst offenders along this line are not Congressmen working hard in Washington

but members of the opposition party campaigning for political office, especially Senators campaigning for a presidential nomination. The greatest abuses appear in quiet campaigns where the various candidates are searching for jarring announcements with which to draw attention to themselves. In extreme cases, Congressmen who support the administration on the House and Senate floor become critical and indulge in gross overstatements when they hit the campaign trail.

Another group often found guilty of distorting defense and diplomatic criticisms is the opposition party's advisory committee. The party rank and file as well as the party's congressional and senatorial delegations have little control over this independent group's irresponsible statements and is often embarrassed by them. Other offenders are military men and defense products manufacturers who endeavor to increase military appropriations by frightening the country with overdone announcements on the weak state of our defense.

A rare problem but one that does have to be handled from time to time is the occasional Congressman or politician who deliberately fosters a reputation for vindictiveness and has an utterly ruthless disregard for the restrictions of security and the psychological deterrent. Fear, especially the hopeless fear of inappropriate and unreasoning reprisal, is their means to power. These people purposely cultivate the impression they will stop at nothing—even when it means ruining the faith of the American people in their leaders and wrecking Western unity.

Although security leaks by Congressmen hurt the defense effort and help Russian intelligence agents, it is questionable whether rash overstatements by campaigning politicians give the Kremlin any useful information. Soviet intelligence probably compensates for overstatement in American political campaigns just as most intelligent voters do. There is real danger from these overstatements, however, because of the impression they create on world opinion.

Campaign statements do not stop at the American border but are picked up by the various news agencies and sent all over the world. Foreign readers do not understand the U.S. tradition of overstatement in politics, take the distortions seriously, and begin thinking our defenses really are inadequate. This does severe damage to the confidence of our allies in our ability to defend them. It also injures the impression of military strength the United States must maintain among the uncommitted nations.

Also the foreign press, a portion of it biased and state-controlled, does not have the United States reporting tradition of balancing distorted opposition attacks with the administration's defense. Anti-American foreign news media are quick to pick up congressional overstatements, distort them still further, and use them to create the illusion that the United States cannot protect itself. Russian propaganda agencies are particularly adept at picking up overstatements on military deficiencies and sending them all over the world.

Divisive nature of criticism

The greatest danger from irresponsible statements during political campaigns is that they divide the American people on the defense issue and rob them of the self-confidence and unity they need to compete with a totalitarian enemy. The Russians have an active policy of trying to split U.S. public opinion at home and the Western alliance abroad. Their psychological attack is designed to play on our nerves and tempt some fainthearted Americans into advocating appeasement. The opposition plays into Russia's hands when it uses unwarranted criticisms that help foster such a split.

The Communist shelling of Quemoy and Matsu during 1958 was a direct maneuver on the part of the Kremlin hierarchy to divide Western public opinion, both within the United States and within NATO. The opposition played into Russia's hands at this time by calling for the administration to abandon protection of the offshore island defenses of Formosa. An opposition politician, trying to win votes for his party's 1958 congressional candidates, advocated the United States "get out and stay out" of these islands and press for Nationalist Chinese evacuation as well. The false impression of American disunity thus created was probably viewed with elation by Moscow.

In June of 1960 the Soviets attempted to use the U–2 spy plane affair to discredit the United States in the eyes of her allies and the uncommitted nations. Fortunately the initial reaction of the opposition party was to rally to the support of the Government. An opposition Congressman, Representative CANNON of Missouri, rose on the floor of the House and explained that the opposition-controlled Committee on Appropriations had known about the U–2 flights and approved of them. He also complimented the administration for maintaining an excellent intelligence operation and closed with a statement that the entire affair proved the ability of the United States to present a united front against an authoritarian dictatorship.

Problem faced only in democracies

If, as shown above, distortions and overstatements during political campaigns are at the very heart of the American democratic process, then any attempt to restrain opposition criticism that harms the psychological deterrent will go to the very roots of our political institutions. This is a problem that could only occur in a free society. Russia is a totalitarian dictatorship and can use her entire press and Government to convince the world of Soviet military strength.

PART II

This section of the paper presents the general views and comments growing out of discussions by the political scientists on the symposium.

The high degree of danger

Opinion was expressed in the panels of political scientists which discussed this problem that the dangers arising from the criticism-deterrent crisis are very real. The danger is based on the assumption that the leaders of the Kremlin do not understand American democratic procedures and are unable to read the lesson of American history—that the American people stand united in times of a clear external threat. This assumption that the Russians do not really understand us is proven by the recent behavior of Premier Khrushchev.

Permanence of the problem

The panels also felt that the criticism-deterrent crisis is going to be with the United States for many years to come. It will be worth our while to do some thinking about creating permanent institutions designed to lessen the danger of irresponsible political distortions to national unity.

Congress at the middle levels of power

Many political scientists argue that the present international crisis and the resultant need for security is reducing Congress to the middle levels of power. Most of the major policy decisions, they contend, are now made by military experts in the Pentagon simply because security requirements will not permit the matter to be discussed by the Senate and the House. This is a trend which should not be permitted to continue. Any solution to the criticism-deterrent problem must provide for security but at the same time not eliminate Congress from its important job of overseeing all general policy formation.

The crisis of conscience

The criticism-deterrent problem leads to a crisis of conscience among responsible critics of the administration. These people often feel it is their patriotic duty to speak out on certain aspects of our defense or diplomatic program about which they are genuinely concerned, but security requirements forbid them from doing so. Many of our most responsible military and political leaders are pulled apart by this crisis of conscience. An adequate solution to the problem must provide a way for these people to present their criticisms to the President and the Congress without violating security or hurting the credibility of our deterrent.

Any solution to the criticism-deterrent problem will naturally involve giving up some freedoms, but any freedoms given up should be given up knowingly. Continued crises such as the present one have the hidden danger of making the American people accustomed to giving up freedoms, resulting in a slow strangulation of all freedoms that may not be noticed. Thus in any instance where freedom of criticism is to be limited, an apparatus must be provided for constant review of the freedoms given up and the continuing need for doing so.

It is also necessary that any group vested with the power to try to make opposition criticism more responsible must be solidly based in the civilian rather than the military wing of the Government. It should contain members of those groups being acted upon—including Members of Congress and members of the party out of power.

The problem of accountability

Perhaps the greatest danger to democracy in making opposition criticism more responsible is that it could cut down the accountability of the party in power to the people. One of the basic principles of American Government is that the press and opposition party will serve as watchdogs and be the first to ring the alarm bell when the people holding high political office step out of line. Any solution to the criticism-deterrent problem must provide strong institutional safeguards for keeping the executive department accountable to both the Congress and the people.

The danger of drift

The problem goes much deeper than simply controlling distorted criticisms. No one in our Government is in a position to take time out and make overall policy. The end result is that decisions and the opposition criticisms of them are isolated and made on a piecemeal basis.

This hit-or-miss relationship based on handling crises as they come up has resulted in a gross mismanagement of American public opinion. Often public opinion has been built up on oversimplified issues that are not relevant. In other cases good programs are neglected because public opinion is not built up in time. This phenomenon represents the failure of both the administration and the opposition to center public attention on the right issues at the right time. The inevitable conclusion is that we must change the way we make and criticize decisions as a first step in solving the criticism-deterrent problem.

Executive-congressional relationships

The criticism-deterrent problem is also rooted in the relationship between the President and Congress. The separation of powers theory which led to the creation of an independent Executive and independent legislative has partially failed. Designed by the Founding Fathers to protect freedom by having the two segments of Government check on each other, the separation of powers has served in practice only to produce discord and inefficiency in foreign and military affairs.

One problem is that military matters can become involved in executive-congressional fights and get blown out of all proportion to their real importance. Often a military question will be seized upon by dissident Congressmen and used to show the President "who really makes policy in this country." The end result is a highly publicized argument conducted in the military sphere but where military matters are not the real issue.

Separation of powers leads to mutual suspicion between the President and the Congress as to just who should be doing what in the military field. To keep an eye on the Executive, the Congress often goes messing into the minute details of military policy with which it should not be involved. At other times, Congressmen have the feeling that the President is hiding something from them and, in order to protect their jurisdiction, try to force critical security information out of the President.

On the other hand, separation of powers causes the President to become wary of congressional cussedness where military matters are concerned and try to bypass the Congress if possible. President Franklin D. Roosevelt engineered such a bypass in the famous destroyers-for-bases deal with Great Britain early in World War II. Congress had previously demonstrated its jurisdictional jealousy by passing a law forbidding the President to sell military material to a foreign power without first getting congressional approval. Roosevelt ran an end run around Congress simply by making the destroyer deal a trade for bases rather than a straight sale of military material.

Congressional-Executive relations in the military field also break down because of the natural distrust between the politician and the professional policymaker. Defense policy specialists are often regarded with suspicion by the average Congressman. We can conclude, therefore, that any solution of the criticism-deterrent problem must make some provisions for improving presidential-congressional relationships where military and foreign policy matters are concerned.

Possible solution I: Increased party responsibility

Millions of words have been written by political scientists on methods for increasing party responsibility, none of them optimistic. In the United States, where party labels and platforms mean little, Congressmen can easily bolt their party and still survive politicaly. The parties even fail to use what sanctions they do have—denial of committee chairmanships and other seniority privileges—to bring intransigent Members into line. Under our system of geographical representation, Congressmen are beholden only to a narrow section of the population back home rather than national party officials.

Sentiment was expressed in this symposium that increasing party responsibility holds little or no promise of solving the criticism-deterrent question. There is also the problem that both parties contain two wings—liberal and conservative—and it would have to be decided which wing the majority of the party is going to be responsible to.

Possible solution II: Bipartisanship

The idea that enmity and conflict between the two parties should cease when we get to the critical areas of military problems and foreign affairs is an old one in U.S. politics. From time to time, Secretaries of State, like Hay and Root, made a practice of conferring with leading Senators from the opposition party in advance of treaty negotiations. The contemporary development of bipartisan collaboration, however, dates from 1943 when Franklin D. Roosevelt sought Republican cooperation in putting over the United Nations. As much as anything, this was the result of the Roosevelt Administration not wishing to experience a repeat performance of what happened between Woodrow Wilson and a Republican Congress when the League of Nations came up for ratification.

Members of both parties in both Houses of Congress were brought in on the negotiations for the United Nations at the very beginning. Bipartisanshp reached its highest level when President Truman sent Republican Senators Vandenberg and Connally as American delegates to the San Francisco convention which drew up the charter. After that time the practice of consultation and collaboration became rather common—Greek-Turkish aid, European recovery program, North Atlantic Pact, for example—but no means customary. Policies regarding German and Japanese occupation, Palestine, and China were entirely executive in nature.

Bipartisanship is thus a tool which is available but not always used. Its success depends on the existence in the opposition party of a party specialist who is well versed in the particular area concerned and who is able to lead most of his fellow party members his way. Senators Vandenberg and Connally played such a role during the Truman era. As these two men went, so did the rest of the Republican Party, and bipartisanship became an efficient and workable technique.

But bipartisanship has a full share of liabilities. It can be irksome, time-consuming, tiring, and limited by the jealousies, hatreds, and status requirements which infect all human personalities. It works only when the two parties are in basic agreement on the issues concerned and can only be applied to overall policies rather than to detail work. No one put the case more strongly than Senator Vandenberg in defining the limits of bipartison consultation:

"When and where it is possible, in clearly channeled and clearly identified projects, for the legislature, the Executive, and the two major parties to proceed from the beginning to the end of a specific adventure, so that all are consulted in respect to all phases of the undertaking, I think it is a tremendously useful thing. * * *

"But to think that that can be done as an every-day practice in regard to all of the multiple problems of international import which now descend upon the State Department every day, in my opinion is totally out of the question."

Certainly the problem of curbing criticism that harms the psychological deterrent comes under the heading of over-all policy rather than day-to-day business. As a result, any solution of the criticism-deterrence problem should provide for bipartisan cooperation and consultation.

Possible solution III: intraparty cooperation

Even when bipartisanship is unworkable, executive-congressional relations can often be smoothed by having the President work closely with the members of his own party in the Senate and the House. This technique is effective because, like bipartisanship, it lessens the suspicions and antagonisms inherent in the separation of powers principle. Here again the party specialist acts as an intermediary whom the rest of the party's Congressmen trust to do their thinking for them in certain critical areas. Any solution to the criticism-deterrent problem should provide for improved intraparty congressional-executive relations as well as bipartisanship.

Possible solution IV: increased personal responsibility

Much of the irresponsible criticism that damages the psychological deterrent could be curbed simply by appealing to the personal responsibility of Congressmen. An effort should be made to see that all Members of the House and Senate are fully informed on how unwise criticisms could lead to Russian miscalculations or wreck Western unity. Congressmen should be made aware that, whether they like it or not, their campaign statements and distorted criticisms are part of general American propaganda and have all the effects of good or bad propaganda. Congressmen are all good Americans, and the simple act of pointing out the danger to them will probably curb 90 percent of the abuse.

In the field of security requirements and leaking, Congress has proved many times in the past that it can keep secrets and keep them well. During World War II the House Appropriations Committee guarded its private secret that billions of dollars were being spent to develop the atomic bomb. Recently, it was revealed that the same committee knew of the existence of the U–2 flights for more than 4 years and never leaked so much as a hint about it. Thus, it is very clear that Congress can and will keep secrets if the reasons for classification are made crystal clear.

Possible solution V: Counterappeal to public opinion

Should even the appeal to personal responsibility fail, the administration still has one sanction available for encouraging Congressmen to curb distorted criticisms. This is the counterappeal to public opinion in which members of the opposition are chided for letting out security information and making divisive statements that help the enemy. The severe public and press reaction to opposition statements designed to sabotage NATO the day before its 1959 meeting probably did much to tone down the future irresponsible criticisms of this sort.

Many political scientists feel that irresponsible opposition criticism is not so much to blame for national disunity as is the failure of the party in power to make full use of the counterappeal to public opinion. They claim the Republicans have failed to adequately defend themselves and the country against the neutralist-defeatist position of many administration critics. Rather than trying to silence opposition criticism, these political scientists think the administration should take concrete steps to see that all irresponsible attacks are soundly countered and that the positive side of the psychological deterrent is strongly maintained on the propaganda front. In other words, there should be an offensive operation where national unity is concerned rather than just a defense.

It appears logical at this point that four of the five possible solutions outlined above—bipartisanship, improved intra-party executive-congressional relations, increased personal responsibility, and the counter-appeal to public opinion—should be included in any proposed solution to the criticism-deterrent problem.

Concrete Proposal I

This symposium felt generally that the Republican Congressional Policy Committee take upon itself the responsibility of seeing that the psychological deterrent is positively defended whenever possible. It should attempt to do the following things:

1. See that irresponsible charges made by opposition political campaigners which harm national unity and question our defense capability are quickly and firmly answered. In particularly important areas, the committee should appeal to the publicity powers of the President for countering irresponsible criticisms.

2. Endeavor to arouse public opinion against opposition party members who leak critical defense information to further their political ends. It should also arouse opinion against those who spread disunity and defeatism at a time when unity of purpose is called for.

3. Follow a general positive policy of strengthening the psychological deterrent

and maintaining national unity. Thus the committee need not wait for opposition criticism before taking action in this field.

Defense of Proposal I

Conscious maintenance of the psychological deterrent and national unity by the Republican congressional policy committee fits in with the idea that the best defense against irresponsible opposition criticism is a counterblast of your own. This solution also has the advantage that it fits in with the American tradition of the two opposing political parties taking concrete stands on the issues and letting the voters have their choice.

It was pointed out that no Congressman can command the newspaper space or position that is given to the statements of opposition party leaders. Also individual Congressmen are not clearly identified in the public mind as party spokesmen. For this reason it is argued that the policy committee of the party in the White House should appeal to the publicity powers of the President so that the policy committee's answer will have the same strength and publicity value as the opposition charge.

It was argued that what the American people want is not to have the Democrats silenced but to be reassured that their leadership has the courage required in today's international situation. They are looking for a reaffirmation that all Russians are not 10 feet tall. This is not to say that they want soothing sirup, but that they want to be told this tremendous society we have is worthwhile and worth fighting for. The policy committee would take upon itself the job of providing this assurance and rededication to purpose.

It was also argued that the question is broader than simply maintaining the psychological deterrent. It is felt the U.S. Government should realize it is fighting psychological warfare in the most general sense. The concept of just a deterrent gives the idea of a defensive posture when we need to convey the idea that we are taking the offensive as well. The policy committee can help foster and clarify such an offensive attitude.

The discussants noted that our Government must remain responsible in its foreign policy and should never go so far as to stir up international chaos the way Soviet foreign policy is designed to do.

Concrete Proposal II

It is proposed for the future that a joint session of the four congressional policy committees meet with the President (or his representative) to formulate strategy on how the criticism-deterrent issue can best be handled. Such a joint session would have the following duties:

1. Encourage political campaigners not to overstate their criticisms of the defense situation or make distorted statements that would tend to damage Western unity. Foreign policy and defense matters were, by mutual consent, left out entirely of the presidential campaign of 1948.

2. Publicize around Congress the danger of questioning the credibility of our psychological deterrent. Point out clearly to the average Congressman that he is part of the U.S. propaganda machine and should endeavor to strengthen the psychological deterrent whenever possible.

3. Constantly review any irresponsible criticisms being curbed to make sure they are curbed knowingly and that we give up no more freedoms than absolutely necessary.

4. Find ways for military men and Congressmen suffering a crisis of conscience to make their views known to the President, the people, and the rest of Congress without hurting the psychological deterrent.

5. Serve as a permanent organization for producing joint Presidential-congressional national policy when sudden policy crises arise.

6. Serve as a body cutting across several committees that gets above the present piecemeal nature of defense and foreign policy planning. Abundance of time and detachment from detail would permit the joint session to take an overall view and come up with continuous policies to replace the present stopgap measures.

7. Rule on what security information can be leaked. The committee could serve as a clearinghouse for declassification through which all security information Congressmen want to release would have to pass. A code of ethics in this field could be worked out as a general guide for the joint session.

8. See that party specialists from both parties have been informed on all security matters and are kept on the inside of Government policies in the military and foreign affairs fields. In this way the rank-and-file Members of Congress would be assured that trusted members of their party know what is going on and the administration is not "pulling a fast one" on the Congress.

Procedures for Proposal II

Ideally, the joint session of policy committees would meet personally with the President, but since the Chief Executive is already overworked, some provision should be made for having a qualified member of the administration in a policy position take his place.

Both the Republican House and Senate policy committees will be members of the joint session along with their Democratic counterparts. Both the liberal and the conservative wings of both parties should be represented. Also, all party specialists in military and foreign affairs should be asked to serve.

The joint session would meet periodically to discuss overall policies and advise the President. Provision should be made for having it called into crisis session by either the President or the chairman of any two of the four policy committees.

All conferences would be in executive session, although results would be reported to the entire Congress and the people.

Defense of Proposal II

Although the contemporary need for security puts Congress at the middle levels of power, under the joint-session system specialists are kept in the know and at the top levels of power. These watchdog party specialists are an additional means of keeping the executive accountable.

The joint session will satisfy the plea for a group in our Government to make overall policies instead of operating defense and foreign affairs on a hit-or-miss basis. Thus, joint policy committees will have a positive role of building public opinion on needed policy issues instead of a merely negative role of checking for security leaks.

Since the joint session will contain both the President and Congress, it will face the problem of military and foreign policy matters getting involved in executive-congressional relationships.

Such a meeting of representatives of the two most powerful branches of our Government should serve to reduce suspicions, get Congress out of messing with detail, and reduce the tendency of the President to try and bypass Congress. It also should help to reduce the natural distrust between the politician and the administration policymaker.

It was observed, however, that the joint session will be stillborn unless its membership includes the real inner circle of leadership in the House and Senate. It must include people (such as the Senate majority leader) who can get a large majority of their party to support the decisions of the joint session.

The joint session will represent the liberal and conservative wings of each party, provide for bipartisanship, take into account the role of the party specialist, and strengthen intraparty executive-congressional relationships. All these requirements were set up as necessary to smooth dealings between the President and Congress.

Attempts by the joint session to make criticism more responsible will mean much more since they will come from a bipartisan committee rather than a partisan administration. A group representing both parties can apply moral pressure and requests for increased personal responsibility of Congressmen which could never be applied by the President himself.

The need for unity

The great strength of the joint session is that it is a concrete step toward the national unity which is so badly needed in combating a totalitarian dictatorship like the Soviet Union. Previously, the American people have been able to wait for some dramatic event—the sinking of the battleship *Maine*, unrestricted German submarine warfare, the bombing of Pearl Harbor—to create the unity necessary for national survival in a time of crisis. But the time-space age will not allow the time to wait for a dramatic event to bring the Nation together with one purpose. We must have unity now, and the joint session is an institutional step in that direction.

Juvenile Delinquency in Philadelphia

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, June 20, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from the Public Relations News of May 30, 1960, dealing with a joint project to combat juvenile delinquency in Philadelphia.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

In Philadelphia, the Reverend William Vaughn Ischie, Jr., rector of Christ Episcopal Church, and the Reverend Leon H. Sullivan, pastor of Zion Baptist Church, joined in a project to fight juvenile delinquency. They organized a nonprofit, no-fee employment agency to secure jobs for teenagers during their free hours. The effort is not only interdenominational; it is also interracial because one of the churches is predominantly white in membership and the other predominantly Negro.

When the project came to the attention of John J. Kelly, president of Kelly Associates, Inc., PR consultants, he promptly offered his assistance. His plan was to get sufficient publicity for the activity to: (1) let underprivileged youngsters know where to turn for guidance and help, (2) stimulate industry to report job openings to the project's sponsors, and (3) possibly turn the attention of some charitably inclined person to the activity. He was successful on all three counts. Kelly called the religion-education editor at the Philadelphia Evening Bulletin and outlined a possible story. The resulting feature was used by the wire services and sent across the country. A national foundation learned of the activity through the pickup by the New York Times, investi-

gated, and offered a grant of $33,600. Philadelphia papers gave spreads, pictures, and editorials which, within a month, stimulated 400 job applications, brought inquiries from 150 companies, and led to the placement of 200 teenagers.

Vision, Patience, and Determination: The Story of the Savannah River Development

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. BROWN of Georgia. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an address entitled "Vision, Patience, and Determination: The Story of the Savannah River Development," delivered by Hon. Millard A. Beckum, mayor of Augusta, Ga., before the 47th annual national convention of the National Rivers and Harbors Congress on May 26, 1960.

The address follows:

VISION, PATIENCE, AND DETERMINATION: THE STORY OF THE SAVANNAH RIVER DEVELOPMENT

(Address by Millard A. Beckum, mayor of Augusta, Ga., before the 47th Annual National Convention of the National Rivers and Harbors Congress, Mayflower Hotel, Washington, D.C., May 26, 1960)

Mr. President, officers, delegates, and distinguished guests, it is a great honor to have the opportunity of addressing this outstanding organization. I appreciate this privilege—the privilege of bringing to you in part, the story of the Savannah River development. Should my talk be worthy of a title, I would give it this label, "Vision, Patience, and Determination" or the subtitle "The Story of the Savannah River Development."

For more than a quarter of a century, leadership of my city, Augusta, Ga., realized that one of its most valuable assets was being overlooked. They set to work to restore to its full use to the people the Savannah River, which had, since the advent of the railroads, lost its place as a means of transportation between Augusta and the city of Savannah.

At the close of the first two decades of the 20th century, Augusta found itself losing its place in the sun as a winter resort city and, recognizing the need for the development of a positive, progressive, industrial program to take the place of the tourist economy, which was so rapidly slipping away, men of vision saw the need of reopening the Savannah River to transportation.

The first segment of success in the program of restoration was the building a lock and dam at a point approximately 12 miles below Augusta, this magnificent undertaking being realized as a result of the Public Works Administration program. When it was completed, the lock and dam was turned over to the Corps of Engineers of the U.S. Army, Savannah District, for maintenance and operation. It gave us a major important step in our river development plan. It caused our people to work with renewed interest and a conviction that a development of the river was indeed possible and could be justified.

Thanks to able advice and leadership available to us through the Corps of Engineers, our civic leaders of Augusta were caused to see the necessity of developing the Savannah River on a much broader base than first envisioned by our local people. The Corps of Engineers made it perfectly plain that to develop the Savannah River for the purpose of transportation only, was not enough that it would be highly important to the future of the Savannah River Valley to develop the river on a broader scale; soil conservation, flood control, and hydroelectric power, it being pointed out that each of these phases of development was equally important to the future of our river program; that if we were to put the river in a condition to render its maximum value to the people, we must indeed broaden our program.

The 1935 survey conducted by the Corps of Engineers for the Savannah River established the practicability as well as feasibility of need and justification for such a program. Under the remarkable leadership of Mr. Lester S. Moody, secretary of the Chamber of Commerce of Augusta, a man who simply would not give up in the face of discouragement, and even defeat in many instances, the effort to obtain authorization for the project continued, until success came to us in 1944 with the passage of House Document No. 657 which provided for the building of Clark Hill Dam and powerplant 20 miles above Augusta, at an estimated cost of $35 million. I am sure that you will be interested to know that when the dam was finally constructed, it cost $80 million, $45 million more than was originally estimated. This was due largely to the fact that it was deemed necessary to increase the size of the plant by adding two additional generators; implemented further in cost by the fact that during the years which intervened between the time of estimate and actual awarding of the contract for construction, the cost of labor had increased a great deal over that period of time.

I give you this brief rundown on the history of our river so that I might fully emphasize the importance of the work you do as a well organized and continuing association, serving the best interest of the people of the United States as you make use of the knowledge and prestige of this nationally recognized and respected organization keeping constantly before the Congress the vital need and urgent importance for a full development of the waterways of America, as well as the fallacy of an inadequate and/or dilatory program of flood control and soil conservation, pointing as you do to the fact that to withhold full support to such a program is indeed extravagance in the worst form, as it permits needless waste of our most precious and irreplaceable assets, soil and water.

To give to you and to those at home who have labored long in the interest of waterways development, flood control and soil conservation a full measure of appreciation for the fine and important work being done, and the value of your efforts to the people, not only of my section of this great country of ours, but to the Nation as a whole, let me tell you what the Savannah River program has meant to the economy of the Savannah River Valley. Since the program got underway, more than $200 million has been spent on the Savannah River by the Federal Government. The Clark Hill hydro plant has made available to industry and agriculture 88,000 kilowatts of electric power not previously to be had. The building of the dam and the impounding of that vast reservoir of water, which has a shore line of more than 1,200 miles, has brought to our section a tremendous recreational opportunity not previously enjoyed by our people. It has opened up a great amount of business to those who are engaged in selling outdoor equipment, boats, fishing tackle, hunting equipment, etc. In addition to the recreational value of the reservoir, it brought a change in the temperature of the water, cooling it to a sufficient degree that it gave preferred position to our area in the final decision to locate the Atomic Energy plant which is on the Savannah River below the city in our area. Construction costs of this vast industrial undertaking, calculated to serve our Nation from a standpoint of defense, has run well over a billion dollars. This, gentlemen, was a giant shot in the economic arm for the entire area. The present and permanent employees of that great plant is in the thousands. These employees are highly paid and skilled personnel. They add a great deal to the economy of our section; they add much to the cultural, spiritual and educational value of our area; they are participants in an expanding program of service in many areas of our community services.

A program for the deepening of the channel on the Savannah River from Augusta to Savannah is now underway. The starting of this channel has had much to do with the location of a great new plant by the Continental Can Co. They have selected a site on the Savannah River, just below Augusta, and it is said that the cost of their new plant will run well over $40 million. The building of this new plant has in turn been responsible for the location at Augusta of a second industry, one that will be the component field of manufacturing to that of Continental Can. In other words, gentlemen, the prophecies of those who preached the gospel of river development have come to pass. The Savannah River was, and is the key that unlocks the doors of our golden future of the Savannah River Valley, and when we think of the vast numbers of new jobs that have been created in and around Augusta as a result of the progress obtained today, it is of course easy to understand why our people are so grateful to the Corps of Engineers for the splendid support that they have given to our effort to develop and restore the Savannah River to its full use to the people of that great valley. As a result of their wise counsel and unfailing support, we will no longer stand by and see the rich topsoil of our area flow past the farms of the valley on into the sea. Flood control and soil conservation program as it is a very proper part of our river development has a cash value almost beyond estimate. With the completion of the Hartwell Dam and powerplant, we will have available a firm power availability for the Savannah River Valley that will meet all of the needs of an expanding industrial program.

Gentlemen, a dependable year-round channel from Augusta to Savannah will industrialize many sections of the valley. The payrolls that will come as a result of this new job opportunity will truly open a new economic era for the people of our great river valley. I cannot commend too highly the National Rivers and Harbors Congress for the farsighted and effected work you have done for the people of America, as you have carefully considered each matter that has been brought to your attention, and when found worthy of support by this organization, you have played an important part in seeing that the proper committees of Congress get such facts as will greatly assist them in the matter of making a decision as to whether or not a given project be included in bills to be passed, and if so, the implementation for appropriations that must be made to put such contracts into work. You are indeed adding to the wealth, to the might, and to the strength of America as you carry on the work of the National Rivers and Harbors Congress. I am sure you are a great help to the splendid arm of Government, the Corps of Engineers, in

that all research done through the National Rivers and Harbors Congress is, I am sure, a great value to the corps.

In closing, may I say in connection with the channel, when work is completed, we will have a 90-foot-wide channel, 9 feet deep the year round. The Corps of Engineers have completed, or have in work, three contracts with a fourth ready for letting. I feel that it would be of interest to you to bring out in my remarks that in providing for the channel it will be necessary to eliminate 28 sharp bends, and more than half of these have been removed by cuts, thus enabling longer tows to be made on the river. The Corps of Engineers have provided in the contract for riprapping, pile dike revetment, and bank stabilization, which, as you know, will of course aid in maintaining a 9-foot channel.

I am happy to state that local interest provided the funds sufficient for all easements and spoilage rights, these being required by the Corps of Engineers for the project. We are happy to add that Waynesboro, Ga., Allendale, S.C., and Hardeeville, S.C., are now anxiously awaiting completion of the channel. These cities are ready to establish wharves on the river as soon as possible. This I give you as another firm indication of the impact that this great economic development will bring as a result of the work on the river. We believe this will affect the entire area, and, gentlemen, let me say that I feel all of this comes out of the vision, patience, and determination of good civic leadership, aided and guided by such highly competent organization as this and that splendid arm of Government, the Corps of Engineers of the United States Army, whose sound operations have saved our Nation millions upon millions of dollars in construction costs.

Let me thank you for listening to the Savannah River story. To us it is the realization of a long-cherished dream. We are happy and proud that we see in sight the completion of this great undertaking.

Thank you very much.

Wanted: Rugged Individuals Who Like Insecurity and Will Take Chances

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 20, 1960

Mr. WILEY. Mr. President, the challenges of the 1960's, perhaps more than ever before, will require creative leadership guided by perspective, foresight, and understanding.

Through the years, our pioneers, each in their own way, of the 1700's, 1800's, and 1900's, have built and nurtured the greatest free way of life in the world.

To paraphrase the old adage, however, "History is merely the story of the acts of great men." Whether in science, politics, agriculture, conservation, the humanities, or other fields—the progress and success of any system or philosophy depends upon the individual—and the individuals en masse—who support and carry forward these programs.

Although our modern civilization has provided more comforts, conveniences, and good things of life than previously existed in history, the time has not expired when a social, political, economic, spiritual system—yes, mankind itself—does not depend upon strong, rugged, creative individualistic leadership, reflecting a mind and spirit attuned to the times, cognizant of its need, and irresistibly dedicated to attain the goals that will best serve mankind for the future.

Recently, Dr. Henry M. Wriston, former president of Lawrence College, Appleton, Wis., and now president of the American Assembly at Columbia University, and Chairman of the President's Commission on National Goals, delivered a lecture at Brunswick, Maine, entitled, "Wanted: Rugged Individuals Who Like Insecurity and Will Take Chances."

Reflecting a recognition of the need for stronger individualistic leadership in all our national endeavors I ask unanimous consent to have excerpts of the article recently published in the Milwaukee Journal printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, June 16, 1960]

WANTED: RUGGED INDIVIDUALS WHO LIKE INSECURITY AND WILL TAKE CHANCES—A PASSION FOR SECURITY AND HOMESICKNESS FOR THE HERD PREVENT AMERICANS FROM DEVELOPING THE KIND OF LEADERSHIP THEY USED TO HAVE, SAYS NOTED EDUCATOR

There has been a spate of books, articles, and speeches bewailing America's lost leadership. Politician after politician cries out for bold and imaginative action—seldom defined at all and never with any precision. Religious leaders bewail moral decay as preachers have since exhortation began. Publishers dominant in the field of mass media assert that we have lost our sense of mission.

The wailing wall is crowded, and ululations fill the air. When one asks where new leadership is to come from, who is to define the national purpose, and who will summon us from moral lassitude, the answer is an embarrassed silence.

Recently there was a symposium on the national purpose. A number of people gave their view of what it had been when it was lost, and what should be done to recover it. I found it intriguing that not one of the great minds ever mentioned the individual and his responsibility. Every criticism was cast in collective terms, in terms of society. There was a time when the individual was at the core of our political, religious, and economic thought. Indeed, the key to our history is the concept of freedom. One man may chase the dollar and consider it almighty. Thoreau could go to Walden pond in search of his own goals; Emerson could exalt the thinker; Walt Whitman could extol the pioneers and assert that the crowning growth of the United States is to be spiritual and heroic. Franklin, Jefferson, Edison, Theodore Roosevelt—and millions more—could follow their insatiable curiosity. Initiative is decentralized; responsibility is personalized; the individual is the ultimate value. His freedom is the key.

"THREW THE BABY OUT WITH THE BATH WATER"

Somewhere in the 1930's, or thereabouts, rugged individualism became associated with industrial piracy, with defiance of moral checks, with exploitation of one's fellow men. If I may borrow an expression familiar in Britain, when we denounced rugged individualism, we "threw the baby out with the bath water." We went too far, for nothing is more obvious than that leadership is a word which describes a quality of individuals, not of a society.

Surely the century which has known Woodrow Wilson, Lloyd George, Winston Churchill, Franklin Roosevelt, Charles de Gaulle, and Gandhi should not find it difficult to realize that leadership requires not only individuals but rugged individuals.

Temptation to shed responsibility is not unique to our day or to this generation. In a brilliant passage in his famous book "Revolt of the Masses," the great Spanish philosopher-historian, Ortega y Gasset, summed up the tendency and explained in a few words how the dictator rises to power not by his own strength so much as by the weakness of others. "Many men * * * homesick for the herd * * * devote themselves passionately to whatever is left in them of the sheep. They want to march through life together, along the collective path, shoulder to shoulder, wool rubbing wool, and the head down." It was this impulse to escape the harsh task of thought, to avoid responsibility, that made "he will decide" one of the great slogans of the Mussolini era in Italy.

The passion for security and anonymity has not passed America by; as a great jurist said, "They are the defenses against the intolerable agony of facing ourselves. We are in deadly fear of life, as much as our own American scene betrays." To some extent because of eagerness to have others make the hard choices of life, there is loud complaint that "Washington does not give us leadership." But Washington is inhabited by individuals like the rest of the Nation. If the goal of living is to hide in a social group, if we do not want to be rugged individuals, if we consistently decry individualism, why should we expect leadership? Whenever you sell individualism short, you lay the ax at the roots of democratic leadership, though you open the way for demagogs.

This recent denigration of the individual runs very deep and appears in unexpected and seemingly innocuous ways. For example, we demand guidance counselors in school. But what kind of guidance have they been giving?

Students are told to aim for certain jobs because there are plenty of vacancies and therefore not much danger of unemployment. They are advised to train for certain vocations because the pay is good, rather than because such employment of one's talent and energies brings intellectual, spiritual and emotional satisfactions. This kind of defensive counsel will never help to produce leadership.

The Soviets are candid about their central doctrine. Whatever else they keep secret, this is no secret at all. Economic determinism is the professed key to their philosophy and to their policy. They say explicitly that "the material life of society * * * is primary, and its spiritual life secondary, derivative"; "one must look for the source of social ideas, social theories, political views, and political institutions * * * in the conditions of the material life of society." Communists are relentless in their logical defense of that concept, unswerving in their devotion to that idea. Such a doctrine is the complete denial of the historic American dream. It is the precise opposite of the great ideals which shaped American history, proclaimed with such eloquence by Thomas Jefferson in the Declaration of Independence.

Few Americans therefore, would explicitly avow such a philosophical foundation for their way of life. Yet many, implicitly and in action, exemplify this grossly materialistic premise. Much of the recent advice to young men and women has been cast in the tone, the mood and the framework of economic determinism. Amidst all the noisy chatter about resistance to communism, there has been a silent surrender to one of its central ideas, namely the assumption that economic

interest is primary, while other phases of life are secondary, derivative.

SOME DENOUNCE STALIN BUT LIVE HIS DOCTRINE

Ironically, some of those who have shouted loudest about un-Americanism and Communist infiltration have swallowed this doctrine—and never felt it in the gullet as they gulped down this most un-American of all political and economic dogmas. They clasp Stalin's doctrine to their bosoms while with their voices they denounce him and all his works.

If we have been blind to this fact, others have not. It accounts for the feeling often expressed in the new nations of Asia and Africa that there is little to choose between the avowed materialism of the Soviets and the unconscious materialism that they observe in the United States.

A guidance counselor who has made a fetish of security, or who has unwittingly surrendered his thinking to economic determinism, may steer a youth away from his dream of becoming a poet, an artist, a musician, or any other of thousands of things, because it offers no security, it does not pay well, there are no vacancies, it has no "future."

Among all the tragic consequences of depression and war, this suppression of personal self-expression through one's life work is among the most poignant.

If you wish to speak in social terms, rather than in terms of individual self-expression, that suppression, when effective, is fatal to the concept of leadership. For leadership requires courage, boldness, and the willingness to accept risks. To use the most dreadful word permitted to be uttered in public, leadership inevitably, inescapably, involves insecurity.

The retreat from the effort to stimulate leadership arises in part, also, from a profound misinterpretation of democracy. No political thinker of any stature in all history ever interpreted democracy as equality in all things. What you will find set forth as an ideal is that every individual, however broken his body or limited his mind, shall have equality before the law and equality of opportunity to fufill his own highest potential. That is the American ideal.

EDUCATION EQUALITY LOWERS STANDARDS

In the reaction against rugged individualism, however, this historical and rational concept of democracy gave way to a sentimental and superficial idea that people should somehow be made equal. We can observe this effort all too clearly in education. During the last generation there has been a strong tendency to level requirements down, in order that the slowest, in the words of the sentimentalists, should not have their tender personalities "damaged by failure"—as though failure were not a normal experience of every human being.

With some validity it could be said that security has become "the opiate of the people" in America. You do not get boldness, or dedication to public service, or even responsible citizenship from those who choose as much idleness as possible as a way of life. They cease to be masters of the state, as the democratic thesis demands; they become its wards. When the citizen accepts the Government as his guardian, democracy is in decay.

There is nothing in the Bill of Rights that promises that the freedom there guaranteed can be enjoyed in comfort or in a serene atmosphere. In the long history of freedom, discomfort has always accompanied speaking on controversial matters. There never has been a time when there were not social sanctions against candor. But if freedom is to amount to anything, one must be ready to pay the price. When a man speaks out, he must be ready to receive, if not absorb, criticism. Dostoevsky lived in a land of tyranny; he knew its corrosive effect. With the wisdom that comes from lack of liberty, he asserted that "tragic freedom" is better than "compulsory happiness." It is a lesson we need to ponder.

I am asserting that those who misrepresent the normal experiences of life, who decry being controversial, who shun risk, are enemies of the American way of life, whatever the piety of their vocal professions and the patriotic flavor of their platitudes.

Commencement Day Address at Presbyterian College, Clinton, S.C.

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, June 20, 1960

Mr. THURMOND. Mr. President, on June 6, 1960, Wayne J. Holman, Jr., delivered a most inspiring address at the commencement exercises at Presbyterian College at Clinton, S.C. The message of his speech is applicable equally to citizens generally as it was to the graduating class of Presbyterian College. I ask unanimous consent that the text from Mr. Holman's remarks be printed in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE EQUALITY OF MEN

(Address delivered at the 79th commencement exercises of Presbyterian College, Clinton, S.C., by Wayne J. Holman, Jr., chairman of the board of directors of the Chicopee Manufacturing Corp., June 6, 1960)

I hope you will not think it a mere act of perfunctory civility when I tell you I really feel greatly honored to have been invited by my fellow Tennessean, Dr. Brown, to participate in your commencement exercises. Through a long and firm friendship with the late P. S. Bailey, of the class of 1926, who was one of the most devoted of your alumni, I came to know much about Presbyterian College; and through Mr. Robert Vance, chairman of your board of trustees, I have come to know more. And, in view of the great contributions which Presbyterian has made to the South, and in fact to the entire country, I am especially happy to be here.

Moreover, it always gives me high pleasure and a keen sense of gratification to be in that which has been known historically, and which has been so aptly described, as the independent State of South Carolina. This is so for a number of reasons. South Carolinians have always been leaders in espousing the Southern point of view; South Carolina was the home of him who was perhaps the greatest of all Southerners, a Yale man of the class of 1804, John Caldwell Calhoun; South Carolina was the first to secede just 100 years ago at 1:15 this afternoon, lacking 197 days; and during the War for Southern Independence, with a white population of 291,300, South Carolina put into the field 62,838 effectives, of whom, with the reserves, 22 percent perished in the struggle. What a proud and noble heritage those who stem from South Carolina possess. I should like to add also, the fact I have so many friends here, and the fact I persuaded one of the high-minded girls of Converse to marry me do not cause me to admire the State any the less.

On this bright day in your lives, when with profound relief you realize that your studies as undergraduates are all over, when you are about to receive your degrees with all the rights and privileges thereunto appertaining, when you are the object of a vast amount of pride on the part of your parents, your friends, and that one whom you most want to impress, I should like to speak to you briefly on a subject which really is a very old one, but of which we seem to hear more and more of late, and that is, "The Equality of Men."

In the latter part of the 18th century there emerged the doctrine of the equality of men. The motto of the French Revolution was "Liberté Egalité, Fraternité"; and the 33-year-old Jefferson began the second paragraph of the Declaration of Independence with the statement, "We hold these truths to be self-evident, that all men are created equal." Jefferson did not explain with great clarity and precision just how or in what way men were created equal, but perhaps some of his meaning may be divined from the remainder of the sentence which is "that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty and the pursuit of happiness.", Prof. Dumas Malone, of the University of Virginia, in the second volume of his life of Jefferson, stated that it was equality in rights, the equality of all men before the law, rather than equality of economic and social condition which Jefferson considered basic.

During the middle of the 19th century there was great discussion about the equality or the inequality of men in connection with the issue of slavery. This was one of the principal subjects of the seven Lincoln-Douglas debates which took place between August 21 and October 15, 1858. And one of the results of that great struggle which occurred between 1861 and 1865 was that one section of our population became a little more equal in some respects than it had been at the outbreak of the war.

In the decision of the Supreme Court in the case of *Brown* v. *Board of Education of Topeka, Kans.*, handed down on May 17, 1954, the decision was that separate but equal facilities were really not equal, and the implication was that the use of separate facilities tended to make those who were equal perhaps a little less equal.

At the commencement exercises of New York University on June 10 of last year, the Chief Justice of the Supreme Court of these United States gave the commencement address. During the course of this he said, "The central significance of our American Government is that for the first time in man's history practical political form was given through our free institutions to the conception that all men are by right equal."

As followers of Jesus Christ, we know that all men are equal in the eyes of God for it is written in the 28th verse of the 3d chapter of the Epistle of St. Paul the Apostle to the Galatians: "There is neither Jew nor Greek, there is neither bond nor free, there is neither male nor female: for ye are all one in Christ Jesus."

It is quite apparent, however, that from the viewpoint of physical, mental, and moral qualities men are not equal. They are quite dissimilar. Men are not equal in size, weight, strength, dexterity, and swiftness. Those men who comprise the track team of this college are there because they are superior individuals in their respective specialties. In the Olympic games which will be held in Rome this summer, through competition the foremost track and field athletes in the world will become known. Men are not equal in physical characteristics.

We do have some means, however imperfect they may be, of measuring a man's intelligence, or his ability to learn. At West Point and Annapolis, at the end of each academic year, as a result of the marking system in which a man's knowledge and reasoning ability are determined objectively, the men in the graduating class are racked up from the anchor man at the bottom, man by man, to the cadet or midshipman who receives first honors. Here at Presbyterian College those who excel academically are elected to membership in your scholastic society, Sigma Kappa Alpha. There are differences in a man's intelligence, or in his abilty to learn. Who has equalled Shakespeare in writing sonnets, the illustrious Dr. Samuel Johnson in the art of conversation, or Einstein in abstract mathematical reasoning?

If we had some ingenious way in which a scale of increasing temptation could be devised, we would find that men are dissimilar in their ability to withstand temptation and to observe moral laws. And it is to be noted that even men generally held to be good, sometimes fall from the straight and narrow. It is written in the 11th chapter of II Samuel that David had Joab place Uriah the Hittite in the forefront of the hottest battle that he might be killed. Uriah was killed, and David took his wife, and she bare him a son, and it is written in the 27th verse of the 11th chapter of II Samuel that the Lord was displeased. Judas betrayed Jesus Christ, and Peter denied Him three times. Men are different in their abilities to withstand temptation.

It is said that men are equal under the law. Yet in but very few States today are local laws upheld or enforced when there is a labor dispute. In the steel strike which took place last fall, it was reported that 200 supervisors of the Jones & Laughlin Steel Co., of the Hazelwood plant near Pittsburgh, were stuck in the plant because the strikers would not agree to let them back in if they did go out. The union arrogated to itself the right to prevent employees from entering a plant, and the police force did nothing. Scarcely a day passes but that we read of a similar incident.

Late last summer there was a teamsters' strike in San Francisco. Although enjoined by a restraining court order, striking teamsters continued to interfere with truck movements, with interstate commerce no less, into San Francisco. A court order was ignored in Little Rock, and the President sent the United States Army in. What happened in San Francisco? Essentially nothing. Where is the law? Where is equality under the law? Mass picketing, rioting, dynamiting, automobile wrecking, and intimidation of would-be workers and their families without any effective action by those sworn to uphold the law are too common in connection with labor disputes to bear repeating.

In his essay "On Liberty," published in 1859, John Stuart Mill stated that all the political changes of the age tend to raise the low, and to lower the high, and the political changes of this age are certainly no different. The poet Robert Frost, in testimony before a Senate subcommittee not long ago, said everybody comes down to Washington to get declared equal to somebody else, and he wanted poets declared equal to big business. This was a facetious remark, of course, but it has been my observation the Federal Government, especially since and beginning with the first administration of F. D. Roosevelt, has made the leveling or equalizing of men in matters financial and social a part of its fundamental policy. This has been the case despite the efforts ot the contrary of some of our own Senators and Representatives, among whom the very able and distinguished Senator from South Carolina, who is, at this moment, the newest of your alumni, has been one of the most active.

A number of immunities have been built into our labor laws during the past generation to free labor unions from those codes of conduct which bind the rest of us so as to enable their members to obtain a larger share of the national output. Under our various farm laws, the Federal Government has taken money from the general funds, and in the form of price supports has passed it along to those who raise certain specified crops. This subsidization of the farmer has brought about a condition of Government ownership of cotton, corn, wheat, and tobacco which is nothing short of ridiculous.

Of course, where the leveling effect of the actions of the Federal Government is felt most strongly is in the income tax structure. We have been accustomed to think of our economic system as a free enterprise system in which reward is proportionate to accomplishment, and accomplishment is achieved as a result of competition with others. But in our zeal to equalize people, we have gotten away from the idea of properly rewarding the man who does the best job.

If one of you graduates has superior energy and ability so he produces five times as much as a man with much less energy and ability, you would assume that the extraordinary producer would get five times the reward. But no—our tax system is designed to prevent this. It is the essence of our progressive tax system to penalize you precisely for your ability to produce more, and thereby to earn more.

In the McKinsey Foundation lectures delivered at Columbia University year before last, Crawford Greenewalt, of the Du Pont Co., said, "The admiration of the American people for achievement in any field is obvious and cannot be gainsaid." But, "When the rewards of achievement are paid in dollars rather than in honors or cheers, we say 'No, no,' and tax most of them away. We admire success, but penalize the successful; we admire talent, but penalize the talented; we admire initiative, but penalize the initiator; we admire leadership, but penalize the leaders."

The financial processes of the Federal Government extend beyond the income tax to other measures which work toward the objective of equalizing men financially. We level; we equalize; and by this very process we tend to destroy those things which make for real progress in our country. With this equalizing process, the able and diligent man feels he is getting a shabby deal, and the incentive to exert and apply his superior ability tends to disappear.

The leveling of men in a social sense, using the term "social" broadly, is most manifest, of course, in the school integration decisions of the Supreme Court; examples, it seems to me, of judge-made law at its worst. That one day school segregation could be legal, and 24 hours later it could be illegal, without act of Congress, or without an amendment to the Constitution, and in the face of clear and explicit language of the 10th amendment to the Constitution, does not comport with what I conceive to be the system of government entered into when the delegates of South Carolina ratified the Federal Constitution in Charleston on May 23, 1788.

The whole tendency of our times is to cherish and take care of the mediocre and ineffectual, and to penalize those who are able and who possess the habit of accomplishment. All of this has brought about a feeling of irresponsibility among a great many, and, in my opinion, a lowering of the standard of honest workmanship. The new cars which constantly have to be adjusted, the appliances which are not right, the waiters who don't serve, the long coffee breaks, low manufacturing efficiencies with low yields and high waste are common experiences.

Recognizing, however, that men are not equal, and recognizing also there are forces tending to level men, the question which you members of the 1960 graduating class must answer is: What should you do? What is your proper course of action? And my answer to this is that each of you should strive to become more unequal; you should strive to become more uncommon; you should strive for excellence in all that you are and do. It was in 1948 that Herbert Hoover said: "The great human advances have not been brought about by mediocre men and women. They have been brought about by distinctly uncommon men and women with vital sparks of leadership."

The very fact that you men and women are here today, garbed in an academic costume which stems from medieval times, is an outward and visible manifestation of the fact that you are already unequal, that you are already uncommon, but what I urge you most strongly to do at this time, which is really but the beginning of your adult lives, is constantly to endeavor to become more unequal, to strive for excellence.

And you may raise the question: Why should I extend or exert myself? Why should I not simply work from 9 until 5, 5 days a week, watch television in the evening, play golf or cards, or go driving or fishing on Saturday and Sunday? And while there are many answers to this question, I shall give you two. In the first place, with conditions as they exist in this world today, it seems quite probable that your survival, the survival of your families, the survival of our country is dependent upon the degree of excellence which we as a Nation cultivate. Dr. James Killian, chairman of the corporation of the Massachusetts Institute of Technology, and a native of Blacksburg, S.C., when he was special assistant to the President for science and technology, said that some aspects of American education have deteriorated despite the challenge of Soviet science. And the answer, he said, lies in bold and large-scale efforts to raise American intellectual standards to a level adequate to meet the challenge of the times. This goal, as applied to our colleges and universities, cannot be isolated from the quality of our intellectual life generally. What we really must be concerned with is the importance which the American people accord to the factor of excellence in our society, and it is to this factor that I ask you to turn your thoughts today.

When it was announced on the afternoon of Friday, October 4, 1957, that the scientists and engineers of the Union of Soviet Socialist Republics had put a satellite in orbit around the earth, our entire country was amazed and astounded. The common conception of the Russians had been that they were a generally illiterate, uneducated group of peoples, without the innate capacity, the body of learned instructors, or the physical facilities requisite and necessary for a comprehensive educational system. Nothing could be further from the truth.

Adm. Hyman C. Rickover, in a report on Russia before the Committee on Appropriations of the House of Representatives last August, as a result of a visit to that country and to Poland, during which he made a special study of the educational systems of those countries, stated the real race we are in with communism is to see whose educational system best prepares youth for the world of modern science and technology. The evidence is very clear that graduates of the Russian 10-year schools are much more thoroughly, intensively, and comprehensively educated than are the graduates of our 12-year school systems, and that there are more of them. It is estimated graduates of Russian secondary schools are about 2 years more advanced than are the graduates of our high schools who have taken the college

preparatory course. In 1957 the Russians had 1,475,000 scientific and professional people, at which time we had 1,330,000. Moreover, in the scientific and technical fields, 30 percent of the Russians hold degrees that are higher than our own, degrees which correspond roughly to our doctorate of philosophy.

The significance of this to you men and women who will be graduated today is that in whatever field of endeavor you decide to go, it behooves you to continue to study, to learn, to prepare yourselves, to strive for excellence. This thirst of the Russian people for knowledge, the avidity with which they go about acquiring it, their success in achieving professional competence, and the uses to which their advanced scientific and technological abilities are being put are things which should motivate us most strongly in this direction.

Mr. Charles G. Mortimer, chairman of the board of the General Foods Corp., went to Russia last year in connection with the American National Exposition in Moscow. The second day he was there, he dictated this note into a portable dictating machine he had brought along with him: "It seems to me I have discovered the secret weapon of the Soviets. It is no secret at all. Quite the contrary: it is the universal willingness and desire to work primarily for the sake of achievement. Everyone takes pride in working and in doing it well." And we, remembering Premier Khrushchev's remarks, "We will bury you," must do even more.

The second answer I shall give you is that the fullest, deepest, richest, most gratifying, and most rewarding sense of satisfaction which can come to you as an individual will come as a result of your having made an uncommon effort, of your having done your very best in your work. Emerson, many years ago, in his essay, "Self Reliance," wrote: "A man is relieved and gay when he has put his heart into his work and done his best, but what he has said or done otherwise shall give him no peace."

Most human beings have, to some extent at least, a feeling of inadequacy, and of insecurity. One of the most effective remedies for these psychological disturbances, it seems to me, is the conscious realization you have exerted all your faculties and capabilities to the full, and that you have accomplished the desired result in splendid fashion.

For doing our best and for striving for excellence we have an adjuration in both the Old and New Testaments. The preacher said in the 10th verse of the 9th chapter of Ecclesiastes, "Whatsoever thy hand findeth to do, do it with thy might—"; and in the 41st verse of the 5th chapter of the Gospel according to St. Matthew, it is written, "And whosoever shall compel thee to go a mile, go with him twain."

In February of 1941, Dr. William E. Wickenden, a distinguished engineer and president of what is now Case Institute in Cleveland, took this verse from the Sermon on the Mount as the theme of an address before the Engineering Institute in Canada. And in this Dr. Wickenden said that every calling has its mile of compulsion, its daily round of tasks and duties, its standard of honest craftsmanship, but that beyond that lies the mile of volutnary effort, where men strive for excellence, give unrequited service for the common good, and seek to invest their work with a wide and enduring significance. It is the extra mile; the added effort, the fullest exertion which produces excellence.

One of the great Confederate victories during the War for Southern Independence was won at Chancellorsville on May 1 and 2, 1863, when Lee divided his army, and sent Jackson with part of it around to roll up the right flank of the Federal forces under Joe Hooker. Although the Confederates won an overwhelming victory, and drove the Federals back across the Potomac, it was at tremendous cost, since Jackson, that staunch and noble Presbyterian, was shot at dusk by mistake by his own men, and died of pneumonia 9 days later.

General Lee, realizing he must carry the war to the North, brought his men, inspirited and inspired by success, to Pennsylvania. During the fighting of the first day of the battle of Gettysburg, on July 1, 1863, Dorsey Pender's division of North Carolinians was sent by A. P. Hill to clear Seminary Ridge. They cleared Seminary Ridge. And Freeman tells us it was done with the fierce might which always made Pender's charges terrifying. The courage, the resolution, the determination, the indomitable spirit of those men was demonstrated by the color-bearer of the Thirteenth North Carolina. A projectile almost tore this boy's right arm from its socket. Scarcely pausing, he grasped the flagstaff with his left hand and continued to press on with the cry, "Forward; forward."

As you go out from these commencement exercises today, may you go forward with resolution and determination to become unequal, to become uncommon men and women, and as you go, may God be with you in all that you do.

From Where I Stand

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES

Monday, June 20, 1960

Mr. KERR. Mr. President, I would like to have printed in the Appendix of the RECORD the inaugural address entitled "From Where I Stand," made by my good friend and fellow Oklahoman, Mrs. E. Lee Ozbirn, of Oklahoma City, the new president of the General Federation of Women's Clubs, an organization composed of 11 million women in the United States and in 60 foreign countries and territories.

I heard Mrs. Ozbirn give this address Friday evening, June 17, at the Sheraton Park Hotel. I was stirred by her words of vision and challenge, pointing to a magnificent effort for better understanding and friendship among the peoples of the world, beginning in this hemisphere. Under the leadership of this able and forceful Oklahoma woman, I am sure that the great organization of women will be an effective force in behalf of world peace.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FROM WHERE I STAND

(Address by Mrs. E. Lee Ozbirn, Oklahoma City, Okla., president, General Federation of Women's Clubs, June 17, 1960, Washington, D.C.)

Madam Chairman, esteemed friends, and dear family, this moment is a many splendored one—challenging, inspiring, and historic.

You have just conferred upon me the highest honor that is within your power—the international presidency of the largest group of organized women in the world. And by the same token, you have challenged me with the greatest gift of responsibility that can come to any woman through election to office, exceedable only, perhaps, when a woman is elected a Vice President of the United States.

As your president, you have designated me the leader of the most far-reaching group of organized women in the world—truly an empire on which the sun never sets—with its roots firmly planted in this Nation and its branches reaching into 50 foreign countries and territories.

Although I am grateful to you for the honor you have bestowed upon me, I hasten to say that I am cognizant of the great challenge facing me. Not only the challenge of leading an organization of millions of women, but the challenge of our way of life, yes—even to the existence of life itself on this planet.

This is an inspiring occasion. What could be more exhilarating, than from where I stand tonight, to look out over this magnificent audience—women assembled here from the length and breadth of this organization—and all dedicated to the same noble purpose—to build a better way of life?

What could be more gratifying than to be surrounded, as I am, by my devoted clubwomen and friends from my home State—Oklahoma? And what could be more heartening than to have the members of my precious family sharing this platform with me tonight?

And to you, my predecessors, several of whom honor me with your presence, with each of whom I have had the golden opportunity to serve, I salute you and pay a tribute of gratitude for your more than ordinary vision and courage that gives to us, today, our present heritage—rich, indescribable, and infinite.

Ours is a tradition of statesmanship and foresight we are solemnly obligated to perpetuate.

It has been tradition with us to exercise vision, wisdom, and concentrated effort toward those objectives which we view as necessary to the welfare of our country.

Over and over again, our plans have spanned decades—clearing paths for generations yet unborn.

The general federation worked for international good will and understanding in a period when our country was steeped in the philosophy of isolationism. Our clubwomen have never made the mistake of ignoring our neighbor because it was too much trouble to try to understand him.

Need I remind us that as early as 1896, the general federation was agitating for a bill in Congress that would provide for the settlement of our international problems around a peace table? And it was altogether fitting that the United Nations—our great international organization, dedicated to the peaceful settlement of disputes and the promotion of peace—had among its founding participants a former president of the general federation.

The Federation has always been highly sensitive to ways and means of keeping our Nation strong and free. Thirty-six years ago, the Federation recognized the need for more scientists in a resolution which expressed concern about the shortage of scientists in our country, and supported the encouragement of promising students and the recruitment of able science teachers. This resolution was reaffirmed 4 years ago—a year before the twinkle of Russia's pioneer man-made star—the first sputnik—awakened a drowsy America to the importance of a stepped-up program of nuclear science for its very survival—an awakening that today significantly gives the United States an overall advantage in nuclear ability.

Yes; this is a historic moment—uniquely so. With the beginning of this administration, we begin a new decade—the 10 years that could well be the most exciting of the 100,000 that man has inhabited this planet.

As we plunge into the "soaring sixties"—and what could well be the "sobering sixties of great decisions"—never before have our opportunities been greater, never before have our challenges loomed quite so large as in this most demanding of all decades.

With the boundaries of space, through the ingenuity of men, slipping away with astonishing rapidity—when far is near—we look in amazement upon the world of today.

We are surrounded by material wealth, and suffused in luxuries undreamed of a half century ago. The rich, warm atmosphere of prosperity is ours. Even now a historic moment of economic well-being is being recorded in our Nation. For the first time, the American economy is edging above the half-trillion mark.

It is difficult to believe that "trillion" in the sixties will become a working part of our vocabularies, just as "billion" astonished, awed, and then became commonplace in the forties and fifties.

All of this and more—and yet at no time in the history of our country has our way of life been on trial as it is at this moment.

Throw your mind, momentarily, as it were, around the world, and what do you find? Two nations—representing two ideologies—in a life and death struggle for the minds of men.

The United States of America on the right, a Christian nation—a freedom-loving nation—a democracy—that believes in and respects the right and the dignity of the individual. A nation of free self-government of and by the people—and God help us keep it so—with free enterprise the American way. Yes, a Nation that has a glorious record of standing in the brillance of its own integrity.

On the left—Communist Russia—a godless nation, a government-controlled nation—with no respect for freedom or the dignity of the individual and whose sole aim is world domination.

Yes, the current threat to democracy is genuine and ominous.

What can we do about it? Ours is a call to action—to mobilize the woman power of the General Federation in a dynamic program of "Responsible, Responsive Citizenship" in all affairs of public interest and concern. Beginning where? With you, in your community—the action point of democracy. There it is made and there it will be kept.

As your leader for the next 2 years, I appeal to you to reexamine, to reevaluate the organizational structure of the federation, its programs and its projects—and expediently make adjustments on all fronts to meet the needs and the demands of this day. It is a time when clubwomen must lay aside old rules and customs and unite in giving their best efforts to meet present challenges.

If at this moment I could wave a magic wand throughout the realm of this organization and my wish be granted, it would be that we promptly discard the old method of programing, and that every club would become a "roundtable" discussion group, with imaginatively planned forums, where clubwomen meet to study and engage in free discussion. Do away with the one speaker method. Clubwomen want both sides of the question presented and plenty of time allowed for questions and answers. Develop a "new town hall" in every club, open wide the doors, invite the interested people of your community and extend them the privilege to take a part in the discussions, as well as listen.

So strong is my conviction that it is our responsibility to develop and encourage citizenship responsibility and not in some comfortable future but right now, that in support of this conviction—and with the assistance of the department of adult education at the University of Oklahoma, a questionnaire, accompanied by a letter over my signature, was sent to the Governor and the senior U.S. Senator of each State—and to the president of each State university—with the request that each list what he or she considered the most vital issues before the public today. The response has been most gratifying and each response has indicated careful and studied thinking—and, I might add, strong commendation to the general federation for assuming the responsibility to know the problems and issues of public affairs, followed by suitable action. Many requested to be placed on our mailing list, stating that such study "could be most helpful in furnishing guide lines for governmental study."

At the State presidents' briefing conference tomorrow, the replies will be evaluated in relationship to setting into motion the public issues study program as a part of helping to solve today's problems—before they become the crises of tomorrow—and to aid in developing personal public responsibility.

A program of action of this magnitude highly indicates an enlarged legislative program and plans are now in the making to meet this need.

I am deeply persuaded that one of the greatest contributions this organization can make in the effort to help solve some of our national needs is the immense proliferation of action through dedicated and informed women—acting on a voluntary basis—for this is the core and strength of the General Federation. As an illustration, we cannot turn all the jobs of true welfare over to government, and this list could be added to. We must solve as many of these as possible on the voluntary level. It is apparent, using the General Federation, with our vast membership in this country, as an example, that we women appreciate and understand the value of voluntary action. This is the essence of responsible citizenship and the basis for democracy.

It is also my conviction that we must direct our attention to the business of strengthening our own organization. This is our first allegiance. We must keep a strong sense of purpose—the life in an organization. Recapture—revitalize our role of leadership by accommodating the power we do possess with our willingness to use it. Make all our programs in the name and in the right of the General Federation. The time has come when we need to call a halt to the cooperating and fund raising trend that is dissipating our energies, time and talent. Projects, yes; but limited to those that serve as an important tool for the implementation of our own programs, whether they be at the community and State level—or national and international in scope.

Now on the broader front: Undoubtedly the issue of greatest concern is that of insuring a basis for a just and durable peace, which involves greater international understanding. It is common knowledge that while we have been concentrating on Europe, Asia, and Africa—we have lost friends in this hemisphere. Therefore, the attention, the activities and the international emphasis of this administration will be turned toward the Western Hemisphere—the bulwark of democracy.

We are aware that the heritage of a long history of harmonious Canadian-American relations is being eroded away and primarily because of America's thoughtlessness and unconcern. All too few Americans are aware of this, largely because they know so little about actual Canada itself. The average American knows more about Europe's problems than he does of our neighbor north of the 49th parallel. We need Canada's friendship, support and raw materials. Canada has one of the world's highest standards of living, a literate and progressive citizenry—and a booming economy. Physically she stands between the United States and the Soviet Union on transpolar air routes. In the field of diplomacy, she helps to interpret the United States to Commonwealth neutrals like India. And more trade flows on the Great Lakes every day than through the Suez and Panama Canals combined. In recognition that this easy-going relationship must end and because we desire to keep a good neighbor and to be a good neighbor, it is with keen anticipation that we will have the stimulating personal contact with the Canadian Council of Women's Clubs and the General Federation of Women's Clubs participating in a 3-day seminar, September 30 through October 2, preceded by our own fall board of directors meeting. Both meetings to be in Montreal, and with the members of the board of directors making a valuable contribution in developing a better understanding and strengthening the bonds of friendship.

In further support of our Western Hemisphere solidarity program, immediately following the General Federation Convention, June 5 through 10, 1961, at Miami Beach, Fla., our international convention will be held in Rio de Janeiro, followed by a series of seminars in other Latin American countries, based on the subject of "Participation of Women in Public Affairs."

Why Latin America? Proximity alone provides sufficient reason for us to be especially interested in our Latin American neighbors to the South. In addition to proximity, there is the very important fact of our economic interdependence. Our trade and investments in the Americas, including Canada, are greater than for all the rest of the world put together. During the past few years the United States has annually received one-third of its total imports from Latin America and—at the same time—has shipped one-fourth of its exports to that area.

United States involvement with Latin America is made even greater by the fact of the Cold War. We cannot afford to treat our southern neighbors with the casualness of the recent past. As one authority has put it, "We cannot win the cold war in Latin America, but we can lose it there."

These things and more bind us together so strongly that a common effort to build the Western Hemisphere a true bulwark of peace and democracy seems both necessary and inevitable.

And those with whom we have advised in the State Department highly commended the General Federation for its choice of international emphasis these two years—and are lending full support in planning and implementing seminars both in Canada and Latin America.

And now we are faced with an immediate public issue of serious importance and import—a national election. The time has come when we should discard the outmoded idea that we are a nonpolitical organization, because we are not. We are a bipartisan organization. Politics today is every one's business. We are obligated as responsible citizens to know the issues, the principles involved and the character of the men and women who are seeking public office.

How much do Americans care about their free government? Judging by our voting record, many of us care less than we should. Make your first concern this year's election. I appeal to all of you, as representatives of your clubs and State federations—to immediately set into motion an intensive program in your communities designed to arouse your citizens from their apathetic indifference.

It is not too much to say that the fate of this era, in these perilous times, could well be determined by the next election—for much of our survival depends on the leadership of this Nation.

Who's decade will it be? The answer could well be found in the words of the purpose of this administration, "Responsible, responsive citizenship for survival."

This moment, together, we pick up the pen to write the history of the General Federation in the first 2 years of this exciting demanding decade. Ours is the challenge to write our most significant record.

What will the answer be? It is within you. As you will it, so will it be.

And this our benediction would be:

"Blessed is that nation whose God is the Lord, for where the spirit of God is, there is liberty."

Cloudy Defense Picture

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Monday, June 20, 1960

Mr. BARTLETT. Mr. President, the Fairbanks (Alaska) Daily News-Miner published a front-page editorial on June 14 concerning the military defense of Alaska and the other States to the south. It evaluates a pattern of contradiction in high-level policy which preceded the removal of the 449th Fighter Interceptor Squadron from the first line of national defense. I ask unanimous consent that this editorial, entitled "Cloudy Defense Picture," he printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CLOUDY DEFENSE PICTURE

A study of the numerous Air Force statements, press service news stories and dispatches from our own correspondents in Washington concerning the current Alaska defense picture leaves us—and we'll wager there are others who feel the same—wondering "Just how important is Alaska defense?"

Back in March of this year, Alaskans were told by the Air Force that the 449th Fighter Interceptor Squadron based here was to exchanges its F–89 aircraft for F–101B's—a superior, more modern faster and more effective type of aircraft. There has no hint in this announcement that the Air Force considered the 449th expendable. The plan to provide this unit with greater defensive punch would seem to indicate exactly the opposite.

Less than 2 months later, however, the situation seemed to take a 180-degree turn so far as the Air Force was concerned when the announcement was made that not only would the 449th not get the F–101B's, but the unit was going to be scrapped.

The reasoning advanced at this time was that the move was being made in connection with redeployment of America's defenses, giving greater emphasis to missile defenses, which, it was felt, could be based more conveniently and more economically in the United States.

Many valid arguments have been advanced against this point of view—a point of view which apparently was inconsistent with Pentagon thinking just a few months back.

Recently, a partial return to the original Air Force evaluation of the importance of Alaska was made—a move totally inconsistent with action to eliminate the 449th in August.

The Air Force statement carried in today's News-Miner declares that the number of F–102 fighter interceptors now stationed in Alaska will be increased and that these interceptors will maintain a continuous air defense alert in the Fairbanks area and in other areas of Alaska.

If a continuous air defense alert is now considered vital by the Air Force, why is the 449th being scrapped?

Why did the Air Force evaluation of Alaska's importance change so radically within a few weeks then change back again?

Why has nothing been said about defending with both missiles and aircraft the $300 million Ballistic Early Warning System station now going up at clear?

Isn't it logical to try to intercept Russian bombers from Alaska instead of waiting until their manned aircraft get over vital targets in the heart of the United States? (It is true as the Air Force has contended, that Alaska is not necessarily the only direct route of approach against targets in the United States—but it is one of the principal routes. Alaskan fighters certainly could appreciably blunt the Russian attack and ease the blow against the rest of America, and naturally, if Alaska's defenses are stripped, the Russians undoubtedly would pick the over-Alaska route as the best possible one for their offensive.)

This military maxim still holds true: The farther away from its target that an enemy invader is intercepted, the better from a standpoint of national security.

The Air Force policy toward Alaska has not been consistent; it has vacillated at least three times in the last 3 months. We hope it will now solidify on a policy which has much support both inside and outside the military; the policy of making Alaska strong instead of weak; heavily defended instead of highly vulnerable.

What's Happening to Our Cities?

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 20, 1960

Mr. WILEY. Mr. President, our fast-expanding population—resulting in greater business, industrial, and residential concentrations, urban expansions, and other far-reaching changes in our economic life—create the necessity for planning ahead effectively. Why? To assure that these significant facets of our economy are deployed to best serve our people.

The trend toward urbanization particularly creates a variety of complex problems. These involve the need for adequate zoning of business, residential, and industrial districts; expansion of educational facilities; expansion of water, sewage, and other facilities; improving road, rail, air, and water access to and from urban centers; and a variety of other complex challenges.

If the Nation is to best utilize its human and natural resources, then we must plan effectively to accommodate and meet the growing urban-community needs for our increasing populace.

Recently the Milwaukee Journal published an informative interview with Victor Gruen, a nationally recognized authority on city planning, entitled "What's Happening to Our Cities?"

Reflecting the complexity of the problems, as well as proposing solutions for more effectively coping with them, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, June 16, 1960]

WHAT'S HAPPENING TO OUR CITIES?—CELLULAR FORM OF URBAN PLANNING IS CALLED THE ANSWER TO METRO PROBLEM

Question. What is the answer to the city's problem?

Answer. I believe in a new type of metropolitan organization which I call the cellular form of urban planning.

Question. Would you explain that?

Answer. This form goes back to the way nature builds all her own creations—by grouping atoms and molecules in cellular fashion.

Question. How would you apply this cellular system to a city?

Answer. By starting from the simplest and smallest module—the human being—building up from there to a family unit, then a group of family units, and then to a small community.

That might be the basic cellular form in the urban environment. A number of such cellular forms—or communities—may then form a bigger one, which may be a town. But each of these cellular forms, or communities, should remain as a definite unit, and should not flow into the others.

Question. How would you keep the communities apart?

Answer. I feel that in our cities of the future we should arrange green spaces and separations between each one of the cellular forms, and should not allow our cities to be converted into the endless, amorphous, suburban deserts which we see today crawling over the entire countryside.

Question. Then how are these communities linked to form a city?

Answer. Cells, clusters of cells, constellations of such clusters, form a planetary system revolving, in their activities, around a powerful solar body in the form of the metropolitan core. In this core, the highest expressions of the economic, cultural, social, and work life are represented.

Question. Would we have to rebuild cities from scratch to develop this cellular system?

Answer. That is not necessary. We could convert the present pattern of our cities with comparatively little effort into the kind of pattern I am talking about. We could do it by using tools at our disposal which we are now misusing.

Question. Such as?

Answer. One of the best means for the purpose are the freeways, highways, parkways, and so on that we are building today. The trouble is that now we are building them from a strictly engineering point of view—simply to connect two points of nonexistent interest in the shortest possible manner.

In building freeways today we are disrupting existing communities, often cutting them apart, cutting off homes from their schools or from their shopping centers.

Question. What should be done with these freeways?

Answer. We should use them to encircle the various cells of which I spoke—these clusters of human activities.

Question. We've been hearing a lot lately about the "downtown mall." Is this a part of your cellular pattern?

Answer. Yes. It is definitely a part of it. I am frequently referred to in the press as the "father of the mall."

Though I do not want to shirk my paternal responsibilities, I must say that I am a little concerned about the kid. I believe that many mistakes are being made in its upbringing. The mall will be a success only when it grows up normally and organically.

Many mall experiments which are now going on—and I have heard about 50 such experimental malls—are like precocious

children. Because it is dramatic to take all traffic out of Main Street and grow trees and bushes there, it has publicity value, it makes newspaper headlines and it therefore is used as a promotional device.

But a mall is only a part of the whole pattern. The question is: How essential a part is it, and when should it be brought into execution?

Question. What is wrong with the mall?

Answer. The mall will be effective only if other things have been done first. Obviously, if we close up one of our main downtown streets to create a mall, then the autobiles that formerly used that street will have to go somewhere else. That means we just add congestion on other streets. The trouble with our downtown areas is not merely that they don't have green spaces and trees and flowerbeds. The main trouble, as I pointed out, is that it is so hard to get to the downtown area, hard to park once you get there, and then so hard to move around after you park. So just by creating a mall and planting grass in it, you haven't really solved an awful lot.

Question. What should a city do first?

Answer. Before you can afford to build a mall, you have to arrange for better accessibility to downtown areas by both private and public transportation.

You have to provide some kind of "retainer basin" for the traffic which flows in from all sides. I usually propose doing this by having loop roads encircling the core area and, immediately adjoining these loop roads, storage space for private automobiles and terminals for public transportation.

Question. Who is going to pay for all this? Isn't it true that the people with higher incomes are moving out of cities, into the suburbs?

Answer. That is not entirely true. In fact, we can observe today the beginning of a return to the city of such people.

I have recently heard some interesting figures that indicate a comeback for city apartments. This may be partly explained by the fact that commuting has become so much of a nuisance. Land has grown more expensive. It is hard to find help to tend suburban lawns and gardens. Provision of public services such as sewage, roads, power, water, schools, is becoming more costly as the spreading continues. The detached house is growing out of the reach of more and more people.

So I would predict that we will see a reversal of the flow, and that the refugees who have left in the last 20 years will come flooding back toward the center of the cities.

Question. Are public funds available?

Answer. We have a number of very practical tools for reshaping our cities, and one of the most important is the Federal redevelopment and renewal program. In the beginning, this was merely a slum clearance program and was concerned only with residences. Even with that limitation, it helped downtown areas considerably, because it converts the slums which surround our city centers into middle income housing.

Lately, through some changes and modifications in the law, it has become possible to apply urban renewal to commercial areas in the downtown sections.

Now it is possible for a community to receive funds from the Government to draw up a plan. The bulldozer approach is not necessarily the correct one.

It may be that renewal, rather than redevelopment, is the answer. Buildings that are beyond redemption may be condemned while those that are still in good condition may be left standing. With the Federal and State Governments putting up three-quarters of the money, the city can demolish the old buildings, put in new sewers and new utilities, then turn the area over to private developers for renewal.

Question. Is the rebuilding of downtown areas actually being done in some cities?

Answer. We are working now on a number of such projects in downtown centers. We are doing one in Stamford, Conn., and another in Paterson, N.J.

One project that is unusual and probably the furthest advanced is that which is taking place in Rochester, N.Y. There the redevelopment is being done by private enterprise.

Question. How did this come about in Rochester?

Answer. Here we had a case of two downtown department stores that came to us, I believe, 3 years ago and said: "We're finding ourselves in quite a quandary. Business downtown is retrogressive. We have considered opening branch stores, as some of our competitors are doing. In fact, we each have one branch store. But we are not very happy with them. We believe Rochester is not a big enough city for regional shopping centers with department store branches. What do you think?"

I replied: "Gentlemen, you're absolutely right."

They said: "Do you believe there is a chance to do something about the downtown area? We love our town and would rather spend our money to give it new life than drain the money off into the suburbs."

I told them: "I think there is something you can do, especially since your city has already taken a number of steps in the right direction."

Question. What has the city of Rochester done?

Answer. Rochester is building a loop road, which I have mentioned, as one of the important ingredients in city replanning. It is about half completed and the other half should be completed in 2 or 3 years.

The city is also building a new civic center, which is important because it creates greater civic pride and interest.

Rochester has a very progressive administration which is giving thought to changes in the whole traffic pattern and has built a number of city-owned parking garages along the edge of the downtown area.

Question. How big is this Midtown Plaza?

Answer. There are about 8 or 9 acres of land involved. The Midtown Plaza is a fusion of existing structures and new ones. The existing ones are the two department stores and a hotel. The new ones are stores, auditoriums, coffeeshops, restaurants, and so on, and an 18-story office building of which the top 4 floors are occupied by a new hotel.

Underneath this complex is arranged a 2,000-car garage on three levels. All the stores, the hotel, and the office building can be reached on two merchandising levels from an air-conditioned, landscaped pedestrian mall two stories high. People can reach the mall by escalator from the garages.

Question. What does the city of Rochester contribute to this?

Answer. The city pays for the parking garage. But the city had already promised to build a garage anyway, and by getting the underground rights from the owners of the property has saved itself immense costs. This project shows what can be done by private investment with the cooperation of the city.

Question. How do loop or belt highways fit into this picture? How should a city lay out its traffic system?

Answer. Let's for a moment use an analogy. Let's compare a traffic system with a river system. A river starts with little springs that flow into brooklets; the brooklets flow into creeks, and the creeks into rivers which empty into the ocean.

The traffic river is similar. Small roads combine into big roads that merge into highways that lead into freeways. The trouble is, there's no ocean for the traffic to pour into. When it finally arrives in the city it finds itself jammed into narrow streets. The result is a flood, just as if you dammed a river.

Question. How can you handle this traffic flood?

Answer. If you want to avoid a traffic flood, you have to provide an ocean, or a retention basin. That ocean can take the form of broad belt highways which distribute the traffic around the most congested areas. Multiple deck parking garages, accessible directly from the belt highway, are an integral part of this retention basin.

Question. Where does rapid transit come in?

Answer. There must still be public transportation, semipublic transportation and rapid transit. This includes buses, subways, taxis, and so on.

Question. What about the monorail which has been talked about a lot in the last few years?

Answer. I am very much worried about the tremendous attraction that names such as monorail hold for so many people. Everybody talks about the monorail. It sounds so modern. Yet, actually, what is a monorail? It's just a third avenue "el" on one rail.

It's just as disturbing to the neighborhoods through which it passes.

That doesn't mean that the monorail does not have its place. But I do not think its place is within a highly developed urban area. It might be used to connect one urban area with another. It might be placed above riverbeds, or between banks of freeways—but not inside our city pattern.

Question. Is it true that in cities that have pretty good rapid transit it is not being patronized—that people are still staying with their automobiles?

Answer. No, it is not. There has been very little done to improve rapid transportation, but where it has been done, it has had immediate effect.

Question. Where has this been done?

Answer. In Philadelphia, they have done something very simple. The city has guaranteed to the commuter railroads a certain minimum income on condition that the fare be reduced and the service improved. The effect has been that the railroads' commuter traffic has increased to a high degree.

Question. What other cities have done anything about rapid transit?

Answer. Chicago has built new rapid transit lines between the lanes of their new freeways, and these new lines enjoy good patronage. Chicago has made it a condition that no freeway can be built within the city limits which does not give the city free right-of-way between the lanes for rapid transit. And a wise measure this is, because it means that with every mile of freeway they also get a mile of rapid transit.

Question. Are you optimistic that the problem will be solved and that the big city will be saved?

Answer. I believe that it must be, and therefore that it will be. I am optimistic because of the change in thinking, the growth of interest in the problem that has occurred in the last 5 years. There are so many forces moving now that I have no doubt that we will see action.

I also believe that, once the first breakthrough is made in any of the approximately 100 cities that are seriously planning redevelopment of their downtown areas—as soon as one of them succeeds—the idea will spread.

Question. Is there any limit to the size of a city that can be rebuilt? How about New York, for example?

Answer. The basic approach is the same. The difference is that the very big city center will consist of more cells than a small one.

Question. Do you visualize the reshaping of cities as being done by private capital or out of tax revenue?

Answer. There will be a mixture of those two things. Only where the combination of private and public action is fully effective will we be successful.

Question. How about rapid transit systems? Will they be operated by private enterprise or by the city government?

Answer. I believe that public transportation is just as much a public service as the police department, the sewage system, the schools or the roads. It is in the nature of public services that they cannot be successfully operated in the framework of the profit motive.

Decline of Basic Values in Contemporary Society

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, June 20, 1960

Mr. THURMOND. Mr. President, on June 7, James J. Kilpatrick, editor of the Richmond News Leader, made an able address at a testimonial dinner for Col. W. D. Workman in Columbia, S.C. Mr. Kilpatrick spoke knowledgeably of the basic values which appear to be on the wane in contemporary society. His address is well worth the reading for every Senator and Congressman, and I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

By this time next year, the Southern States will be swarming with visitors to our salubrious climes by various centennial observances marking episodes in the late unpleasantness. Up home, where we often are reminded of how the Yankees took Richmond, our retail merchants are happily figuring how Richmond will take the Yankees. After a hundred years, we are about to get a little of our own back.

This wave of renewed interest in the war prompts me to some renewed speculation this evening on one of the oldest flights of fancy in American history. Suppose, I have asked myself, suppose Longstreet had come up in time that summer day, and Stuart had not been out picking daisies or whatever he was doing when Lee couldn't find him, and that Gettysburg had gone the other way. Suppose Lee had pulled off the victory on which he had pinned such hopes; and suppose that Union generals had then sued for terms. Suppose, in brief, that the South had won.

This is a fetching theme to brighten an idle hour, and though it has its lighter aspects it has some serious points worth pondering also.

It is possible, of course, considering the stubbornly individualistic nature of the southerner in political combat, that the Confederate States of America would themselves have seceded one by one from their own Southern Union. Such is the fraticidal temper of our brotherly love that we willingly might have sacrificed a southern constitution—the Atlanta Constitution, that is—at some point along the line. There have been times in Virginia when some of us willingly would have ceded Arlington County back to the District.

But suppose the Confederate States of America had survived as a separate political entity. What then? Well, there would have been no Reconstruction, of course, or at least no Reconstruction as we knew it in Military District No. 1. Doubtless President Davis would have asked some reparations—for enough Union cash to tidy up the Treasury a bit—but he was a man of vision and he would have taken one long, sober look at New York City and said to Mr. Lincoln, keep it, sir. He would have thought about Detroit, and he would have said, keep that, too. By way of reparations, we might have demanded as tribute a lifetime supply of Milwaukee beer, Maine lobsters, and the apple strudel they make in Lancaster, Pa., but there would have been nothing greedy in all this. General Grant would have understood such terms.

And then we would have settled down, the United States of America on one side of the Potomac, and the Confederate States of America on the other, and we would have entered upon those cordial relationships of commerce and industry by which, in our own times, belligerents become the best of friends. And oh, gentlemen, how trade would have thrived. Here in the South we are blessed with at least three necessities of any proper civilization: Beauty queens, bourbon, and Flue-cured tobacco. In these essentials of human existence, the South stands alone. And whenever our late antagonists threatened to get restive, we would have slapped an embargo on Jack Daniels, Chesterfields, and sweet-talking ladies from Mississippi. We would have brought 'em to their knees once more.

It would have been a happy, peaceful, and prosperous time. When automobiles were invented, we would have had the oil to keep up a trade balance. When the time came for prohibition, we would have ministered to the Union thirst; common humanity would have demanded no less. The Confederate States of America, we may be certain, would have spurned an income tax amendment; we would have avoided foreign aid, unless it came our way, and year by year our blissful, thrifty, and solvent land would have become the envy of our brothers and the administration of the civilized world.

Our Constitution, you will recall, provided for not only those individual freedoms and liberties that were to be expected from the sons of Mason, but included many other provisions that the experienced eye of Southern statesmen had viewed as desirable additions to the Constitution of the old Union they had left behind. If I might be serious for a minute or two, on such a festive occasion, perhaps you would let me call attention to a few of these forgotten provisions. There is much to be learned from them.

The Confederate Constitution, opened with a preamble adapted from the preamble of 1787, but with two especially significant changes. The old preamble began, "We the people of the United States, in order to form a more perfect Union," and so forth. The Confederate preamble began in this fashion: "We the people of the Confederate States, each State acting in its sovereign and independent character, in order to form a permanent Federal Government," and so forth. The purpose of these changes is apparent: The revised language made explicit what the framers of 1787, in their rush to finish their work that summer, had unintentionally left ambiguous—ours was never a union formed simply by "we the people," but rather a federation created by the ratifying acts of separate sovereign States, any one of which was free to come in or to remain outside.

From that clear and admirable beginning, framers of the Confederate Constitution proceeded by careful and deliberate changes in the old language to draft a new and more perfect compact. Thus, the legislative powers that were "granted" to the Congress of the United States in the document of 1787 were pointedly merely "delegated" to the Congress of the Confederate States in the language of 1862.

Article II of the Confederate Constitution contained a clause of such clairvoyant brilliance that I invite you to join me in respectful admiration for those of our fathers who thought it up. This clause gave the Confederate house of representatives the sole power of impeachment, with one exception: "Except that any judicial or other Federal officer resident and acting solely within the limits of any State, may be impeached by a vote of two-thirds of both branches of the legislature thereof." Think what a comfort it would have been to you Carolinians a decade ago, when a certain Federal judge who shall be nameless was warring upon your institutions, to have had power to reach him through the legislature at Columbia. Think what a blessing it would be to Virginians today if we could have a man removed by the same deliberate process.

Section IV of the Confederate constitution eliminated a word from the 1787 version that continues to cause trouble today. As you know, the Congress in Washington has power to alter State regulations dealing with the times, places, "and manner" of holding elections. The Confederate congress at Richmond had power to alter state regulations dealing only with the "times and places" of elections; the "manner" of conducting elections was seen as a prerogative of each individual state.

In the sixth section, the Confederate constitution provided for an arrangement that at first glance may seem to violate principles of separation of government, but on second thought is found to have great merit. This permitted members of the Confederate cabinet—the "principal officers in each of the executive departments"—to have a seat upon the floor in House or Senate, "with the privilege of discussing any measures appertaining to his department."

Section VII contained the provision Senator HARRY BYRD has so often tried to obtain through the enactment of a bill in Congress, as a useful instrument for Presidents of the United States: The item veto for appropirations acts. Section VIII further attested the prudent wisdom of the Confederate fathers in matters of governmental finance. They rewrote the clause that appears in Article I of the United States Constitution to limit the power of their own Congress to levy taxes for revenue purposes only, sufficient to "pay the debts and provide for the common defence." They deliberately eliminated the vague power to lay taxes to provide for the general welfare. They looked forward, too, to all the trouble inherent in the commerce clause, and they carefully circumscribed the power delegated to the Congress in Richmond to regulate commerce: Except for aids to navigation, the cost of which was to be paid by the steamship lines themselves, no internal improvements of any sort were to be financed in the name of regulating commerce. Mr. Summerfield, the eminent Postmaster-General, would have admired this Constitution of ours; it insisted that the expenses of the Post Office Department be paid from the department's own revenues. The Confederate Constitution provided that no funds could be appropriated without a two-thirds, yea-and-nay vote, unless the appropriation had been requested by a department head and submitted by the President. There would have been no pork barrel at Richmond.

It really is remarkable, how far ahead our fathers looked in framing their own Constitution. They provided for an executive with a six-year term, and anticipating the con-

siderations that led us nine years ago to the 22d Amendment, they provided that no President could succeed himself. Anticipating, perhaps, some of the elaborate rows over civil service hirings and firings, which seem to cause such weeping and wailing on the part of the Washington Post today, the Confederate Constitution authorized the Confederate President, in blunt and unmistakable terms, to fire any civil employee he pleased, at any time, on his own finding of inefficiency or misconduct.

One more provision, and I am done: Our Republic's present Constitution, as you know, can be amended, in practical effect, only after two-thirds of each House of the Congress have agreed to a specific proposal. This means that a large bloc in the House of Representatives, from, say, California, New York, and Pennsylvania, Illinois and Ohio, able to muster one-third of the votes plus one, can prevent even the consideration of a proposed constitutional amendment. Under the Confederate Constitution, however, it was provided that "upon the demand of any three States, legally assembled in their several conventions, the Congress shall summon a convention of all the States, to take into consideration such amendments to the Constitution as the said States shall concur in suggesting at the time when the said demand is made." And the provision went on to say that amendments agreed to by such a convention would thereafter have to be ratified by at least two-thirds of the States in order to become part of the Constitution.

The Confederate Constitution also provided, of course, for the admission of new States into the Confederate States of America, and we may imagine that the provision would have been frequently invoked. After all, the right of the States to secede from the United States would have now been established. Looking below the Mason-Dixon line, our cousins to the North would have perceived great advantages here. One by one, such excellent States as Indiana, Delaware, and Ohio might have applied for admission: We would have annexed the Indianapolis Star, the home office of du Pont, and a port on the Great Lakes. Politically, it would have been said, as the CSA waxed larger, that no northerner ever could be elected President, but sooner or later Mr. LAUSCHE of Ohio would have proved the maxim inapposite.

So the Confederate States of America would have grown to a rightful place among the powers of the earth, strong at home, respected abroad, and whenever the central bureaucracy at Richmond threatened an excess of bureaucracy, a rumbling warning of fresh secession would have curbed the tendency toward needless expansion. What a paradise was lost when the principles of federalism were rejected a century ago.

But my purpose in coming here this evening is not to lament the vanished glories of the Confederacy, but to reflect instead upon the present-day South, its great strengths, its abiding virtues, even a few of its weaknesses, for these were the characteristics that Bill Workman dealt with in his book, and they are characteristics that need to be better understood elsewhere in the land.

If I were to single out one quality above all others that distinguishes the South, and makes it a political and social entity, I believe it would be the South's obedience to the commandment that appears in many of our State constitutions, "to recur frequently to fundamental principles." This is not, as some would have it, a process of forever living in the past; it is not arch-reaction, or ante bellum stodginess, or a merely static insistence on the status quo. It is rather an instinctive, ingrained approach to change and innovation; it colors all our political and social relationships; it figures in our family life and in our churches; it is part of our public affairs, our education, our business and professional life.

And it is a good and wise thing. One fundamental principle is that, in general, the least government is the best government. Another is that government must operate by the consent of the governed. Still a third is that government must be kept close to the people. And because we of the South inherit a political allegiance to these principles, and recur to them frequently, it may be that we comprehend better than some of our brothers the evils that lie in an overgrown government, enforcing its will by fiat upon an unconsenting people, operating through remote and politically unreachable process upon our daily lives.

This habit of the South, to look backward before plunging forward, has blessed us with an incalculably valuable gift, the ability to resist the impulse of the moment. When it is suggested that Congress, by some grand enactment, can repeal the laws of supply and demand, the Southerner knows better. When it is suggested that a court decree can reverse the laws of evolution, and remand them for further consideration in some lower court, the South says simply, it cannot be done that way; stop, it is not so easy.

This is the long view, gentlemen; it is the long view. It is a view drawn from the soil, from the certain knowledge that some things can't be hurried, that grain cannot be harvested until it is ripened, that it cannot ripen until it has matured by sun and rain and the passing of time, and that much depends upon the seed and the good earth, and may it please the court, on God and His divine plans.

For all the urbanization and industrialization of the South, we are still—and I say it thankfully—a region deeply and almost spiritually touched by an agrarian tradition. What we are most in danger of losing, I sometimes fear, is this capacity for reflection upon the green fields, the golden uplands, the forests that blanket our old and patient mountains. This has always been the blessing of the South, that it has had a Calhoun to sit in his study at Fort Hill, gazing upon the good earth; a Jefferson to look from his mountain top in Albemarle; and today (if you will forgive the pride of a Virginian in a great son), a Byrd to relax of a summer night on the great porch at Rosemont, with orchards and a church steeple and the misty Shenandoah spread before him. So we recur to fundamental principles, the growing seed, the movement of water to the sea, and we hear above the katydids and the tree frogs how slowly ticks the eternal clock.

What I am groping to say here is nothing new. "The world is too much with us," said Wordsworth. "Late and soon, getting and spending, we lay waste our powers." And perhaps all I am really saying is that we are not quite so concerned, here in the South, with the incessant processes of getting and spending. We have known values not for sale in a supermarket: order, and self-reliance, and a sense of tradition, a respect for the wisdom of the great men who have preceded us.

These were the characteristics that Confederate statesmen, a century ago, brought to the writing of their constitution. They are the characteristics that sustained our people through the long and bitter night of Reconstruction, through the lean years at the century's turn, through the terrible grinding poorness of the thirties. And, gentlemen, they will sustain us, yet.

Our purpose, it seems to me, is twofold: It is to stand by the Constitution, and to preserve our society. In these two honest aims, we shall not fail.

How does one stand by the Constitution when every passing Monday sees some imperceptible fragment of it washed away? How does one preserve a society against powerful forces so recklessly, and so ignorantly, determined to impose a new order?

We recur, gentlemen, to fundamental principles. Let us study the Constitution unceasingly, not in the idle memorization of words and phrases, but in the deep, unchanging meaning of the instrument itself. Let us strive to understand and to admire the complex beauty of the relationship devised so long ago for keeping government in check, lest it snatch away the liberties of the people. In our public lives, let us seek to apply these principles to contemporary affairs, and to test every proposition by the Constitution as a good craftsman tests his work, holding it squared to the light. And when we have so schooled ourselves in the disciplines of the Constitution, in the reasons behind it, in the worth of its requirements, in the permanence of its values, we must make of ourselves missionaries to teach others. Once there arose a king, it will be recalled, who knew not Joseph. Just so, a generation has arisen in our country, that knows not the Constitution. Thirty years of progressive education have raised up millions of young and middle-aged Americans who have been taught little or nothing of these old values. They are alseep; let us wake them. And let us never be discouraged in this long struggle. The slow erosion of the Constitution has been a work of many years. It will take many years to build it back.

And just so, we must examine our society, its strengths and its shortcomings, its enduring values, the reasons for preserving it; we must first understand ourselves, and with firmness and good will, and respect for the contrary views of others, we must likewise wage a continuing campaign of education to win others to some comprehension of a way of life that is inescapably different from ways of life elsewhere in the Republic. We must instruct our cousins in what Emerson called "the solid angularity of life facts." On this score, I pass along a reflection for what it may be worth: These past half a dozen years, paradoxically, have been good for many of us in the South. We have been compelled to a reexamination of many things we had taken for granted or scarcely thought about at all. We have been embarrassed, I suspect, at some of the more foolish impositions that had been put upon the Negro people, and a source of our strength lies in the steady progress that is being made—in the midst of some maddening provocations—to remedy these ills. South Carolina's magnificent program of Negro school construction is a case in point, but you will not read much of that case in the New York Times.

We are familiar with this case in Bill Workman's book: The case for the Constitution, the case for a stable society, the case for preservation of those cultural qualities indigenous to our land, the case for an unpopular, minority cause in a country dedicated to the proposition that minorities have rights that must be respected—the case, in brief, for the unbeatable South.

One word more: We speak properly, in the context of the contemporary scene, of this case as a case for the South. It is we who stand politically as tertium quids, resentful lodgers in the house of our fathers, gazing in mounting anger at the abuses of our alien in-laws. It is we, below the Potomac, who have known longest and most intimately the infinite complexities and the unwritten rules that make possible a happy life on the part of two races thrown closely together by fate. In the common parlance of man, we are talking especially and particularly of a case "for the South."

But gentlemen, this is a larger case. The principles of government and of human behavior and of the relationship of man to the state that Bill Workman has set forth,

are not ours alone. They make up a case for free men in a free society, and they underlie every concept of wise change and sound growth. Whatever temporary adversities we may suffer, the case itself in the end must triumph. For this is, as Mr. Jefferson once remarked, the common glory of us all.

Propaganda Analysis

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. MICHEL. Mr. Speaker, on Wednesday, June 15, my good friend, the genial publisher of the Pekin Daily Times, was the leadoff guest speaker at the 1960 workshop on economic education at Bradley University. Mr. McNaughton spoke on "Propaganda Analysis," outlining the 6 approaches to propaganda and the 15 techniques employed by the propagandists.

As an introduction to the speech, Mr. McNaughton gave the 39 Peoria area teachers attending the 2-week concentrated course on busines economics a test. The test, which was graded during the speech and the results read back to the group at the conclusion of the talk, demonstrated to the teachers that they are not free from prejudice and perhaps they are easy prey for clever propagandists.

The results of the test for the teachers were very interesting and I should like to have them reprinted in the RECORD at this point.

Mr. McNaughton closed his speech by challenging the teachers to practice these five rules of mental conduct:

First. We can give up certainty; that being certain is itself a sin, certain to be avenged by life.

Second. We can reach tentative decisions from facts, stripped of propaganda shortcuts and gadgets. These decisions we will hold subject to revision in light of the new.

Third. We can refuse to be stampeded by anyone for any cause.

Fourth. We can urge others to act intelligently in view of the available facts.

Fifth. We can thus maintain the "crackerbarrel" spirit. We can stand on our own two feet in our thinking and help others to do the same.

TEACHERS TAKE TEST

(By Dean McNaughton)

Teachers can take it as well as dish it out.

At the afternoon session of the "Bradley Economic Workshop" yesterday I threw a "test" at the Peoria area teachers.

Why a test?

Well, my assigned subject was "Propaganda Analysis." My first mission was to demonstrate through a test that a large group of intelligent teachers can't agree on any controversial question—including the ultimate destination of the sinful. (They agreed, however, on two questions.)

A lecture on the subtle tricks used by professional propagandists is better understood when teachers realize the wide diversity of opinion in the group.

THE TEST

(Please answer the following questions by circling "Yes" or "No." Let your answers to the questions reflect your innermost feeling (prejudices and biases included), not the way you "ought" to feel.)

1. Teachers in the primary and secondary schools should receive more pay to keep them in line with other professional groups, and the laboring class. Yes, 39; no, 0.

2. Band parents tend to become overwrought about grade schools bands. Yes, 21; no, 18.

3. Organized lobbying should be prohibited in the State and Federal legislatures. Yes, 12; no, 27.

4. Taxpayers with $75,000 or more income should have their income tax lowered to promote "capital investment." Yes, 7; no, 32.

5. I objection to a Catholic becoming President of the United States. Yes, 15; no, 24.

6. More than any other factor, Hoover's ultraconservative program caused the great depression. Yes, 2; no, 37.

7. The Anglo-Saxon race is superior to all other races. Yes, 6; no, 33.

8. Vice President NIXON is a political opportunist. Yes, 16; no, 23.

9. By and large, a person's social position in a middle western community is based on how much money he has (or his father had). Yes, 21; no, 18.

10. Senior citizens on social security should get a free health-care ride. Yes, 15; no, 24.

11. U.S. foreign aid expenditures should be materially reduced. Yes, 19; no, 20.

12. The average politician in local government is accepting some "persuasion money" (let's not call it a bribe) or "extra compensation" not publicly known. Yes, 25; no, 14.

13. Big labor is out of hand and must be restrained by Federal law. Yes, 27; no, 12.

14. African blacks should have equal voting rights with African whites. Yes, 30; no, 9.

15. Big-time college football with its near-professional players and high-paid coaches, should be de-emphasized. Yes, 31; no, 8.

16. Churches in general have gone too far astray from the teachings of the original Christian moral concepts. Yes, 19; no, 20.

17. "Capitalistic Democracy" is superior in every way to the communistic "Peoples Democracy." Yes, 21; no, 18.

18. There is a bit too much pressure on teachers to advocate the "status quo," the stereotyped ideas acceptable to society. Yes, 30; no, 9.

19. Doctors have a schedule of professional charges which are too high. Yes, 23; no, 16.

20. The city manager form of municipal governemnt is superior to the mayor-commission form. Yes, 24; no, 15.

21. Khrushchev won the diplomatic battle at the summit. Yes, 4; no, 35.

22. Current high school graduates spell better than those in the old days. Yes, 15; no, 24.

23. An evil person will go to hell. (Hell defined by church doctrine). Yes, 22; no, 17.

24. Parents as a rule want teachers to pass out more home work. Yes, 7; no, 32.

25. The Communists have had limited success infiltrating the AFL–CIO American Federation of Teachers. Yes, 26; no, 13.

26. Federal aid to education is another step on the road to socialism. Yes, 20; no, 19.

27. The average housewife shops like a bumblebee attracted by brightly colored trading stamps. Yes, 24; no, 15.

28. Stevenson is too intellectual to make a good President. Yes, 4; no, 35.

29. The University of Chicago is a breeding ground for Communists. Yes, 4; no, 35.

30. Sex is here to stay. Yes, 39; no, 0.

The Issue in Japan: U.S. Bases

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ralph McGill which appeared in the Washington Star June 16, 1960:

THE ISSUE IN JAPAN: U.S. BASES—COMMUNIST EFFORT TO MAKE US PULL ALL OUR FORCES HOME SEEN IN EVENTS

(By Ralph McGill)

Bases are the issue in Japan—not Mr. Eisenhower.

The Comunists, having dramatized the fact of U.S. bases after the unhappy U–2 incident by threats to bomb them, are whittling away at those in Japan.

The treaty, against which the Communists and Socialist groups in Japan are protesting with such violence, gives the United States 10 more years to man and support missile bases.

The Socialists may be sincere when they stridently oppose the treaty because the presence of U.S. missiles and launching forces may again involve Japan in war. But the Communist groups are not sincere. They are acting on instructions. Their purpose is to call attention to the bases and to promote a drive toward either an alliance with the Kremlin or a neutralism which forbids bases.

The Communists apparently believe they can build up enough fear and distrust over the bases to bring about the fall of the Kishi government, even after the treaty becomes official on June 19. The Communists are not popular in Japan. The Americans do have the support of most of the citizens, especially the better informed. But Japan has an instinctive fear of war. This is not too surprising in a country which, alone, has experienced two atomic attacks. Mr. Khrushchev knows this. And so he probes and agitates. And the Communist Party happily accepts the opposition provided by the Socialists and happily exploits it.

Here we have a fine example of how communism rides a horse going their way. The uninformed and thoughtless in this country often are led to say, and believe, that some worthy cause is communistic because the Communists support it. They ignore, or do not know, the Communist technique. Hence, in this country the Communists have scored by causing some Americans to attack the Supreme Court as Communist-dominated because the Communists endorsed the school desegregation decision. The Communists are pleased if they can make us doubt our courts.

The Communists in Japan support the Socialist protest against the U.S. treaty because it gives them, the Marxists, a vehicle they lacked. They would very much like to sabotage the treaty. Failing in that, they would hope to so weaken the Kishi government it can be toppled in the months ahead. We may be very sure they will work to that end. The attack on the President of this country is merely a means to a hoped-for end.

The United States is concerned about this and the bases. The average citizen may have overlooked the fact that we have been deprived of former bases in France. We have been restricted in our use of bases in Norway. We do not quite know what will happen in Turkey, where a military committee is trying to restore the functions of government. Presently this group is very partial to the West and to this country in particular. Happily, it has a long history of opposition to,

and fear of, Russia. But we do not know what will happen.

It is becoming increasingly clear that, whether or not there is some dialectic disagreement between Red China and Russia, they both join to work the same side of the street in urging neutralism in Asia. The Chinese wish India to become more neutral, out of fear, and certainly both Peking and Moscow wish to see Japan driven from her treaty relationship with the United States.

It is a further irony that Japan's desperate need to trade has made her unpopular with certain segments of our own economy and with their representatives in the Congress. It does not require any great vision to comprehend what our position would be in the East if Japan were to declare herself neutral and deny us bases or use of Japanese waters. That our own resistance to Japanese competition may assist the Soviets to bring off a victory in Japanese neutralism is a very serious segment of the complex problem.

So it is that today the Communists ride the anti-Eisenhower sentiment in Japan. Tomorrow they will ride whatever else is going their way. If they can pull down the Kishi government they may bring about a repudiation of the treaty. That's what they actually want.

Union Do-It-Yourself Program

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. PUCINSKI. Mr. Speaker, on May 18, I had the pleasure of calling attention of the House to the most worthy action of Local No. 1031 of the International Brotherhood of Electrical Workers in Chicago, whose president is Mr. Frank Darling, when this union adopted a plan to provide surgical and hospital care for its retired members at the union's expense. At that time I called this plan a good example to follow.

I am delighted to see that in an editorial on June 14, 1960, the Chicago Sun-Times similarly called attention to local 1031's exemplary action and has praised both this union local and Frank Darling for their action.

It gives me great pleasure today to include in the RECORD the Sun-Times editorial, which follows:

UNION DO-IT-YOURSELF PROGRAM

Recently we have stressed on this page our conviction that there are many fields in which Americans can adopt a do-it-yourself policy rather than rely on the Federal Government to do it for them.

The city of Philadelphia has used city funds to subsidize private railroad lines' commuter service.

Presbyterian-St. Luke's Hospital plans a $20 million expansion to make it one of the Nation's greatest university-affiliated medical centers and physician training institutions.

A group of North Side businessmen and institutions have agreed to spend $35,000 on a neighborhood renewal and conservation plan for the Uptown area; they hope to stimulate private investment and save the neighborhood from blight without asking Government help.

In still another area, the field of medical aid, a Chicago union has just undertaken another do-it-yourself project. Instead of counting on the Federal Government to set up a medical program for the elderly, the AFL–CIO International Brotherhood of Electrical Workers, Local 1031, has set up its own program.

The local has insured 106 of its retired members against illness by taking out a policy on them with the Continental Casualty Co. For $11 a month, paid by the local, the members receive these benefits:

Up to 50 doctor's calls a year will be paid for at $5 each for home or hospital calls and $3 for office visits.

Up to $300 for each surgical operation and up to $150 for medicines and X–rays.

Fifteen dollars a day for the first 31 days in a hospital or convalescing nursing home and $10 a day for 29 more days. Patients can choose their own doctors and hospitals.

M. Frank Darling, president of the local, said the plan was put into effect because union officials believe there will be no expansion by the Government this year of the social security program to include hospital benefits for the elderly. Darling is willing to take Federal help but does not count on it.

Instead of waiting on the Federal Government to take care of its older members, the union will dip into its own treasury to do so. This is a good example of what we had in mind recently when we said problems of schooling, health, urban renewal, etc., can be better handled by States, municipalities, business organizations, and individuals than by the Federal Government. To that list we can now add labor organizations.

Monroe Doctrine and Panama Canal—American Legion Resolutions

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. FLOOD. Mr. Speaker, the Congress now has before it in both House and Senate important resolutions relative to the Monroe Doctrine and Panama Canal.

Because of their importance these measures have aroused wide interest among patriotic groups including the American Legion.

The national executive committee of this great veterans' organization on May 4–5, 1960, adopted two resolutions dealing with these subjects, and with special reference to the Panama Canal.

The indicated resolutions follow:

RESOLUTION 10

Whereas the Monroe Doctrine has historically been a keystone in the structure of our foreign policy; and

Whereas we are seriously alarmed and disturbed over increased Communist activities, infiltration, and influence throughout various portions of the Caribbean area, Central and South America, particularly Cuba and the Panama Canal area; and

Whereas we feel that a strong, dynamic, and effective policy toward Latin America should be immediately adopted and executed by our Government, lest the Communist cancer take hold throughout the entire area; and

Whereas any Communist action relative to the Panama Canal would be considered as a most serious threat and a hostile act: Now, therefore, be it

Resolved by the National Executive Committee of the American Legion in regular meeting assembled in Indianapolis, Ind., on May 4–5, 1960, That the American Legion call on our Government to reaffirm the Monroe Doctrine and broaden its scope in recognition of the fact that the infiltration of imperial communism is a type of aggression and further to promptly and vigorously use all means within our power, both economic and military, to prevent the establishment or continuance of any Communist or communistic-controlled government within the Western Hemisphere; and be it further

Resolved, That our Government take all necessary steps, both economic and military, to preserve the complete sovereignty of the United States of America, including the Panama Canal Zone.

RESOLUTION 17

Whereas the American Legion is deeply concerned over the situation that has developed relative to the question of sovereignty as claimed by the Republic of Panama over the Panama Canal and the Panama Canal Zone, owned and operated by the United States; and

Whereas we believe that the United States should not, in any wise, surrender to Panama or any other government or authority, its jurisdiction over and control of the Panama Canal and the Panama Canal Zone, in accordance with existing treaty provisions contained in article III of the Hay-Bunau-Varilla Treaty of 1903: Now, therefore, be it

Resolved by the National Executive Committee of the American Legion in regular meeting assembled in Indianapolis, Ind., on May 4–5, 1960, That it is to the best interests of the United States and all nations and peoples of the world, that all powers, duties, authority, and obligations of the United States, in the Panama Canal and Canal Zone, be continued in accordance with such existing treaty provisions; and, be it further

Resolved, That the United States retain its sovereignty over the Panama Canal and the Panama Canal Zone which exists under treaty and that no flag other than that of the United States of America be flown over it.

Surveys Show Air Pollution a National Problem

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. ROBERTS. Mr. Speaker, air pollution is a growing problem in this country. It is a problem that knows no State boundaries.

For several years the Committee on Interstate and Foreign Commerce has given consideration to the responsibilities of the Federal Government in this field and has sponsored legislation to set up the present research program which is being conducted under the direction of the U.S. Public Health Service with Federal funds.

Members of the House will be interested in a summary of a statement made recently by Drs. Eugene Sawicki, Walter C. Elbert, Thomas R. Hauser, Francis T. Fox, and Thomas W. Stanley, at a meeting of the American Industrial Hygiene Association in Rochester, N.Y.

The summary, with various tables showing the results of a study of air in 103 cities and 28 rural locations, follows:

Dr. Eugene Sawicki of the Robert A. Taft Sanitary Engineering Center, Public Health Service, reported on measurements made of the 3,4-benzpyrene content of the air in 103 cities and 28 rural locations in the United States. Benzpyrene is known to be carcinogenic to laboratory animals and is suspected of producing cancer in man. Dr. Sawicki reported values averaging about 16 times greater for city areas than in the country. Much higher concentrations of benzpyrene were found during winter periods than in summer, probably because of the increased amounts of fuels used for heating in winter months. In some cities, the quantities of benzpyrene found would indicate that an individual breathing such air would inhale as much benzpyrene as from smoking two or more packages of cigarettes daily.

Benzpyrene in air is of great interest to health authorities because of its possible relationship to lung cancer, a disease which has increased markedly in recent years. Statistical studies do not show any significant correlation between concentrations of benzpyrene in air and the latest available lung cancer mortality data as these vary from one city to another. It is known, however, that benzpyrene is not the sole potentially carcinogenic agent present in community air or in cigarette smoke. One additional possible explanation for the lack of correlation is that lung cancer mortality may be associated with exposures to carcinogenic agents many years ago, at which time the conditions of the air may have been different than those now being studied.

Benzpyrene is a material classified as a "polynuclear hydrocarbon," believed to come principally from the incomplete burning of fuels, waste materials, or other combustible substances. It is normally found as a constituent in many tarry materials.

Significant detailed data on benzpyrene concentrations in air in various locations are attached.

Benzpyrene concentrations in urban sampling sites for January through March 1959

State	City	Micrograms of benzpyrene per 1,000 cubic meters of air
Alabama	Montgomery	24
Alaska	Anchorage	3.8
Arizona	Phoenix	5
Arkansas	Little Rock	1.5

The National Oceanographic Expedition

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. SIKES. Mr. Speaker, I would like to call to the attention of my colleagues a very fine address on the National Oceanographic Expedition presented by Rear Adm. H. Arnold Karo, Director of the Coast and Geodetic Survey, before the 47th National Convention of National Rivers and Harbors Congress on May 26, 1960:

THE NATIONAL OCEANOGRAPHIC EXPEDITION

(By Rear Adm. H. Arnold Karo, Director, Coast and Geodetic Survey)

I am happy to be with you today at this session of the 47th annual national convention of the National Rivers and Harbors Congress. As the director of the Coast and Geodetic Survey of the U.S. Department of Commerce, it is a pleasure to exchange ideas and information with this distinguished group concerning our mutual interests in the harbor areas and water resources of the Nation.

Our surveys are vital to one of your principal objectives—that is, harbor and channel improvements to meet the ever-increasing demands of the Nation's waterborne commerce and shoreside industrial complexes. We also have an interest in the Nation's water resources program insofar as our geodetic surveys contribute to planning and execution of new projects.

I am with you today specifically to discuss the oceanographic program of the Bureau as recently highlighted by the voyage of the ship *Explorer* en route from Seattle to Washington, D.C. This 10,000-mile expedition which extended over a period of 79 days establishes a landmark in the oceanographic activities of the Bureau. It is the modern counterpart of an historic voyage by the ship *Hassler* in 1872.

The old sailing ship, named for the first superintendent of the coast survey, the great Swiss scientist and engineer, Ferdinand Rudolph Hassler, took 10 months to sail from San Francisco around the Horn to Boston. The scientific operations of this cruise were under the direction of Prof. Louis Agassiz, the Swiss naturalist who also immigrated to the United States from Switzerland. Both ships had San Diego as a port of call during their oceanographic cruises and it was there that kindly old Professor Agassiz endeared himself forever to the people of that great Western port. He was asked to address a big rally then in progress in the town in support of Horace Greeley's candidacy for President. If anyone thought he was going to make a speech in support of Greeley they were disappointed. Instead, his remarks were in support of the ideal climate of San Diego and he paid high compliments to the people of the town for their graciousness to him and his associates. The people learned of his interest in collecting specimens of local flora and fauna and when the *Hassler* departed the city after a 10-day visit he had 12 barrels aboard of San Diego fish, snakes, insects, plants, etc., all immersed in alcohol for future scientific study.

The cruise of the *Explorer* did not generate a counterpart to this episode, but we did have many unique experiences which can be encountered only on a cruise of this type. One of the highlights of the cruise was our investigations on and around Swan Islands when I had the opportunity of being aboard. We accomplished a substantial amount of hydrography in investigating the underwater shelf around the islands. Tides were observed there for 6 days and observations were also made at two magnetic stations. Plants, reptiles, and insects were collected for the U.S. National Museum of the Smithsonian Institution and 18 large land lizards, or iguanas, were captured alive for the National Zoological Park in Washington.

We collected 89 rock samples and made a reconnaissance geological study of Swan Islands for the U.S. Geological Survey. Oceanographers specially trained in scuba diving techniques donned diving gear to study and photograph the coral reefs around the islands. Over 800 feet of motion picture film were exposed in a series of 10 underwater dives. Due to the isolated area of these least known of the U.S. possessions, we enumerated for the Census Bureau the 28 inhabitants of the islands for the 1960 census. The Post Office Department authorized a special cancellation stamp for philatelic mail and over 5,100 commemorative cancellations were made aboard the ship.

Transfer of the *Explorer* to the east coast heralds an expansion of our oceanographic program in the Atlantic. I have high personal regard for this old workhorse of our fleet of survey ships. She was my last sea command before being assigned to headquarters in Washington prior to taking over my present job of head of the Bureau. Even in those days we made significant discoveries pertinent to our present-day accelerated interest in submarine topography. During September 1949, on a course which I laid for the *Explorer* across the Gulf of Alaska, we discovered a seamount 400 nautical miles southwest of Queen Charlotte Islands. This submarine mountain rose to 4,000 feet below the sea surface from depths of about 15,000 feet.

I have just announced the discovery of another major seamount rising 1½ miles to a surface depth of 3,984 feet. This is the 20th peak of a chain extending along the floor of the Aleutian Trench for 600 miles from its terminus 110 miles east of Kodiak Island. Approximately 160 underwater mountains have been discovered by Bureau ships in this vast northwest Pacific area. Operational use of nuclear-powered, deep-running submarines and the development of countermeasures against these, including detection, identification, tracking, and attack, will inevitably require far greater knowledge of the location and definition of seamounts as well as other underwater features.

Reassignment of the *Explorer* to the east coast resulted from the addition to our fleet of a fine new survey ship for west coast and Alaskan operations. On April 30, I had the pleasure of commissioning the *Surveyor* at San Diego where she was built by the National Steel and Shipbuilding Corp. The commissioning of the new ship was especially timely in view of national attention now being given oceanographic operations. This modern ship, among the finest of the specially built ocean survey ships in the world, now becomes the backbone of the Coast and Geodetic Survey fleet.

I like to recall that my first assignment in the Bureau almost 37 years ago was aboard the old *Surveyor*. She was then considered the most modern of surveying ships and was at that time the pride of our fleet, yet her bridge contained only a steering wheel, magnetic compass, whistle cord, and a big brass spittoon. We sold the gallant old lady a few years ago after 38 years of service. At the time of her decommissioning, the bridge of the *Surveyor* contained a steering wheel, automatic pilot, gyrocompass, magnetic compass, automatic whistle, automatic direction finder, two radars, sonar, sofar, loran, shoran, EPI, IFF, three different types of echo-sounding equipment, numerous small electronic gadgets—but no spittoon. Progress is inevitable.

The new ship of over 3,000 tons has all these items on her bridge and many more, all a tribute to the electronic age. She also has the bell from the old ship to prepetuate the honorable memory of her proud predecessor, in grateful recognition of her years of sterling service to the Nation.

The oceanographic voyage of the *Explorer* embarks us on a new and intensified oceanographic program. In view of the part that the Coast and Geodetic Survey will be expected to play in this new program as a recognized world leader in physical oceanographic work, we took the opportunity of the *Explorer's* transfer to develop the cruise into a full-fledged expedition. Our objectives were to examine oceanographic phenomena in collaboration with a dozen or more scientific agencies.

We are indebted to the National Science Foundation for support in this undertaking, which is the first extensive scientific expedition of its kind that the Bureau has conducted since the days of Pillsbury in the early 1880's. Lack of information concerning the oceans or the science dealing with the earth's water mantle has never been more keenly felt than it is today. We must have knowledge if we are to cooperate with the oceans and reap their bountiful harvest—a harvest of increased food supplies,

better weather forecasts, and the future possibility of influencing our weather for better, safer, and more expeditious sea voyages.

We were particularly happy to have had the Weather Bureau participate with us in this undertaking. Dr. Reichelderfer assigned a meteorologist to the expedition for the entire cruise. Extensive probes were made of the atmosphere with high-altitude meteorological balloons which were inflated in a special inflation shelter installed on the stern of the ship. The Weather Bureau scientist sat for hours in the ship's plotting room, working up the data that his balloon radioed back from elvations as high as 130,000 feet above the surface of the ocean. Ultimately it is hoped to control or modify the weather through a more thorough understanding of oceanic phenomena and the interplay between the atmosphere and the oceans. In these and other ways we in the United States can and should lead the way for the benefit of all mankind.

In this time of international tension the contributions of the oceans are equally important to our defense posture. Increased knowledge of the oceans, their physical structure, and the ocean bottom is needed for precise underwater navigation. The recent submerged globe-circling exploits of the Navy's atomic-powered submarine *Triton* dramatizes the need for knowledge of the oceans in greater detail than heretofore realized. For adequate protection, we must somehow make the oceans figuratively transparent. Only research, basic and applied, ashore and afloat, can supply the answers. The future programs of the Coast and Geodetic Survey will be framed to meet these objectives.

Many individual research projects were carried out during the 79 days the *Explorer* was at sea. With the growing demand for information about the oceans we recognized this exceptional opportunity for an intensive oceanographic investigation at a fraction of the cost of equipping an expedition of this magnitude under any other conditions. The commanding officer of the *Explorer*, Capt. E. L. Jones, entered into this unique assignment with great enthusiasm and contributed effectively from his many years of sea duty with the Bureau. Dr. Harris B. Stewart, Jr., our chief oceanographer, directed the scientific phases of the expedition. The complement of 13 Coast and Geodetic Survey officers, 10 Bureau scientists including oceanographers and geophysicists, 5 guest scientists, and 72 crewmen actually worked on a 24-hour basis gathering pertinent facts on the physics, chemistry, and biology of the ocean waters, the geology of the ocean bottom, and meteorological information on the atmosphere along the route.

The Naval Electronics Laboratory at San Diego made its deep-sea camera available for most of the cruise and supplied their expert who developed the camera. This equipment was used effectively in obtaining a great number of underwater photographs. Of special interest were the photographs that were obtained of rich deposits of manganese, nickel, and cobalt that occurred as manganese nodules on the ocean bottom more than 2 miles beneath the *Explorer's* keel. A huge manganese deposit was discovered in the Pacific Ocean off the southern tip of California. This area was first reported by the Russian oceanographic ship *Vityaz*. Corings revealed that the mineral nodules are so rich that experts estimate that it may some day be the site of an ocean mining operation.

Special nets made available by the Bureau of Commercial Fisheries of the Department of the Interior were towed from San Diego to Panama to obtain samples of small creatures that live in the upper layers of the ocean. The floor of the Caribbean and the Straits of Florida were dredged for bottom-dwelling organisms of interest to the Bureau of Commercial Fisheries.

An important phase of the oceanographic cruise was our drift bottle operation. Almost 5,000 bottles were released at the rate of 10 every 2 hours throughout the entire voyage. These specially made bottles carried a message impregnated in bright colors in the glass, in four languages. We hope to learn new facts concerning the pattern of ocean currents by the cards that we have asked to be returned to the Bureau by the finders of the bottles. At the end of April 260 cards had been received. One hundred and fifteen were found along the west coast extending from Vancouver, to Costa Rica. Cards returned from the bottles released in the Atlantic Ocean numbered 145, extending from the Florida Keys to Central America. The bottles were numbered and an accurate record retained of the point from which each was released. As the record of each bottle is received in the Washington office it will be compared with the point of release and these facts correlated to reveal a pattern of circulation for expert analysis. We may continue to receive information from our drift bottles for several years or more.

South of Swan Island, 97 miles northeast of Honduras in the Caribbean, we discovered evidence of a drowned coral atoll. Investigation revealed a previously unknown undersea plateau rising from a depth of 6,000 feet to a least depth under the ship of 90 feet. With the echo-sounding equipment, magnetometer, and bottom sampling equipment working together, the uncharted bank was found to be made up of dead coral with a core of magnetic rock which is probably volcanic in origin.

Studies of this type reveal pertinent facts concerning the geology of that region, but more important they indicate the presence of the uncharted bank, an obvious danger to submarine navigation.

The Scripps Institution of Oceanography provided the magnetometer that the *Explorer* towed throughout the entire trip to make a continuous chart of the earth's magnetic field along the ship's track.

Another unique phase of the oceanographic cruise was the completion of a profile of the water temperature beneath the ship for the entire trip. This profile comprised a graphic record which highlighted a unique discovery off the Pacific coast of Costa Rica. This discovery was an area of upwelling of cold water from the ocean floor rich in nutrients important as a food supply for the smaller forms of marine life. Larger forms of fish life feed on the abundant supply of marine life resulting from the upwelling, which creates a large supply of fish in commercial quantities. This is especially interesting to tuna fishermen since tuna congregate in these areas to feed on the smaller fish.

Oceanographic stations were occupied at selected positions off the coast of Oregon, in cooperation with the Scripps Institution of Oceanography and Oregon State College. At each station water samples were obtained for chemical analysis. These analyses will reveal data of importance in determining the oceanographic regime or makeup off the coast of the Pacific Northwest States. In addition, surface water samples were obtained from which it is hoped that suspended sediment will help oceanographers learn what happens to Columbia River water after it enters the Pacific Ocean. The oceanographic stations occupied off the coast of Oregon have extended northward the network of similar stations occupied in connection with the marine life research program of Scripps from Lower California to the California-Oregon border.

The Coast and Geodetic Survey has a long and historic interest in the Gulf Stream. Benjamin Franklin first recognized the existence of the Gulf Stream and it is interesting to note that his grandson, Prof. Alexander Dallas Bache, the second Superintendent of the Bureau, authorized the first scientific investigation of this mighty river of the sea. He assigned his brother, Capt. George Bache, the task of making the first scientific investigation of the Gulf Stream in 1846 with the Coast Survey brig *Washington*. This expedition ended in disaster when the ship was demasted in a violent hurricane and Capt. George Bache and 10 of his men were swept overboard and lost. The scientific data collected during the season's work by the *Washington* was not lost, however. The crippled ship finally made port in Philadelphia with all of her records intact. These records are carefully preserved to this day in the archives of the Bureau.

Our interest in this phenomenon of nature has continued throughout the years. During the latter phase of the *Explorer's* expedition we undertook a preliminary investigation of the Gulf Stream off the Florida coast near Miami, and we plan to schedule further detailed studies for future operations.

Final benefits accruing from the *Explorer's* 1960 voyage will not be realized until the huge mass of data has been processed. The record of the expedition includes about 7,500 miles of trackline hydrography, 50 oceanographic stations, 650 salinity samples, 646 oxygen samples, 35 bottom sediment cores, 680 bathythermograph observations, and other data in addition to the Swan Islands developments.

We expect that the *Explorer's* recent accomplishments will be followed by more comprehensive and enlarged programs. The wealth of scientific data obtained on this cruise, supplemented by a constantly increasing flow of new data, should provide important contributions to many scientific studies in oceanography and related fields. As our oceanographic program is stepped up to new levels we offer our experience and background gained over more than 15 decades of sustained effort in supplying some of the answers to the great oceanic riddles.

Shadowy Power Behind Castro

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times magazine of June 19, 1960:

SHADOWY POWER BEHIND CASTRO

(The principal idea man and organizer of Cuba's revolution is a "native Cuban" from Argentina with a Marxist record, Maj. Ennesto Guevara.)

(By Tad Szulc)

HAVANA.—Shying away from the crowded and chaotic center stage of the revolution, but not altogether hiding in its wings, a soft-spoken, Argentinian-born physician with Communist propensities, shoulder-length hair, and an indefinably oriental aspect is Cuba's éminence grise. He is Maj. Ernest Guevara, at 34, a professional rebel, itinerant Marxist revolutionary, guerrilla expert, improvisatory banker and, as he put it, amateur economist.

"Che" Guevara, as he is known to everyone here, was the man who negotiated Cuba's

trade treaty with Russia during Soviet Deputy Premier Mikoyan's visit last February. He has followed it with agreement with Poland, Czechoslovakia, and East Germany, providing for extensive credits for industrial equipment. This growing entente cordiale has now been climaxed by Premier Khrushchev's acceptance of an invitation to visit Havana soon, as if to seal personally a new alliance in the Western Hemisphere.

The title of major—or doctor—Guevara's two jobs in the Cuban Government sound innocuous and incongruous; president of the National Bank and head of the Department of Instruction of the Armed Forces Ministry. But—together with Premier Fidel Castro and his brother Raul Castro, who is Minister of Revolutionary Armed Forces—he is a member of the ruling triumvirate (its enemies call it the "unholy trinity") that is directing the steamroller implantation of a new order in Cuba. Major Guevara is the revolution's principal idea man and organizer, as well as its most potent political influence.

As president of the National Bank, he holds all the wires controlling the Cuban economy. (Significantly, the public reaction to his appointment last November was a run on the country's banks.) As head of the Department of Instruction, he controls the "Peoples' Militias," the civilian army which Premier Castro created at his suggestion. The militias are now nearly 100,000 strong (the regular armed forces total about 35,000) and have become one of the principal political props of the regime.

In a broad sense, Major Guevara's economic and political roles are indistinguishable. With his cool, methodical mind, he is mapping the shift from free enterprise to a pattern of overwhelming state control of the economy. At the same time, he is helping to create the conditions in which this pattern, imposed from the top, can prosper.

These conditions demand the elimination of all overt or hidden opposition to the new order. Consequently, the regime has seen to it that all media of expression—the press, radio, and television—are subordinated to the thinking of the state, that the leadership of labor unions is absolutely loyal to the Government, that a barrage of revolutionary indoctrination is aimed at every segment of Cuban society.

Most observers here see Major Guevara's hand behind all these, as well as other, policies, at least in their conception. His speeches and his book, "The War of Guerrillas," one of the most complete and wide-ranging modern revolutionary handbooks, show him as a fanatic believer in political indoctrination in depth on all levels, and in the need for the tightest possible revolutionary organization of the nation.

While the precise machinery of the revolution's leadership is a mystery to the outsider, Premier Castro doubtless remains the chief figure in the 18-month-old regime. He works in a vortex of pressures, cross currents and contradictions. As in any revolutionary group, there is considerable silent infighting within the top layer of the Cuban leadership, and despite repeated official assurance that "Fidel, Raul, and Ché are like one," each has a private group of followers jockeying for position. Though the aims of the three chieftains seem to coincide at present, the natural dynamics of the situation produce frictions—if not clashes—among their groups. It is a good guess that Guevara is the target of more resentments than the Castro brothers, but if actual opposition to him exists near the top, as is probable, it is well camouflaged.

Public opinion holds that the influence of Major Guevara asserts itself by pushing the Premier to adopt increasingly radical measures. It is taken for granted that Raul Castro and other members of the regime's inner circle actively concur in this strategy, but Dr. Guevara is generally credited with the formulation of broad plans.

The revolutionary government's new official agencies have been reinforced by foreign Communist technicians, individually or in small units, to help ease the acute shortage of Cuban specialists. For example, the National Institute of Agrarian Reform (INRA), Cuba's all-powerful economic organization, has Chilean, Mexican, Guatemalan, Belgian, and French Communist economists and advisers. Their presence is said to have been Dr. Guevara's idea.

His trade pact with Mikoyan was the cornerstone of Cuba's new policy of hitching her plans for industrial development to the Communist states and, thereby, tying her economy to the Iron Curtain. Mikoyan left behind a group of Soviet industrial technicians and cultural specialists. Since the resumption of diplomatic relations between Havana and Moscow in May, this group has been steadily increasing.

They are discreet, but can be occasionally seen at two or three of Havana's less spectacular hotels. Lately, however, the proregime press, with a touch of pride, has begun reporting their activities. The first mention was of a five-man team of Soviet mining engineers in Pinar Del Rio province.

When Cuba began importing Soviet crude oil, it was Major Guevara who wrote letters to United States and British refineries here requesting them to process the Russian petroleum. He delicately hinted that refusal would mean that the national bank could no longer authorize dollar remittances on payments already owed for Venezuelan oil or for new imports.

As his power has grown, the bizarre and retiring Argentine doctor has inevitably made enemies among the general public. There are people here who think that Major Guevara may meet with a violent end. (In his book, he admits the possibility that he and the Castro brothers may be assassinated.)

The greatest objection to him is the belief that he is a Communist. In most quarters, he is thought to be one of the international variety—that is, a Communist linked with and subservient to Moscow or Peiping. Many of the most dedicated supporters of Premier Castro fear and resent him as a dangerous presence in the revolution—and, often as "the foreigner."

This is one of the reasons why Major Guevara, despite his tremendous importance on the Cuban scene, is most unlikely ever to come to power in his own right. Although one of Dr. Castro's first official acts was to declare Guevara legally a "native Cuban," the Premier has refrained from including him in the line of succession. As it stands now, Raul Castro is his brother's designated successor; if he should die, too, the other revolutionary chieftains are to select the new "maximum leader." Major Guevara's strength is essentially that of the power behind the throne.

Lately, however, the major has been making more and more public appearances, as if trying to acquire an acceptable public image for himself. Recently, he took his small daughter to a public affair; at other times, he has been seen with his mother. On one occasion, he was duly photographed with an ice-cream cone.

One successful note of intimacy is the universal acceptance of his nickname, "Ché" "Ché" is an Argentine expression meaning, roughly, "Hey." His frequent use of it during the days of Sierra Maestra gave him the moniker.

Face to face, Dr. Guevara can be a pleasant, even charming, personality. Invariably attired in olive green fatigues and boots—a stunning sartorial style for a bank president—he lets his long brown hair curl gently down his neck. Indoors or out, even at conferences in his modernistic office, he wears a black beret with the golden star of his rank. His scraggly beard and moustache (Raul Castro shaved his beard, cut off his pony tail and trimmed his moustache early this year, though his brother has maintained the hirsute symbols) plus his slightly slanted brown eyes give him his oriental air, oddly reminiscent of a younger, slimmer, shorter Ho Chi Minh.

Dr. Guevara has an easy smile and a soft, persuasive voice, but his eyes are hard. Persons who have dealt with him at the National Bank say that once he makes a decision nothing can sway him. He is said to have an icy ruthlessness.

Suffering from an acute asthmatic condition, the major, who is a heavy cigar smoker between attacks, sometimes has to take to his bed for days. He is an extremely hard worker. His hobby is mathematics; he used to spend hours at a blackboard solving equations. Now the great equation facing him is the basic transformation of Cuba's economy. His failure to guide it successfully—through the spread of inflation, through shortages of food and goods, or through a lack of resources to carry out the ambitious revolutionary programs—could mean the collapse of the Cuban experiment.

The major seldom speaks with strangers of his private political beliefs. But talking to a group of visiting Latin American journalists recently, he lightly dismissed a direct question about communism and Marxism by saying that he lacked sufficient political education to be a Marxist. Yet, in his book, he wrote that anti-communism is a "dialectical position" designed to destroy the Cuban revolution—a rather revealing choice of words—and in a television address not long ago he remarked smilingly, "It seems that, together with Raul, I have the honor of being among the most shocking persons."

Whether or not he is a Communist, Dr. Guevara's greatest obsession is his hatred of the United States in general and of "Yankee imperialism" in particular. It is a constantly recurring theme in his writings and speeches. The destruction everywhere of this imperialism seems to be his foremost goal in life and he has written boastingly that Cuba has shown the way to all Latin America on how to smash the imperialists. In a recent speech, he said that Cubans must "fight to the death" the "Yankee monopolies."

"Our economic war will be with the great power of the north," he said. "Our war is not a simple war, our road toward liberation will be found in victory over the monopolies and, concretely, over North American monopolies."

Then he added: "Cuba is an example of a small nation that defies the laws of a false science called geopolitics * * *. This is the crime * * * that the North American imperialists and colonialists fear."

Such is Major Guevara's enthusiasm for "liberating" other Latin American nations from the "imperialist yoke," that last summer an investigating commission of the Organization of American States formally accused him of organizing an invasion of Nicaragua by Cuba-based rebels.

Very little is known of the major's past and he is reluctant to discuss it. He is said to have graduated from the University of Buenos Aires Medical School in 1953. His earliest political and revolutionary experiences were in Argentina, against the Perón regime, and in Bolivia. In 1953 and 1954 he was in Guatemala, working for the pro-Communist regime of President Jacobo Arbenz Guzman.

The sketchy story of Dr. Guevara's relations with Dr. Castro begins in Mexico early in 1956 when the Argentine met the future premier through Raul Castro, Dr. Guevara had been exiled there since the fall of the Arbenz regime in 1954, "looking for a new revolution," as a friend put it.

He found it in Dr. Castro who then was preparing his invasion of Cuba. After an all-night conversation, the two rebels agreed to work together. With his curious blend of Latin American romanticism and Marxist revolutionary spirit, Dr. Guevara fitted perfectly into the Castro conspiracy. He soon became the chief of personnel for the expeditionary force—his first organizational task—and joined with Gen. Alberto Bayo, the exiled Spanish Republican guerrilla expert, in training the men at a remote ranch.

Aboard the yacht *Granma*, tossed mercilessly for several days and nights by the waves of the Gulf of Mexico, Dr. Guevara acted as physician, helping the men, who suffered from violent seasickness, although he was himself undergoing terrible asthma attacks.

After the small band landed on December 2, 1956—attacks by Batista forces had cut it down from 88 to 12 men—Dr. Guevara combined his medical activities with those of a courageous fighter and guerrilla leader. He stressed in his book that it is at such a time a physician "has the most influence over the troops" and his revolutionary preachings can capture the men better than anyone else's.

As the Castro force became firmly established in the Sierra Maestra and began growing in numbers, Dr. Guevara turned increasingly to matters of organization and indoctrination, thinking in far-reaching terms and not just of the day-to-day military situations.

Officers of the rebel army say that, from the very first, he began forming around him a hard-core, Communist-oriented group, as Raul Castro reportedly did later in his "Second Front." While advancing through the central provinces, Dr. Guevara is said to have left behind a trusted man in each town and village to form a Communist cell.

According to other informants, he nearly engaged in hostilities with another pro-Castro rebel group in the Escambray Mountains of Las Villas province late in 1958, when the Escambray fighters refused to enter into a pact with the Communist Party. Such a pact had been signed earlier between the Communists and the Castro "26th of July Movement."

Major Guevara also put together the first rebel industries in the Sierra—a shoeshop and a weapons plant—the rebel radio station, and a network of schools for peasants' children and for the Castro troops. Thus, hiding in the hills, he was already the organizer and indoctrinator that he now is on a nationwide scale.

There was a relatively long lapse between the victory in the Sierra and Major Guevara's open emergence at the top levels of government. The doctor had led the troops that occupied Havana in the first days of January, 1959, and his first job was the command of La Cabaña fortress here. In the months that followed, his influence was exercised only indirectly.

Then, in midsummer, he embarked on a long voyage around the Middle and Far East, concentrating on contacts with "neutralist" governments and groups. On the major's return to Havana, Premier Castro began gradually easing him into official positions of growing importance. When he was named head of the industrial department of INRA, observers realized that he was the economic chief of the revolution. His appointment to the National Bank confirmed his primacy.

The big question asked in Cuba nowadays is how Dr. Guevara persuaded Premier Castro to go along with his policies. Despite the violent anti-Washington posture of the Castro regime, and its growing identification with Soviet foreign policy, the belief—some say, myth—persists here that the Premier himself has no Communist links.

One theory is that Dr. Castro has, consciously or not, become a prisoner of the Guevara and Raul Castro policies, having accepted their reasoning that—since the United States is allegedly conspiring against the revolution—he must take vociferous Communist support for his regime as well as the material aid of the Communist powers.

The other view is that Premier Castro is deliberately using the Communists, including Major Guevara, until he feels strong enough to get rid of them. But this theory has less and less currency in Cuba since Dr. Castro has publicly embraced the belief that anticommunism is "divisive and counterrevolutionary." Dr. Guevara referred to these early hopes when he wrote sarcastically in his book that some people in the United States thought that "this crazy boy, Fidel Castro, could be counseled and led along the right path."

In a sense, Major Guevara's career has come full circle. With his brand of revolution accomplished in Cuba, or nearly so, this restless professional rebel, to whom frontiers do not exist in Latin America, may soon be turning toward new fields of conquest. But this time his post of command is in a country fortress instead of the tropical forest.

National Rivers and Harbors Congress: Report of Committee on Irrigation and Reclamation

EXTENSION OF REMARKS
OF

HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. CHENOWETH. Mr. Speaker, I include in my remarks a copy of the report of the committee on irrigation and reclamation to the National Rivers and Harbors Congress 47th National Convention which was held in Washington in May. This report was submitted to the convention by the vice chairman, Mr. J. W. Grimes, State engineer of South Dakota, on May 26, and was unanimously adopted. I again had the honor to serve as chairman of the committee, but much of the credit for this report belongs to Ival V. Goslin, chief engineer and secretary of the Upper Colorado River Commission, and to William E. Welsh, secretary-manager of the National Reclamation Association. I am happy to also include a list of the members of the committee.

The committee's report follows:

NATIONAL RIVERS AND HARBORS CONGRESS—COMMITTEE ON IRRIGATION AND RECLAMATION

Chairman: Representative J. EDGAR CHENOWETH, Colorado.

Vice chairman: J. W. Grimes, Pierre, S. Dak.

Secretary: Ival V. Goslin, Salt Lake City, Utah. Chief engineer and secretary, Upper Colorado River Commission.

MEMBERS

Arizona: Representative STEWART L. UDALL, Tucson; member, Interior and Insular Affairs Committee.

California: Representative B. F. SISK, Fresno, Calif.; member, Interior and Insular Affairs Committee.

Colorado: Representative BYRON G. ROGERS, Denver. Harold H. Christy, Pueblo; director, National Reclamation Association.

Idaho: George L. Crookham, Jr., Caldwell; president, Guffey Water Development Association.

Kansas: Robert V. Smrha, chief engineer, division of water resources, State board of agriculture, Topeka.

Montana: Everett W. Rising, Washington representative, State Water Board of Montana.

Nebraska: Pete Badura, Ashton; president, Farwell Irrigation District.

Nevada: Representative WALTER S. BARING, Reno; member, Interior and Insular Affairs Committee.

New Mexico: John P. Murphy, Albuquerque; secretary, New Mexico Reclamation Association.

North Dakota: Fred Fredrickson, Valley City; Washington representative, Greater North Dakota Association.

Oklahoma: Frank Raab, Oklahoma City; president, Canton Irrigation District; represented by Guy H. James.

Oregon: Representative AL ULLMAN, Baker; member, Interior and Insular Affairs Committee.

South Dakota: J. W. Grimes, Pierre, S. Dak., State engineer.

Texas: Kenneth M. Smith, McAllan; water master, Lower Rio Grande.

Utah: T. W. Jensen, Salt Lake City; secretary, Utah Water Users Association.

Washington: John Richardson, Olympia, Wash.; supervisor, department of conservation and development.

Wyoming: State senator Earl T. Bower, Worland.

REPORT OF COMMITTEE ON IRRIGATION AND RECLAMATION

INTRODUCTION

The committee on irrigation and reclamation of the National Rivers and Harbors Congress was convened for the first time at the 44th annual convention 3 years ago. Since that time the committee has continued to function and to maintain a high level of interest and participation in the irrigation and reclamation program of the United States.

During January of 1960 efforts were made to hold an extra session of the irrigation and reclamation committee for the purpose of reviewing the Federal reclamation program and making recommendations relative to it to the U.S. Congress. Because it became apparent that it would not be practicable to have a majority of the committee members present at such a meeting these efforts had to be abandoned.

PURPOSES OF THE IRRIGATION AND RECLAMATION COMMITTEE

This committee has been directed to deal only with matters of general policy.

At its inception the purposes of this committee were defined as the formulation of a policy and a program for the continued, orderly development by reclamation and irrigation of our water and land resources in the arid and semiarid regions of the West, and to suggest ways and means whereby the National Rivers and Harbors Congress may better cooperate and coordinate its efforts with the advocates of reclamation and irrigation.

COMMITTEE PERSONNEL

The personnel of the committee on irrigation and reclamation are listed on page 1 of this report. This committee is interested not only in irrigation and reclamation, but in flood control projects, rivers and harbors projects, and, in fact, all phases of water resource development.

PROGRESS

In this committee's report for 1957 to the National Rivers and Harbors Congress, several policy and procedural recommendations were outlined. These were designed as guides and suggestions for implementing basic principles. The adoption of these recommendations by this organization has contributed greatly to a better understanding

of water resources problems. It is gratifying to note that sponsors of projects are recognizing new possibilities for coordination of efforts and cooperation in developing water and land resources. This new spirit and its resultant accomplishments constitute progress—not because during the past year we feel that the program of project development has been accelerated to the point necessary or desirable—but because future results will prove the wisdom of united efforts.

As a result of cooperative efforts, Congress enacted a public works appropriation bill for fiscal 1960 that contained many unbudgeted water development projects, of which seven were major reclamation new starts. In addition, four were initiated under the Small Reclamation Projects Act, Public Law 984, and two were loans for irrigation distribution systems under Public Law 130.

RECLAMATION IS A VITAL PART OF AMERICA'S FUTURE

Our committee concurs with the Honorable WAYNE N. ASPINALL, of Colorado, chairman of the Interior and Insular Affairs Committee of the U.S. House of Representatives, who said the the House Appropriations Committee "the continued development of supplemental water supplies for existing irrigated areas and the opening of new lands to settlement through reclamation are entirely consistent with sound, long-term agricultural objectives. Such development provides the most important basic element to a successful regional economy—a stable, diversified agriculture. In addition to improving our existing agricultural situation, reclamation helps to insure adequate future food and fiber for our rapidly growing population.

"The objective of expanding the economy of the West is of prime importance to the whole Nation. The Federal reclamation program has been one of the important tools by which the underdeveloped arid and semiarid regions of the West have been made into a habitable and productive part of the Nation by promoting westward movement of population, business, and agriculture, and providing a solid base for investment and employment where little existed previously. The reclamation program still has these positive influences today.

"With respect to my statement that reclamation tends to alleviate the existing imbalances of agriculture, I have this to say. It is not widely understood that irrigation farming in the West enjoys a complementary, rather than competitive, relationship with the whole of the country's agriculture. Of the major crops in surplus, those that constitute more than four-fifths of the holdings and loan commitments of the Commodity Credit Corporation, reclamation farms grew only three of these crops, and the 1958 contribution from reclamation farms amounted to only 1.8 percent of the holdings. The reason why this proportion is so small when the total importance of reclamation in the economy of the West is so great is that the irrigation farmer has been able to shift production from surplus crops to those that are in current demand. The nonirrigated land is largely tied to a 1-crop economy and cannot diversify in response to changing demand patterns. Reclamation has played a large role in facilitating these adjustments and in enhancing the efficiency of the agriculture of the West as a whole. The misapprehension that any extension of irrigation will compound the Nation's agricultural difficulties is not borne out by the facts, either past or present.

"In addition, we are advised by agricultural authorities that our present crop imbalances are merely temporary and that continued efforts are needed in research and the conservation and development of soil and water resources. They emphasize that the capacity to meet the food and fiber needs of the expanding population does not happen automatically. Because major irrigation projects do not reach a fully developed stage until 15 to 25 years after authorization or start of construction, it is essential that reclamation needs be viewed in future perspective.

"The Nation's population is increasing at about 8,600 additional persons per day while the acreage of good cropland diminishes at a rate of 3,000 acres per day due to conversion to roads, airports, and cities. Just how soon our agricultural abundance will give way to shortages depends on what positive steps are taken to overcome the efforts of these incursions."

Senator ALLEN ELLENDER, of Louisiana, said at a dinner sponsored by the National Association of Soil Conservation Districts honoring the 25th anniversary of the Soil Conservation Service:

"It is interesting to note that these additional mouths must be fed; these additional bodies must be clothed, these additional people housed from substantially fewer acres than are now available for cultivation. The fact is we have no new land to bring into cultivation. All we have is land which we can improve.

"Yet, each year we are losing precious irreplaceable soil and water resources due to the encroachments of urban population areas, among other things. Specifically, by the year 2000 some 80 million additional acres of our very finest cropland will be lost to creeping urbanization. Against this 80 million acre loss we can count, on this plus side of the ledger, only about 25 million acres, which we hope to add to our production base during the same period of time. The difference, that is 55 million acres, must be derived from increased productivity—by producing more food and fiber from the same acreage which we cultivate today."

RECLAMATION—KEY TO THE FUTURE

Reclamation is the key to the future. It is a real American enterprise that unlocks the doors to opportunities in industry and business. Reclamation is not to be considered only in terms of agricultural development. Recognition must be given to the industrial and business economies that are directly dependent upon and inevitably follow the development of an irrigated agricultural project.

A productive agricultural economy and the availability of water for domestic and industrial uses, made possible by reclamation, are essential to provide for our expanding populations. Agriculture and industry are complementary.

Reclamation projects are providing millions of Americans with opportunities for recreation and constructive use of an increasing amount of leisure time in a world filled with nervous tensions. Immeasurable as these recreation values may seem, they are real values and contribute greatly to both physical and mental health and productive potential in many vocations. In 1959 the visitor count at reclamation reservoirs of the 17 Western States reached the astounding total of 22,700,000.

Only through continuing the development of our water resources can our Nation meet the future needs of its citizens.

The Reclamation program has proved to be an economically sound and financially feasible enterprise for the Federal Government. Every four years the value of crops produced on Reclamation farms equals the total money appropriated for Federal Reclamation since its inception 58 years ago. The cash value of the crops produced in 1958 was almost $1 billion. Since the Reclamation program was initiated in 1902, $14,265,102,000 worth of crops have been produced. The Federal Government has received nearly $3,900 million in Federal taxes derived from Reclamation projects and adjacent trade areas since 1902.

From a financial standpoint, Reclamation projects repay the investment in many ways besides repaying to the United States all of the costs allocated to irrigation features without interest and the costs allocated to power and municipal water supplies with interest. Reclamation portions of Federal multiple-purpose developments create economic returns in the form of stabilized downstream flows for industrial waters, pollution abatement, and other benefits that are not reflected in the financial feasibility of irrigation use of water. Western Reclamation projects develop floodwater as the irrigation water supply, thereby accomplishing flood control as an important by-product.

IMPORTANT CURRENT PROBLEMS

1. Criteria for evaluating water development projects

There is a definite need for the formulation of modern, consistent and realistic general principles to guide Federal agencies in analyzing and appraising potential water development projects. The National Rivers and Harbors Congress can do a real service to future progress by urging the U.S. Congress to establish the policy to be followed by Federal agencies in the evaluation of project benefits.

2. Protection of water rights acquired under State laws

For many years efforts have been made to persuade Congress to enact legislation that would protect owners of water rights acquired in the various states against the encroachment of Federal agencies. These efforts have been largely unsuccessful. There are several bills for this purpose pending before the U.S. Congress. It is the consensus of our committee that the National Rivers and Harbors Congress should join the campaign to inform our legislators of the importance of enacting a States water rights bill that will accomplish the desired purpose of protecting water rights vested under State laws.

RECOMMENDATIONS

The following recommendations embody principles essential to a well-rounded yet progressive irrigation and reclamation program to be correlated with and complementary to a national program of development, utilization, and conservation of our Nation's water resources.

It is recommended that:

1. Where opposition to water development programs exist, officers, members of, and delegates to, the National Rivers and Harbors Congress should act without delay to neutralize such opposing influences with any effective means available at local, State, and National levels.

2. Authorization and construction should not be subjected to a stop-and-go policy. Funds for reclamation portions of multiple-purpose developments should be increased and maintained at a level that would be consistent with the annual gross national product.

3. The Congress of the United States should establish the policy and criteria under which all Federal water development projects will be authorized and constructed.

4. On multiple-purpose projects, wherever practicable, the development of water resources should be preceded by basinwide planning.

5. Power revenues derived from Federal projects should be used on a basinwide or areawide basis to assist in repayment of irrigation allocations on Federal projects.

6. The principle of the interstate compact should be encouraged in order to avoid litigation between and among States and to preclude domination of the development and control of natural resources by Federal agencies.

7. Procedures under which Federal water resources projects are investigated and reported should be simplified.

8. Criteria under which Federal agencies evaluate water resource development projects before submitting them to Congress for authorization or construction should be reviewed and reestablished to include consideration of all future benefits.

9. Basic land and water inventories, soil and water research, snow surveys and stream forecasting should be continued, expanded, and modernized in order to provide adequate data for current and future planning.

10. The use of conservancy-type districts capable of levying taxes on project beneficiaries as agencies to execute repayment contracts with the Federal Government should be encouraged in order to more equitably allocate costs of a project and meet the burden of expensive and complex project construction.

11. In planning and constructing water resource projects the principle of supplying supplemental water to lands presently inadequately irrigated should be given priority over bringing new lands into cultivation.

12. It is further recommended that the National Rivers and Harbors Congress, through its executive offices and appropriate committees:

(a) Accelerate its campaign in support of a water-utilization program designed to fully develop our land and water resources placing special emphasis on starting new water development projects that are financially feasible and economically justified;

(b) Continue to bring to the attention of the executive and legislative branches of our Federal Government the need for a continuous, progressive, planned program of project authorization;

(c) Urge and actively support adequate appropriations for investigating and planning conservation water-use projects:

(d) Support legislation requiring compliance with and adherence to State water laws by Federal Agencies.

(e) Support legislation to require Federal agencies to employ more liberal and realistic criteria in their evaluation of water development projects prior to authorization and construction.

SUMMARY

In summary, the purposes of the committee on irrigation and reclamation of the National Rivers and Harbors Congress shall be to promote the development, control, conservation and utilization of the Nation's water resources, to work for the continuation of the services and the coordination of activities of Federal agencies dealing with water resources, to cooperate with and assist in securing authorization and construction of Federal conservation water-use projects which meet with the approval of States and local agencies, to assist water users of the Nation in the economic development of river basins, to preserve the rights and interests of the States in their water resources, to promote the enactment of legislation favorable to these principles.

A Few Facts Regarding Agriculture

EXTENSION OF REMARKS

OF

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. LANGEN. Mr. Speaker, the National Foundation for Economic Stability recently made public a few facts regarding agriculture. Because these facts, which are often overlooked, show the disruptive effects which a depressed agricultural economy has had on consumer sales and the entire national economy, I believe them to be of value to every Member of this body. I therefore insert them at this point:

A FEW FACTS REGARDING AGRICULTURE

The 1950 census shows that over 71 million people, or 40 percent, lived in towns of 5,000 and less and their surrounding areas.

This 40 percent of our population depends primarily on farm income for their buying power.

In 1959 agriculture had a capital investment of over $203 billion, or approximately 14 percent of the capital worth of the United States.

In comparison, the total assets of corporations, other than banks, insurance companies, and loan associations in 1959, was approximately $258 billion.

Approximately one-half of domestically produced factory goods is purchased by residents of rural America. This amounted to about $95.4 billion in 1959.

In 1959 agriculture owned approximately 40 percent of all of our productive capital. This investment is the source of approximately 40 percent of the gross income of the Nation.

In 1959 agriculture had a capital investment 15 times greater than the steel industry and employed 15 times as many workers.

In 1947–49 farm prices at wholesale were only 90.5 percent of the base period (1947–49=100), while prices of all products at wholesale averaged 120 percent of the base. Farm prices were off 9.5 percent and all other wholesale prices were up 20 percent.

This means that rural America had only 75 percent of the buying power which this area had in the period 1947–49.

In the base period 1946–50 consumer goods sales averaged 55 percent of the national income, and in 1959 they were only 48 percent of the national income. This means that consumer goods sales in 1959 were $28 billion too low in ratio to national income. This relative loss of consumer sales was directly due to an underpayment of $24 billion for farm production.

As a result of this loss of markets caused by the underpayment of $129.4 billion to agriculture during the period 1951–59, small business suffered a relative loss of $43 billion during the same period.

A Sensible Viewpoint of the Japanese Situation

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. GEORGE. Mr. Speaker, many and varied are the comments regarding the cancellation, whether by our Government, or that of Japan, of the President's visit to the land of the Rising Sun.

While events of the past 2 months emphasize that a change is long overdue in our foreign policy, the attitude of the people of Japan is understandable. Some Communists, of course, fomented the display of ill feeling toward the President of the United States.

Desiring no repetition of the terrible destruction that brought an end to World War II, doubtless many thousands of anti-Communists joined in the protest demonstrations. The editor of one of the leading daily newspapers published in my home State, John H. Stauffer of the Kansas City Kansan, clearly set forth the sensible viewpoint regarding the rebellious Japanese action.

Mr. Speaker, I ask unanimous consent to include Mr. Stauffer's editorial of Thursday, June 16, as part of my remarks:

THE JAPAN VISIT IS OFF

Cancellation of President Eisenhower's plan to visit Japan is a setback for the United States in its efforts to strengthen its alliances. The President was determined to go to Toyko and to confer with high Japanese governmental officials as a token of assurance that the United States stands firmly behind them in their resistance to Communist pressure.

But events of recent days left considerable doubt as to the Kishi government's ability to cope with the demonstrators who are determined to prevent, if possible, consummation of the new United States-Japanese treaty. Exactly 1 month after Premier Khrushchev withdrew the invitation to President Eisenhower to visit Russia the Kishi government regretfully withdrew its invitation to him to visit Japan. Thus moves the cold war.

But all is not lost yet. The Communists may force capitulation of the Kishi government. But there is evidence the pressure is not altogether against the present government but primarily against the alliance treaty, which many Japanese fear would make Japan vulnerable to attack. They remember all too clearly the bombings of the last war.

Midwestern Railroad and Utilities Commissioners Favor End to Airlift of 4-Cent Letter Mail

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. CUNNINGHAM. Mr. Speaker, earlier this month the Midwest Association of Railroad and Utilities Commissioners took a firm stand in opposition to the Post Office Department's airlift program for ordinary first-class mail on an experimental basis or any other basis.

The commissioners represent the following 10 Midwestern States: Arkansas, Illinois, Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota, and Wisconsin.

The resolution expressing the opposition of these commissioners as it was adopted at the annual Midwest Association convention is as follows:

Whereas for over 6 years the Postmaster General of the United States has been conducting an airlift program for transporting by air ordinary first-class mail on an experimental basis and has recently substantially extended the program and has announced plans to further extend the program on a permanent basis; and

Whereas the diversion of first-class mail revenues from the railroads as a result of this program materially impairs their ability to continue to provide the service required of them in the interest of a sound national transportation system to adequately serve the national economy and properly maintain the Nation's defense: Now, therefore, be it

Resolved, That the Midwest Association of Railroad and Utilities Commissioners hereby go on record as opposed to the program to fly ordinary first-class mail and as favoring and urging enactment of legislation to require discontinuance of the program; and be it further.

Resolved, That copies of this resolution be sent by the secretary to each Senator and Congressman from the States embraced in the membership of this conference, and to the members of the Committees on Post Office and Civil Service of the Senate and House of Representatives.

Glossary of ETV Terms—Part II

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. ROBERTS. Mr. Speaker, under leave to extend my remarks, I wish to insert part 2 of a glossary of educational television terms compiled by Educational Facilities Laboratories, Inc.:

GLOSSARY OF ETV TERMS

Monochrome transmission: The transmission of television signals which can be reproduced in graduations of a single color only (black and white).

Monochrome vidicon: A television camera tube of moderate sensitivity, adequate for most educational broadcast requirements (black and white); much less expensive than image orthicon equipment; does not require highly expert handling.

Multiplexer: Any device or curcuit used for mixing signals; in television multiplexers have several applications, the most common of which is the optical mixing of several program sources such as film projectors, slide projectors, etc., for pickup by a single camera.

Network: A group of television stations connected by radio relays or coaxial cable so that all stations may simultaneously broadcast a program.

Picture tube: The television cathrode-ray tube used to produce an image by variation of the beam intensity as the beam scans the raster.

Projection television: A combination of lenses and mirrors which projects an enlarged television picture on a screen.

Radio frequency: A frequency used for radio transmission; the present practicable limits of radio frequency are roughly 10 kilocycles per second to 100,000 megacycles per second.

Radio wave: An electromagnetic wave produced by rapid reversals of current flow in a conductor known as the antenna, or aerial; such a wave travels through space at the speed of light, 186,000 miles a second.

Random interlace: A scanning system based on the 2:1 interlaced broadcast standard which utilizes less precise timing of the sweep frequencies than that required for open circuit broadcast usage.

Relay station: A station used to receive picture and sound signals from a master station and to transmit them to a second relay station or to a television station transmitter.

Remote pickups: Events televised away from the studio by a mobile unit or by permanently installed equipment at the remote location.

Repeater: A device for receiving, amplifying and retransmitting a signal or wave.

Resolution: The blending of picture elements and lines; it may also be used to refer to the amount of detail present that can be resolved into a complete picture; a numerical value to express resolution may be determined by examination of a transmitted test pattern; the number of lines represented by the vertical wedges at their point of blending in this resolution in lines.

Reverberation: Persistence of sound in an enclosed space, due to reflection from the walls.

Satellite stations: VHF broadcast stations located within the area of service of another television broadcast station, licensed by the same ownership and intended primarily to repeat the same program to extend the service to an adjacent area; technical requirements are precisely the same as specified for regular license.

Scanning: The process of deflecting the electron beam in a camera or picture tube so that it moves at high speed from left to right in a sequence of rows or lines from top to bottom, thus changing light and shadows of a scene into electrical impulses to form the image on the receiver tube.

Service area: The region surrounding a broadcasting station in which that station's signals can be received with satisfactory results.

Signal: Information transposed into electrical impulses; two basic signals involved in television transmission—the picture or video signal and the sound or audio signal; each signal contains electrical impulses representing elements transmitted.

Studio control room: The room or location where the monitoring equipment is placed for the direction and control of a television program.

Telecast: A broadcast of both sight and sound.

Television: The radio or electrical transmission of a succession of images and their reception in such a manner as to give a substantially continuous and simultaneous reproduction of an object or scene before the eyes of a distant observer.

Television broadcast signal: A combination of two radio frequency carriers spaced by a 4.5 megacycles per second, the lower one being amplitude-modulated by a standard composite picture signal, the upper one being frequency modulated by the accompanying audio signal.

Television channel: The term "television channel" means a band of frequencies 6 megacycles wide in the television broadcast band and designated either by number or by the extreme lower and upper frequencies.

Television receiver: A receiver for converting incoming electric signals into television pictures and customarily associated sound.

Television transmitter: The radio frequency and modulating equipment transmitting modulated radio frequency power representing a complete television signal (including audio, video, and synchronizing signals).

Translator stations: UHF broadcast stations also intended for repeat service to extend the service from an existing licensed station (ownership may be the same as the station used for program source); highly directional antennas are often utilized and a special set of operating and technical rules are followed, established by the FCC, but much different from standard broadcast requirements; the UHF channel so selected for translator service is based on availability and interference considerations.

Transmission line: A material structure forming a continuous path from one place to another for directing the transmission of electromagnetic energy along this path.

Transmission system: In communication practice, an assembly of elements capable of functioning together to transmit signal waves.

UHF: Ultra-high frequency, normally about 300–3000 megacycles.

Unidirectional antenna: An antenna having a single well-defined direction of maximum radiation intensity.

VHF: Very high frequency, normally between 30 and 300 megacycles.

Video: Of or concerning sight; specifically, those electrical currents representing the elements of a television picture.

Video amplifier: An amplifier having characteristics suitable for amplifying video signals.

Video signal: The frequencies generated by the scanning of a scene or image plus the sync and blanking pulses involved.

Mutual Security and Related Agencies Appropriation Bill, 1961

SPEECH
OF
HON. WILLIAM H. MEYER
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12619) making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

The CHAIRMAN. The Chair recognizes the gentleman from Vermont [Mr. MEYER].

Mr. WOLF. Mr. Chairman, I ask unanimous consent that the time allotted to me may be transferred to the gentleman from Vermont [Mr. MEYER].

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. MEYER. Mr. Chairman, I am opposed to this amendment. Last year I supported the mutual security appropriation, and I believe in many of the things it stands for and many of the things it does. But, I do believe we could be much more selective in the use of military funds abrpad. We give a lot of hardware, a lot of planes and things to countries which cannot use them and do not need them to do things that really are not in the interest of those people. Furthermore, we have seen that some of these military funds are used for political purposes, which is not in the defense of the free world or in fulfillment of the general terms and purposes of this act. We have also found out in recent times that much of the money is being used for implementing nuclear agreements to provide nuclear weapons systems to countries abroad, some of which are not too reliable. I do not believe that is in the best interests of the United States. Therefore, if not so much money was available, we would be more selective as to how it would be used, and we would do much more good with it. Furthermore, the Committee on Foreign Affairs did not have an opportunity to examine the military portion in detail this year because of the nature of the vote on the legislation.

Mr. CURTIS of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. MEYER. I do not have time; I have only 3 minutes.

Therefore, this much money should not have been authorized. By it I mean the $2 billion figure, or even $1,800 million. Therefore, I am opposed to the amendment.

I now yield to the gentleman from Massachusetts.

Mr. CURTIS of Massachusetts. Is it not a fact that the Foreign Affairs Committee examined the military assistance program in detail this year?

Mr. MEYER. Not the way it did last year.

Mr. CURTIS of Massachusetts. I beg to differ with the gentleman.

Mr. MEYER. I yield back the balance of my time.

Expense Payments From the Contingent Fund of the House of Representatives

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. MACK. Mr. Speaker, I have today introduced H.R. 12707 for the purpose of assuring an independent audit by the General Accounting Office of expense payments from the contingent fund of the House of Representatives.

In proposing this legislation, I am in no sense passing on the purported disclosures made in recent newspaper and magazine articles about committee expenditures from this fund.

I have the utmost confidence in the integrity of Members of this House. Furthermore, I believe we owe it to ourselves to provide for an independent audit of our expense funds as a means of assuring that our activities are reported accurately so the innocent would not suffer with the guilty.

I do not believe we are getting the complete picture from newspaper and magazine stories which are designed to make news but which reflect on the propriety and honesty of Members of Congress. While I fully respect the rights of newsmen to report the news, and even to draw reasonable inferences from the information they are able to gather, I do not believe that such disclosures are the most accurate way of getting at the facts. Too often have disclosures of this type resulted from hasty perusal of incomplete records. When this happens I do not believe believe Members of Congress are accorded the same fair treatment we afford to witnesses before our investigating committees. It would be much better, in my opinion, to provide for regular and thorough study of all payment vouchers by the one agency equipped to do the job, the General Accounting Office.

More than our own reputations is at stake. We have imposed a heavy burden of taxation on the people of this country. They have a right to know how their money is spent. We demand an accounting from the executive agencies of the Government. There is no logical reason why the legislative branch should not also be held to account for its expenditures, down to the last cent.

It is unfair to burden any committee of the House with this responsibility. A committee of our colleagues has a natural reluctance to cross-examine any Member as to the details of his expense account. Fortunately, the Congress long ago established an agency to scrutinize the accounts of all three branches of the Government, executive, legislative and judicial. The General Accounting Office is an arm of Congress. The Comptroller General of the United States, the administrative head of GAO, is appointed by the President, with the advice and consent of the Senate, for a term of 15 years. So far as I know there has never been any serious question raised as to the independence of the Comptroller General and the GAO. They are as free as human institutions can be of pressures from either the executive or legislative branches. This makes the GAO the ideal agency to scrutinize the expense accounts of House Members and committees.

The U.S. Government Organization Manual for 1959–60, on page 35, describes the GAO as follows:

> The purpose of the General Accounting Office, an agency in the legislative branch of the Federal Government, is to perform an independent audit of Government financial transactions to provide a basis for the settlement of accounts and to determine how well the agencies are managing their financial affairs; in so doing, exercise the power of disallowance based on the finality of the Comptroller General's settlement of accounts and claims, and report to the Congress in special and annual reports its findings as to financial conditions in the Government. In order to accomplish its purpose, the General Accounting Office has responsibility for: performing an independent Government-wide audit of receipts, expenditures, and use of public funds; prescribing principles, standards, and related requirements for accounting to be observed by the executive agencies, and cooperating with the agencies in carrying out their primary responsibilities for the development of their own accounting systems; settling claims by or against the United States; rendering legal decisions pertaining to governmental fiscal matters; performing investigations relating to the receipt, disbursement, and application of public funds; reporting to the Congress the results of its activities including recommendations to further the effectiveness of governmental operations; and for other related functions.

Mr. Speaker, the manual, on page 36, contains this additional statement:

> The financial transactions of the executive, legislative, and judicial agencies, including but not limited to the accounts of accountable officers, are audited by the General Accounting Office in accordance with such principles and procedures and under such rules and regulations as may be prescribed by the Comptroller General of the United States.

Mr. Speaker, the foregoing statement would appear to indicate that congressional accounts already come under the purview of the GAO. And so they do, except for the contingent funds. More than 70 years ago, in 1888, the Congress passed a law making the administration committees of the House and the other body responsible for final audit of payments from the contingent funds.

The bill that I have introduced today would amend the 1888 law to remove this barrier to GAO audit of the contingent fund of the House of Representatives. I purposely refrained from broadening my proposal to include the other fund because I feel that the initiative for that should come from the other body.

My bill is confined to removing the provisions of the 1888 law, and a similar 1911 statute, that inhibit the GAO from performing its otherwise statutory duty with respect to the House contingent fund. It does not specifically authorize the GAO to audit the contingent fund because the House legislative counsel advised me that the GAO already has all the authority it needs, provided the inhibitory statutes are repealed.

New Honors to John R. Murdock

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. UDALL. Mr. Speaker, many of our colleagues enjoy the friendship and companionship of former Representative John R. Murdock of my home State. It pleases me to inform his many friends that a few days ago Congressman Murdock was the recipient of a well-deserved and long-overdue honor. On May 31 he was awarded an honorary doctor of laws degree from Arizona State University, where he taught for many years before his election to Congress in 1936.

He is still a leading scholar and historian of the West, and has continued his studies of Western water and river devlopment problems since he left Congress in 1953.

Many tributes have been accorded John Murdock in his lifetime, and I am inserting in the RECORD an editorial from the Tempe Daily News which reviews his many accomplishments and celebrates his attainment of doctor of laws:

TO HIM, ALL HONOR

Tonight, under the brilliant lights of massive Sun Devil stadium, a plain guy from down the street in Tempe will have conferred on him that distinguished cape of doctor of laws.

A degree conferred, if you please, for services rendered.

Services rendered to God, to his country, to his State and to his university.

The ceremony, we believe, must be classed a high water mark in this observance of the diamond jubilee, Arizona State University.

It honors John R. Murdock.

Educator, dean, father, husband, gentleman, neighbor, author, civic worker, lodgeman, churchman, and Member of Congress.

Simply put—

It couldn't happen to a nicer guy.

For the unknowing, and that includes a lot of newer Tempeans, here's a résumé of this man Murdock.

He joined the then normal school faculty at Tempe in 1914, 2 years after he received a bachelor of arts degree from Northeast Missouri Teachers College at Kirksville.

For the next 23 years he was associated with the faculties of the 3 State institutions of higher learning, teaching in summer sessions at the University of Arizona and the then normal school at Flagstaff.

In 1936, while our college dean and a professor of history and political science at what was then Arizona State Teachers College here, he was elected to the U.S. Congress.

He entered the political arena when the late Isabella Greenway King, Member of Congress, retired from her station. He was then, and for the next 6 years to come, this State's lone Congressman.

In 1943, he commenced a fourth straight term. But this time he had a companion for Arizona had been awarded two Congressmen. He was, however, still a Congressman-at-large, a status which continued until 1948, when, beginning his seventh term, he represented District No. 1, Maricopa County.

In 1952, after 16 years as Congressman, he lost election in the Eisenhower landslide. He has been in retirement since, content to lecture and write, two things he does very, very well.

Arizona will long remember his service in Congress much of which was spent as chairman of the vital House Committee on Interior and Insular Affairs.

It was John R. Murdock, friends, who was primarily responsible for the establishment of the Wellton-Mohawk Irrigation project down in Yuma County.

His efforts, too, on behalf of Arizona water rights contributed greatly to our State's success in obtaining a just share of Colorado River water, and to the recent decision in favor of Arizona's Colorado River water claims.

We'll be in the stands tonight to witness John Murdock's reception of this wonderful degree, a degree cherished by any person listed as an educator professional.

We said it couldn't happen to a nicer guy.

And we mean it.

A man can be a prophet who is honored at home.

John R. Murdock is such a man, for example.

And Tempe is such a place.

Mutual Security and Related Agencies Appropriation Bill, 1961

SPEECH

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12619) making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

Mr. SIKES. Mr. Chairman, I rise to ask the chairman of the subcommittee one or two questions, if I may have his attention. I shall be brief.

I know that the gentleman from Louisiana has always considered this program with great care and wisdom, and is literally saving the American taxpayer billion of dollars. I think the country owes a tremendous debt of gratitude to the gentleman and to his subcommittee.

May I ask the chairman of the subcommittee, Would not the gentleman agree that grant aid, whether under special assistance or the President's contingency fund, should be used sparingly—only in very special and exceptional situations?

Mr. PASSMAN. I am in complete accord with the gentleman's viewpoint.

Mr. SIKES. May I go one step further and may I ask the gentleman by way of clarifying legislative intent, notwithstanding this situation would it not be the understanding of the chairman of the subcommittee that Guatemala, a country which is solidifying the anti-Communist forces in the delicate Caribbean and Central American area, falls into this exceptional category and that any forthcoming special assistance or contingency fund assistance to that country could well be by grant, particularly in view of the current effort of the Arbenz Communist group, now associated with Castro in Cuba to regain a foothold by force in Guatemala?

Mr. PASSMAN. I want to say to the gentleman that I am certainly in accord with his position. I feel that Guatemala is in a singular position and is deserving of special consideration.

A Breath of Fresh Air in our Foreign Policy

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. GEORGE. Mr. Speaker, the old guard of the Republican Party was confused and confounded with the 12 points enumerated by Senator JOHN F. KENNEDY in his recent foreign policy speech.

Some of the more broad-minded members of that party, however, recognized that JACK KENNEDY had the courage to face the facts and that he does not hesitate to state his position. What a White House metamorphosis is in sight. Under the next Democratic administration the American people will no longer be deceived.

A breath of fresh air is sorely needed, Mr. Speaker, in our foreign policy—in fact, it is needed badly throughout the executive branch of our Government. It is certain to come on November 8.

In an editorial published June 16 in the Morning Wichita Eagle the writer recognized that Senator KENNEDY does not intend to follow blindly the established pattern of the status quo, but that he will act boldly and take the people into his confidence. I ask, Mr. Speaker, that the editorial be included with my remarks.

The editorial follows:

BREAKING NEW GROUND

While Senator JOHN KENNEDY'S major foreign policy address in Congress Tuesday, sounded for the most part like the standard Democratic criticism of the Eisenhower record, it did appear to break new ground in one direction.

Much of KENNEDY'S speech showed that while the Democrats harp upon the Eisenhower administration's "frozen policies" and the need for "rethinking" our goals, there are precious few specific changes the Democrats care to suggest. Responsible Democrats know that any real changes would either require the Communist leopard changing his spots or else our bartering away advantages we now have.

But KENNEDY may have struck upon one area where our policies are not only outdated but fail to conform to realities—the question of Red China. It doesn't make sense for us to pretend that nothing has changed since 1948 in an aggressive nation whose tremendous industrial growth is fast bringing it into the nuclear age.

The Massachusetts Senator realized that he was playing with fire in trying to use this issue, however. Mindful of how Americans are emotionally committed to our present policy, of nonrecognition of Red China KENNEDY put in the disclaimer that he would not favor recognition "without a genuine change in her belligerent attitude."

He went on to contend the next President must reassess our China policy. As a first step, KENNEDY suggested bringing China into the nuclear test ban talks at Geneva. This would help our side, he explained, by stopping the Soviets from continuing their atomic tests in Red China without inspection.

Indeed, here is the one area where America conceivably could gain by unfreezing its policy. But whether KENNEDY can shape an issue without alarming the public may be something else again.

Straight Talk to the Graduates of 1960

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter to the graduates of 1960 by Tom Anderson, from the Kershaw (S.C.) News Era, of June 9, 1960:

STRAIGHT TALK

(By Tom Anderson)

To the graduates of 1960:

Things I wish I had known when I went out to face the cold, cruel world 25 years ago (or as my teen-age daughter calls it, "in the olden days"):

That sheepskin does not mean you're educated. It means that you should now have enough appreciation of education to make you want to become educated. Your intellectual horizon should now have been arised so as to whet your appetite for knowledge, which you now should know where and how to get.

A successful farmer today must know far more than merely how to farm. He needs to be part scientist, salesman, student, buyer, bookkeeper, tax expert, internationalist, politician, philosopher, veterinarian and weather expert. And, a keen sense of humor helps.

MAKE YOUR OWN BARGAIN

The time has come when, if you have not already done so, you must make your own bargain with life.

Neither your parents nor your Government can do it for you. You can do and be almost anything you want to do and be badly enough to make the necessary all-out effort and sacrifices. Try to decide now what you most want from life. And remember, those who merely chase happiness never

catch up with it. Life has its sunshine and its shadows, its peaks and its valleys.

This is still the only country in the world where anybody who's got what it takes and gives what it takes, can rise from the bottom to the top. Most great deeds are mainly mixtures of courage and sweat. There are few born geniuses.

Your albatross could well be too much opportunity, instead of too little; too much, too easy. Opportunity can make and break. Money and luxurious living are false gods. For hardship builds character, like forging builds steel.

You can't get to the promised land without going through the wilderness. Our Republic was built on individual freedom, individual opportunity, and individual responsibility. Wonder what Abraham Lincoln would have done, if he'd had the opportunity you have?

Lincoln as a boy, read books by the light of an open fire and had only about 3 years of formal schooling. No struggle, no Lincoln; no wilderness, no Moses; no cross, no Christ; no adversity, no victory.

Neither be afraid of change, nor change for change's sake. The only thing that's sure in this world is change. And goodness knows, there's plenty that needs changing. The American way of life has never been equaled. Be sure you have something better before you agree to a change. Some of the progressive ideas such as socialism to replace capitalism; humanism or modernism to replace Christianity, would set us back almost 2,000 years. For it was that long ago that socialism, humanism, and modernism were first proven failures.

My generation—the generation your parents belong to—has done a lousy job for you. We sacrificed great hunks of the individual freedoms your forefathers fought and died for. We swapped them for Government-guaranteed womb-to-tomb security. We ate up not only our seed corn, but part of yours. In the welfare state, the politicians and bureaucrats get well and you pay the fare.

If we ever want freedom from responsibility more than we want freedom of opportunity, we will cease to be a free people. Prisoners have security. Life termers really have it made. You can't have freedom and security.

As you begin your serious bargain with life, never forget that the only security you can ever have is the security within yourself. Security, like happiness, can neither be bought nor given. Each of us has to earn our own. Government can give you nothing which it does not first take from someone else. For government is essentially a parasite. It creates nothing. It lives off of the creation of others. Generally speaking, government is your enemy, not your friend, because it's like a predatory male: It'll go as far as the female will let it. It has already gone far too far. If you want government to be your slave and not your master, you must understand it, participate in it, distrust it, control it. For the bigger it is, the littler you are.

Make all of life's bargains on top of the table, not under it. The best Payola you can get is your own self-respect. Be a sovereign individual, not just a member of the mob. The great things of the world are accomplished by a relatively few individuals, not by the mass. Don't go along with the crowd when the crowd is headed toward the precipice. Going along with the crowd is taking the easy, cowardly way. Is that what Jesus did? Or Moses, Christopher Columbus, Patrick Henry, Robert E. Lee, General MacArthur, or Senator Taft? No. Pontius Pilate went along with the crowd, pleased the mob. In this day of decaying morals, more and more Pilates, VanDorens, politicians, publishers, disc jockeys, businessmen, beatniks and editors seem to be taking the easy way. In the end, somehow and somewhere, they'll pay the price. Like an easy woman, some day they'll find that the easiest are soonest left unloved. Some day they'll learn that you can't lie with the hounds without getting up with fleas. Some day it'll burst upon their consciousness, if not their conscience, that a people who lack the morality to stand on their feet and say "no" will some day have to say "yes" on their knees.

THE THINGS THAT REALLY COUNT

Once a father took his little son with him to steal some corn. As the man prepared to put the corn into the bag, he anxiously looked around to see if anyone was watching. "Son, open the bag quickly," he said. The little boy replied, "Daddy, you didn't look in one direction."

Frightened lest the boy had spotted an observer, the father whispered "Where? Where?"

His son answered simply, "Daddy, you didn't look up."

Character is what you do when nobody but God is looking. The older you get the more you will realize that the things which really count in life are effort, service and character.

Each of us, rich and poor, educated and uneducated, capable and incapable, has a sacred obligation on this earth: To do the best we can; and to make the land we live on, the land we live in, and the world we live with, a better place because we were here.

Glossary of ETV Terms—Part I

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. ROBERTS. Mr. Speaker, we are living in a warld where vocabulary is undergoing constant change. If we are to keep pace with progress, we must learn to speak the language.

Educational television is the mark of progress in the field of educating our children. Its language, too, is strange to many of us.

Because I believe Members interested in this important development want to understand more about ETV, I wish to include part of a glossary of ETV terms compiled by Educational Facilities Laboratories, Inc., which appears in its excellent report, "Design For ETV."

GLOSSARY OF ETV TERMS

Acoustics: The science of sound; the sound properties of a room or space.

Adjacent-channel interference: Interference caused in one radio circuit by a transmitter which is assigned for operation in an adjacent channel.

Amplifier: Electrical device through which a sound or picture signal is strengthened.

Antenna: A structure for sending or receiving radio waves.

Antenna array: An arrangement of two or more antenna elements to form a system that operates as a unit; term especially applied to antennas with more than one element.

Audio: Of or concerning sound; specifically, the electrical currents representing a sound program or the sound portion of a television program.

Band: A range of radio frequencies within two definite limits and used for a definite purpose; for example, the standard broadcast band extends from 550–1600 kilocycles, television from 54–216 megacycles, and international broadcasting uses several bands between 6,000 and 22,000 kilocycles.

Bandwidth: The range of frequencies required to convey the visual or aural information being transmitted; the bandwidth of a television channel in the U.S. is 6 megacycles.

Brightness: The comparative intensity of light which the eye can see as illuminating an object or screen.

Brightness control: Knob on a television receiver which varies the average illumination of the image.

Camera: In television, a unit that contains an optical system and a light-sensitive pickup tube that converts a visual image into electrical impulses when properly scanned.

Camera chain: TV camera plus electronic equipment necessary to deliver a complete picture for telecasting.

Carrier: The transmitted electrical wave that carries the video or audio signals or impulses impressed upon it.

Channel: A range or "band" of frequencies assigned for the transmission of communication signals; in television it is the group of frequencies comprising the transmitted visual (video) and sound (audio) signals.

Channel allocation: The channel or band in the radio spectrum to which a television station is assigned, or the channel space in the radio spectrum to which a communication service is assigned.

Closed circuit: A wire circuit used as one means of carrying and directing a television program for specialized audience viewing.

Coaxial cable (concentric line): A transmission line formed by two coaxial conductors, each insulated from the other by some suitable dielectric material such as air or polyethylene, polyfoam, teflon, etc.

Community antenna system: A master antenna array and the signal distribution system, i.e., the amplifiers, coaxial cable, connecting devices, etc., necessary to effect signal presentation at TV receiver.

Compatible color system: A color television system which permits normal black and white reception of its transmitted signals without altering currently used receivers.

Contrast: The relation of black to white on a receiver or projection screen.

Decibel: A measure of the gain or loss of sound energy, intensity or loudness; each 3 decibel gain in sound measurement doubles the intensity or loudness.

Definition: The fidelity with which the detail of an image is reproduced by a television receiver; also called resolution.

Demodulation: The process of removing the video and audio signals from their respective carrier waves.

Directional antenna: An antenna radiating or receiving radio waves more effectively in some directions than in others.

Fidelity: The degree to which a system, or a portion of a system, accurately reproduces at its output the essential characteristics of the signal that is impressed upon its input.

Footcandle: A unit measure of quantity of direct illumination falling on a surface, measured from the surface toward the source.

Footlambert: A unit measure of reflected or emitted light "seen" by the viewer at the surface being illuminated.

Frequency: Number of cycles per second.

Interference: Disturbance in radio reception caused by undesirable signals or stray currents from electrical apparatus, atmospheric, static, etc.

Interlace: The process of scanning alternate lines of a television picture to reduce flicker.

Kinescope recording: A sound motion picture, usually on 16-mm. film, photographed off the end of a kinescope tube during a television show.

Line scanning frequency: The number of lines of an image scanned each second;

under present U.S. standards it is 15,750 cycles per second, which corresponds to a 525-line picture.

Live talent: Studio or on-the-spot televising of events and people in contrast to the transmission of film material.

Locked interlace: A scanning system where the sweep frequencies used are rigidly timed and controlled. More stable in operation than random interlace.

Master TV control: The point or points at which all TV signal assimilation occurs for subsequent controlled distribution through a closed circuit coxial cable; this includes control of all inter communications signals, TV signals, and so forth.

Megacycle (mc): One million cycles; when used as a unit of frequency, it is equal to one million cycles per second.

Microwaves: Radio waves less than one meter in length.

Microwave relays: Systems used for transmission of video and audio signals by highly directional radio beams at frequencies between 2,000 and 15,000 mc.; distances up to 50 miles may be covered by a single link consisting of a transmitter and receiver; longer distances may be covered by multiple links receiving and transmitting the original signal.

Modulation: The process of impressing audio or video impulses on the carrier wave for transmission through the air.

Monitor: To control the picture shading and other factors involved in the transmission of both a scene and the accompanying sound; monitoring usually occurs in the control room and at the transmitter. Also denotes a type of receiver.

Monochrome image orthicon: A television camera tube so sensitive it can televise (in black and white) any scene the eye can see, even under low lighting conditions; more expensive than vidicon, used for professional studio broadcasting; requires expert handling.

Fourteenth Anniversary of the Founding of the Italian Republic

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. GIAIMO. Mr. Speaker, on June 10, the Italian people observed the 14th anniversary of the founding of the Italian Republic. I am pleased and proud to bring this anniversary date to the attention of this House and to extend congratulations and best wishes to a nation of friends which has contributed so much to our culture and the culture of the entire world throughout the ages.

It was in 1948 that Italy, for the first time in the exercise of popular sovereignty, gave herself a fundamental law in adopting its republican Constitution. Italy's adoption of its Constitution, and its establishment of a republican form of government 2 years earlier, gave notice to all peoples that it was her intention to become associated with the free nations of the world.

The founding of the Italian Republic was a great landmark in the history of Italy. After the downfall of Fascist dictatorship came a political vacuum, and the Government that existed was in disrepute. It was in June 1946 that the Italian people became masters of their own destiny and chose between retaining their old monarchial form of government, or of adopting a republican form of government.

Over 22 million Italians expressed themselves at the polls on June 2 and 3, 1946, with 10 million in favor of retaining the monarchy, and over 12 million favoring a republic. On June 10, 1946, Italy became a Republic.

A year and a half later, its Constitution was adopted, and Italy began on the road of democratic progress. It is one of the largest and most progressive Republics in the world, and I believe that the many advances Italy has made since the war in all fields of human endeavor has been largely due to its new form of government.

Despite the tremendous advances Italy has made in the short time since World War II, there is still much to be done. But there is no doubt in my mind that under its Constitution, with the freedoms it guarantees to the people, and with the encouragement and help of Italy's friends throughout the world, Italy will continue to grow and prosper.

The United States has close ties with Italy, and despite the intervening actions of hostile Italian Governments, it has always had a high regard for the people of Italy. Italian immigrants have contributed greatly to the growth of our own United States in helping to build this new nation. It was particularly fitting, therefore, for us to contribute toward Italy's recovery after the second world conflict, not only in recognition of the contribution of Italian immigrants to our own growth, but also in a reaffirmation of our friendship and of our faith in the future of the Italian Republic.

United States aid, through the Marshall plan, mutual security, the United Nations, and so many other programs, helped express the American people's friendship for a noble people who had suffered much.

On this 14th anniversary of the founding of the Italian Republic, we can be proud that we were able to extend a helping hand to the Italian people with whom we in America have such close and common ties. We can rejoice in Italy's splendid recovery and its continuing progress, and be happy to have played a small part in assisting this progress.

We can be confident, too, in knowing that the people of Italy have achieved a maturity in government and in governing themselves, and that Italy will continue to play a vital role in the promotion of freedom and peace throughout the world.

Mutual Security and Related Agencies Appropriation Bill, 1961

SPEECH
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12619) making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

Mr. RHODES of Arizona. Mr. Chairman, I desire to associate myself with the interesting remarks and the philosophy expressed by the gentleman from New York [Mr. ROONEY] during the course of the discussion on foreign aid legislation.

Not only in Afghanistan, but in all parts of the world, Pan American Airways has become a symbol of the American flag. Like any private enterprise, Pan American assumes risks—often far beyond the normal—in tackling an oversea problem.

Pan American's mutual aid history far antedates foreign aid as we have come to know it in the last generation. In 1927 when Pan American began operations from Key West to Havana, through 1928 and 1929, when it built an air link around South America, the history of Pan American has been one of carrying the American flag to all parts of the universe.

This airline, Mr. Chairman, was the first American-flag carrier to fly into Africa, Asia, Australasia and to span the Atlantic and the Pacific.

Of course, Pan American received assistance from the U.S. Government in all these undertakings, but the question is which came first, Pan American or Government assistance? Obviously, one would not have been possible without the other.

We have reached an impasse in our financial dealings abroad. Obviously, foreign aid in the form of outright cash disbursements cannot continue indefinitely. However, until American business enterprises similar to Pan American are encouraged by the Government to go abroad and blaze new economic and technological horizons we must anticipate that Government assistance remains necessary.

I agree with the gentleman from New York [Mr. ROONEY] that Pan American and other American firms should be encouraged to continue their oversea expansion, and I thank him for the privilege of letting me join with him in giving credit where credit is due.

Department of State: Hidden Policymakers

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. FLOOD. Mr. Speaker, in previous addresses to the House on the Caribbean and Panama Canal situations, I have repeatedly asked the question: What are the influences in our Government that have permitted the present crucial conditions to the south of us to develop? But so far there have been no adequate explanations. Certainly, the time is overdue for the Congress to delve into these

matters and identify these influences and the personnel that implement them.

Thus, it was with gratification that I read in the June 14, 1960, issue of the Evening Star of Washington, D.C., an illuminating article on "The 'Hidden' Policymakers" by Mr. Constantine Brown, the distinguished foreign affairs columnist of that newspaper.

The article follows:

THE 'HIDDEN' POLICYMAKERS—SUBSTITUTION OF ONE DICTATOR IN CUBA BLAMED ON BEHIND-SCENES FIGURE

(By Constantine Brown)

Congressional committees are studying ways and means to streamline and modernize our top-heavy diplomatic machine, particularly since the so-called "Paris disaster." It has become obvious to all who follow closely American diplomats' actions and attitudes, especially since the death of John Foster Dulles, that more often than not the right hand does not know what the left is doing.

There are more "hidden" policymakers these days than are good for the country's interests. Their policies may come out as the work of the Secretary of State, but actually he is sometimes merely a front behind which are the "hidden" policymakers. It is difficult to conceive for instance that a man as cautious as Mr. Herter would have been on his own initiative a party to the bringing into office of Fidel Castro. The tragedy of Cuba and the Cuban people was the result of well-conceived and well-calculated actions on the part of a number of "hidden" policymakers from several agencies. The net result of their concealed labors, in which they had been assisted by some of our information media, is that we have replaced the dictatorship of Fulgencio Batista with that of Castro. In doing so, we have enabled Messrs. Khrushchev and Mao Tse-tung to establish political and military bases at our doorsteps. Cuba today is not only the center of action of international communism for South America, but also is becoming a base for Red rocketry and submarines.

Despite the blatant threat to our security, the hidden policymakers now are endeavoring to overthrow the existing government in the Dominican Republic. The pattern follows closely that of Cuba. It started some time ago with acid newspaper stories about the misdeeds and the oppressions taking place in the Dominican Republic.

There is no question that Generalissimo Trujillo is a dictator. We have known this—and have supported him—for the last 30 years. The situation has not changed since. The fact is that despite the dictatorial form of government, the Dominican Republic is better off and more orderly than many Latin American republics which have their own type of democracy. That is immaterial, however. The important factor is that the Trujillo administration is definitely dedicated to keeping communism out of the Caribbean in the same manner as it opposed the Nazis during the last war. And that, under the existing world conditions, is what matters uppermost. Yet, the official slaps at the Dominican Republic are being accompanied not only by propaganda but also by funds channeled from this country—not from officially appropriated moneys but from certain secret funds—to foster Generalissimo Trujillo's overthrow.

Nobody seems to worry about what would happen if this is done or about who would replace the Trujillo dynasty. Objective observers maintain that the vacuum would be filled by Communist dupes of the Castro type. Moscow's and Peiping's efforts to surround us have been successful in Cuba and unless we wake up they may be successful in other countries close to our shores.

What seems to be even more amazing are the reports that there are a number of hidden policymakers who are keeping their ears on the ground in hope of detecting vague rumbles from Spain and helping the enemies of Franco, who operate principally from abroad, to create confusion in that country, which has become one of our most important allies in Europe.

Spain has changed since the end of its civil war from a total dictatorship to a "managed democracy" with only a token, powerless Parliament. But that is beside the point. We are on record that we do not care about the form of government of any country.

Spain has become our main anchor of defense in the Western Mediterranean. This has become particularly true since we are being forced to remove our air bases from Morocco. There is no question in the minds of responsible men in the Pentagon that a political turmoil in Spain will have disastrous results to the defense of the free world. This fact should be obvious to all who are concerned about the tomorrow in the present world situation. Yet ideological hidden policymakers wish us to take a different course.

Soviet Russia's Vodka Diplomacy

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. PUCINSKI. Mr. Speaker, following is the speech which I had the honor of delivering last Saturday at the Department of Illinois AMVETS Convention in Peoria, Ill.:

REMARKS BY CONGRESSMAN ROMAN C. PUCINSKI, DEMOCRAT, OF ILLINOIS, DELIVERED AT THE COMMANDER'S DINNER ON JUNE 18, 1960, DURING THE STATE CONVENTION OF THE DEPARTMENT OF ILLINOIS AMVETS IN PEORIA, ILL.

My fellow Amvets and ladies of the auxiliary, this year's convention of the Department of Illinois AMVETS is being held at a time when the whole world is anxiously awaiting developments in the most crucial period of the cold war.

It is indeed fortunate that you men and women who have made such a great sacrifice in the defense of freedom and survival for democracy should be meeting here today to collectively appraise the situation which is threatening the peace for which you so desperately fought. I hope that before you leave here, you will have agreed on a program of action for our Nation which will represent the collective thoughts of those who have experienced the horror of war and who today so vividly understand the price of freedom.

Your task is not an easy one, but I am confident that because of the leadership which you are fortunate to have in the Department of Illinois AMVETS at this particular time, the program you will recommend for future action will reflect the high degree of responsibility the American people have learned to accept from your organization.

The free world today is locked in a bitter ideological struggle with those who, through despotism and brutality, are intent upon destroying man's God-given right to be free.

Not since the end of hostilities in World War II has the international arena been so fraught with tension as it is today. We are living in an era that demands the highest degree of responsible analysis and understanding so that we can bring the world back to a concept of conduct acceptable to all civilized nations. The situation today demands extremely careful analysis because it is patently clear to all of us that one false move, one ill-conceived decision, could plunge the entire world into a nuclear war that could well set civilization back many centuries.

The free world today, with its high ideals and unyielding determination to preserve peace with dignity, is pitted against a conspiracy emanating from the Kremlin, which has made "vodka diplomacy" the order of the day.

I have no fear that leaders of the free world will do anything sufficiently provocative to touch off a third world war. But, unfortunately, we in the free world are not masters of the situation. Rather, we must endure countless humiliations and retain a degree of patience not even equalled by Job, simply because we know that the Kremlin leaders shift and pivot their own regard for peace commensurate with the amount of vodka they have consumed.

We in the free world are being forced to play "Russian roulette" with a despotic leadership in the Kremlin which has repeatedly shaken the peaceful conduct of diplomatic relations with violent threats of nuclear retaliation. I need not tell you that on any number of occasions at diplomatic receptions in Moscow, after consuming several vodkas, the Premier of the Soviet Union has made not only bold and arrogant insults against the leaders of the free world, including our own President, but also has threatened to destroy our bases in friendly countries with nuclear bombs.

The real threat to world peace is the ever present possibility that these unstable and unpredictable leaders of the Kremlin, in one of their fits of rage or outright intoxication, could very well throw the entire world into nuclear conflict.

Your responsibility, therefore, as leaders of your respective communities, is to constantly help place this entire situation in its proper perspective to our American people, because as never before, our people must understand the complex problems of the world today.

We are witnessing the ugly specter of conventional diplomatic relations being forced to surrender to mob rule. A few weeks ago we watched with horror as a wild and violent mob drove the President of Korea out of office. Only last Thursday we witnessed one of the most catastrophic diplomatic disasters when we saw our own President forced to abandon his plans to visit Japan because the Japanese Government is apparently unable to cope with mob violence in its own country.

It is important for those of us who have learned the meaning of respect and discipline as veterans to be ever mindful of the fact that mob rule is infectious. If it could happen in Korea; if it could happen in Japan; we, as Americans, must go beyond the realm of normal assumption and take cognizance of the ugly fact that it could happen here.

You, therefore, have the challenge to make sure that young people in your own communities recognize the meaning of orderly dissent, if they so wish to dissent, within the framework of standards commonly accepted in an organized society. Let there be no question about this.

The AMVETS has a history of tolerance and respect for diversity. Your organization has attracted many veterans from the armed services because they know that within your framework there is ample provision for free debate and progressive ideas. But you also have a proud history of service to the community to preserve the highest ideals of America in freedom and democracy. Now, more than ever before, you must recognize the fact that through your leadership the people of your community, especially the young people, can have a better understanding of the great complexity of freedom. I am

certain that the young people in your community will not be any party to mob violence—such as we witnessed among students in Korea and Japan—if you properly orient them on the responsibility of their citizenship.

People are moved to mob violence and to forsake law and order only when they fail to understand the complex structure of the democratic process. You, as men and women who have fought so hard to preserve that democratic process in our country, must today become the ambassadors who will carry to your communities not only the meaning of freedom, but also the responsibility that goes with it to those who would enjoy it.

The AMVETS, by the very nature of your organization's charter, have a responsibility to make your collective voice heard on urgent legislation and on policy of our national administration. I hope that before you leave here this weekend, your organization will reemphasize America's national purpose and, having done that, will spell out in a series of resolutions how you believe this national purpose can best be dramatized and implemented among the growing number of Americans who, either through impatience or lack of desire, seem to have forgotten what our national purpose really is. Those of you present here today certainly know what it is because you fought so valiantly to defend it.

Perhaps everyone of us present in this room may have a different opinion on the details of our national purpose. But I trust we can be unanimous in our agreement that the foundation of our national purpose is to remain free.

Freedom is built of many ingredients. In order to be able to preserve freedom, we, as a nation, must be economically strong; and to do this, we must have a normal economic growth which can absorb the increasing number of Americans coming into the labor market. Ironically, in recent years our Nation has failed to maintain a degree of growth which can give us the economic strength we need to preserve our freedom. There are still almost 4 million people unemployed, and we have many areas of our country which have been chronically depressed because of shifting industries and changing times. You must take cognizance of this and give serious thought to this problem, particularly since right here in Illinois we have four counties that are listed by the Labor Department as chronically depressed areas.

In order to preserve our freedom, we must have a strong defense establishment. This does not mean one that would tolerate or condone waste of the taxpayers' money; but on the other hand, it does not mean that in our search for economy we should deprive our military leadership of those sinews which they consider absolutely essential to preserve our Nation's survival.

You, as veterans, have a twofold responsibility. One, to ferret out, wherever you see them, examples of waste and inefficiency. But just as important is your responsibility to explain to the people in your community why the vast sums which we are spending today on defense are so urgently needed.

In order to remain free, we Americans must realize that the two large oceans which have for centuries safeguarded us from the problems of the rest of the world are today but insignificant ciphers on the sliderule of guided missiles.

Our own survival today requires alliances and treaties of mutual security with our allies. Earlier this week there were many voices raised in Congress to eliminate the mutual security program, which in the last 14 years has cost this Nation $103 billion. No one would contend that this is not a serious amount of money, but I dare say no one can deny that this serious expenditure has helped us to preserve the allies on whom we must today rely for mutual assistance should the Soviet Union be foolish enough to disturb even the shaky peace the world is experiencing. It is up to people like you to explain to those in your communities the real significance of mutual security.

In order to remain free, there is a myriad of domestic problems which we must first try to understand and then persuade our neighbors to support legislation which would help alleviate them.

Finally, in order to remain free, you must make your own voice heard in the great debate on foreign policy. This is a subject which under no circumstances should we Americans ever permit to become discussed on a partisan basis. Conversely, if we feel that our foreign policy is not achieving results which would produce better understanding among nations, we would be derelict if we failed to make our voices heard. This is the dynamics of our Republic: the ability to contribute your own views to the great discussion on survival.

Too often I have seen in Washington outright carelessness, inefficiency, or even tragically bad judgment being concealed under the guise of secrecy with excuses that full disclosure might affect our national security. Here again the situation requires extreme responsibility. It is one thing to assail our President or his administration with bitter criticism for demagogic reasons only. It is another thing to point out in responsible tones where you feel our national leaders have erred in their conduct, if you believe they have indeed erred.

I, myself, for instance, very severely criticized our State Department for inviting the Soviet leaders to this country. I said then—and I think time has proven me right—that we were wrong in dignifying them with the traditional hospitality so characteristic of us Americans. But that does not mean that today, when we have recognized the degree of our mistake in inviting these men I or anyone else should engage in reckless criticism of the President just for the sake of criticizing.

This, therefore, is your challenge: Help your fellow man to better understand the complicated world in which he lives. You veterans are the leaders of your community. Do not make the mistake of looking for leadership elsewhere; it rests with you. Through the process of leaving the job of leadership to somebody else, we might conceivably reach a point where but a handful of Americans could actually affect the future of our country. This you must never permit.

I am very disturbed that this Nation for some years now has been tragically slipping into the limbo of conformity. More and more of our people are perfecly willing, often subliminally, to fall into a single cadence; and those who want to speak out on the great issues of a tremendously complicated world are being more and more shouted down by a populace that is growing increasingly impatient with the art of free speech. I need not remind you that perhaps the greatest tragedy to beset our Nation would be to have all of us march in a single cadence and for all of us to think alike. We would then lose that precious characteristic which distinguishes us as free people from those now enslaved behind the Iron Curtain.

The AMVETS were organized because you wanted a greater voice in the affairs of your postwar Nation. Let us then rekindle the spirit that gave birth to this organization; let us then as veterans go back into our communities and soberly provide that avenue of understanding which we as Americans need if our Nation is to survive. Our form of government is the most complicated form of government in existence anywhere in the world today. Yet, in this complexity we have been able to guarantee our citizens the greatest degree of freedom enjoyed by people anywhere in the world today.

I urge you to exert your leadership to keep our country great. You have fought hard on the battlefields of World War II, and you won the war. Now you must continue to fight to preserve the peace.

May I take this opportunity to congratulate your State department commander, Edwin Fifielski, and his entire staff for the excellent work he has done during the past year and may I wish all of you success in your efforts during this coming year.

Thank you.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my newsletter of June 18, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, 5th District, Texas, June 18, 1960)

A pay raise for all Federal employees was voted in the House this week amid confusion which would have been comic had it not pointed up so graphically the power of certain self-serving lobbying organizations. A discharge petition demanded by postal unions and other employee organizations gained the requisite 219 signatures of House Members with almost unbelievable promptness, took jurisdiction away from the Post Office and Civil Service Committee which was considering selective pay boosts, and called up for floor debate the straight-across-the-board 9-percent hike sought by the unions. On the day this bill was to come up on the floor, the committee met again and voted out the new and different version calling for a 7.5-percent increase. This amendment wasn't printed up, read or explained to the committee members but it was passed by the committee nevertheless. Later on the floor of the House it was more of the same. Member after Member took the floor to condemn the procedure and deplore the lobbyists' pressure (the galleries were filled with employee representatives who had earlier jammed the corridors and committee room). The bill passed 378 to 40. I was one of the 40. Frankly, I'm content (and I believe that most of the 40 dissenters would agree) that some sensible pay raise for postal employees and other Federal workers is in order. I'm certain, though, that it should be a selective one considering the demands of varying jobs, the increase in the cost of living since last Federal pay rates were adjusted, and other pertinent factors. There was no basis whatever to my mind for any across-the-board increase—no basis, that is, other than the baldly-stated demands of the lobbyists seeking this increase.

The constitutional amendment granting District of Columbia residents the right to vote for President and Vice President passed handily, and I agree that this right should not be denied. This amendment should not be confused with home rule which would grant local control of Washington to locally-elected officials—a control now residing in Congress. After ratification by three-fourths of the States, this suffrage amendment will become law.

Tighter accounting and control of funds covering the necessary additional expenses of Congressmen during the course of official business would be provided by H.R. 11654 in whose sponsorship I joined this week.

The mutual security appropriation (foreign aid) evoked the usual controversial debate. Few new ideas or arguments came to light except as further developments of earlier presentations (see newsletter Apr. 23, 1960). Here, however, are a few thoughts that struck home to me: (1) Foreign aid since World War II totals $103,209 million for mutual security gifts of money and goods, grants and loans under seven separate lending institutions, Public Law 480 (surplus food disposal), and oversea military construction and expenditures; (2) foreign nations are now in a position to demand our gold, if they choose, to the full extent of our holdings of some $19 billion ($12 billion of our $19 billion is earmarked to support our currency); (3) each year part of the funds appropriated are now spent; (4) the Comptroller General in a report on foreign aid states the problems stem from too much money; (5) we continue to support, as a matter of policy, Communist regimes in Yugoslavia and Poland; (6) some of the snafus are hard to believe. Among some new ones: We shipped 421 jet planes to a country with 186 pilots; 255 tanks to a country whose total active tank force is 30 men; 391 jet planes ($70 million cost) to a country which placed 160 of them in temporary storage and 45 in permanent storage. We provided three army surgical hospitals to Ethiopia at a time when there was only one native doctor in the Ethiopian Army; (7) $451 million in counterpart funds have been "discovered," which we apparently didn't know we had; (8) the very name, Development Loan Fund, is a misnomer. The funds provided under it are gifts. Loans are repayable in local currencies which we can't spend without the local country's permission to take the money out of the country; (9) defense support (economic aid) in Vietnam: a highway system to cost $18,300,000, at this point $130 million; (10) we now have 44,000 employees and 10,000 trainees in "mutual security" work in 77 countries.

In the field of economic assistance we have found ourselves only subsidizing our enemies or at best dubious "fair weather" friends while weakening our own economy and pyramiding our own debt. Militarily we have poured money and materiel into a number of nations with no assurance of their military support when it may be needed. Certainly all of us are now concerned as a result of Japan's Communist-inspired student and labor uprisings that we are vulnerable in our oversea bases. Such bases can be neutralized politically before they can be used militarily. This leaves us faced with the realization that our strategic air command may not prove the deterrent force we think it to be in an emergency. Only as we ourselves are demonstrably strong will our allies rally to us.

Imports of Foreign-Made Surplus Military Rifles Into United States as Sporting Guns Is Threatening American Firearms Industry

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. BOLAND. Mr. Speaker, during debate last Friday I had planned to offer an amendment, with the support of my colleague, the gentleman from Massachusetts [Mr. CONTE], and members of the Connecticut delegation in the House, to the mutual security bill in order to halt the importation in the United States of firearms which were manufactured abroad for military purposes and which are now being dumped upon the world market.

Due to the parliamentary situation at the time of the reading of the mutual security bill for amendment, however, it was impossible for me to offer my amendment because I had been advised by the Parliamentarian that it would be subject to a "point of order."

Mr. Speaker, the dumping of these surplus foreign made firearms is occurring in such increasingly large volume and at such ridiculously low prices that it is causing a serious reduction in the skills and investment of American manufacturers of firearms. The result has been a drop in arms research and development and a slowing down or abandonment of the modernization of small arms plants in the United States. If this trend is not halted, American arms manufacturers will obviously be harmed to an extent which gravely impairs their defense mobilization capacity.

In fact, the defense mobilization base of the United States has probably already been impaired by the dumping upon our markets of surplus military firearms. These firearms are virtually being given away and are dramatically reducing sales by American arms manufacturers. The J. Stevens Arms Division of the Savage Arms Corp. is located at Chicopee Falls, Mass., in my congressional district. This American arms manufacturer, producer of the famous sporting Savage .99 rifle, and other manufacturers located in Connecticut, have been feeling the pinch in sales as a result of the importation of foreign made surplus rifles. They are being sold here as sporting rifles at prices with which the American arms industry cannot compete.

These surplus rifles are coming primarily from Italy, England, Sweden, and Germany. There appears to be no end to the supply abroad; and since the United States is the only major market for these guns, the outlook for the American firearms industry is very grave indeed. European governments refuse to permit their people to buy these military rifles.

Mr. Speaker, under the munitions control provisions of the Mutual Security Act, the State Department has the authority to regulate traffic in arms. Licenses are issued by the State Department for both import and export of arms and ammunition. Under the law, the Secretary of State is authorized to issue a license if he finds that the license furthers U.S. foreign policy, world peace, and the national security. To date, the Secretary of State, applying these standards, has concluded that the mass importation of surplus military rifles does not conflict with world peace, our foreign policy or the national security.

On June 29, 1959, six of the leading American firearms manufacturers filed a petition with the Office of Civil and Defense Mobilization, asking for relief against these excessive imports of military surplus. Unfortunately, however, the OCDM decision will not be forthcoming before autumn. Meanwhile, the American arms manufacturers continue to be threatened by the dumping of surplus foreign-made military rifles which are glutting the American market and selling for prices ranging from $14 to $30 in direct competition with American sporting rifles retailing between $80 and $130.

Employment Potential of the Handicapped

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. HALPERN. Mr. Speaker, it is with great pride that I have the opportunity, through this forum, to bring to the American people the heart-warming story of the successful efforts of a resident of my district, Mr. Eugene T. Turney, Jr., of Bayside, N.Y., to demonstrate the great employment potential of the handicapped. Mr. Turney is president of North Shore Nameplate, Inc., a company which manufactures aluminum foil nameplates currently used by 500 top domestic corporations, plus pressure-sensitive cloth markers and safety signs for industrial use. Many of the employees of this thriving company are physically handicapped.

Through his efforts men and women who once faced uselessness because of physical handicaps are now turning out productive work of high caliber, and at a fast pace.

He is also president and chairman of the board of Anodyne, Inc., a company which is presently completing construction in Miami, Fla., of a 28,500 square-foot plant designed especially for handicapped workers. 100 of the expected 150 employees will be handicapped. The plant will be furnished with smooth-surfaced ramps, extra wide doors to permit passage of wheelchairs, and other special devices to make the employees fully self-reliant.

Starting as a board member of Abilities, Inc., in 1952, Mr. Turney has devoted his efforts to providing opportunities for the handicapped, and has emphatically demonstrated that they are capable of outstanding achievement by setting new records in attendance, safety, and production.

His spare time has been given unstintingly to meetings with American businessmen at which he has described the potentials of the handicapped. "It is not altruism but good business to hire these people," he declares, and the successful operation of Abilities, Inc., and of North Shore Nameplate, Inc., offers dramatic testament to this assertion.

Recently, in the Bayside Times, a weekly newspaper in my district, and in the Christian Science Monitor, there appeared articles describing Mr. Turney's outstanding work in this vital area of human dignity and relations. Under

unanimous consent, I include the articles from these newspapers in the RECORD as a part of my remarks. They follow:

[From the Bayside (N.Y.) Times, May 5, 1960]

PIONEERING INDUSTRIAL CONCEPT: NEW HORIZONS FOR HANDICAPPED THROUGH GENE TURNEY'S OPERATION PALM TREE

The pioneering concepts of a nationally-known Bayside business executive have captured the attention of high-level industrialists around the Nation.

Eugene T. Turney, Jr., a longtime local resident, is building a $750,000 multicolor anodizing and etching manufacturing plant in Miami (dubbed Operation Palm Tree), around a new product and even more significantly, around physically handicapped people.

The working force of Anodyne, Inc.—the parent organization of North Shore Nameplate, Inc., of 214–27 Northern Boulevard—will number 150, and 100 of these will be handicapped.

Steelwork is being completed now at the 28,500-square-foot facility in north Miami. Smooth-surfaced ramps, extra-wide doors to permit passage of wheelchairs, and other special devices will make employees fully self-reliant. Plant occupancy is scheduled for next month.

Turney, board chairman and president of Anodyne, says that experience with hiring handicapped at his Bayside operation proved conclusively that they have top performance records and are more reliable and loyal than workers in the best health.

"This new facility is not a charity operation. Each employee understands the commany is not a shelter and that he must produce a day's work for a day's pay," Turney explains.

Business publications have brought this project to the attention of industrialists around the country, and the foundation of a new approach to employment of the handicapped may have been created by the Baysider.

Turney doesn't claim that his Miami plant and its utilization of handicapped workers was planned overnight. On the contrary, he has been exploring this personnel concept for years.

The localite is a board member of Abilities, Inc., of Albertson (Long Island), the pilot project for industrial employment of the handicapped. Henry Viscardi, Jr., born legless in New York in 1912, started Abilities in 1952 to fill a need among men and women whose employment problems matched his own.

Abilities has grown to a multimillion-dollar business hiring more than 400 handicapped persons. Viscardi's book, "Give Us the Tools," is a national bestseller that details the development of Abilities, Inc. Viscardi's work has served as a continuing inspiration to Eugene Turney.

The expansion potential of Anodyne is limitless, Turney claims, and with its growth the handicapped will have an equally limitless employment potential. Right now, blueprints are completed for a 50,000-square-foot addition to the Operation Palm Tree plant which is still under construction. Groundbreaking for "Palm Tree, No. 2" is slated for early fall.

Those who have followed Turney's meteoric ascension in the business world from modest beginnings right here in Bayside will be the first to realize that the sky is the limit in Anodyne's industrial future.

Right now, the firm manufactures anodized pressure-sensitive, aluminum foil nameplates currently used by 500 top domestic corporations, plus a complete line of pressure-sensitive cloth markers and safety signs for industrial use.

North Shore Nameplate, long a landmark on Northern Boulevard, will eventually be moved to Nassau County (site not yet selected), but a sales office will be established in Bayside * * * and Mr. Turney will continue to maintain his residence at 215–05 27th Avenue. He already has a home in Hollywood, not far from the new Anodyne plant.

Readers will recall that Quentin Reynolds devoted the first chapter in his best seller, "Operation Success," to the story of Mr. Turney's uphill development of North Shore Nameplate. Other business success stories in the book are those of Floyd Odlum and Vic Tanny.

On Anodyne's board of directors are Mr. Viscardi of Abilities, and five other top American exectives including one of Turney's neighbors, William O. Bennett, of 214–15 28th Avenue, research and engineering vice president of Bulova.

The Baysider is married to the former Margaret S. Beale. They have four children; Maury (Mrs. C. C. Nelmes, Jr.), Gail (Mrs. J. Cardeiro), Marine Cpl. Eugene T. Turney 3d, and Susan.

His affiliations include the Bayside Republican Club, Bayside Kiwanis Club (inducted just last month), Little Neck Bay Power Squadron, Coast Guard Auxiliary, Manhattan Rifle and Revolver Association, American Radio Relay League, and the Railroad Club of New York.

[From the Christian Science Monitor, Apr. 23, 1960]

HORIZONS FOR HANDICAPPED

(By Lowis Carlton)

MIAMI.—Several thousand men and women who once faced uselessness because of physical handicaps are now turning out productive work of high caliber, and at a fast pace.

What once was a personalized crusade to replace charity handouts to the handicapped with employment that provided a living wage has passed its latest milestone. Construction has begun here of a $750,000 multicolor anodizing and etching manufacturing facility for Anodyne, Inc. This plant will have a working force of 150, and 100 of these will be from the ranks of the handicapped.

Smooth-surfaced ramps, extra wide doors to permit passage of wheelchairs, and other special facilities will make employees fully self-reliant. Special machines will enable handicapped men and women to manufacture the anodized etched-foil nameplates and a complete line of cloth markers and safety signs, products of Andoyne, Inc.

The company expects the new plant to make a profit. Here is the striking new concept now gaining acceptance in industry.

WORK REQUIRED

"Each employee understands the company is not a shelter and that he must produce a day's work for a day's pay. That's the secret of his salvation. A man can say to himself, 'I earned this loaf of bread and I can support myself and my family.' It gives him pride and a sense of accomplishment that works wonders," said Eugene T. Turney, Jr., board chairman and president of Anodyne, Inc.

Mr. Turney is president of North Shore Nameplate, Inc., of Bayside, N.Y., which also employs handicapped persons. Experience at North Shore Nameplate provided a basis for planning the Miami facility, its personnel training program and mechanical equipment. Once Anodyne of Miami is in operation, it will become the parent company with the Bayside, N.Y., firm as a division.

For outstanding business achievement under the free-enterprise system, Mr. Turney won an Oscar in 1959. Quentin Reynolds devoted a chapter in his best seller "Operation Success," to the story of Mr. Turney's uphill development of North Shore Nameplate, Inc.

SUBJECT EXPOUNDED

A soft-spoken, decisive and energetic man, Mr. Turney speaks earnestly about a subject that has interested him all his adult life.

"After a maximum of 6 months' training, the handicapped employee is capable of greater productivity, and is more reliable and loyal than the average employee in the best health. Our records prove this. We feel that industry will miss a fine opportunity if they do not recognize the outstanding capabilities of these people," he said.

Mr. Turney is a board member of Abilities, Inc., the pilot project from which grew the whole inspiring program. This was started in 1952 in a grimy, unfurnished garage in West Hempstead, N.Y., under the direction of Henry Viscardi, Jr. It was to fill a real need among men and women who had problems similar to those Mr. Viscardi himself had experienced.

BUSINESSMEN SECURED

The founder secured a group of businessmen as directors of his venture, then worked day and night to turn a dream into reality. He had triumphs and days of despair but today Abilities, Inc., is a multimillion-dollar business hiring more than 400 handicapped people.

Mr. Viscardi maintained that there were no disabled people—only people with varying degrees of ability at varying tasks. Rather than a disguised charity project, Abilities, Inc., offered men and women a chance to earn a living doing useful work without being supervised as though they were backward children. Even the name expressed his positive viewpoint, stressing that handicapped people deserve the right to work.

Every type of handicap was found among the employees. Much of the work was on intricate electronic assembly, demanding fine craftsmanship. Men who could see directed work of those who could not. Those who could walk made deliveries and carried messages for others who had difficulty moving about.

CONTENTION DEMONSTRATED

From the beginning, the workers demonstrated Mr. Viscardi's contention that they were capable of outstanding achievement by setting new records in attendance, safety, and production.

Mr. Viscardi stated his views in his book, "Give Us the Tools." He pioneered for spiritual development, too. A small, interdenominational chapel was constructed at the plant site where employees were invited to worship. Records show how men and women dropped their concern about themselves and became enthusiastic foremen and department heads. Several married and provided homes for their families.

Meanwhile, the company expanded into new quarters. An ambitious lecture and educational program was commenced, with approval of the company's board of directors, to carry exciting news about Abilities, Inc., to businessmen across the United States.

CONCLUSIONS ACCEPTED

Sears, Roebuck & Co. was the first large organization to accept Mr. Viscardi's proven conclusions. Its employment manual was changed to eliminate clauses discriminating against the disabled. Twenty-five hundred handicapped persons were on their payroll within a year. Other companies also acted. Representatives of seven foreign countries came to observe and took home plans for similar programs in their lands.

Mr. Turney, as a director of Abilities, Inc., shared in the difficult founding work and saw the wonders being accomplished. Out of his desire to expand the program, he started North Shore Nameplate, Inc., with Mr. Viscardi as a director.

Now that North Shore Nameplate has been safely gifided through its critical first years

to a firm financial footing, Mr. Turney is hard at work on his project in Miami.

Between work at the new plant site and speeches before groups of influential businessmen and trips to New York to direct his company's operation, Mr. Turney said, "American businessmen need to be advised about the potentials of this neglected labor pool. It is not altruism but good business to hire these people. We are working long and hard to get the facts across but we have barely begun. There is so much more work to be done."

Yet the foundations have been laid, and laid well, thanks to a handful of dedicated men.

Commencement Day Address at Medical College of South Carolina

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 20, 1960

Mr. THURMOND. Mr. President, on June 2 the Honorable Ernest F. Hollings, Governor of South Carolina, delivered the principal address at the commencement ceremonies of the Medical College of South Carolina at Charleston. In this address Governor Hollings charged not only the future doctors to whom he was speaking but also the entire American public to treat and cure the evils that beset our great land. This is a splendid and forthright address. In order that it be available to the largest possible number of people, I ask unanimous consent that it be printed in the Appendix of the RECORD. I commend it to all the Senators and Congressmen particularly.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GOV. ERNEST F. HOLLINGS AT COMMENCEMENT CEREMONIES OF THE MEDICAL COLLEGE OF SOUTH CAROLINA, CHARLESTON, S.C., JUNE 2, 1960

Hippocrates, the greatest of Greek physicians, warned, "Strong maladies require strong medicine." This forebear of today's medical profession also wrote, "in order to cure the human body it is necessary to have knowledge of the whole of things." With the prophetic greatness of the ancient Greeks, Hippocrates' words have special meaning today.

The transcending malady of our times is the plague of compromise. Insidiously, it eats away at American principle and the free enterprise system in America. The strong medicine we need is vigorous action to reverse this deterioration. The medical profession must play a major role in treating this malady. It will require that you be broad enough in scope, and incisive enough in insight to help diagnose and treat the ills of compromise and equivocation. You must "have a knowledge of the whole of things."

The patient today is the equivocal man—a strange creation who stalks the land in growing numbers. He bears faint resemblance to the American of earlier day who believed in human responsibilities as well as human rights, who wrung personal achievement from his own initiative, thrift, and prudence; who knew that the best governed was the least governed, who believed the American Constitution meant what its noble words said as written, rather than as interpreted by psychological or sociological theory.

This patient is marked by symptoms which are distressing in their potential impact on the welfare of the Nation. His economic pulse is slowing and becoming erratic because he is finding the rewards for personal initiative are being crushed by confiscatory taxation and stifling governmental regulation. Instead of seeking the thrills of achievement and profit through his own creative ambition, he is turning to the seductive beckoning of security. His goal in life is a safe niche in some paternal organization with pensions for old age rather than the risks of building his own future through competitive effort. He finds it easier to drift in groups than to strike out on his own. His instinct for thrift is being chewed to bits by the greedy jaws of loose money and credit. He is caught in the grip of rising costs and deflated value of the dollars he earns. If he is a farmer, he is told what he may plant. If he is a businessman, he is taught that his operations and profits must conform to the dictates of a silent partner—the Government. He learns further that if his profits reach a certain level, then this partner becomes owner of the business. If he is a worker, he is often told his right to work is governed by powerful group forces rather than by his own choice. In short, he is losing his self-reliance and with it fades the vibrant spirit of free enterprise which made this Nation great.

In addition to his weakening pulse, this patient finds himself suffering from cancerous moral fiber. Integrity becames a word of relative meanings. Things which his forebears would never have condoned come easier to rationalize and explain away. Cheating on income tax returns becomes a national pastime and codes of personal conduct become "anything goes" so long as you can get away with it. This deterioration boils out in open sores when payola schemes are brought to light, Government officials are indicted for frauds, and general crime statistics soar. The no-compromise-with-evil spirit of his forefathers grows dimmer.

The mind of the patient is becoming clouded and unsure on fundamentals of self-government. He is told that powers reserved to the States under the Constitution are really meant to be in the hands of the Federal Government—that the original Federal-State balance of power is outmoded. He knows that the strength of the American system of government lies in its three separate but equal Federal branches—legislative, judicial, and executive. But in reality he sees the judicial taking over legislative power through far-reaching political decisions and the executive branch usurping the powers of Congress through the instrument of the Executive order and the preponderant weight of bigness. Legislatively, he sees government by pressure groups. He watches the strength of local government being sapped into the massive sponge of a paternalistic central hierarchy. He is told the great American passion for liberty should be subjugated to so-called equality demanded by groups which have never learned that equality is an earned dividend of liberty.

Internationally, on the basis of unconditional surrender, he wins the war to end all wars, but learns that conditions exacted by our so-called ally have put us in the role of conquered. It is for us to concede. The great victories of World War II have been dissipated by the defeats of Yalta, Teheran, Potsdam, Panmunjom, and Geneva. He sees his Nation being led to the summit time and time again, each time coming away with less prestige and more concessions than before. He hears his national leaders talk of disarmament agreements with a nation which has never kept its previous agreements. He dreamily plays a game of international diplomacy while the Soviet engages in hard international politics. Because it is polite to do so, he sings the song of peaceful coexistence while he knows, and the Soviets know, that there can never be morally or politically peaceful coexistence between God-fearing democracy and atheistic communism. Because he plays the part of "stupid one" so well, he is treated in kind. From one unarmed reconnaissance flight, the Soviet accuses him of being an "aggressor" and derides his as "liar," "cheat," and "the one who never keeps his agreements." Immediately he responds with an investigation to make sure that there will never be a recurrence of conditions that will cause a summit failure, again pleading guilty as if he caused the conditions, as if he could control the conditions. Again playing the part of "stupid one," what concessions he can't give at a summit, he concedes at home to make sure the world knows that he has conceded. Even his best sellers at home carry this line. He reads in a current Pulitzer prize winning novel that an American Senator "brought down the house" by telling an American audience "he would rather crawl to Moscow than die under a bomb." He wonders what can be the end result of it all.

The very heartbeat of this equivocal man is being slowed by the strictures of conflicting philosophies, haziness of principle, and gray shadows of compromise which surround him. His history books tell him that America has always nobly risen to conquer whatever obstacle beset her, whether it be war against a foreign enemy or breaking through a domestic frontier. The national purpose has always hardened in the face of crisis and national effort has brought victory. But the great giant was brought to its knees in the Korean conflict. Unconquerable America would settle for less than victory. Today our patient is led to believe that peace is more important than victory. He is led to believe that any threat to America in her support or leadership of the free world should be met with peace. The plague of peace has immunized our national purpose. Working for freedom causes "tension," and the great fetish of this decade is to "ease tension." Unwilling to preserve freedom apparently our national purpose is to consume its fruits.

Nothing could be more dangerous. Never has America faced a greater challenge, a greater need for national purpose. Never has our mission been more difficult.

The difficulty lies in failure to have knowledge of the whole of things. The equivocal man, like many medical patients, presents the frustration of improper self-diagnosis. It's no longer considered smart to feel bad and call the doctor to see what's wrong. Fashion, plus our present mania for specialization, requires that the patient know what's wrong so that he can call the right doctor in the first place. This trend, plus the disease of psychiatry, has all of us guessing the malady at the least pain, and mentally treating it. A wrong guess can become so fixed that many times a doctor must dedicate most of the treatment to dispelling fantasies, so that the patient may be conditioned to receive the proper cure. Such is the case of the equivocal man. He has sold himself the idea that changes from fundamentals or compromise of principle are desirable as understanding. The equivocal man must first be conditioned. He must be sobered up from so-called understanding, so that he can receive the cure. Secondly, the difficulty is compounded in the equivocal man's failure to recognize he is in an epidemic—world war III. There are no high fever symptoms in this epidemic. World war III is cold. Rather than the warning of high fever or a Pearl Harbor, today we face a wily, vicious, unscrupulous foe who engages in cold war-

fare on the political, economic and ideological fields. He intentionally keeps this war cool, lulling us to sleep with flights through the free world like a dove of peace, dangling before our eyes visions of sugarplums at the summit.

If we will appreciate these difficulties then we will realize that to win this war we must mobilize every resource at our command. We must close ranks. We must set our national purpose and that purpose must be to so strengthen ourselves in mind and body that we are impenetrable. Such strengthening can only begin at home and in the individual. In short, we must purge ourselves of the Equivocal Man by the strongest cathartic possible—a return to American fundamentals.

You must not only administer this cathartic, you must also take part of the dose yourselves. The very breakdowns and weaknesses—the symptoms of equivocation—which threaten the Nation also threaten the professions. None have been exempt from their influence. In the law, courts and legal procedures are constantly employed to promote and provoke litigation, rather than dispose of it. In the teaching profession, so-called "academic freedom" in certain places has become so "free" as to make un-American a pledge of allegiance to America. In the church, many religious leaders seek inspiration and guidance from a Supreme Court rather than a Supreme Being. And the way for a southern journalist to obtain national acclaim is to bear false witness against his neighbor.

The Equivocal Man has infiltrated the medical profession. No longer is it a simple step from graduation to the treatment of the sick. Instead, the young graduate is swept into the flow of convention and conformity. Although standards have brought much progress to medical training, the tendency to conform has deprived the doctor of a vital element—his individualism. Working relationships must be established with the right hospitals. Professional referrals must be weighed in many balances. The office procedures you follow, the treatment you prescribe, the fees you charge, the office hours you keep, the clubs and civic organizations to which you belong, the neighborhood in which you live, the manner of dress and even other more intimate details of your life will be dictated by forces which deprive you of all individuality. In short, the young graduate finds himself caught in a web of conformity and demands on his time, his talents, his energies even before he can ever get down to his basic mission—treating patients. But the great edifice of Medicine has been built upon pillars of individual achievement—by the Halsteads, the Oslers, the Blalocks and other illustrious men who were not afraid to stand alone rather than follow the line of least resistance.

I believe the best advice any young medical graduate today may receive is this: Remember the patient. Keep all other demands in perspective. Don't allow financial rewards or social status to cloud your sense of mission or your service to mankind. Work actively in your professional organizations toward individual and group progress rather than as drones seeking prestige. Never stop improving yourselves professionally. You must pursue perfection in medicine and mold your lives after the magnificent men you follow and the Great Physician which all men follow. While research has brought us miracle drugs and remarkable recoveries, there will be no discovery which will eliminate the hard work of a doctor. Of all professions, the medical profession still calls for the hardest work. You hold the highest of public trust. You also hold the greatest of opportunities as a profession to help the Nation rid itself of the equivocal man.

Your profession stands as a symbol of the finest achievements of American free enterprise. The American medical profession has brought this Nation the world's foremost record in medical care and progress. This has been accomplished by the personal efforts of devoted men and women such as you and by private and State educational facilities, always doggedly resisting pressures to bring this dynamic system under the deadening anasthesia of Federal control. Our State may well be proud of how she has met her responsibilities in this field, reflected here in this splendid Medical College of South Carolina. You as individuals may render no greater service than to devote yourselves to maintaining and strengthening the standards of your profession, providing the very best in care, and holding fast to the integrity of your profession as a profession.

The French historian de Tocqueville found in 19th century America, "There are men of integrity in almost all parties, but there is no party of integrity." I am sure he would say today that in its medical profession America has achieved both men of integrity in the profession as well as a profession of integrity. Our enemies would like nothing more than to see this noble profession, this symbol of American achievement, compromised by mediocrity.

To you of the high calling of medicine, there is no higher mission today than to help America cleanse itself of its greatest ill—the equivocal man. The malady is strong. The medicine must be stronger. Nothing less than a complete and swift return to American fundamentals can cure the patient.

Contrasting Social Security and Voluntary Retirement Plans

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, in an effort to explore all sides of the question on retirement plans, I would like to include the following editorial from the GP magazine:

AS OTHERS SEE IT—SOCIAL SECURITY TAXES

In January, the social security tax went up—again. Computed on the first $4,800 of earned income, a self-employed person now pays 4½ percent or $216 a year. This is the amount most physicans would pay if they were under the umbrella.

For years GP has contended that the individual might come out ahead if he were allowed to invest the same amount of money without Uncle Sam's assistance. Physicians can still do this, almost no one else can.

People who should know tell us that it's not too difficult to find investments that pay 6 percent (many of the mutual funds have been known to do even better). Armed with this information, we asked a machine what would happen if a doctor invested $216 a year and let the interest earn interest. We considered the fact that most academy members don't retire at 65. The average retirement age is 69—after working 40 years.

Our trusty machine told us that at the end of 40 years, this private, do-it-yourself retirement fund would contain $35,332.31. The doctor could then start to drain off the annual interest, without touching the principal, and have an income of $2,110.94 a year or $176.66 a month. He could still collect this amount even if he continued to work. Unless he were 72 years old, he couldn't collect a social security dime if he earned more than $100 a month.

Or, if he had already established an estate, via life insurance, etc., he could dip into the principal and come up with at least $300 a month for the next 10 or 12 years. The maximum social security retirement income payment is $116 a month.

Best of all, the program would be his, not something dreamed up by short-haired old women and long-haired young men in Washington. If he wanted, he could put in more than $216 a year or vary the amount from year to year. He would also know, and this is important, that he'd probably get back every dollar he invested—and many, many more. Very few of the people who are destined to pay the maximum social security tax, year after year, will get a dollar-for-dollar return. Instead, part of the money they've put in will go to someone else who is, in turn, destined to come out ahead. That's the way the system works to "redistribute" income.

What Reclamation in the Arid and Semiarid West Has Meant to the United States

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. ULLMAN. Mr. Speaker, I wish to take this opportunity to call the attention of my colleagues to the address given before the 47th annual national convention of the National Rivers and Harbors Congress, by LaSelle Coles, president of the National Reclamation Association. LaSelle is from Prineville in my own district, and he is uniquely qualified to speak on the importance of our reclamation program. There is too often a tendency to lose sight of the fundamentals which he discusses and to forget that our expenditures on such resource development programs as reclamation are in reality investments in the Nation's future.

The address follows:

WHAT RECLAMATION IN THE ARID AND SEMIARID WEST HAS MEANT TO THE UNITED STATES

(Address by LaSelle E. Coles, president, National Reclamation Association, Prineville, Oreg., May 26, 1960)

They say that sentiment has no place in today's world, but I must confess to feeling a little sentimental when I appear before the National Rivers and Harbors Congress. This organization was formed in the glorious days when the conservation movement was being shaped and proclaimed by Theodore Roosevelt and his group. The very heart and essence of that movement, as Roosevelt saw it, was the development and wise use of the Nation's water resources. This is a fact that many professed conservationists of today have forgotten. The Rivers and Harbors Congress, as its name implies, was created to advance that conservation ideal.

Reclamation, too, dates back to those days. It was a key point of Teddy Roosevelt's conservation program. It still is a key point in any sound and true national conservation program. Roosevelt's successful fight for the original Reclamation Act of 1902 was

one of the proudest achievements of his career. Many of the progenitors of the Rivers and Harbors Congress took part in that fight, and share in the credit of the achievement.

When the 44th annual convention of this congress decided, 3 years ago, to create a special Committee on Irrigation and Reclamation, it was keeping faith with the founders of the Congress and with the conservation ideals which it has advocated through two generations. The report of that committee, issued last year, was a worthy addition to the annals of American water resource development. The officers of the committee—Chairman J. Edgar Chenoweth, Vice Chairman J. W. Grimes, and Secretary Ival V. Goslin—and the members representing the 17 Western States, have not labored in vain. They have played an influential part in carrying forward a movement which is vital to the progress and welfare of our Nation.

My own organization, the National Reclamation Association, is considerably younger than the Rivers and Harbors Congress. It was formed in 1933 to save reclamation, at a time when the very existence of the program was in great danger. Looking back, it is ironic and incredible to think that a program like reclamation should have had to be rescued. Surely few programs in all the Nation's history have provided greater blessings to all the people.

Recently we celebrated the addition of two new States to the American Union, Alaska and Hawaii. No one joined in the celebration more heartily than we in reclamation. After all, both those States lie west of the 98th meridian, and hence are potentially in our bailiwick.

Yet, quietly and without celebration, reclamation has added to the Union cultivated acreage more than twice that of Alaska and Hawaii combined; it supports a population 2½ times that of Alaska and Hawaii combined; it has created or sustained about 20 times as many farms as exist in Alaska and Hawaii combined; and it yields to the U.S. Treasury in internal revenue collections each year half again as much as Alaska and Hawaii combined.

Those internal revenue collections are worthy of note, for they are an indication of general production and prosperity, and thus represent a great many kinds of economic progress which otherwise might be hard to measure. Let's look at them a little more closely.

In fiscal year 1957,[1] reclamation project areas yielded $341,607,000 in taxes to the U.S. Treasury. In that same year appropriations for the reclamation program totaled $201 million, and that included everything—operation, maintenance, investigations, and all the rest of it. The appropriation for construction was only $158 million. When a program yields more than twice as much in revenue as it costs for construction, doesn't that seem like a good bargain? Yet I have understated the true case. The bulk of the construction costs are going to be repaid to the Treasury in cash by the water and power users. Hence the project costs in effect are only loans, and the reclamation bargain is even better than it seems at first glance.

And we still haven't considered the value to the Nation of the crops produced—almost a billion dollars worth last year—nor the value of the power and municipal water, nor the economic stability, the extra jobs, the markets, and the recreation; nor the great value to the Nation's health of having a year-round supply of fresh fruits and vegetables grown in former desert regions; nor all the other blessings which together form Reclamation's main reason for existence, and would amply justify the program even if it never returned the Treasury one cent.

We in Reclamation often ask ourselves why such an institution, with such a history and such a record, should have to struggle year after year for adequate subsistence and sometimes for its very life. Yet, Reclamation's existence has been one long struggle. Sometimes it is opposed through ignorance, by people who do not understand the part it plays in the conservation movement or national prosperity. Sometimes it is opposed by special interests which, understandably even if wrongly, may prefer their own advantage to the national good. Some of the most dangerous threats come from people who do not oppose Reclamation as such—people who, acting in accordance with sincere and honest views, would stifle the life out of it with sterile technicalities.

We in Reclamation do not claim that our movement is 100 percent perfect nor that our views are always right. We realize that the great majority of the men who disagree with us are as devoted to the public welfare as we. But whatever the merits of this individual view or that, we believe that when the sum effect of a given line of argument is like that of a slow poison to a healthy organism, then it cannot be a good line of argument.

One of the vital questions now confronting our movement has to deal with the computation of project benefits. This is a technical question, and yet it means everything to reclamation; for if it is decided too mechanically, or on grounds too confining, it conceivably could cause our movement to grind to a halt.

We in reclamation do not believe we can ignore the increased return to a farm operator and his family when adding up the benefits of a reclamation project—not if we want the computation to be realistic. We do not believe that reclamation can be considered primarily as a good program, and valued only in terms of the alternative cost of producing food elsewhere. Instead, we believe that Western cities deserve and need to be supported by their own hinterlands, their own thriving rural areas; and that neither the cities nor the region can thrive otherwise. We believe that there is a real, existing value in spanning the thousand miles of poorly watered land between the Mississippi Valley and the Pacific Coast with oases of settlement, development, and production. We believe that the Nation's population needs water resource development if it is going to carry forward the Westward movement of recent decades, and that the provision of such development is an important economic good whose value should be recognized.

We cannot agree with a viewpoint which places no value on new homes and communities, new schools and churches and stores; no value on new jobs created by the handling of reclamation products; no value on the stabilization, diversification, and flexibility of agriculture; no value on a broadened and increased tax base; no value on an improved national diet; no value on a multihundred-million-dollar annual market for the manufactured products of East and West; no value on balanced Western economy, nor on balanced Western growth, no value on the commencement of projects today which will be needed to feed and clothe the growing population of tomorrow—in short, a viewpoint which places only the most limited value on the present, and no value whatever on the future.

These things are the main blessings which reclamation provides. They form the substance of reclamation's great contributions to the growth of the West and the Nation. If we must close our eyes to these things, if we must wilfully blind ourselves to the living growth which reclamation brings forth, if we must look at a great social and economic institution through darkened lenses which cut off the vision of most of what is there, then the future of reclamation is indeed precarious.

It may seem that I am using this platform to talk about problems and troubles that are ours alone. I do so because these problems are not ours alone. A blow at reclamation cannot help being a blow at water resource development everywhere. Reclamation today is struggling against attitudes and viewpoints that seek to downgrade the value of water resource development in all its forms. Those who see no broad national value in reclamation, will not be inclined to see the broad national value of flood control or recreation or watershed improvements. They do not understand the interlocking dynamics of national growth.

The United States is the most dynamic society known to history. Its spirit of drive and enterprise drove our people across forests and deserts and continental mountain ranges. And it has always up to now been a policy of the U.S. Government to assist and pave the way for economic expansion. The Government explored the West and cataloged its resources. It discovered highways and rail routes. It granted public lands to homesteaders, helped create communications systems, built dams and irrigation developments, and established the basic improvements that would permit American enterprises to open the Nation's resources of wealth. And our Government did these things with full confidence in the national destiny. It did not build this Nation by grudgingly testing each potential benefit, like a pawnbroker biting on a coin, to see which it would accept as the measure of its willingness to help the country grow. Where would we be today if it had?

At each stage of national growth, to be sure, there has been some opposition to the programs of expansion. The do-as-little-as-possible attitude has always accompanied the dynamic spirit, like the other side of a coin. That is why the same old arguments against growth keep reappearing, generation after generation. Our grandparents were told, as we are, that developing the West might create some competition for the East; that growth programs should be put off until other problems were solved; that the risks were too great, and we couldn't afford the costs. But such views have never represented the outward-reaching spirit that up to now has distinguished Americans from other peoples The longer range view has always prevailed—the view of those who could foresee that the development of resources creates wealth which spreads far and wide through commerce and ultimately enriches everyone.

Today, when our country faces the greatest tests it has ever had to meet, when its leadership and productivity are being challenged as never before—this is no time to let the American drive grind to a halt and the national growth creep forward at a limp pace.

When we of the National Reclamation Association ask for an adequate national reclamation program, we are in fact asking for a populated, thriving, self-supporting West. We want to replace emptiness with enterprise; waste, with use; parsimony, with production. We want farms and towns and industries in the West for the same reason that a chamber of commerce wants factories and businesses and modern amenities in its community. The development of economic resources and economic opportunities is needful everywhere—West as well as East, in the country as in town—if our Nation is to maintain its vitality. As a former president of the NRA once said, a nation grows like a horse—not one part at a time, but all at once.

[1] Comparisons are based on 1950 census figures except those for internal revenue, which are based on 1957–58 figures. Figures on Alaska and Hawaii are from the World Almanac; on Reclamation, from Legislative Reference Service report.

The water resources of this Nation were given to us free by the Creator, but they still have to be sold to the American people. That is one of the big tasks before this Congress. Basically the job is to teach our people to have foresight. We must teach them to prepare flood protection projects before floods strike. We must persuade them to provide sound, accessible recreational developments before population growth and spreading encroachments crowd out the possibilities. We must urge them to protect watersheds and preserve soil before costly erosion takes place. And similarly we must teach them the value of providing for their water-resource needs, whether for irrigation or power or municipal use, before critical shortages appear and while the opportunities are still available. This means supporting adequate project development at an orderly rate geared to national needs.

If the people were aware of what they gain by these programs, and of what is at stake in them, there would be no more talk of holding them back. National growth would not have to be squeezed and strained through the small end of a budgetary measuring funnel. This Rivers and Harbors Congress is an important instrument for helping to bring the facts about American water resource needs and programs to the attention of the American people. I assure you that you could devote your energies to no worthier task, and I and the organization I represent are proud to play our part in that task.

Veterans of World War I of the U.S.A. Memorial

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following information received from Mr. Charles McCarthy, national commander of the Veterans of World War I of the U.S.A., Inc., re their memorial foundation and proposed memorial:

There has been formed in Washington, D.C., a corporation titled the Veterans of World War I of the U.S.A. Memorial Foundation. This corporation has entered into contract with the Virginia International Center, Inc., of Arlington, Va. The center is to deed a central section of their tract of land on U.S. 66, at Virginia Route 234, adjoining Manassas Battlefield Park, to the foundation for the erection of a memorial to all veterans of World War I. This memorial will be a planetarium and museum building, the planetarium among the largest in the world, and the museum to display thousands of trophies and mementos relating to World War I. Charles A. McCarthy, of Cincinnati, Ohio, who is national commander of the Veterans of World War I of the U.S.A., has been elected the president of the foundation.

President McCarthy stated today that according to present plans there will be a solemn blessing and dedication of the grounds in the near future, to be followed at a later date by the historic groundbreaking ceremony.

This memorial will be only a part of the larger project that is to be a historical, educational, and cultural center. Victor Gruen, perhaps the world's most famous architect and the man who designed the proposed Washington World's Fair, will design and supervise the construction of the planetarium and the museum building.

Other officers of the foundation are F. B. Taylor, of Roanoke, Va., vice president; Wilbur C. Cochran, of Warsaw, Ind., secretary-treasurer. The complete directory of the national advisory committee, men and women, leaders in public, industrial, professional, and educational life in the United States, will be published in the near future.

Amendment Prohibiting Expenditure of Mutual Security Funds in Shipyards Located Outside the United States

SPEECH
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
Friday, June 17, 1960
IN THE HOUSE OF REPRESENTATIVES

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12619) making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

Mr. COLMER. Mr. Chairman, with the parliamentary situation what it is, of course no opportunity is available to present the necessary explanation of and the purpose for the amendment. Briefly, the amendment would prevent what I regard as a continuation of an intolerable situation so far as the shipbuilders is concerned as affected by this program. Under the present law, the administrators of this program allocate these funds to foreign countries; they then can and do authorize the building of ships by one foreign nation to another; sometimes the money is furnished one nation to build ships for itself in its own country. While this comes as no revelation, I wonder how many of our colleagues know that it is practically impossible for American shipbuilders to successfully bid for the construction of these ships. In fact, to all intents and purposes it is impossible. This, for the simple reason that the foreign yards, with their cheap labor and cheaply produced materials can underbid the American yards by as much as one-half and never less than one-fourth. Mr. Chairman, this was brought forcefully to my attention recently when the ICA issued invitations for bids for the construction of a hydraulic dredge for Vietnam. Several American yards bid on this ship. It so happened that the Ingalls Shipbuilding Corp. of Pascagoula, Miss., was the lowest qualified bidder among the domestic bidders. However, two Japanese firms submitted much lower bids. The Ingalls bid was $1,394,950 but the Uraga Dock Co., Ltd., Tokyo, Japan, was $916,200.

We have repeatedly had the matter up with ICA officials, but have gotten no encouragement whatever. And it would now appear that this contract will be awarded to this Japanese company.

This presents a pretty difficult picture. It comes at a time when every reputable shipyard in this country is hungry for contracts. They are all engaged in submitting the lowest possible bids in order to have enough work going to keep their yards intact; often bidding below the actual cost of construction. It also comes at a time when the President of the United States and the United States itself are insulted by having the President's invitation to visit that country withdrawn.

But, Mr. Chairman, that is not all. I am sure the facts are that this very foreign yard was either constructed or materially subsidized by the American taxpayers in its construction. Finally, Mr. Chairman, I wonder how the stockholders, the workmen who are being laid off of their jobs for want of contracts, all of whom are taxed to pay for this project, must feel.

Of course, this situation does not apply to the shipbuilding industry alone. It is going on every day in many other industries. And, of course, everyone knows that American industry cannot compete with foreign industry because of the cost of labor and materials.

This amendment should be adopted.

Mutual Security and Related Agencies Appropriation Act, 1961

SPEECH
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12619) making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1961, and for other purposes.

Mr. GEORGE. Mr. Chairman, how can the administration of the mutual security program be so intermeshed with corruption, waste, and extravagance as is evidenced by the committee hearings? A year ago much the same condition existed.

When the executive branch of our Government takes no cognizance of such maladministration and permits the situation to grow worse, many Members are tempted to vote against H.R. 12619. If the continuance of our free and democratic form of government did not depend to such a great extent upon the necessary appropriations being made for mutual security, this measure would be defeated overwhelmingly.

Possibly the Democratic majority in Congress has been too meek in dealing with the Republican administration. Criticism has been tempered, especially in the field of foreign policy. For this reason we, the Democratic Party, must accept part of the blame for the failure of our foreign policy to stop Communist expansion.

Since 1952 the only semblance of a bipartisan foreign policy has been the failure of the Democratic leadership to criticize—to even criticize constructively. Not since Harry Truman left the White

House—never to be invited to return—has the foreign policy of this country had the advantage of a truly cooperative effort by both political parties. No Democratic leader has had an opportunity to participate in the establishment or administration of our foreign policy.

The bombastic insults hurled by the Russian dictator have apparently succeeded in drawing the American people closer together in support of our President—and therefore in support of a foreign policy that has not been successful. This was no doubt the result expected and intended by the wiley leader of the Communists.

We Americans must not permit our loyalty to the President and our sympathy for him to prevent the piercing of the Communist veil. We must select a President that will not hesitate to depart from the status quo in foreign affairs. We must place a younger man at the head of our Nation—and one who is not tarred with the status quo.

Thankful we should be that the summit meeting was not held. We had nothing to gain and much to lose. Our agreements would have been kept, but only those to her advantage would have been kept by Russia.

With all the sound and fury of the ranting Communist dictator, there is no change in attitudes or objectives. There would have been none if a summit conference had taken place. There will be none.

These events are now behind us, but they and the developing attitudes in other countries definitely establish the fact that friendship cannot be purchased. Billions of dollars have been spent to create good will abroad, while the very men who expend the funds have incurred through their maladministration of them the scorn and illwill of the people of the nation in which they live so luxuriously.

The next administration must revive the bipartisan foreign policy and breath new life and vigor into it. Our people should forever be grateful that only a few months remain for the present confused and bewildered administration.

In the future our efforts should be confined to negotiations through diplomatic channels—and we should pray that we can soon have trained personnel to do the job. We must remain strong as a Nation, but the wasters and the grafters must be eliminated from our foreign aid and defense programs. Morality must be restored to the Government of the United States.

Through the United Nations we might offer Russia the opportunity to assist underdeveloped countries to come into their own. Or in aiding such countries we could offer to work—at arms length—in a cooperative arrangement with Russia instead of the competitive, expensive plan we are now pursuing. Whatever plan we adopt, a constant vigil must be maintained and our guard must forever be held high.

It is possible that when more is learned about the mysteries of space, all countries on the face of the globe may be glad to cooperate in the interest of self-preservation.

No one nor any nation wants to commit suicide and the individual, in whatever country, desires to have a home and food for his family, dignity for himself and his brother, and above all an honorable and lasting peace. An ironclad arms control agreement should be our immediate and primary objective.

Indian Giver: Our Uncle Sam

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. GEORGE. Mr. Speaker, in nearly 100 years of Statehood, Kansas has never been fortunate enough to have a site dedicated to history established within its borders notwithstanding the fact that many are deserving.

There are several such historical sites in the Second Congressional District worthy of congressional action, Mr. Speaker. One is the old fort, a bastion of the Civil War, located at Fort Scott. Another is the Huron Indian Cemetery in Kansas City, Kans. For some reason, not now clearly discernible, both received rebuffs by the Secretary of the Interior. And his negative action was taken in the face of report by his own representatives that warranted a favorable recommendation to the Congress by the Secretary in each case.

Mayor Paul Mitchum, Commissioners Joseph P. Regan and Earl Swarner, civic leaders, the Wyandotte County Historical Society, that of the State and the Kansas Council of Women, whose membership exceeds 500,000, have exerted every effort to preserve the Huran Cemetery, the ancient burial ground of the Wyandot Indian. All six Kansas Members of the House of Representatives have urged the conversion of the cemetery into a national shrine. Joining us in this recommendation are the Honorable RICHARD BOLLING, the Honorable W. R. HULL, Jr., and the Honorable WILLIAM J. RANDALL, our neighbors in Missouri.

Not only is this hallowed ground worthy of the designation as an historical site, but the faith of our Government, set forth in an ancient treaty, morally demands its preservation. The editor of the Kansas City, Kansan, John H. Stauffer, included the observation of Circuit Judge Walter A. Huxman in his editorial of Friday, May 6, which I ask be considered as part of my remarks:

PRESERVED IN PERPETUITY

At the Huron cemetery hearing in Federal court Judge Walter Huxman sharply criticized the treatment of Indians by white people and white agencies of Government in the past. When an attorney in the case stated that there were few recent treaty cases which could be cited as precedent, Judge Huxman observed that there aren't many recent cases because the treaties had all been broken.

Violation of treaties is not one of the proud chapters in the long history of the white man's dealings with the Indians. Nor has the chapter ended. In western New York the Seneca Nation is making a fight for preservation of what is left of its reservation along the Allegheny River. The corps of engineers has planned a power project to occupy the tract, the dam to flood most of the reservation except the steep mountain sides.

The Senecas claim their rights to the land are protected under treaty signed by George Washington, a pact which was to protect their land in perpetuity "as long as the sun shall rise."

The Huron cemetery by tradition is to be preserved while "winds blow and rivers flow."

The Senecas have editorial support of a number of leading newspapers of the area. One claim is that the corps has failed to use the best site available for its flood protection plan for Pittsburgh. By boring a hole through a moraine left by the glaciers—a natural earthen dike which changed the course of the river—a larger reservoir could be created elsewhere and the Seneca land left unmolested.

But that's New York's fight; we have our own Indian affairs.

Jet Flight Between Friendship Airport and Paris, France

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. FRIEDEL. Mr. Speaker, last Saturday, June 18, Pan American World Airways introduced a new service to the people of Baltimore which is of great interest and importance to our area. Beginning on this date, Pan American inaugurated round trip, jet service between Friendship Airport and Paris, France, marking the first time any scheduled air carrier has ever connected Baltimore with the Europeon Continent. This service is of the highest value to the greater Baltimore area which relishes the opportunity to avail itself of the splendid jet facilities at Friendship Airport for a speedy, uninterrupted journey to the wonders and beauties of Europe.

We are reminded on this occasion of a similar pioneering feat accomplished in the thirties when the first air service to Bermuda was introduced by the famous old Pan American flying boat—the B314—which made history by its flight from Baltimore to the island of Bermuda. I commend Pan American for its pioneering spirit and its president, Mr. Juan Trippe, himself a native of Maryland, for providing this excellent service.

Mr. Speaker, I was also pleased to note that a most interesting speech was recently made by the gentleman from New York [Mr. ROONEY] regarding Pan American's aid in the Mutual Security Pact by organizing and getting airborne the Afghanistan Airline at the request of our State Department. This is indeed a worthwhile and well managed project.

An Index to Conservatives

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. HIESTAND. Mr. Speaker, one of the best analyses of record votes I have yet seen is the Americans for Constitutional Action index. The Richmond (Va.) News Leader of May 31 gave it an editorial:

AN INDEX TO CONSERVATIVES

In the course of the past 8 or 10 years, many of us in the pundit business have fallen into errors of political hypothesis that now are happily subject to some revision and correction. An index has just come to hand, prepared by Americans for Constitutional Action, that provides for the first time a truly significant insight into the political philosophy of Members of Congress.

One of the errors we had come to accept was an impression that "there really isn't much difference" between Democrats and Republicans. There is in fact a great difference, capable of being objectively measured. Our thinking on this score will have to be sharply recast.

We also had imagined that Senators KENNEDY, HUMPHREY, and SYMINGTON were like Winken, Blinken, and Nod, all identically at sea in the same liberal boat; and we had supposed that LYNDON JOHNSON was, relatively speaking, considerably more "conservative" than the others. It isn't so. On the ACA index, KENNEDY scores 11, JOHNSON 10, SYMINGTON 4, and HUMPHREY 1. These compare with an index of 92 for Senator BYRD. On 38 key questions on which both JOHNSON and BYRD voted, they voted alike four times only.

This index, published by Human Events at 408 First Street SE., in Washington, is a remarkable labor in behalf of political understanding. The ACA editors began by studying 963 votes in the Senate between 1955 and 1959, and 280 votes in the House between 1957 and 1959. After prolonged study, they reduced this mass of material to 77 Senate votes and 40 House votes that seemed to offer clear-cut questions of a conservative point of view as opposed to a liberal point of view.

Doubtless no two political observers would agree that these 117 Senate and House votes are the exact 117 that should have been chosen for a study of this sort. Reasonably minded men, regarding themselves as conservatives, might well object to the "minus" charged against their spokesmen on a few issues. But in a study as large in scope as this one, such objections cancel out. In broad outline, the ACA's dispassionate brush paints a picture too clear to be denied. And the index is just as valuable, of course, in rating liberals as in rating conservatives; the percentages need only to be turned upside down.

One popular impression is abundantly supported by the ACA's study: The South is indeed a bulwark of conservatism. Of the 15 most conservative Democrats in the Senate, 13 are from the South; the others are LAUSCHE of Ohio, with a rating of 81, and FREAR of Delaware, who scores 62. But Republicans, as a group, are far more conservative than even the southerners, as a group. The most liberal Republican is COOPER of Kentucky, who nevertheless scores 27 on the ACA index; no fewer than 44 Democrats are more liberal than he.

Substantially the same picture obtains in the House. If it were not for their unfortunate predilection for accepting Federal handouts, southern Representatives would rank up top on the conservative index. When it comes to questions of States rights, individual liberty, private property and sound money, southern Democrats scarcely can be distinguished from typical stanch Republicans.

Among Virginians in the House, Congressman POFF, Republican, of the Sixth District, is the most consistent conservative, with a rating of 98. His 10th District colleague, Mr. BROYHILL, Republican, is in second place with 86. Then come the State's eight Democratic Representatives, led by Richmond's J. VAUGHAN GARY at 78, others are TUCK 77, HARRISON 75, ABBITT 75, SMITH 73, DOWNING 47, HARDY 45, and JENNINGS 25. Remarkably, New York's Congressman ADAM CLAYTON POWELL rates 32.

The ACA study helps to clarify the dilemma that faces southerners in terms of the presidential election. Every one of the potential Democratic candidates appraised in this study is, on the record, a liberal. Messrs. KENNEDY, JOHNSON, HUMPHREY and SYMINGTON have almost nothing in common with their southern colleagues; they share a party label, that is all. If an opportunity were presented for southerners to vote their political convictions (as these convictions are represented by their own Congressmen), southerners would support BARRY GOLDWATER, of Arizona (98), or JOHN WILLIAMS of Delaware (99), or BRIDGES of New Hampshire (92). Trouble is, GOLDWATER, WILLIAMS, and BRIDGES bear the label of "Republican."

These gentlemen are, of course, conservatives, and if the Republic ever comes to its political senses, we will choose up sides all over again so that the national political weight reflected in 30 Republican Senators and 14 Democratic Senators, each with an ACA rating of 40 or better, could be put to more effective use.

West Virginia Approaches the Century Mark

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. HECHLER. Mr. Speaker, today marks the 97th birthday of my State of West Virginia.

Back in the days of the Revolutionary War, George Washington remarked:

Give me a hundred men from West Augusta (later West Virginia) and I will plant my feet on the west bank of the Potomac and defy the world.

The mountaineers of West Virginia have lived up to that tradition.

West Virginia was born in 1863 of determination to meet a challenge—the challenge of preserving the Union. This challenge inspired men to daring deeds.

Courage is not new to the West Virginian. In fact, the entire history of the State is a chronicle of challenge and courage to meet each new difficulty.

There were challenges like that thrown down by Gov. Alexander Spottswood when he struck Golden Horseshoe medals for those hardy and brave enough to conquer the vast wilderness that lay within the mountain slopes. Or the courage of Mary Ingles, who faced incredible hardship to cross the State and rejoin her family after she had been carried off to the wild Ohio country in 1775 by marauding Indians. Or of the 29 delegates who firmly opposed secession when Virginia left the Union and even dared to hold a rump session to pledge their efforts to keep the State in the Union in 1861.

It is from this breed of men that West Virginia was born.

Today my State is faced with new, grave challenges.

A decline in coal mining employment has stripped many towns of their source of all wealth. Ghost towns have sprung up.

There are gnawing physical needs within the land. Children go without bread, and are forced to miss school because they have no shoes.

How can we cope with the serious problem of our older workers who have lost their jobs? We refuse to accept the heartless and inhuman solution of those who tell these older workers to pull up their roots and leave the mountains of their homeland.

But even worse is the problem of the flight of West Virginia's younger people, the source of future strength and vigor in any society, who have left the State for a more promising future elsewhere. My attention was first called to this problem by our own young Governor, Cecil H. Underwood, in an address to the Elks Club at Huntington. Governor Underwood pointed out that when the West Virginia State bonus was paid to veterans of the Korean conflict, 43 percent of the checks were sent to out-of-State addresses. This means that the cream of our younger people have left the State for better opportunities elsewhere.

Between 1950 and 1960, West Virginia was one of the two States in the Union which suffered an absolute decline in population. We lost over 158,000 people in this period—the largest decline among the States. We face this stark fact squarely and without self-pity. We recognize the challenge, just as our mountaineer forefathers recognized the challenges they faced.

Mr. Speaker, these are the challenges of today. Are they greater than the massive challenges of yesterday? They are not. Nor are the people of West Virginia going to surrender and abandon hope in the face of such challenges. For we are not a "dying State," as a desk-bound editor tried to characterize us recently. West Virginia, her men, her minds, and her muscle, have a tremendous potential for the future. Already bright glimmers of hope—like heat lightning flickering across a sultry summer sky with the promise of cooling relief to come—are evident in our State's affairs.

In my own Ohio Valley district, a great and diversified industrialization is gathering momentum, providing new jobs for our people. This golden area, which is just awakening to its real potential, can truly become the "Ruhr of America," and offers the true key to the State's salvation.

Our pleasant mountain areas are beginning to realize their great tourist po-

tential, drawing thousands from the heat and pavements of the eastern seaboard.

West Virginia, 97 years old today, thus faces a confident and expanding future, rising to meet the new challenges as we have in the past.

Fishbait Miller

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. HARRISON. Mr. Speaker, our affable and indefatigable Doorkeeper carries his nickname lightly but proudly. We know it has not prevented his performing the more solemn functions of his office with becoming dignity.

Fishbait Miller's fame was extended Sunday, June 19, when Parade, a magazine supplement distributed with the Washington Post and Times Herald and other newspapers from coast to coast, carried an article by Mary Rensselaer Thayer, which I include under leave to extend my remarks in the Appendix of the RECORD:

FISHBAIT MILLER: WASHINGTON'S FAMOUS DOORKEEPER

(By Mary Van Rensselaer Thayer)

WASHINGTON, D.C.—When the Democratic National Convention begins in Los Angeles on July 11, its doors will be opened by a Doorkeeper who is paid $18,150 a year. He is a chunky, soft-spoken Mississipian named "Fishbait" Miller.

Fishbait, who is the House of Representatives Majority Doorkeeper, has been appointed for the third successive time as Doorkeeper of the Democratic National Convention. It's a job paralleling that of the Angel Gabriel in selectivity. It requires the memory of an elephant, the stubborness of a mule and the wiliness of a seasoned politician. Fishbait has all these assets—and more.

How does a Doorkeeper happen to draw such an impressive salary and rate so many VIP chums? It's because Fishbait, who has toiled 28 years under the Capitol dome (he started out as messenger in the House post office), makes an obliging friend and skillfully manages one of the most demanding jobs on the Hill. To a man, Republican and Democratic Congressmen agree that his salary is not a penny too much.

Speaker of the House SAM RAYBURN neatly thumbnails Fishbait: "Fishbait purely loves to do favors."

Fishbait describes his duties modestly as merely "taking care of all the chores." Actually he functions as a combination housekeeper, chaperone, and Emily Post to all House of Representative Members. His chores are staggering; under his round-the-clock direction, 250 to 300 employes handle them. His army includes an assortment of teen-age pages, telephone managers and janitors, 38 doormen, 40 custodians.

Fishbait also supervises three barber shops, the snack bar in the Democratic and Republican cloakrooms and the Document and Folding Rooms, where legislative paperwork is prepared for mailing.

But these details are run-of-the-mill to Fishbait, who gets his greatest thrills from announcing VIP guests at Joint Sessions of Congress and—in lesser degree—from a pleasant initiation he sets up for congressional freshmen. Senate and House join forces when distinguished foreign guests or the U.S. President address Congress, and Fishbait arranges for their meeting in the more spacious House Chamber.

On these gala occasions Fishbait, in a blue suit, white shirt and black string tie, takes the honored invitees in tow. After pausing at the Chamber's entrance to sing out their names in a voice that rocks the rafters, he leads them down the aisle.

FIVE-STAR FINAL

Fishbait's most dazzling moment comes when the President delivers his annual state of the Union message. This is a five-star show played to packed galleries. As a curtain-raiser, Fishbait shepherds foreign ambassadors, Supreme Court Justices, and finally the Cabinet members to their seats. Then, as a grand climax, he belts out, "The President of the United States," with such added resonance that radiomen tear off their earphones.

Fishbait has been majority or minority (during the Republican 80th Congress) Doorkeeper since 1947. During this span he has taken hundreds of fledging Congressmen on their first tour of the Capitol. This initiation he calls his "Fishbait Special."

Only 15 Congressmen have been in the Capitol longer than Fishbait, who is so well known that his mail often is addressed merely to his nickname. Recently, a postcard from Mississippi addressed "Fishbait, Washington, D.C.," contained this message: "Dear Fish: I wish you'd send me the name of my Congressman. I've forgotten who he is."

Besides answering his fan and nuisance mail, Fishbait fills in the empty chinks of his 12-to-18-hour day with a wierd variety of unofficial services. They range from producing shrimp for unscheduled congressional luncheons to acting as waterboy for the hilarious Republican-Democratic annual charity baseball game.

Fishbait's most unusual service was at a wedding ceremony. The bride was a Mississippi Congressman's pretty secretary. Fishbait, invited to serve as an usher, noticed the minister totter and turn pale. When Fishbait rushed forward to brace him, the minister handed him the prayer book. Without skipping a word, Fishbait read the service. Then, at the end, the minister recovered sufficiently to pronounce the bridal couple man and wife. (The minister, Fishbait learned later had mistakenly swallowed pills intended for his wife.)

Hardly anyone knows Fishbait's real name (it's William M. Miller) and he even campaigns under his nickname. He campaigns because his job, which was set up during the first session of our first Congress, is elective. Congressmen do the voting, and the election of a Doorkeeper and other House factotums is legalized in the first resolution of each Congress.

Fishbait acquired his compelling moniker in a curious way. At 15 he weighed a trifling 75 pounds. Living in a small Mississippi town on the Gulf of Mexico, he spent much of his time lolling around the waterfront. Because of his small size he was called a variety of names—Alligatorbait, Garbait, Crabbait, Shrimpbait—but Fishbait finally stuck.

OASI Basically Unsound

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, since the very inception of the social security program, a far-seeing minority on the Ways and Means Committee has continued to point out some basic weaknesses in the plan. Before we vote to further increase benefits and add new programs, such as medical care, we should review some of the views stated in previous years. Among these views I would like to include some excerpts from the minority report of Carl T. Curtis, then a Member of the House, to the report on Social Security Act amendments for 1949.

MINORITY VIEWS

My dissent from the bill reported out does not stem from opposition to a liberalized social security program; instead it arises from the fact that the bill reported out fails in some major respect to do the very things a liberal and effective social-security program should do.

The old age and survivors insurance program is a grossly unsound and ineffective tool for the social-security purposes it attempts to accomplish. Because it is so unsound and ineffective, I cannot agree that the mere extension of its coverage or a mere numerical revision of its benefit formula, such as the majority of the committee proposes, can bring about significant improvement. Instead, the very fundamentals of the program should be objectively reexamined, and to the extent that such reexamination indicates the need for drastic overhauling of the program, that overhauling should be done, even though it proves necessary to abandon completely those concepts on which the present program rests.

Social security funds are necessarily limited in amount, since they depend upon the amount of economic productivity in the Nation and the possibility of drawing off a portion of this productivity for social-security purposes that is not too large to injure the Nation's economic health. Because of this limitation, it is of the utmost importance that these funds be distributed wisely.

On frequent occasions Congress has voted a very costly program, such as in the field of veterans' legislation or housing. There is an end to such programs. They do expire. There is no end to our social security program. It runs into perpetuity. We bind oncoming generations to pay untold billions of dollars not only 50 years from now, or 100 years from now, but so long as the Government of the United States stands. It is totally unmoral.

Let us permit our children and our grandchildren to decide how much per year they of their generation will pay for social security. We should not bind them by contract to pay untold billions each year, as the present system does. The right of self-government means not only freedom from kings, tyrants, and dictators, but it means freedom from the past.

New York College Youth for Johnson

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. ANFUSO. Mr. Speaker, evidence that the youth of this Nation is backing Senate Majority Leader LYNDON B. JOHNSON for the Democratic nomination for President is shown by the results of a mock convention held recently at Alfred University, Alfred, N.Y. The interesting thing about this university is

that it is located up-state New York, in an area that is predominantly Republican. Its student body consists primarily of young men and young women from all parts of New York State, including a large number from the New York City area, as well as from other sections of the country.

Under leave to extend my remarks, I wish to insert into the RECORD three news items from the Buffalo Evening News, the Hornell (N.Y.) Evening Tribune, and the Fiat Lux of Alfred, N.Y., containing reports of the convention at Alfred University:

[From the Buffalo Evening News, Apr. 28, 1960]

MOCK CONVENTION PICKS JOHNSON—CROTTY CRITICIZES GOP'S RECORD

(By Bert Freed)

ALFRED, April 28.—Southern "delegates" held firmer than the Confederate battlelines at Gettysburg and succeeded early today in making Texas Senator LYNDON B. JOHNSON the Democratic "nominee" for President.

Second spot on the ticket hammered out by a mock party convention that lasted until almost 1 a.m. at Alfred University went to Senator HUBERT HUMPHREY. Despite his strong civil rights position, the Minnesotan was backed by nine Dixie delegations in his victory on the first ballot.

The mock 6-hour convention was organized by the University's Young Democratic Club with the assistance of Prof. Rene Beauchesne, its adviser and political science instructor.

A serious note was the keynote address of Peter J. Crotty, chairman of the Erie County Democratic Committee.

DO NOTHINGISM CHARGED

The only political leader to address the convention, he stirred the 600 student "delegates" to cheers with a plea for partisans "to accomplish the social unity for which the world cries out."

He scored the Eisenhower administration as being based on "do-nothingism" and "the interests of the economically powerful."

He decried "shameful and stupid lack of emphasis on the crying public need in the fields of education, housing, hospital and medical assistance to the aged and all other aspects of the general welfare."

He declared, "The Republican Party is now, has been, and I dare say, will always be, the interest of the economically powerful. That it stands for big business today, there can be no doubt."

FUND DINNER HELD

He added that "American industry is pursuing a policy of planned obsolescence * * * in the meantime great advances which could have been made in rocketry and space research are being neglected.

"Even the very stability in Government which is necessary to continuous advance is denied the people because Government service has become little short of a revolving door," he said.

He was one of 55 western New York Democratic leaders who attended a fund-raising dinner sponsored by the club in Howell Hall.

State placards, pennants, marching demonstrations, booming floor fights and other elements of a genuine political convention were present.

"Permanent Chairman" Paul Cohen of Great Neck presided with the firmness and aplomb of House Speaker SAM RAYBURN.

[From the Evening Tribune, Hornell, N.Y., Apr. 28, 1960]

JOHNSON WINS ALFRED NOMINATION

ALFRED.—Senator LYNDON B. JOHNSON won the Democratic presidential nomination last night in the mock national nominating convention held at Alfred University.

Senator HUBERT HUMPHREY was selected as his running mate.

JOHNSON won on the second ballot defeating the other major contender, at that time Adlai Stevenson, by a margin of 913 votes to Stevenson's 638. He was then declared the Democratic candidate by a unanimous vote.

JOHNSON swept to victory after Senators HUMPHREY and SYMINGTON swung their support to him. On the first ballot he received 281 votes. KENNEDY received 369½ votes; HUMPHREY, 258½; and SYMINGTON, 115.

Following the rollcall on the second ballot it was close to a tie between KENNEDY and JOHNSON. Then a trend was established for Stevenson who had not been nominated on the first ballot, with KENNEDY throwing his support to Stevenson and many States changing their votes.

With HUMPHREY giving his support to JOHNSON, many other States also changed their votes, resulting in his nomination.

HUMPHREY received 774 votes for Vice President on the first ballot and was declared JOHNSON'S running mate.

This convention was sponsored by the Alfred University Young Democrats Club. Nearly 500 students took part, acting as delegates and convention officials. Preceding the convention, a Democratic fund-raising dinner was held, which was attended by area Democratic leaders.

[From the Fiat Lux, Alfred, N.Y., May 3, 1960]

L.B.J. AND H.H. ARE NOMINATED ON CONVENTION SECOND BALLOT

At the Democratic mock political convention held at Alfred University, Alfred, N.Y., on Wednesday, April 27 the party's nominees were: Senator LYNDON BAINES JOHNSON for President and Senator HUBERT H. HUMPHREY for Vice President.

L.B.J. won at the termination of the second ballot after a bitter fight with Stevenson forces. JOHNSON'S total at the end of the ballot was 913. A motion was made to make the vote unanimous and was carried overwhelmingly.

The convention was opened by the temporary chairman, Gary Ostrower, a junior from Woodridge, N.J. Ostrower proceeded to lash out at the Republicans in succinct speech that brought the convention to its feet many times.

The next speaker was the president of the Young Democrats Club and one of the guiding hands behind the success of the convention, Miss Rosemary McGuire. Miss McGuire, in her role of national chairman, introduced the keynote speaker for the convention, Mr. Peter J. Crotty.

Crotty is the Erie County Democratic leader who ran for the post of attorney general of New York in 1958. In his speech Crotty castigated the Republican administration for its lack of leadership and for its conservative views in blocking the United States from again returning to the position as the world's greatest power.

The convention owes a great deal of credit to Prof. Rene Beauchesne for his invaluable assistance in contacting the upstate Democratic leaders and bringing them to the convention, to the able rulings handed down by the parliamentarian, Martin Unger, and to the excellent work done by the rollcall clerk, Miss Kathleen O'Donnell. Also due credit must be given to the tally clerks who had their hands full when States started to change their votes very rapidly.

The convention drew to a close with the acceptance speech of HUMPHREY. All the students who participated in the convention learned invaluable lessons on the importance of a nominating convention and how the American political system works.

Minority Views on Social Security Amendments of 1954

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, in a further effort to understand how far we have come from the original concept of the social security program, I would like to call your attention to some of the statements made in the minority views to the report on Social Security Amendments of 1954. The report was signed by my good friends, NOAH MASON and JAMES UTT, and points up the drastic departure from the original plan and the threat such departure, which has been compounded every 2 years since, poses to our free enterprise system.

DISSENTING VIEWS ON H.R. 9366

The committee has the grave responsibility of framing social security legislation which will improve and maintain the system on a sound basis, compatible with its purpose and with our system of free enterprise.

Some of the hastily adopted amendments contained in H.R. 9366 are highly questionable and probably would not have been adopted upon mature consideration. The most important of these amendments expanding the social-security tax base from $3,600 to $4,200, are fundamentally wrong and have far-reaching implications. The inflated wage base proposals were adopted with a strong dissenting vote and mark a departure from the basic purpose and justification of social security—that of affording a basic floor of protection—and would directly impair both the ability and incentives of the individual to achieve security through the normal processes of free enterprise.

Private arrangements for security, in contrast with the sterile taxing and spending processes of social security, are an integral part of free enterprise and provide the funds for capital investment upon which our economic system is based. Private thrift and insurance purchases also provide a flexibility of protection adaptable to the particular needs of the particular family. This flexibility is impossible under social security. Furthermore, security privately achieved by voluntary action, as contrasted with unnecessary inflated compulsory social security, is compatible with our traditions and our way of life.

Thus, even though social security were in fact bought and paid for by the individual and his equities, typical of free enterprise, were preserved, it would violate our basic principles to extend its taxes and benefits beyond the levels required to meet its purpose of providing a minimum floor of protection against destitution.

The bill's provisions extending the system's taxes and benefits to earnings in excess of the present $3,600-per-year limit, manifestly raise the fundamental issue of whether we shall progressively depart from the original purpose of the system. The proposal assumes that the $4,200 man requires more compulsory, publicly provided protection than does the $3,600 man. The next step, already proposed and urged, is that of providing still greater Government protection for the $6,000 man than is provided for the $4,200 man. There is no stopping point when one accepts the philosophy of more and more compulsory reliance upon the State, with the corollary of less and less

reliance by the individual upon his private voluntary arrangements.

These amendments are indefensible in our opinion. The proposed superbenefits for the high-income man are incompatible with the purpose of the system. Burdening other social security taxpayers with their payment shocks one's sense of equity.

The powerful drive for expanding the wage base and providing higher and higher benefits, and the lack of public understanding of the consequences of this action, place the committee and the Congress in a most difficult position—particularly in an election year.

But the inescapable fact is that younger people, including those not yet of voting age, and millions yet unborn, must largely support benefits for persons who retire in the next two or three decades. This situation places a special trusteeship on this committee and on the Congress. For not only the purpose of social security, but the welfare of our young people and their children, strictly limits the social security benefits which can be provided for the aged through taxation of the young. We must halt the constant increases in present and future benefits, and in the taxes required to support those benefits.

It is far from certain that the present tax schedule will support the presently scheduled benefits, and still less certain that the proposed increased taxes would support the increased benefits.

It is manifest, in any event, that the proposed wage base extension would provide an unwarranted increase in benefits of persons with high earnings, who least need social security protection. It is also manifest that the unwarranted increase in benefits—and for younger people the lifetime burden of the additional social security taxes—would adversely affect individuals and our economy and would be contrary to the general welfare.

FURTHER DISSENTING VIEWS OF MR. UTT

In addition to the foregoing minority report, I wish to state it is my fearful belief that the social security tax is fast shaping up to become a secondary graduated income tax upon wages and salaries, a tax which, when its full impact is felt, will shake our social security system to its very foundation.

Award to Dr. J. Fred Rippy

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. O'HARA of Illinois. Mr. Speaker, it is with pleasure that I announce to the House the 1960 William Volker Distinguished Service Award for outstanding achievements as a scholar and teacher to Dr. J. Fred Rippy, history professor emeritus of the University of Chicago. A stipend of $15,000 goes with the award.

Dr. Rippy was a member of the University of Chicago faculty for 31 years until his retirement in 1958. He was internationally recognized as America's foremost authority on Latin America. He now resides in Durham, N.C.

It will interest my colleagues to know that this distinguished scholar for years has been a regular reader of the CONGRESSIONAL RECORD. No matter how busy his schedule, he has found time to read the CONGRESSIONAL RECORD as part of his daily must.

The Pitfalls of Personal Diplomacy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial as it appeared in the Wall Street Journal of June 17, 1960:

THE PITFALLS OF PERSONAL DIPLOMACY

Let us say at the outset that we think President Eisenhower, having committed himself to visit Japan, was wise not to act hastily in cancelling his trip, hoping the storm would blow over. Since it did not, it was also wise to have called off the trip.

But having said this, we think the whole affair sharpens some very grave questions about this concept of personal diplomacy. Taken together with other experiences of recent months, it drives home a lesson that this country needs to learn.

Consider, first, just this Japanese visit. Its general purpose was to spread good will. Beyond this vague intent there was also a desire to lend a helping hand to the government of Premier Kishi and to impress the people of Asia, notably the Red Chinese, with our prestige and influence in that part of the world.

The results, to put it mildly, are quite different. The Red Chinese are jubilant at the success of the riots they did so much to foment. So is the Soviet Union. The United States has been made to look ridiculous in the eyes of all Asia, with consequences no one can yet see clearly.

Rather than being strengthened, Premier Kishi may well have been destroyed. In any event, we have embroiled ourselves in the internal politics of another country. At the moment there are even some doubts whether the new U.S.-Japanese security treaty, which is the foundation of our Far Eastern alliances, will be ratified by the Japanese Parliament.

So it is too little merely to say the United States has failed to accomplish what it hoped from the President's visit. It is not too much to say that on every point we have accomplished the exact opposite of our hopes.

This is, to be sure, an extreme example of the pitfalls in personal diplomacy. But it is not the only one. Only a few months ago Mr. Eisenhower and Mr. Khrushchev were visiting at Camp David and Mr. Eisenhower was planning a return visit. Only a few weeks ago the heads of state were sitting down together in Paris. The outcome of all that, of course, was the public tongue lashing of President Eisenhower, an insulting withdrawal of the Khrushchev invitation to Russia and a collapse of the summit. Whatever else may be said about that, it too marked a failure for personal diplomacy.

These failures have nothing to do with Mr. Eisenhower personally; he has, indeed, conducted himself at all times with good sense and dignity, so much so that he has in each case salvaged a great deal from the wreckage. The trouble lies in the naive notion that good national relations can be created by friendly personal relations between the heads of States or by friendly visiting.

We suppose the notion is understandable. The President pays a visit, say, to Britain or France or India and there is an outpouring of cheering crowds. In the wake of his visit there is discernible a heightened sense of goodwill.

So it is appealing to conclude that the goodwill is created by the gesture of a visit from the President of the United States or by the personal appeal of the man who holds the office. Why not, then, use the same method to win us friends all over the world?

The fallacy of this, now, ought to be apparent. We have ourselves had many visits from foreign statesmen that had the effect of heightening our sense of friendliness towards their countries. But we have also had visits from Khrushchev and from Castro, both of whom were courteously received by us. Yet who, any longer, shares the illusion that these visits altered anything fundamental in our foreign relations with their countries? Or could?

The lesson in all this is not that personal diplomacy is without its merits. But plainly we had best disabuse ourselves of the idea that, where there are fundamental differences between countries, they can be smoothed over by so simple a device.

More than that, we had better recognize that even where the relationship between the two countries is generally good, as it has been between the United States and Japan these past few years, personal diplomacy is still full of pitfalls.

Adequate Medical Care

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. COHELAN. Mr. Speaker, the following editorial from the Washington Post of June 20 clearly defines the situation the House of Representatives finds itself in, with the omnibus social security bill coming to the floor under a closed rule. It also expresses the feelings shared by myself and many other Members of Congress who hope, under the circumstances, that the Senate will produce a measure genuinely adequate to the needs of the country's older citizens.

For these reasons, I submit the item for insertion in the RECORD under permission to extend remarks:

ADEQUATE HEALTH CARE

Political as well as social considerations impel Congress to take action this session on proposals to make medical and hospital care available for the aged. All over the country there has been intense interest in these proposals; and in a presidential election year this interest on the part of people who can give it effective expression at the polls can hardly be ignored. What is still more important, however, is the simple fact that medical progress in the field of geriatrics together with the dramatic increase in the cost of medical care has made special provision for the aged a social imperative.

The medical care program approved recently by the House Ways and Means Committee is a complete disappointment. It would provide care for fewer than 1 million of the 16 million Americans over 65 years of age. Even for this fraction, the care would be meager; and it would be available only on the basis of a means test to low-income individuals. Participation would be optional with the States and would involve a complicated Federal grant-in-aid program. Representative AIME FORAND was quite justified in calling this a "pauper's" bill. It is to come before the House for action on Wednesday under an absurdly restrictive rule forbidding any amendments.

The hope for an adequate measure to give health care to the aged lies, therefore, with the Senate. Its Subcommittee on Problems

of the Aged and Aging has conducted extensive hearings and given thoughtful consideration to medical care programs. We hope that the Senate will produce a measure genuinely adequate to the needs of the country's older citizens. Such a measure would be a facet of social security and can best be financed, in our judgment, through an enlargement of the social security tax. It ought to be available, like the retirement benefits of social security, to all persons of retirement age as a matter of earned right and not on the humiliating basis of a proof of indigency. If such a measure is adopted by the Senate and if the House is given a chance to vote on it, there can be little doubt that it will be passed in preference to the piddling bill fashioned by the Ways and Means Committee.

Supplemental Views to the Report on Social Security Amendments of 1955

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, in a further review of the development of the social security system, we find that in 1955 the Committee on Ways and Means reported to the House, without holding hearings and with only a limited number of executive sessions, amendments designed to increase benefit payments from the trust fund of $2 billion a year, on the average. While most of the minority members of the committee voted to report the bill favorably, they strongly protested the failure to hold hearings. In the supplemental views to the report on the 1955 amendments we find additional warnings as to the danger to our economy of continual increases in the social security tax and the inequity which it creates. Following are some pertinent statements from these supplemental views:

BASIC PROBLEMS

Cost: In order to finance the multibillion-dollar increase in benefits contained in this bill, a higher tax schedule is provided. An almost immediate increase to 2½ percent each on employees and employer, respectively, is provided effective January 1, 1956. Each of the subsequent periodic increases provided under existing law is also increased by one-half of 1 percent. As a result the ultimate tax rate projected under the bill, effective in 1975, is 9 percent shared equally by employees and their employers. The self-employment tax, applicable to professional individuals, will become 6¾ percent at that time.

As high as these future rates are, the rates themselves do not convey a complete picture of the true burden they involve. The tax on wages is a tax on gross wages without any allowance for personal exemptions, dependents, or other deductions. The tax on self-employment income only permits certain business deductions, such as depreciation. It is, in effect, a tax on adjusted gross income. Therefore, unlike the income tax, the social security tax is not limited to net income. As a result, that tax, as a percentage of net income, is substantially higher than the actual rates would indicate. In fact, the eventual 6¾-percent rate on the self-employed would be the equivalent of a net income tax in the neighborhood of 20 percent and higher in many cases.

Let us take the example of a farmer with a net income from self-employment of $4,200 in 1975. Assuming that he has a wife and two children and uses the standard deduction, his Federal income tax under present rates, will be $276. His social security tax, on the other hand, will be $283.50. In this example, which is a completely average case, the social security tax, as a percentage of net taxable income, would be in excess of 20 percent. If the same individual had three children his income tax would be cut to $156 but his social security tax would still amount to $283.50. In such a case, the latter tax would be the equivalent of a net income tax of 36 percent. We again point out that this would be an ordinary case and not at all an unusual one.

It is estimated that in 1975 the total social security tax collections will approximate $20 billion annually, a colossal sum. Moreover, this estimate assumes continuation of existing wage levels and makes no allowance for the increase in those levels which past experience indicates will occur. The $20 billion estimate, is therefore, extremely conservative.

We are concerned over this fact, moreover, because by their very nature, the liberalizations contained in this bill will create demands for additional changes involving further costs.

We are further concerned over these ultimate costs because of the danger that they may eventually weaken or even destroy public acceptance of the social security system. A social insurance program cannot be expected to provide against all insurable risks. It must be designed to provide a basic protection at a cost within the reach of all, especially those in the lower income brackets who are most in need of that protection. Despite this fact, we are creating a scale of benefits which must be supported by a social security tax which, in the not too distant future, will be equal to and in many cases higher than the Federal income tax.

Finally, insofar as the cost of this program is concerned, we should take sober warning that, in our zeal to provide ever greater benefits and to provide against an ever wider area of need, we do not destroy the very system which we have created. We have succeeded in avoiding the full impact of the cost by shifting most of the burden to the future. At that time, the high tax rates may make it very difficult to retain the contributory principle which we believe so essential to the program. However, we would be deluding ourselves should we believe that the general revenue could be depended upon to support the system. We have already pointed out that, under the present schedule, social security tax collections in 1975 will amount to about $20 billion. If such a vast sum were financed through the individual income tax for example, it would necessitate approximately a 50-percent across-the-board increase in that already burdensome tax. These figures show clearly the magnitude of the problem we are so casually creating.

It is our earnest hope that the questions we have raised will lead thoughtful citizens everywhere to search for the answers. The social security system was created to give our people confidence and faith in their future. It should be above politics.

Old Glory Flies at Fairless Hills

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. FLOOD. Mr. Speaker, on August 20, 1959, I addressed the House on the subject of "Flagless Fairless Hills." I related how, in this town about 25 miles from Philadelphia, the deed to every property carried a restriction against the erection of flagpoles. Without flagpoles, the inhabitants could not suitably display the flag. This prohibition was carried to the preposterous extent that the U.S. flag did not even fly over the U.S. post office in the town.

I learned of this absurd situation through Pennsylvania Supreme Court Justice Michael A. Musmanno, who, in his capacity as vice chairman of the Americanism committee and member of the flag committee of the Pennsylvania Veterans of Foreign Wars, had visited Fairless Hills and discovered the conditions which I have described. As soon as Justice Musmanno told me about this state of affairs, I obtained from the Architect of the Capitol a new 49-star flag, which had been flown over the Capitol and I sent it to Justice Musmanno. Musmanno, who is a retired rear admiral in the U.S. Navy Reserve, took that flag to Fairless Hills and, with other officers of the VFW, climbed an iron ladder to the roof of the post office building and there planted it for 10 minutes to show that physically it could be done.

Admiral Musmanno then conferred with Benjamin Fairless, former chairman of the board of directors of the United States Steel Corp., in whose honor the town had been named. In the meanwhile I communicated with the Post Office Department and in a matter of 3 weeks the American flag was flying over the Fairless Hills Post Office.

Admiral Musmanno then continued his efforts to have the flagpole restriction removed from the deeds. The lawyers of the Danherst Corp., which built the houses, first resisted any relaxation in the restriction but eventually the Danherst Corp. announced that they would not hold the householders to the restriction.

In addition, the Danherst Corp. erected a 150-foot flagpole in the center of the town, and, on Flag Day of this year, the flagpole was dedicated and our Capitol-flown flag was hoisted to the top of the pole where it now waves in all its beauty and glory over the town.

I feel certain you would like to know of the successful result of this crusade in behalf of the flag and I am sure that you join with me in congratulating and thanking Admiral-Justice Musmanno in the achievement of his objective. On June 14 the United Press carried the following dispatch from Fairless Hills:

OLD GLORY FLIES AT FAIRLESS HILLS

FAIRLESS HILLS, June 14.—State Supreme Court Justice Michael A. Musmanno, of

Pittsburgh, returned to Fairless Hills today triumphant in his battle against the ban on the flagpole.

The jurist was the principal speaker at the dedication of a flagpole in the center of the community.

Thus ended a one-man campaign that began last August, when Justice Musmanno noted that in all of Fairless Hills not one flag was allowed to fly above a building.

He carried his fight to Postmaster General Arthur E. Summerfield, because not even Fairless Hills' post office had the national emblem above its building.

He sought the help of U.S. Representative DANIEL FLOOD, of Wilkes-Barre; Benjamin Fairless, the retired board chairman of the United States Steel Corp., and the Danhurst Corp., administrators of the town.

Today, while all of Bucks County turned out for the event, the jurist recalled the events leading to the installation of the 150-foot pole and called for greater unity behind the flag of all Americans.

Besides welcoming the rebirth of liberty in Fairless Hills, the justice criticized Japan for its demonstrations in opposition to President Eisenhower's visit.

He called Fidel Castro a "bewhiskered vulgarian" and he cited Nikita Khrushchev as a "barbarian," and said that one of America's greatest mistakes was to invite "this mass butcher of Hungarian freemen" to our shores.

In addition to Justice Musmanno, Charles H. Boehm, State superintnedent of public schools, spoke.

And now, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the address made by Admiral-Justice Musmanno on the occasion of the dedication of the flagpole with the Capitol-flown flag. The speech follows:

ADDRESS BY PENNSYLVANIA SUPREME COURT JUSTICE MICHAEL A. MUSMANNO

Mr. Chairman, officers and members of the VFW, officers of the United States Steel Corp., ladies, and gentlemen, just a year ago I made my first visit to Fairless Hills and discovered to my amazement that the flag of the United States was not flying over the U.S. post office. It was almost impossible for me to adjust my eyes to so incredible a phenomenon. Then I scanned the skyline, hoping that my heart, which had sunk, would leap in my breast, as I might see Old Glory proudly billowing over some other public building or even some private dwelling, but the entire horizon was as empty of the beautiful symbol of our country as some forgotten desert at the antipodes of the earth.

It seemed impossible that in this beautiful little town, the product of the highest American economic and civic ideals, the emblem of liberty and justice should be completely missing.

What was the explanation? I found out very quickly. Contrary to the patriotic impulses and idealistic intentions of the founders of Fairless Hills and its able administrators, there had crept into the verbiage of the town's deeds, almost like a furtive weasel, a restriction against flagpoles.

Immediately I went to see Mr. Benjamin Fairless, former chairman of the board of the United States Steel Corp., and in whose honor the town was named. I communicated with Postmaster General Arthur Summerfield. I spoke to Congressman DANIEL FLOOD who made a speech on the floor of the House of Representatives on the subject. My brother officers of the Veterans of Foreign Wars, Comdrs. Edward Boehmer, Willis Bosch, Walter Bolzer, and Eugene Goodman, and myself, called on the able, amiable, and highly cooperative Gordon K. Bolon, vice president of the Danhurst Corp.

And lo and behold, within the space of 2 or 3 weeks, the roof of the Fairless Hills Post Office suddenly burst into bloom like a flower garden, and the sky took on colors and hues which surpassed the beauty of a Mediterranean sunset. Old Glory had taken its rightful place at the summit of the building housing the post office.

I shall never forget that memorable August morning when I saw the flag which had been missing for so long. I knew how Francis Scott Key must have felt when he beheld Old Glory, after a night of bombardment, triumphantly waving over the "land of the free and the home of the brave." I could feel the excitement which must have throbbed in his veins as he penned the immortal words of "The Star-Spangled Banner."

As vice chairman of the americanism committee and member of the flag committee of the Pennsylvania VFW, I want to express the appreciation of the State Veterans of Foreign Wars to Mr. Fairless, Mr. John Galbreath, and Mr. Bolon, for removing the restriction which now authorizes the inhabitants of Fairless Hills to display the American flag at will, so that the whole world can see their patriotic devotion, which no one ever doubted and no one ever will.

I know that the people of Fairless Hills do not and have never treated the flag indifferently or taken it for granted. I know it thrills them, as it does me, every time they see it. And let me say to the schoolchildren assembled here, that this flag should always mean as much to you as the picture of those who are closest to you in your heart.

Let that flag inspire you, not only on Flag Day, but every day. Let us never forget what it symbolizes—courage in the face of danger and courage in confronting every threat against our democratic institutions.

Let us respect those who respect our flag and let us treat as they deserve to be treated those who show contempt for the flag. I confess that I feel a little sick in the stomach over the manner in which our flag is being reviled in various parts of the world and particularly in nations which should be forever grateful to the United States for her magnanimity, kindness and assistance in the hour of their greatest trials.

Japan treacherously attacked us at Pearl Harbor, she sank our battleships, and killed our boys while her ambassadors were here professing friendship. We defeated her in the war which she precipitated and, contrary to the practice of other countries, we exacted no indemnity and we took no land. In addition, we gave Japan financial and other assistance and yet we have seen during the last few days the scurrility she has heaped upon our flag and all that it stands for. I believe that our President should not go to Japan, not out of any fear, but to deny Japan the honor of having the head of this great Nation on her shores, since many of her people lack the courtesy and good manners so traditionally ascribed to them.

Russia participated World War II by joining up with Hitler. Nevertheless we went to her assistance when Hitler showed his fangs to his former ally. Russia would have been wiped out of existence by Hitler's war machine had she not been supplied with American planes, tanks, equipment, ships and food. And yet we have seen how Khrushchev has insultd our President and our flag. One of the greatest mistakes made by America during the last half century was to invite this mass butcher of Hungarian freemen to America and accord him a hospitality which he is too much of a barbarian to appreciate.

I wrote to the State Department urging the Khrushchev be not invited because an invited visit to America should be a reward for good deeds and manifestation of sincerity of purpose, which Khrushchev had never demonstrated. In spite of similar protests from many other people, Khrushchev was invited. He came here and lived at our expense. He was lodged, wined and dined in our most luxurious hotels, he traveled in plush style, he received a generous hospitality and solicitous attention which had never even been accorded to visiting royalty in the past. And now we have seen how he has insulted our President, desecrated the meaning of our flag and otherwise reviled all that it stands for.

Cuba owes her existence as an independent nation to the United States . American sailor and soldiers gave their blood and their lives to liberate Cuba from Spain. If we had followed the example of Russia, we would have retained Cuba as American territory. On the contrary, we withdrew our soldiers and continued to send American educators, architects, doctors and dollars to build up that country. And as a matter of recompense we now look upon the spectacle of the behiskered vulgarian who is at present dictating Cuba to her ruin practically spitting on our flag every day.

But we will not allow these ingrates to force us into war because we know that the very colors of our flag come from the sacred dye of the blood which flowed from millions of wounds of American soldiers in order to give Americans enduring peace.

No, they will not force us into war, but we will hold them accountable for their misdeeds, their insults, and their ingratitude. We will show the world with dignity but with formilable pride; with moderate voice but with invincible military strength; with continued proffering of the olive branch but with unsurpassable stock pile of nuclear missiles, that we will always hold high the ideals which have made this country the greatest—in morals, philanthropy, tolerance, and devotion to humanity—in the history of mankind. And we will continue to cherish the hope, and work for its realization, that the world will return to sanity and accept the precept spoken 2,000 years ago and which is the heart of true brotherhood everywhere, namely, "Whatsoever ye would that men should do to you, do ye even so to them."

Highway Waste

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD the following article titled "Our Great Big Highway Bungle," written by Karl Detzer, staff writer for the Reader's Digest, which appeared in the July 1960 issue.

I share and have shared in recent years the beautiful dream we all once had to bring to fruition 40,000 miles of interstate freeway that would link all major urban areas of these United States together in the interest of our national defense, and to provide safe and fast transportation to any part of the country for all of us.

Mr. Detzer is to be commended for the work that he has done in presenting a true picture of the waste, graft, and corruption that has now infiltrated the interstate program. I agree wholeheartedly with his statement that now is not

the time to blindly forge ahead on a reckless uncontrolled Government spending binge. It is time to stop and evaluate and take all steps necessary to cut out waste, graft, and stupidity in order that we can realize that beautiful dream.

The Reader's Digest article is most timely and should be read by every Member of Congress now because next year we of course will be asked to again raise gasoline taxes to provide additional funding for construction of the system. We want highways, not expensive pork barreling projects.

Following is the full text of Mr. Detzer's article:

OUR GREAT BIG HIGHWAY BUNGLE

(Haste, waste, mismanagement, and outright graft are making a multibillion-dollar rathole out of the Federal highway program. If you want honest value for your tax dollars that are going into this 40,000-mile muddle, now is the time to make yourself heard.)

(By Karl Detzer)

The American people in 1956 were sold a beautiful $27 billion dream—a 40,000-mile superhighway network that would sweep majestically from coast to coast and border to border. This greatest engineering project of all time would, we were told, be a splendid monument to a free people's wisdom, daring, foresight, and skill.

Its highways would, by 1975, knit together all the States, most large cities and hundreds of smaller towns. Its smooth, gently graded, no-stop-sign roads—four, six, and sometimes eight lanes wide—would speed interstate travel, strengthen defense, reduce accidents, save mileage, cut trucking rates, open new recreational areas, expand tourist trade, hasten produce from factory to consumer and farm to market. The program would create 440,000 new jobs and check the recession that then threatened. What was more, it would pay for itself painlessly out of our Federal taxes on tires and our 3 cents a gallon Federal gasoline tax.

Today it must be reported that the dream has become a nightmare: of reckleness, extravagance, special privilege, bureaucratic stupidity, and sometimes outright thievery.

While the entire network was originally scheduled to cost $27 billion, the Bureau of Public Roads had to admit within 2 years that "unexpected additional costs" had already arisen. The official figure was quietly raised to just under $40 billion. Yet today even this figure is entirely misleading. For one thing, it ignores the proposed $5 billion reimbursement to the States for their previously built toll roads and turnpikes that have been incorporated into the system. For another, it does not recognize a little matter of a billion and a half dollars as the cost of relocating public utilities and railroads that lie in the path of the new roads.

A new official figure is due in January 1961. Already many engineers and builders privately estimate that $50 billion will not touch the total cost. And meanwhile the Federal gas tax has climbed to 4 cents, and Congress is considering another hike.

What has gone wrong? Why?

LOCAL NEED—AND LOCAL GREED

The first trouble is that Uncle Sam is paying most of the bill, with little control written into the law. The Federal Government simply shovels out the money for the States to spend. This has invited irresponsibility and inefficiency. Local self-interest and greed—at the expense of the general good—are in the saddle all over the country.

The Federal Government, out of tire and gasoline taxes, puts up 90 cents of each dollar. Each State adds its own thin dime (12 Western public-land States pay even less) for work done within its borders. Federal engineers help draw a rough, overall map of the system and set minimums—but not maximum—standards. From there on the States take over. They decide how much money they need, how much right of way to buy, where and at what price. They decide on the type of paving, how thick the surface shall be, on how much of what kind of base to pour it, and what types of bridges to build. They let their own contracts. Though Federal engineers are supposed to approve every yard of highway to make sure there has been no waste, the inspections are usually sketchy and infrequent. There just aren't enough engineers in the Government to supervise a program of such magnitude.

So it's hardly surprising that with good old Uncle dishing out the cash, many a community has developed some pretty grandiose needs. Or that many a State official has developed an easy-come, easy-go attitude.

Consider, for example, a lonely, sparsely settled area in Nevada (which pays only a nickel out of each dollar). Three expensive interchanges have been completed in a 3-mile stretch of interstate highway. The cost of the interchanges runs to $358,000. Why were they built? According to the U.S. General Accounting Office, a survey had shown that an average of 89 cars a day entered or left the main highway from the dusty desert roads that intersect it. Now this tiny flow of traffic is handled in style. One interchange leads to a road that serves a railroad shanty and little else. The second gives access to a single ranch.

The third, accounting for most of the 89 cars, leads to some abandoned mines, four or five small ranches, an electric power line, and a bawdy house which has recently shut up shop.

Consider the duplications of existing highways that are popping up everywhere. No matter what broad, safe roads may sweep across a State, other roads are being built parallel to them not far away. In a study of only 11 States, the General Accounting Office found eight planning new highways shoulder to shoulder with existing toll roads. The reasoning in such cases seems to be: since the Government is spending the money, it may as well spend some our way.

Consider the building of city roads at Uncle Sam's expense. In Omaha, Nebr., a superstreet is being driven through the heart of the city at an estimated cost of $42 million, though an alternate route, around the town, would cost less than $15 million. (Local boosters expect to get the alternate route built, too, after the main drag is finished.) Several downtown interchanges with the expressway are planned. The largest will consume about 100 acres. Land purchases alone will cost an estimated $10 million. Some 900 buildings, mostly homes, will be destroyed, and their occupants will be forced to find new places. Loss to the tax rolls will be heavy.

Why this costly local street at Uncle Sam's expense? "We've passed Chicago as a livestock center," one businessman explains, "and we should have good roads leading to the stockyards so that cattle and hogs can be delivered more easily."

That's fine for Omaha, but why should the other 49 States pay 90 percent of the bill?

Although only 12 percent of the interstate network mileage is slated to go into or around cities, at least 45 percent of the network money is being spent on urban roads such as Omaha's. On some of them more dollars go for land than for construction.

Take a look at what is happening in Wilmington, Del. Here bulldozers are driving a 300-foot swath right through town. The six-lane highway will cost $62,432,000—$5 million a mile—and cut the town in two. More than 600 homes are in the path, plus some 50 business buildings, churches, and theaters. Their destruction means a tax loss of $115,000 a year. The city council calls the project a "wasteful, ruinous folly" and demands a congressional investigation. A taxpayers' suit, about to be decided, seeks to halt the work. Meanwhile, the job is going ahead, despite the fact that a route that would skirt the town and cost $17 million less is available. (Much the same situation exists in El Paso, Tex.)

In Macon, Ga., the projected 4½-mile road through the center of town will bisect an attractive residential district containing 28 churches and 17 schools. It will eliminate 400 homes, including some of the city's most substantial, and will fence off the 89-year-old campus of Mercer University from the only direction in which it can grow. It will produce 28 dead-end streets. It ignores the traffic needs of nearby Robins Airbase, and will be a headache for long-distance drivers. A city-county planning board report calls it "blight-producing."

Angry citizens have pointed out the very obvious advantages of a route around town. The present chairman of county commissioners has replied that Macon should not "pass up an outlay of $50 million that is going to be dumped in our laps." By coincidence, a former chairman of county commissioners who, with several other officials, approved a similar layout in 1955 and has been pushing for its adoption, owns a number of acres of land at strategic spots along the right-of-way.

True, the law creating the national network says that "local needs shall be given equal consideration with the needs of interstate commerce." But too manys cities are giving all consideration to their own needs. Their chambers of commerce, politicians, business groups, real estate operators, and fast-buck manipulators feel than an extra highway never hurt any community. Anyway, a new road means profitable business for contractors, splendid real estate deals, work for deserving labor, and quantities of cement, asphalt, gravel, and steel to be bought from manufacturers and local dealers always willing and anxious to serve.

THE BIG RUSH FOR THE BIG MONEY

The second trouble with the program is that, because of the rush to get at the Federal moneybags, the mismanagement and waste normal to a program so sprawling and vast have been many times multiplied.

For example, the argument that sold the highway network to even the most economy-minded Congressman was that it was a "military necessity." The Federal Aid Highway Act of 1956 stated: "Because of the primary importance to the national defense, the name of such a system is hereby changed to the National System of Interstate and Defense Highways." Its proponents claim that it will bolster the national defense by assuring swift movement of materiel and troops in moments of peril.

Yet during the first 4 years of construction, at an expense of hundreds of millions of dollars, more than 2,000 bridges and underpasses have been built that are too small to permit passage of some of our most important weapons. How can such things be?

In July 1956, the Secretary of Commerce and a committee of State highway officials—with no representatives from the Department of Defense—decided that a 14-foot minimum clearance all along the network would be fine. A telephone call to the Pentagon would have disclosed their error. For our military inventories even then included missiles and radar equipment that could not possibly squeeze under an opening 14 feet high, and larger implements were on the drawing boards.

Two and a half years later, after millions of dollars' worth of concrete and steel had been solidly built into the structures, the

military planners at the Pentagon announced that a clearance of 17 feet was necessary.

Did Federal highway officials order work halted until new dimensions could be agreed upon? Not at all. They and the Pentagon brass sat down for a series of informal discussions that lasted from January into October. Meanwhile, the money flooded out across the country, and the builders continued to throw obstructions across the military highways.

Not until January 1960 was a compromise dimension finally decided on. The clearance would be, not the 17 feet that the Army and Air Force needed, but 16 feet—not quite enough for the largest weapons. There was one advantage: the necessary reconstruction of inadequate underpasses and bridges already built would cost, as one western builder put it, "only $730 million".

With such haste, many items—and many dollars—get out of control. In New York, for example, the U.S. Comptroller General discovered that an estimate calling for $25 million to buy up 35 miles of roadway had been decided on in less than a day. In Georgia, an estimate was overstated by $19,700,000—the result of faulty arithmetic. In Ohio, an error of $9 million was made because of a typographical mistake.

Federal policy requires that land must be appraised before it can be purchased by the State. But many parcels of land have been bought first and appraised later. In Nevada alone, the Comptroller General's Office found what it chose to call deficiencies in the purchase of 29 out of 40 pieces of land. Typical was parcel No. 3, project IN-001-1(14). This property was bought on April 26, 1957, for $42,000. On that same day appraisers employed by the State listed the value of the parcel at only $22,000. Having spent almost double the appraised valuation, the State quickly put another appraiser to work. Even he could stretch the valuation to only $38,000—$4,000 less than had already been paid. The files of the Comptroller General are full of such examples.

Mismanagement is evident, too, in the extravagant use of private engineering consultants, instead of State highway employees, in designing projects. Such practice is in violation of Federal policy, and it runs into money. The General Accounting Office has found that the costs of Pennsylvania's contracts with private consultants for preliminary engineering alone have been averaging $1 million a month. In New Jersey, in less than 4 years, eight engineering firms have received $8,219,967 in consultant fees for interstate projects. In Maryland, consultants have received more than $24 million on federally aided highways since 1954.

Usually a consultant is paid a percentage of the cost of the project on which he works. He has a great deal to do with deciding whether the job will be an expensive one or a frugal one. Thus only a highly developed sense of ethics stands between him and temptation. While rich old Uncle is tossing money around, the temptation to cash in on a large scale is frequently great and sometimes irresistible.

HUSH-HUSH DEALS

With hasty mismanagement and local greed has come, inevitably, a third drain—collusion, chicanery, venality, and graft. Nobody knows the enormity of the take to date, but more and more cases are coming to light.

In Indiana, for example, the national president, a vice president, and the treasurer of the Carpenters' Union have been investigated by a grand jury for having bought property near Gary, after being tipped off that a road was going through, and then selling the property for a quick profit of $78,000. The union officers were charged with having paid off a State highway official. The indictments were made in February 1958, but the men were not arraigned until May 1960.

In Oklahoma, on one 13-mile $8 million bypass at Tulsa, grand jury and congressional probes have recently turned up evidence that one contractor, with the knowledge and assistance of State highway engineers and inspectors, used substandard materials, falsified delivery weights, and padded bills. Highway department employees testified that, on orders from their superiors, they actually made up samples of materials in a laboratory, instead of taking them from the roadbed, as proof that specifications were met. Federal overseers of the job discovered nothing amiss at any time. Others testified that overpayments to this one contractor are estimated at $524,000, and that the road, completed in 1958, is already starting to crack up in places.

In Nevada, the interstate road from the California line eastward, as officially planned, will shoulder its way right through the heart of Reno. To do this it will have to bridge the Truckee River four times, plus a ravine 125 feet deep. It will cost an estimated $41 million. An alternate route, for which 17,000 Reno citizens have signed a petition, would bypass the city only 17 blocks to the north, need no bridges, and cost at least $23 million less.

Reno's row over these two routes drew the attention of Nevada's lone U.S. Congressman, WALTER S. BARING, who last year forced the mess into the open. Investigation showed there had been no survey of the bypass before local hearings were held, and that cost estimates for right-of-way on the officially favored downtown route had been $5,600,000 too low. In a letter to President Eisenhower, BARING angrily declared that if the plan for a midtown route was permitted to go forward it would result in "the biggest swindle ever perpetrated in the State of Nevada." He still had received no assurance in mid-May that construction of the route would not proceed as planned.

Meanwhile, BARING has continued to ask questions, not only about Reno but about the whole interstate program. He points the finger at expensive real estate deals and tremendously high administrative costs, and he is urging his fellow Congressmen to clean house.

Scandals are stirring in at least six other States, and investigations now in progress are likely to uncover chicanery on a large scale before many more months have passed.

One other Member of Congress, Minnesota Democrat JOHN A. BLATNIK, heads a subcommittee that is digging deeply into the whole highway situation. With nearly $300,000 voted for the investigation, BLATNIK has put to work several of the toughest investigators who in recent years unearthed pay dirt for the McClellan labor-management corruption committee. The Blatnik committee is already finding substance in the charges of Virginia's Senator HARRY BYRD that the road program is in an "inexcusable mess," and that there has been great "temptation to grab land, hike prices, and profiteer."

When the committee's reports are released, efforts undoubtedly will be made to convince the public that the charges are political. But neither majority party seems more guilty than the other. State and local administrations of both political hues have been reckless of public responsibility, have used roads and real estate to further their individual designs. And the Federal Bureau of Public Roads has been inept.

Some will undoubtedly urge that we proceed full speed ahead, "for the good of the Nation." But perhaps it is time not to go ahead. Judging by the record to date, it is time to stop and evaluate, to make every possible effort to cut out the waste, graft, and stupidity, if that beautiful dream we all once had is to come true.

Let every citizen who has specific evidence of tax dollars going down the highway program's multibillion-dollar rathole report that evidence to Congressman JOHN A. BLATNIK now. Let us have honest value for our tax money.

Reds' Anti-Ike Campaign in Tokyo Will Boomerang

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. CHAMBERLAIN. Mr. Speaker, under unanimous consent I include in the Appendix of the RECORD, an editorial which appeared recently in the Flint Journal, of Flint, Mich., entitled "Reds' Anti-Ike Campaign in Tokyo Will Boomerang." While I believe the reasons which have forced the Japanese Government to request a postponement of President Eisenhower's visit to Tokyo are deplorable, I am in complete agreement with the editorial point of view that the majority of the Japanese people desire continued close relations with the United States. I believe that once the internal affairs of Japan have been settled, and when the efforts of the Communists and the other extremists to deceive and delude these people have been exposed, the President of the United States will again be warmly and affectionately greeted by the majority of the Japanese people.

The editorial follows:

REDS' ANTI-IKE CAMPAIGN IN TOKYO WILL BOOMERANG

It seems inevitable that the Communists, who are bent on making trouble for President Eisenhower on his trip to Japan, will be the losers in the long run.

The form they have chosen for their campaign against his visit and the new United States-Japanese Mutual Security Treaty reveals to the world once more that the heart of communism is hooligan violence.

The Communist-inspired outbreaks in Japan recall the heyday of Hitler. The voices of the mob rise in unison; the bodies move in unison; then come the memorized shouts—all carefully staged by Communist leaders.

The size of some of the Tokyo demonstrations is no indication that large sections of Japanese are violently opposed to Mr. Eisenhower's visit. It only means that the Communists have poured plenty of money into Japan to hire demonstrators to put on their show.

It is clear that the demonstration against the President's press secretary, James C. Hagerty, has filled most Japanese with a feeling of revulsion.

Japanese newspapers condemned the riot in these words:

Asahi: "Shameful"; the demonstration "hurt national pride."

Yomiuri: The demonstrations are "disgraceful to a democratic nation."

Mainichi: "The action arouses in us a deep sense of shame. * * * It was an event which went against all ideas of international courtesy."

Japan Times: "No sensible Japanese will approve of the acts of extreme discourtesy shown him. * * * The vast majority of the

Japanese people are friendly to the United States."

Tokyo Shimbun: "How shameful to realize that such a disgraceful incident occurred in Japan."

It is reasonable to assume that the Japanese people will try to atone for these outbreaks when the President arrives.

The Communist press around the world again tips the Red hand by jumping into the controversy. Radio Peiping said the mob that greeted Hagerty was ony a sample of what Mr. Eisenhower can expect. Moscow's party organ, Pravda, took the same theme and said the protest against Mr. Eisenhower will be "even more massive and formidable." Red Germany's organ, Neues Deutschland, with the trademarked Communist perversion of the truth, termed the Hagerty incident "a powerful Japanese warning for the U.S. President."

No, the Communists won't give up their campaign, and fears have been expressed for the President's safety. The Japanese Government has volunteered assurances that he will receive ample protection.

Furthermore, there are indications that some Japanese elements that have gone along with the Communist demonstrations, will not go so far as to carry them over into the President's visit. A leader of the left-wing labor organization said his group does not plan to demonstrate against Mr. Eisenhower.

And the leaders of the Japanese Socialist Party now fear that the excesses have hurt their cause. As a result, the party chairman has issued a statement urging his adherents to express their opposition to the President in an orderly way.

The head of the committee to welcome the President has said a million Japanese will turn out to cheer Mr. Eisenhower, drowning out the voices of the minority of extremists along the route.

As for the United States-Japanese Treaty which the Communists are so desperately trying to upset, it was an issue in the Japanese election last year. It was negotiated by the Government which the voters put into office. Thus, it has the support of the majority of Japanese.

President Eisenhower has become known the world over as a man sincerely dedicated to the quest for peace. The people of the Far East will see him as such on his current tour. Communist hooliganism will boomerang.

The President is now in the Philippines. The manner in which the Filipinos, by their wonderful welcome, let the Communist world know where they stand, is heartening indeed.

1958 Report on Social Security Amendments Prove Early Assumptions Wrong

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. ALGER. Mr. Speaker, in previous insertions in connection with our review of the progress of social security legislation, I have included excerpts from minority views to committee reports, warning that the actuarial soundness of the program was open to serious question. Contained in the committee report, generally, were assurances that assumptions based on future earnings and benefits proved the program sound. However, when we reach the 1958 report, we suddenly find that the assumptions did not prove accurate and the committee had to come up with a recommendation for an increase in the wage base to be taxed in order to reduce the actuarial deficit. To complete the record on a study of the concern of the committe over the soundness of the program, I would like to include the following brief excepts from the committee report on Social Security Amendments for 1958:

The old-age and survivors insurance benefit structure and the contribution schedule by which the benefits are financed have not been revised by the Congress since 1954. Since that date there have been significant increases in wages and prices; also, new cost estimates have shown an increase in the actuarial deficit of the program. In the light of these developments, it is imperative that the Congress take prompt action to assure that the program be kept both effective and actuarially sound.

The latest long-range cost estimates prepared by the Chief Actuary of the Social Security Administration show that the old-age and survivors insurance part of the program (as distinct from the disability part) is further out of actuarial balance than your committee considers it prudent for the program to be. When the last major changes were made in 1956 the estimates prepared at that time showed an expected long-range actuarial deficit for old-age and survivors insurance of two-tenths of 1 percent of payroll on an intermediate cost basis. More recent estimates show that the old-age and survivors insurance part of the program is now expected to be out of balance by fifty-seven one-hundredths of 1 percent of payroll. Your committee believes that a deficit of the size indicated by present cost estimates should not be permitted to continue.

Hollidaysburg, Pa., Elicits Nationwide Attention Through the Success of Project 60 Which Modernized the Downtown Business Section, Thus Recapturing the Historic Charm of the County Seat of Blair County, Pa.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. VAN ZANDT. Mr. Speaker, the completion of Project 60 by the businessmen of Hollidaysburg, Pa., in my congressional district, was the source of a community celebration that included a week of festivities beginning June 13, with outstanding leaders in Pennsylvania being scheduled for programs on June 15, 16, and 17. During the week, Gov. David M. Lawrence visited Hollidaysburg and was escorted on a tour of the borough after which he delivered an address warmly commending those responsible for the success of the community effort to beautify the business district of the county seat of Blair County, Pa.

Mr. Frank M. "Bud" Palmer, general manager of WFBG–AM–TV, was the creative genius and the sparkplug in the community effort behind Project 60. Bud found that his ideas received the wholehearted endorsement and support of the community's businessmen and the Hollidaysburg Chamber of Commerce whose president, William Hubler, mustered the support of his group to the extent that more than 75 percent of the businessmen and property owners in the downtown area embarked on a campaign of facelifting for their respective properties. The result was a great success and reflected credit on the sponsors and businessmen who devoted their time and efforts to attaining the common goal.

Special credit is due the Peoples Natural Gas Co., which underwrote the expense of obtaining services of Prof. Milton Osborne, the head of the Pennsylvania State University's School of Architecture. Professor Osborne was commissioned to sketch more than 75 storefronts and buildings in a 5-block section of downtown Hollidaysburg. In commenting on Project 60, Professor Osborne said—

No small Pennsylvania community has attempted downtown revitalization on such a wide scope and with such unified effort.

As an example of the keen interest in the project, representatives of the fifth generation of the descendants of Adam Holliday, founder of Hollidaysburg, donated $400 to the project although they own no property in downtown Hollidaysburg. State Assemblyman Joseph R. Holliday, of Blair County, made the donation on behalf of himself, the last male descendant of the founder, his wife, daughter, and a sister and niece living in Indianapolis, Ind.

Because of weather conditions and the legislative situation on the floor of the House Friday afternoon, June 17, I was unable to leave Washington in time to appear on the Project 60 program that evening when I was scheduled to deliver the principal address. Since I had prepared the following remarks for the occasion, I wish to incorporate them at this time in my tribute to all those who played a part in making Project 60 such an outstanding success:

ADDRESS DELIVERED BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE CELEBRATION OF THE COMPLETION OF PROJECT 60, HOLLIDAYSBURG, PA., JUNE 17, 1960

It is an honor to be here tonight with all of you distinguished guests and citizens on this happy occasion to celebrate the completion of project 60 here in Hollidaysburg, the county seat of Blair County.

We have all heard of the marvelous job of revitalizing done on the Golden Triangle in Pittsburgh and similar projects undertaken in Philadelphia and Harrisburg.

These projects have cost millions of dollars in Federal and State moneys.

Project 60, a program of beautifying the main business district of Hollidaysburg, has of course involved a far more modest outlay of funds.

But I am sure that no Pennsylvania community of this size has undertaken a bootstrap operation like project 60—planned and executed on an entirely local level.

I would like to take a few moments to commend the leading figures in this wonderful community effort.

The originator of project 60 and the driving force behind it is Frank B. Palmer, general manager of WFBG–AM–TV.

Mr. Frank Palmer had the idea of beautifying Hollidaysburg in his mind for a long time.

As he himself has said, tearing every structure down and starting over was impossible.

Funds for a project on such a large scale were not available.

However, renovation of existing buildings did seem to him a good possibility.

Bud—as all of his friends know him—next talked with Prof. Milton Osborne, head of the School of Architecture at the Pennsylvania State University.

From an 8-inch by 10-inch photograph, Professor Osborne drew sample sketches of a plan for refurbishing the business district. The rest is history.

Bud then visited the Hollidaysburg Chamber of Commerce. They gave him complete support. Bill Hubler, president of the chamber, and the entire membership became enthused.

Bill Hubler envisioner Hollidaysburg as "one of the most unique and charming shopping centers in the East."

The Peoples Natural Gas Co., under its new program of community development, underwrote Professor Osborne's sketches for renovation of the buildings. In all, sketches were drawn for more than 75 stores and buildings in a 5-block area, and project 60 was underway.

Community response was extraordinary. The county commissioners, whose headquarters are here at Hollidaysburg, have restored some of their buildings along the lines suggested by Professor Osborne.

The borough council has cooperated generously in the project.

The fifth generation descendants of Adam Holliday, founder of Hollidaysburg, donated $400 to the project. Joseph R. Holliday, last male descendant of Adam Holliday, made the contribution for himself, his wife, daughter, a sister, and a niece.

Hollidaysburg's garden club agreed to maintain flower boxes, shrubs, and trees placed in front of many stores.

Now, ladies and gentlemen, I have been paying tribute to many individuals and organizations who have been moving spirits behind this program to beautify the business district of Hollidaysburg.

We must never forget, however, the many merchants and property owners who have participated in this renewal project by giving of their time, effort, and funds.

To all of these individuals, organizations, and the entire community of Hollidaysburg, my heartiest congratulations.

As I view this charming, quaint shopping center, a symbol of what a body of civic-minded citizens can accomplish on its own, I am certain that Hollidaysburg has fulfilled the destiny which its founder, Adam Holliday, foresaw in 1790—170 years ago.

Today this borough is peaceful, happy, untouched by the scars of yesterday's strife.

In those early years, settlement of this area, then the frontier of our new Nation, was beset by battle after battle with the Indians.

Many a pioneer perished in frightful massacres.

Only through extraordinary sacrifices and superhuman courage could the settlers, banding together, pursue their historic destiny.

Today, at this time of crisis in our national and world affairs, it is imperative that once again Americans band together toward a common goal—the goal of survival of our Nation.

True, we are not assailed by tribes of tomahawk-wielding Indians. Far worse, we are confronted with a totalitarian force which seems bent upon imperiling the peace and safety of the entire world—aggressive and godless communism.

Those qualities which our forebears exhibited during those dangerous years of settlement of western Pennsylvania—the same qualities manifested in perhaps a different way during this year of project 60—represent the moral fiber of which freedom fighters are made.

Following the recent collapse of the Paris summit conference, we may all be called upon to make further sacrifices in the cause of greater preparedness.

As President Eisenhower said in his speech of May 26, "we must keep up our strength and hold it steady for the long pull."

And speaking of America's policy of strengthening freedom President Eisenhower further stated, "We must do far more than concern ourselves with military defense against—and our relations with—the Communist bloc."

"Beyond this," he finally said, "we must advance constructive programs throughout the world for the betterment of peoples in the newly developed nations."

Therefore, the community spirit which made project 60 the tremendous success we see before us here in Hollidaysburg must be infused throughout the entire Nation.

And that sense of destiny, which earlier sustained our Pennsylvania pioneer forebears, must guide our entire Nation in its never-ceasing efforts to keep the free world truly free.

As I close, Mr. Chairman, let me congratulate again each and every one of you who participated so magnificently in project 60.

This undertaking of the citizens of Hollidaysburg is truly a thrilling example to the rest of Pennsylvania, and to the entire United States, of the achievements of concerted action at the community level.

In thanking you for inviting me to participate in this evening's program, let me urge you to keep up the good work because your efforts here are not only helping to build a better community, but also a better Nation.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Address Delivered by Senator Bridges at FBI Commencement Exercises

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 21, 1960

Mr. MUNDT. Mr. President, I ask unanimous consent that there may be inserted in the Appendix of the RECORD an address delivered by the Honorable STYLES BRIDGES, senior Senator from the State of New Hampshire, delivered at the commencement exercises of the Federal Bureau of Investigation, held in the city of Washington, D.C., on June 8, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY U.S. SENATOR STYLES BRIDGES, REPUBLICAN, OF NEW HAMPSHIRE, AT THE FBI COMMENCEMENT EXERCISES IN WASHINGTON, D.C., JUNE 8, 1960

Mr. Hoover, Mr. Justice Clark, Mr. Assistant Attorney General Morton, Mr. Bartley, distinguished guests, members of the graduating class and your friends and associates, it was just 14 years ago when I had the privilege of giving a commencement address here once before. It's good to be back. This year marks the 25th anniversary of this Academy, one of the very unique institutions in this Nation. Director J. Edgar Hoover is universally recognized today as one of our greatest living Americans—a man whose entire life has been devoted to the single ideal of service to his country without thought of self-interest or politics. His numerous contributions to more effective law enforcement are well known to all of you, but I regard the creation of this Academy, 25 years ago, almost as a stroke of genius and great credit must go to all his associates in the FBI organization and in the hard-working staff that conducts this Academy, who have prepared this course and who have made this Academy world renowned.

I am particularly proud of my own State of New Hampshire which now has 25 graduates from this academy and of Chief of Police Richard Flynn of Dover, N.H., who is a member of this graduating class.

Hundreds of thousands of young men and women are graduating at this time of year from colleges and universities. The great service academies at Annapolis, Colorado Springs, and West Point this month will graduate our future naval and military leaders in colorful and impressive ceremonies. The leaders of this country's continuous war against a crime graduate from the FBI Academy twice a year. Actually, of course, this is really a sort of postgraduate course for all of you in forms of police administration and law enforcement as you are already qualified and trained professionals or you wouldn't be enrolled here. According to Director Hoover, our annual tribute to crime has now reached the incredible total of $22 billion per year. In this sense, crime does pay as it snatches $9 from our pockets for every dollar we donate to churches and religious work. In 1958 our population had increased a trifle less than 2 percent over 1957—but crime in this Nation jumped 9 percent.

According to the FBI figures, we now have a murder, forcible rape, or assault to kill committed in the United States every 4 minutes. Last year, some 271,000 automobiles were stolen and, as you have to deal with the problem of mounting crime, I am sure you are as deeply disturbed with the problem as I am.

We used to believe, you know, that crime was largely the product of poverty, of ignorance, of lack of schooling, of bad companions, and "bad home influence." Now some of our most shocking and senseless crimes are committee by youngsters from fairly good homes, some the very best homes, and the products of the best and most expensive educational system in the world. Some 800,000 youngsters under 18 years of age were arrested in 1958 for crimes other than traffic violations.

Obviously, 800,000 juveniles involved in crimes in one year could not all have come from "broken homes" or "underprivileged families." Most professional men in police work, I think, recognize that that source, at least, is not wholly the cause.

Testifying last February before a congressional subcommittee, Mr. Hoover stated that lewd films, indecent magazines, sensational yellow journalism, and lurid crime-inciting TV shows were in part responsible. Particularly those books, magazines, TV shows, films, and other media which glamorized and glorified criminals rather than the old-fashioned virtues which most of us knew in growing up in this country.

Adolescents naturally like to think they are grown up. So, it is not hard to understand why some of them should ape the manners and morals of what they conceive to be the sophisticated and the "smart" people. They little realize that these ultrasophisticates actually represent the wormy and rotten fruit on the tree of culture.

Just as sex deviates often fancy themselves a third and superior sex, so the intellectual decadent feels quite sure that he represents a new and sparkling elite. I draw a sharp line, of course, between the sex degenerate, who is a psychopathic problem, and the intellectual degenerate, who is harder to detect and expose. This whole problem, menacing our culture and our way of life, has been inadequately studied and reported.

Instead, we have seen that whole new development in this country of the so-called social scientists who tend to blame everything on society or the system instead of the individual responsible for the criminal or antisocial activity. Indeed, there is even a small segment of this new school of behavioral science, perhaps we should call them, prepared to argue there is no such thing as the criminal type. There are only misunderstood problem people.

Today, of course, everything is a problem—even such simple things as lawbreaking or gross breaches of the accepted moral codes. And needless to say, problems can only be studied and treated by specialists and experts. To these problem experts there are no criminals or bad actors—just maladjusted people. Their maladjustment, they say, is never the responsibility of the individual concerned or those who failed to bring him up properly—it is all the fault of organized society. It is as simple as that.

We often tend to go from one extreme to the other in our attempts to solve all the problems of life. Up to 60 or 70 years ago it was believed that severe punishment was the only answer to crime. Until recent times savage prison terms and often brutal treatment in many countries of the world were the answer to the punishment of crime. Today, the concept of crime has had a change. It is probably well known to most of you, but I want to observe that many of us feel that in dealing with crime the pendulum has swung too far the other way.

The Chessman case is probably a good example of the other extreme in giving a condemned, hardened criminal every advantage to be squeezed out of the law.

I am sure you are all familiar with the Mallory case. This was an extraordinary example of stretching the law to the breaking point through the use of a needle's eye technicality. The U.S. Supreme Court ordered the conviction of Mallory thrown out—even though he had admitted his guilt—on the technicality that he had been held for questioning a few hours longer than was considered proper before arraignment. Here we have a case where the Court was more concerned with correcting what it believed to be a minor abuse of police power than it was in seeing that justice was done in a major crime. So Mallory was freed and went on to Philadelphia where you know by the papers he recently allegedly committed the same crime.

Now in 1958 all forms of murder in the United States took 8,182 lives. There were 75,347 armed robberies and 679,000 burglaries. These are disturbing figures. But they are small indeed in comparison with the toll taken by the worldwide criminal conspiracy known as communism.

No accurate figure exists for the total number of human lives taken by Communists all over the world since the Bolshevik seizure of power in Russia in 1917. But it is generally estimated, and in my judgment the estimates are correct, as between 30 and 40 million human lives. Five million people perished alone in 1931 and 1932 as a result of Stalin's "liquidation" made possible by a manmade famine.

The horrible part of these Communist mass murders, dwarfing any others in history, is that they were ordered and carried out with complete detachment and in a spirit of absolute righteousness. These Communist massacres were not based on anger, hatred, or even blood lust—the most common reason for most murders. Communists murder entire classes of people and entire social groups solely on the grounds of what they believe to be "socialist hygiene." Their reasons are as impersonal as that of a cattleman or a farmer who reluctantly kills off some diseased cattle lest they infect and destroy the whole valuable herd.

As for the not-so-gentle art of robbery, here too the Communists make ordinary criminals appear softhearted. They never settle for just part of their belongings—they want to take everything as Mikoyan boasted to Castro recently in Cuba. Only in Communist terminology they use the word "expropriate"—it's nicer sounding than stealing or robbery because it comes from Latin.

I did not come here today to deliver another speech against communism. We've been denouncing communism and Communists in this country now over 40 years, and

I'm sorry to say, in many instances, we still have an apathetic public. I mention communism today for two reasons. One, because communism and internal subversion will continue to be a big problem for law enforcement officials for some time to come in the future. This means your profession will have to devote considerable time and study to the ramifications of communism.

Let me remind you that some of the most authoritative information available on communism will be found in the congressional committee reports and hearings which you can obtain by writing your Senator or your Congressman or to the committees directly. You can also turn to Mr. Hoover's book, "Masters of Deceit," which should be a handbook for every well-informed police officer. May I also call your attention to a book written by the former chief of police of Salt Lake City who has published one of the best books on the subject entitled "The Naked Communist."

Almost everybody is against communism, but all to few of us fully understand the nature of the beast, and even fewer of us are prepared to do anything practical to expose and retard it from making further inroads in our society. Merely being against leprosy is not going to do much to stop the spread of that dread disease or to prevent others from contracting it. Communism has been aptly described as leprosy of the human soul. Or, if you prefer, the syphilis of the human intellect. It is most positively not the result of poverty and ignorance as so many well-meaning but badly informed people will still try to tell you today.

During 1947 and 1948 when the House Committee on Un-American Activities Committee was holding its sensational hearings exposing Soviet atomic espionage in this country, a long list of witnesses took the fifth amendment, not only on the question of whether they were Communists, but also whether they had ever engaged in espionage. You can look the list over and you will find, with a few exceptions, that most of them were native-born Americans with exceptional scholastic records in some of the best schools and colleges in this country. That's a shocking thing.

One could also very easily draw up a long list of Americans of considerable wealth and fine educations who have been deeply involved in various other aspects of Communist subversive activity in this country.

Secondly, many leaders of the West still make the mistake of assuming that Communists think and act like normal human beings. They are bent on world domination and the creation of a world Soviet state, and anything they do is predicated solely on the single question—Does this advance the world revolution?

That is why I firmly believe that we are permitting ourselves to be boobytrapped over the so-called summit situation—fiasco, some people call it. Khrushchev knew in advance that Western unity could not be split at Paris. He knew he would get very little or nothing in the way of concessions. Why, then, go to Paris and waste time negotiating with people he despises anyway and have to come back and report to his people and the satellites over the world that he came back empty-handed?

He also knew that President Eisenhower had less than 8 more months to serve and that any agreements worked out with him might be rejected by his successor or the next administration. That is why he torpedoed the conference and said he would be ready to talk again in 6 to 8 months. The U-2 plane incident was made to order for his scuttling act, but had it not occurred, believe me, he would have forced a showdown over some other issue, and charged the West with bad faith anyway.

The lesson of history has been all too plainly written—you can't do business with Communists. It is high time we stopped kidding ourselves that through endless talks with Communist leaders we may be able to find mutual agreement and accommodation that they will keep. We may be able to find areas of mutual agreement sometimes, but if a maniac in your community threatens to kill you and your family and has demonstrated that he means what he says, having killed several people prior to that, what in the name of commonsense would the object be of negotiating with him? You might be able to negotiate for a little more time. You might be able to negotiate the choice of the cemetery where you are going to be buried, but if he persists in threatening to kill you, the real area of any possible negotiation is practically nil.

You would be better advised to have him locked up and put out of circulation, or, failing that, to defend yourself to the utmost against any surprise or treacherous attack.

We learned to our cost that one could not do business with Hitler and the Nazis. Millions lost their lives, their countries, and their freedom as the result of chasing the will-o'-the-wisp hope that if only we tried hard enough and talked long enough, we might persuade that madman from his openly announced designs. Why anybody in his right mind and knowing the facts of history in this late day still believes and asks others to believe that somehow we can work out things with Khrushchev and the Communists is beyond me.

I understand that this academy has graduated close to 4,000 law enforcement officers in the past 25 years. I congratulate Director Hoover and his able staff on the fine work they have done. This postgraduate academy has been very effective. A Federal police force which some people advocate in this country would be a direct contradiction to the 10th amendment to the Constitution reserving to the States all rights and functions of Government not spelled out in the Constitution. It would also create a most undesirable precedent for further expansion and extension of Federal power into every community and village in this country. The manner and the way in which the FBI has conducted itself during the years of its existence are probably the best argument we have against some of the people in this country who have been trying from time to time to create a national policy system.

After some 300 years of local self-government, I think Americans have more than amply proven they can also police their own communities without Federal intervention, and I would be similarly doubtful about any other device directly trying to set up a Federal clearinghouse for local police information and records. I am not so sure that the Federal Government under the 10th amendment should be asked to act in this capacity for States and communities.

I know you have all profited from this course. I know you will go back to your own communities better equipped to face the mounting problems of crime and subversion. We face dark and uncertain days ahead as long as the men of the Kremlin and Peiping continue their plotting against the free world. This is a long-time proposition I point out to you, and may last during your entire lifetime. You may face this problem of outside and inside threats. You will be in the front lines on the home front, and you will need all the courage, all the intelligence, and all the fortitude you can muster. I am deighted to be with you on the occasion of this graduation, and I extend each and every one of you my best wishes and good luck in your chosen profession.

Water Pollution Control and the National Health

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by L. E. Burney, M.D., Surgeon General, U.S. Public Health Service:

WATER POLLUTION CONTROL AND THE NATIONAL HEALTH [1]

(L. E. Burney, M.D., Surgeon General, Public Health Service, U.S. Department of Health, Education, and Welfare)

More than half a century ago, at about the time the National Rivers and Harbors Congress was formed, Theodore Roosevelt wrote: "The Nation behaves well if it treats the natural resources as assets which it must turn over to the next generation increased, and not impaired, in value."

It is a real privilege and pleasure for me to speak this afternoon to a group which has been responsible for a large measure of the good behavior our Nation can claim in the past 50 years.

I find it interesting to reflect that in a world of ceaseless change, man's absolute dependence on water stands as an eternal constant. Our modern jet-propelled, nuclear-powered society is as dependent on water as were the civilizations which developed 6,000 years ago in the valleys of the Nile and the Tigris-Euphrates. Now, as then, an adequate supply of usable water is both a biological and an economic imperative.

Virtually every nation in every age has had a water problem. The characteristics of the problem change as man's uses of water become progressively more diverse and complex. But the fundamental problem remains the same—getting enough water to the right place at the right time, in usable condition.

My talk this afternoon is concerned chiefly with the qualitative aspects—the usable condition factor. But so interwoven are the many strands of the water problem that it is impossible to separate considerations of quality from considerations of quantity. Problems of water supply are inseparable from problems of waterborne waste disposal. Economics and health are indivisible.

All of you are well acquainted with the overwhelming statistics on water usage, both today and in the foreseeable future. The volume of fresh water used daily in the United States has increased sevenfold since the turn of the century, and almost doubled since 1945. By 1980, according to the most reliable projections available, our fresh water needs will have doubled again, reaching the astronomical figure of 600 billion gallons, or 1.8 million acre-feet, per day. A week's ration of water, at this rate, would submerge Manhattan Island to a depth of 1,000 feet.

Meanwhile, of course, the bountiful natural supply on which we must draw remains constant over the years. It has been calculated recently by water supply experts that not more than 515 billion gallons per day will be developed for use by 1980, making optimum use of impoundments and other quantity management methods. It is on this fresh water supply of 515 billion gallons that

[1] Presented at the 47th Annual Convention of the National Rivers and Harbors Congress, Washington, D.C., May 26, 1960.

the continued growth and prosperity of the United States depends.

The arithmetic of the situation is elementary. We can develop 515 billion gallons per day by 1980. We shall need 600 billion. A cynic might observe that we are spending water like money. At any rate, something must be done to deal with this deficit financing of our water budget.

Of the courses open to us, two have intrigued scientists for ages—desalinization of salt water and weather modification. Both are under intensive study. But in all candor, the likelihood of practical application of either method, in terms of large quantities, is slight, for economic reasons. It appears that we would be unwise to stake our future upon either possibility.

Major diversions between watersheds, to redistribute water according to our needs instead of nature's whims, offer vast and tempting possibilities. A network of giant power stations and canals fed by excess floodwaters from such rivers as the Colorado, Missouri, and Columbia, or by the world's mightiest fresh water reservoir, the Great Lakes—this is indeed an engineer's vision of utopia. Parts of the dream have already been realized, and more will become feasible with time. But such diversions carry with them tangled legal, poltical, and constitutional questions which, as you know, can be more difficult to resolve than engineering problems.

It is apparent, then, that regardless of our relative success or failure with other methods, a great share of our water requirements must be met through reclamation and reuse of water on a much larger scale than has been achieved up to the present. Already, on many of our watercourses, we are using the same water many times as it flows from the hills to the sea. In the years ahead we must do much more of the same.

It is at this point, of course, that the threads of quantity and quality become inseparably interwoven. And it is at this point that considerations of the national health enter the economic equations.

The three controlling trends of contemporary American life are the upsurge of population, the growth of the metropolis, and the expansion and diversification of industry. We are accustomed to dealing with these as the basis for our quantitative predictions. Let us consider them in the context of water quality.

Since I began talking, a few minutes ago, the population of the United States has increased by 30—not just 30 births, but 30 more births than deaths. At the current rate, we shall have added more than 2½ million people by the time your Congress convenes next spring—considerably more than the entire population of the Washington metropolitan area.

Simultaneously, an ever-higher proportion of us are living in cities. We are already in the age of the metropolis. We are fast approaching the age of megalopolis—super cities stretching along the Atlantic seaboard from Boston to Washington; along the Pacific Coast from San Diego to Seattle; along the Ohio River Valley and the southern shores of the Great Lakes. Note again, in passing, that civilization follows the watercourses. And then consider with me the impact on water quality, and the implications for human health, of these facts of life.

Increased population and urbanization pose a double-barreled problem. The more people, the greater the quantity of high quality water which must be delivered. At the same time, the quantity of domestic wastes which must be disposed of increases proportionately. In most parts of the country, the same waterways must serve both as sources of supply and as channels of waste disposal.

Thus, water supply intakes and sewage disposal outfalls are wedged closer and closer together. Heavier demands are placed upon both sewage treatment and water purification. And the margin of safety against communicable diseases becomes thinner.

Thus our traditional health problem—protection against waterborne disease—is complicated by population growth and urbanization. In the past several decades, the success of our water and sewage treatment methods has been outstanding. It is clear, however, that our precautions must be redoubled if we are to cope successfully with the aggravated threat of the future. One city's water supply cannot be drawn chiefly from another city's wastes with impunity, unless the highest order of vigilance is practiced.

Moreover, there are still a number of unanswered questions in regard to micro-organisms in water. We know how to deal with bacteria, but we know very little about waterborne viruses. We know they are present, and that they may well pass the barriers of present water-treatment methods, but much remains to be learned about their actual and potential significance in the spread of disease.

Thus far we have dealt with two of the three conditioners of our time—population growth and urbanization. When we add the third ingredient—the new industrial revolution of the mid-20th century—we add a whole new dimension to the problems confronting the health professions.

The growth of American industry in the past two decades is almost beyond comprehension. Industries today are dealing with processes and products which were unheard of prior to World War II. Synthetics, plastics, detergents, pesticides, industrial solvents, high energy fuels—the list of new chemicals in the environment can be extended indefinitely without even mentioning the soaring world of nuclear technology.

Two or three examples will suffice to demonstrate the scale of the problem. Since 1940, production of plastics has increased from 150 million to 5 billion pounds; synthetic detergents from 15 million to 3.8 billion pounds; insecticides and other agricultural chemicals from 8 million to 540 million. It hase been estimated that 7,000 totally new chemicals are put to use every year.

The detergent suds and foam which are often visible around sewage treatment plant outfalls are symptomatic of the fact that many of these new chemicals pass unchanged through our treatment process. Some of them actually impede effective treatment. What they do to human beings, cumulatively over a period of many years, is still in the realm of conjecture.

In essence, we are in process of creating a new physical and chemical environment. The water we drink, and the air we breathe, are not what they were 20 years ago. And the challenge to health posed by this new manmade environment differs strikingly from our traditional public health concerns, in several significant ways.

The first of these is the nature of the biological assaults. The health professions and the public are accustomed to the microbial disease pattern. The disease strikes; a period of illness is generally followed by recovery and often by residual immunity. The timespan is relatively short between exposure to the disease and onset of symptoms. The cause and effect are relatively easy to detect.

By contrast, the biological effects of chemicals in our environment, or of low-level radiations, may build up over long periods of time. Relating effect to cause is extremely difficult. A single disease may result from a number of causes. The hazard to the individual is related to the cumulative total of radiations or toxic chamicals received throughout his lifespan, continuously or intermittently, whether their source be water, air, food, or any of several others.

Another way in which the new environmental challenges differ from the more traditional health problems has to do with the complexity of the political, social, and administrative structure within which solutions must be found and applied. Traditionally, the responsibility for environmental health protection has rested with the level of government closest to the people. The local community, aided as necessary by the State, has been the first line of defense.

But the growth of the metropolis has greatly complicated the structure of local government and its relation to the State. Many of our metropolitan areas already sprawl across State boundaries. Each of them is in itself a constellation of governmental and quasi-governmental agencies. What is essentially a common water supply, a common air supply, or a common transportation system is dealt with fragmentarily by literally scores of officials and groups. Successful solutions of these problems must be worked out within these new administrative and political patterns.

Finally, and of greatest significance, the nature of our goals is necessarily different. When we are dealing primarily with microbiological enemies of man, we can in a sense go all-out. We can aim for total eradication. If we can eliminate malaria or smallpox from the face of the earth, everyone gains and no one loses.

But when we are dealing with the possible harmful effects of the byproducts of industry or the wastes of nuclear technology, we cannot seek total victory. We must accept a certain amount of deterioration of our environment if we want an urban, industrial society. On the other hand, it would be the height of folly to develop a shining metropolitan, industrialized, nuclear-powered world for a human race whose health had been seriously impaired in the process.

In sum, the Nation must seek a balance which permits maximum development of our economy at minimum hazard to health. The basic decisions in the water resource field, as in many others, are economic and social. But they must be made in terms of biological reality. There is a limit to what we can accept as progress—a limit imposed by the conditions necessary to man's health and well-being.

Looking to the future, it is plain that we need much more information which can only be developed through research. We need to search for improved, perhaps even radically different, methods of treating sewage and industrial wastes. And in the medical field, we need to accumulate evidence as fast as we can on the long-term biological effects of the new pollutants, singly and in combination.

But these facts, especially those related to health effects over periods of years or even generations, will inevitably be slow in coming. Meanwhile, there is the urgent need to apply what we already know. We cannot afford to wait for final proof before taking action.

In the past few years there has been an encouraging rise in the annual rate of construction of municipal sewage treatment facilities—from an average annual expenditure of $222 million during the period 1952–56 to an average annual expenditure of $360 million in 1958 and 1959. But the cold statistics of population expansion tell us that a still greater annual expenditure—in the range of $575 to $600 million—will be necessary to keep pace with the needs.

Similarly, there have been encouraging indications that a number of industries are becoming progressively more willing to accept their share of the responsibility for pollution abatement. Here, as elsewhere, a tremendous amount remains to be done.

As an indication of the importance we in the Public Health Service attach to these problems, we are presently undertaking a major reorganization of the Service, a prin-

cipal feature of which will be to give added prominence and stature to our programs in water, air, radiological health, and other environmental fields. Meanwhile, plans are going forward for a National Conference on Water Pollution, requested by the President, to be held in December of this year.

Viewing the vast and complex panorama of the water resource problem, from the standpoint of public health, it seems to me that water pollution control is in a peculiarly strategic position. Pollution control stands at the point of confluence between the rivers of economics and health.

Water pollution control, by reclaiming water for reuse, serves the ever-growing quantitative needs of the economy. Simultaneously, pollution control strengthens the barriers against disease and promotes the conditions favorable to health.

Thus, pollution control is doubly imperative. And our efforts to abate pollution should benefit from this double stimulus. We in the public health profession welcome full partnership with all of you who are concerned with water's many services to man. In essence, our joint efforts serve the same goals, which are the goals of the Nation.

U–2: Making the Points

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, June 21, 1960

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article which appeared in the June 13, 1960, issue of Newsweek, as written by Mr. Ernest K. Lindley, entitled, "U–2: Making the Points." In this article Mr. Lindley concludes with the statement:

The Presidents' decision to proclaim his responsibility for the U–2 flights, was, I think, sound and forward looking.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U–2: MAKING THE POINTS
(By Ernest K. Lindley)

The Senate Foreign Relations Committee's inquiry into the U–2 episode has been conducted admirably. Not the least of its virtues has been speed. It seems unlikely that this committee will reach unanimous recommendations. But Chairman FULBRIGHT has made it plain that, in his mind, the central issue is the President's assumption of responsibility.

For a chief of state or head of government publicly to assume responsibility for espionage is unprecedented. It naturally disturbs those who attach overriding values to the rituals of diplomacy. Perhaps the traditional convention that governments do not admit engaging in espionage has been useful, on the whole, in the past. But conditions and circumstances change. The straitjacket of diplomatic precedent is a poor substitute for commonsense and constructive thinking.

These points, among other, deserve notice:

1. The U–2's (which mapped the U.S.S.R.) and their pilots were not engaged in espionage in the traditional sense. They were not practicing the "black art." They were engaged in what is usually known as reconnaissance or scouting. Pilot Powers was not trained as a CIA agent. His wife and parents had good reason to deny that he was a spy. In the usual sense of the word, he was not. He flew a plane and pushed the buttons that operated its cameras and the other equipment aboard.

2. It is by no means certain that any of the previous U–2 flights were illegal. The altitude above the earth to which a nation's sovereignty extends has never been determined by international agreement. The traditional rule is said to be that a nation's sovereignty extends as high as it can exert effective control. But that rule, the U–2 flights were not illegal so long as the planes flew above the reach of Soviet air defenses. How high these defenses can now reach is uncertain. The President and other American officials have surmised—probably more than surmised—that engine trouble forced Powers below the usual cruising altitudes.

3. The Soviet contention that such flights are provocative appears to be tied to the thesis that they might be carrying bombs. Nobody in his right mind would suppose that the United States would attempt to bomb the U.S.S.R. with one plane. The Soviets themselves had made reconnaissance flights over Pakistan and other nations, above the ceiling of their air defenses. Incidentally, an Indian reconnaissance plane approaching Rawalpindi, Pakistan's command headquarters, was shot down last year. The Indian attitude was that shooting down their plane was unfriendly.

4. The out which Khrushchev offered President Eisenhower was also a trap. Had the President accepted it, he could hardly have avoided apologizing for the flight and punishing those responsible for it, besides promising there would be no more such flights. He would also have fueled the false Soviet propaganda thesis that American military and other subordinates are irresponsible and not under the firm control of the President.

5. When it became certain that the Soviets had the pilot and the plane, further attempts to pretend that this was not an authorized reconnaissance flight became palpably absurd. The best way to restore confidence in the word of the American Government was to tell the truth.

6. Reconnaissance satellites, probably within 2 or 3 years, will make a mockery of the present Soviet thesis.

7. The right course for the United States and all other nations which do not plan aggression, is to keep on pressing for international reconnaissance. That would provide a large measure of protection against surprise attack, hence against nuclear war. The U–2 flights were an interim substitute, compelled by the Soviet refusal to cooperate in mutual or UN inspection. The President's decision to accept responsibility underlines this fact and points the way toward the only constructive solution for mankind.

Deceit and hypocrisy are poor instruments of sound international relations. We may well leave them to the Communists, who, since Lenin, have glorified them. A pretense so diaphanous that it conceals nothing is worse than worthless. The President's decision to proclaim his responsibility for the U–2 flights was, I think, sound and forward-looking.

Good Reasons for Doubt

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Allentown (Pa.) Morning Call of June 16, 1960:

GOOD REASONS FOR DOUBT

Representative FRANCIS E. WALTER, whose personal Spartan habits were noted by those who have been exposing alleged abuses of congressional expense accounts, has shed some new light on the charges that have been hurled in copyrighted newspaper and magazine stories.

He explained that it was the invariable policy of his own Committee on Un-American Activities, that none of its members or staff could charge personal expenses to a Government account. Other committee chairmen and members have said as much.

The eastern Pennsylvania Congressman, however, went quite a bit further in casting some reasonable doubts on the validity of the stories, if not on some of the ethics that most newspapermen like to regard as part of their craft.

He made it clear, for example, that those who charged his committee with conducting a traveling road show knew that hearings were conducted in various parts of the country for a specific purpose. That purpose was to definitely uncover pipelines Communists have been using to mail their propaganda to various ethnical groups in different sections of the country, to show that there is a pattern.

He noted, too, that the authors of the series knew that the books they charged the committee and its staff with removing from the Library of Congress and never returning, were taken out by the old Dies committee, the predecessor of Representative WALTER'S investigative group.

He wrote into the record other things the authors missed: that when members of the committee and its staff used limousines instead of taxicabs for transportation to hearings in New York and San Francisco, they actually were saving money; that occasional presumably high charges for hotel expenses included rooms used for conferences rather than simply private accommodations.

In respect to his own committee, at least, Mr. WALTER makes quite a sound case for branding the articles as "scurrilous" and "vile." More than that, the answers he has given, his own exposé of some of the quite obvious omissions in the series, surrounds other charges with some reasonable doubt.

Resolution Adopted by the Racine, Wis., Branch of the Lithuanian American Council, Inc.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 21, 1960

Mr. WILEY. Mr. President, the deceitful tactics of the Communists, following World War II, have resulted in denying freedom not only to the people within the Soviet Union, but also in the orbital countries.

Despite two decades of being under the heel of communism however, these patriotic peoples have never lost their zeal for, and dedication to the ideals of freedom. Here in this country, the Americans of Baltic descent, also, continue to support, and urge expansion of efforts that will ultimately lead to the freedom of such lands as Estonia, Latvia, and Lithuania, as well as others under Communist domination.

Today, I was privileged to receive from Mr. Peter Petrusaity, secretary of the Lithuanian American Council, Inc., of Racine, Wis., a resolution adopted at a recent meeting of the Americans of Baltic descent.

Reflecting the way in which this spirit of freedom has been kept alive in these great peoples, I ask unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas 20 years ago Soviet Russia forced upon helpless Lithuania and her sister nations Latvia and Estonia a mutual assistance pact whereby it illegally seized these nations; and

Whereas despite the deportation of hundreds of thousands and the absence of freedom for two decades the people are still hopeful of someday being allowed to rejoin their position among the free world; and

Whereas despite recent cultural exchanges with Russia the exhibition by Soviet Premier Khrushchev during and after the summit talks displayed there has been no change in the U.S.S.R.'s bold game of political warfare; and

Whereas the view expressed by President Eisenhower in Manila that those under Communist oppression will "not eternally remain chained" is indeed encouraging; Therefore be it

Resolved, That the United States look to the enslavement of the Baltic nations to see the true nature of communism's aims; and be it further

Resolved, That the ideological differences between the free world and Kremlin totalitarianism be clearly understood by the multitude of the American people by keeping them better informed of the events of prime importance to all of the world's population; and be it further

Resolved, That the United States step up its role as a world leader in the fight for freedom and justice for all nations; and be it further

Resolved, That the State Department create a study group to plan a course of action to be followed in the event of a revolution in the Baltic States so that immediate assistance can be rendered to assure permanent restoration of freedom in light of Hungary's attempt in 1956; and be it finally

Resolved, That we express our deep gratitude to the Government of the United States for nonacknowledgement of the incorporation of the Baltic States into the Soviet Union.

MARTIN KASPARAITIS,
Chairman, Lithuanian American Council.

VALENTINS JAUNKALNIETIS,
Representative, Americans of Latvian Descent.

OLGA MALRE,
Representative, Americans of Estonian Descent.

RACINE, WIS., *June 19, 1960.*

North Dakota Girl Discusses American Education in Valedictory Address

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. SHORT. Mr. Speaker, recently I had the opportunity to read a copy of the address given by Barbara Unzelman, the 1960 valedictorian of the Linton (N. Dak.) High School at her graduation exercises.

The remarks of this young lady indicate to me an unusual ability to analyze our present educational system and some of the serious problems facing this county. Since I have a deep concern over our responsibility of thoroughly educating our young people in a proper appreciation of what it means to live in America, I commend this fine young lady's remarks to my colleagues in the House of Representatives:

AN AMERICAN EDUCATION
(By Barbara Unzelman)

Our graduation this evening represents the end of a very formative period in our lives. We have received the best that our school can give to us. Now we must decide how we will continue our educations. Although we are young, we realize that life is a precious gift, and that there is no substitute for living it. Learning is in parallel with life itself. We cannot live without collecting facts day by day.

We have received a traditional education, one which educates the mind, builds character, increases self-reliance, and develops a competitive spirit within the student. We have been taught to think; to deduce new facts from previously known facts.

Ours has been a traditional education; one whose goal was to teach us through the mistakes of our forefathers so that we would not have to make the same mistakes. Our heritage has been a vital part of our education, but today, a form of education exists which shuns the glorious past of our Nation. This type of education is called progressive education. Its name is deceiving, for progressive education is anything but progressive. Although John Dewey introduced progressive education into America at the turn of the century, many of its ideas have come from men like Thomas Huxley, Charles Darwin, Herbert Spencer, and Karl Marx.

Progressive education educates the group, not the individual child. It has been accused of causing the increase in the juvenile delinquency rate in America. Its advocates teach that God does not exist, that it is a waste of time to look to religion for standards of conduct, ethics, and truth. Teenagers who have been brought up under the yoke of progressive education are taught that religion is nonexistent. They are restless and confused. They are uncertain about ideals and standards. According to Professor Sorokin of Harvard University, immorality may destroy this country far quicker than communism.

The originators of progressive education are seeking a socialistic revolution in America. They employ the same methods that the Communists are using in the Soviet Union. They are not concerned with changing the ideals of the older generation, but they concentrate on indoctrinating the children. In a few years these children will be the men and women of America.

An example of this was found in the Teachers' Guide, a magazine used by 5 million children. This question was raised: "Is the United States a land of opportunity for all people?" This answer was printed below: "The United States is not a land of opportunity for all our people, for one-fifth of the people do not earn any money at all * * * The majority do not have any real security."

Sometimes the so-called progressive education tends to border on the ridiculous. In the catalog of Michigan State University, courses are listed for credit in "Beginning Bowling, Canoeing (care and use of, paddling strokes, packing, etc.) and Square Dance and Square Dance Calling."

As we leave our elementary and secondary educations behind, we enter colleges and universities and become a part of the working force our Nation, we must be aware of the value of the right kind of education. It is our duty to fight to keep the educational standards of America where they should be. We must realize that ignorance is not bliss, it is a disgrace.

Americas Respond to Chile's Necessity

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 21, 1960

Mr. WILEY. Mr. President, in a world in which the United States is attempting successfully to carry out its role of leadership—thrust upon it by time and events—we often hear more about the things we don't do—or differences of opinion on what we do—than about our real accomplishments.

Recently the country of Chile, in South America, suffered from one of the most devastating catastrophes as a result of earthquakes in the recorded history of mankind.

In the face of such broad-scope disaster, the United States, as in similar past emergencies, came to the rescue.

In a world in which free and Communist systems are contesting each other, the United States—while Khrushchev was rattling his rockets—has been winging fleets of mercy planes to Chile to help meet the needs of the victims of the quake.

This effort reflects our fundamental concern for humanity—not only among our people but in our national policy.

In addition to the airlift itself, the American people deserve real commendation for such voluntary efforts to help meet emergency needs of a people faced by disaster from natural or other causes.

Recently, the Christian Science Monitor published an article by Claude E. Erbsen entitled "Americas Respond to Chile's Necessity." The article reviews not only the efforts of the United States but of our sister American states to help the Chileans. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAS RESPOND TO CHILE'S NECESSITY
(By Claude E. Erbsen)

BOGOTÁ, COLOMBIA.—Few events have provided as much of a stimulus to inter-American cooperation as the recent tragic earthquakes in Chile.

The earth still rumbled last month when planes began to take off from airfields throughout Latin America bearing the first shipments of emergency supplies for the victims of the quake. As the magnitude of the disaster became known, a full-size international mercy fleet took to the air, establishing a regular emergency airlift to Chile.

From Argentina came 22 aircraft and 2 Cabinet ministers charged with ascertaining Chile's immediate needs and requirements. Other aircraft came from Peru, Ecuador, Brazil, and Uruguay, and from as far away as Colombia, Venezuela, and the United States.

REACTION IMMEDIATE

Colombia dispatched an Air Force DC-4 within hours after the first tremors, and Venezuela followed suit almost immediately with a civilian Super Constellation.

The U.S. Air Force sent planes from Panama and U.S. Caribbean Command bases on equally short notice, augmenting its contribution daily, until more than 70 giant Globemaster planes were involved in the airlift.

The hemisphere's response to the Chilean tragedy has been immediate and far reaching. Special relief funds have been started throughout the hemisphere, and contributions are pouring in rapidly from all sectors of the population, and particularly from the working classes.

In Colombia collections have been started in most business establishments, and participation has been almost universal. The underpaid Colombian armed forces have voted a day's pay to the Chilean relief fund, and many employee groups throughout the country have followed the example of the military.

CONTRIBUTIONS POUR IN

Cash contributions have been pouring into the offices of the Red Cross, the newspapers, and a special bank account for Chilean relief which has been opened at the Banco de Bogatá.

In addition to their early contributions of emergency supplies, most Latin American countries are now preparing to send Chile additional supplies for relief and reconstruction.

CUBA SENDS CADETS

Every country in South America has made clear its solidarity with Chile by sending rescue aircraft, personnel, or gifts to Santiago.

Peru supplied planes and medicines. Cuba sent aircraft and a detachment of cadets who were in Argentina to celebrate the 150th anniversary of that country's independence when the disaster first struck in Chile.

Even Bolivia and Paraguay, the hemisphere's most backward nations, sent Air Force units to Chile as soon as news of the disaster had reached their capitals.

The Latin American press has hailed the spontaneous response to Chile's plight as "a historic event that may well foreshadow a new era in hemisphere relations."

The contribution of the United States to Chilean airlift has been immense, and it has not gone unnoticed in Latin America.

In Chile itself the people of Santiago have shown their appreciation for U.S. help by greeting U.S. airmen with the same effusiveness they met in Berlin during the blockade or in France and Italy after the liberation.

In the eyes of Latin Americans a new link in the chain of hemispheric cooperation has been forged in the rubble of Puerto Montt and Valdivia.

Hon. Douglas H. Elliott

SPEECH

OF

HON. HERMAN T. SCHNEEBELI

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. SCHNEEBELI. Mr. Speaker, since DOUG ELLIOTT and I were sworn into office together a short time ago, I have felt a special kinship and perhaps a closer relationship with him than most of the other Congressmen. We usually sat together at the sessions, discussed policies and procedures and were mutually concerned with many of the initial problems confronting a new Congressman. With this background of sympathetic understanding, I felt close to DOUG ELLIOTT since we shared the same emotional experiences at the beginning of our congressional careers.

Consequently I was deeply moved and very saddened to learn of Doug's sudden passing. His last 2 days in Congress we spent together discussing our thoughts and reactions to the legislation being proposed. It is difficult for me to believe that my friend will not be sitting next to me to confer further on our mutual opinions and reactions to the bills and amendments as they come to the floor for a vote.

I found DOUG ELLIOTT to be most conscientious in his voting; most studious in his attention to House actions, and I sincerely believe that his potential in becoming an outstanding legislator was unlimited. He had a great future before him in the Halls of Congress and from his initial actions it could be easily determined that he would have done exceptionally well for his constituents, his State, and the people of the United States. He had early gained the confidence and respect of his colleagues on both sides of the aisle.

My deepest sympathy goes out to Doug's wife and family in this hour of shock and bereavement.

Address on June 8, 1960, by Mr. Justice Clark, Associate Justice, Supreme Court of the United States Before the 65th Session of the FBI National Academy, Department Auditorium, Washington, D.C.

EXTENSION OF REMARKS

OF

HON. OMAR BURLESON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. BURLESON. Mr. Speaker, on June 8, the Honorable Tom C. Clark, Associate Justice of the Supreme Court of the United States, addressed the graduating class of the FBI National Academy which graduated 59 members.

This year celebrated the silver anniversary of the academy. The 59 members of the 65th session of this school, which includes law enforcement officers from 33 States, the District of Columbia, Puerto Rico, and the Dominion of Canada, increases the total number of National Academy graduates to 3,678.

Established in 1935, the National Academy has brought together cooperating law enforcement officers to meet the need of present day law enforcement. Remarkable progress has been made. It is inconceivable that our Nation could now be without the system, and it proves the foresight of the Director of the FBI, the Honorable J. Edgar Hoover, in inaugurating the academy and the system of cooperation which it engenders.

Mr. Speaker, I ask unanimous consent that the very fine and able address of the Honorable Tom C. Clark, Associate Justice of the Supreme Court of the United States, be printed in the RECORD:

ADDRESS ON JUNE 8, 1960, BY MR. JUSTICE CLARK, ASSOCIATE JUSTICE, SUPREME COURT OF THE UNITED STATES, BEFORE THE 65TH SESSION OF THE FBI NATIONAL ACADEMY, DEPARTMENTAL AUDITORIUM, WASHINGTON, D.C.

Thank you, Mr. Director.

Reverend Bartley, Senator Bridges, Mr. Assistant Attorney General, and my fellow Dallasite, Brother King, you know, Mr. Director, this is not only a great pleasure but a distinct privilege to be here today to harken to the beautiful strains of this distinguished Marine Band, to join in this beautiful prayer that the Reverend Bartley gave us, to hear the message of Class President King, to listen to the hard-hitting speech of my distinguished friend of many years, Senator BRIDGES, and to look into the eyes of these graduates of this great FBI National Academy and also to see the sea of people, hundreds of them, gathered here today, many, many standing in the aisles so that they might partake of this ceremony. As for academy graduations, Senator, this too is my second offense.

This morning as I entered the auditorium and met the Director, I felt like an old grad just coming back for a homecoming weekend. You know, I used to meet often with the classes. Sometimes it was in the gym; sometimes it was on the roof during pretty weather; and many times it was with Mr. Meyers, who I am sure has led you in your physical training work on many occasions, a most excellent servant of the people there in the Department of Justice. While I was Attorney General, over 1,000 men graduated from this same FBI National Academy from which you graduate today. For me, I believe, the fondest memory of these ceremonies is the inspiring sight of each of the officers coming up here to this platform, one by one, and receiving his diploma—I understand today from the Assistant Attorney General. Your diplomas are your insignia that you are now members of that distinguished and select company of the FBI National Academy. This is indeed an hour of great distinction for you. That is evidenced the more by the presence of all of these hundreds of people here today to witness your graduation. I am sure, too, that your communities, as they should be, are each proud of your accomplishments. Today you carry home with you a great tradition—the tradition of loyalty, of justice, and of integrity. I know that you will keep that faith.

In fact, Mr. Director, seeing the graduates this morning convinces me, although I have seen many classes, that this is perhaps the most intelligent class that I have had the privilege of meeting with. Now I know you immediately wonder why I say that. Well, I say that because they have elected my fellow Dallasite, Captain King, as their president. What more evidence do you wish? All Texas is proud of you, Captain King, and of the three other Texans who are here in this class. Now, Mr. Director, there are a total of 105 graduates—Senator, I don't want to make you feel bad—all actively engaged in the enforcement of the law in the great State of Texas. Now I ask you, What other State has 105?

This is the silver anniversary of the founding of your Academy. Mnay of us can remember back in July 1935, when the first class assembled here. The Nation at that time was still in the grip of dangerous hoodlum gangs which roamed the country, virtually at will, robbing and kidnaping, and killing. John Dillinger, you may remember, had gone to his death in a blazing gun battle in Chicago just a year before that meeting.

About the time of the graduation of the first FBI National Academy class, FBI agents brought to an end the infamous careers of "Ma" Barker and her son, Fred. Alvin Karpis, the leering criminal and gang leader, was still at large back there in 1935.

Now these were dark, tension-filled days, when FBI agents literally lived in their automobiles with their guns in their hands searching out these hoodlums. They faced danger straight in the eye, unhesitatingly laid their lives right down on the line, and held the banner of law enforcement high at a time when in some areas of Government there was corruption. The rollcall of FBI agents and of the fearless and hardworking local officers back there during those days is indeed a tribute to the valor and the fearless dedication of the profession of law enforcement. Now since those dark days American law enforcement has molded itself—and I hope the Director will not be abashed, as I speak only the truth when I say—it has molded itself in his image and in the image of the FBI. Now I think history can write its own verdict with reference to what accomplishments have been made. Today, thanks to the efficiency, the dedication, and the integrity of police officers everywhere law enforcement, the profession, is a respected one, and it deserves the accolades of all citizens everywhere.

As we view this quarter of a century of progress, we can be proud of its past accomplishments, and we can be optimistic as to those of the future. But some ask why has law enforcement achieved such monumental progress in the short span of 25 years? The answer, I think, lies in the cooperative techniques now used in combating the criminal, the scientific crime detection programs, the fingerprints, the officer training which, Senator, I was happy to hear you put at the top of the list, and the purposeful determination of officers to see to it that law enforcement is done and done well.

We hear today some talk about the establishment of a Nafional Police Agency—a single, all-inclusive law enforcement group, they say, to bring an end to all inefficiency, to all red tape, and to all conflicting jurisdictions. Well, frankly, I heard that same song way back before there was an FBI National Academy. In my humble judgment it is a mistake, and it is also contrary to all of our concepts of the dual federalism that we have created here in the United States. It likewise violates the philosophy upon which our law enforcement system is founded. Let me add, if I might, and I know that I tread on rather, you might say, slippery ground when a justice makes some little remark, particularly of advice or an innocent answer to a question; but I believe that the real answer to the crime problem as it faces us today is not so much the establishment of a National Police Agency or, for that matter, an overall commission, but I believe that it is the intelligent, the energetic, the enthusiastic support that communities and people should give to the present law enforcement agencies that we have here in the United States. Specifically, I point out, by providing the present officers of the law with the tools—the most efficient ones that are available—in order that they may get their job done. Now this includes not only better trained personnel, which I put at the top of the list, but also better equipment, more respect for officers of the law, firmer community support, and, I mention it last—although in the list of necessities it also should be at the top—more pay for law enforcement officers. I hope that no one will forget that last one—Government officials, too, deserve a fair day's pay for a fair day's work.

As one who has spent almost a lifetime in law enforcement work, I know that in the final analysis good law enforcement rests on the attitudes, on the opinions, on the mores of each of our communities here in America. In our system of free government, the local citizens themselves determine the quality of their law enforcement. If they want good law enforcement, they can get it. But they must work for it. They must encourage civic interest in it. They must teach respect, as I said, not only for law but for men and women who enforce the law. Every man, I believe, and every woman, yes, and every child in America should be brought to the realization that they cannot enjoy or maintain their rights, their dignity, their freedom, except for the loyal and devoted police officers who protect them in every community of our country. Yes, we have come a long way as I have said, but we have a long way yet to go.

In fact, the little pamphlet, Mr. Director, that you issued only 2 days ago—I think the title of it was "Cooperation—The Backbone of Effective Law Enforcement"—symbolizes, I believe, the challenge that I put to you today. It points out that the FBI has a vast storehouse of information which, at this very minute while we sit here, is being put to work and is actually working throughout the Nation. Take, for example, the 155 million sets of fingerprints that are housed in the FBI's Identification Division. They are truly soldiers of service. They identify the guilty; they protect the innocent; and they render also many humanitarian services. Those black little ridges that you see on small pieces of cardboard, if you go over to the FBI and have the privilege of going through their Fingerprint Division, day after day are unmasking the man who travels under aliases; the criminal who puts on the false fronts; and the swindler, too, who has that phony smile that most of them have. What is encouraging to me is the number of law enforcement agencies—over 13,000 in the United States today—which are utilizing the services of the Fingerprint Division. I think that is evidence of its great contribution to law enforcement. Last year, in fact, almost 17,000 fugitive criminals—45 every day—were identified by fingerprint searches in the FBI, and, since the system began, over 270,000 fugitives from justice have been identified through its facilities.

Another of the FBI's numerous accomplishments, I think, is its scientific work. You, I am sure, were given an opportunity to study and appraise the latest techniques of the FBI's laboratory. I am sure you know much more about it than I do. But, I remember back a quarter of a century ago, perhaps longer, because of my age, than most of you can recollect, that there were some who poked fun at the role of science in crime detection. What, they asked, does a piece of paint or a little hair, or maybe a blob of dirt, or a broken saucer or something like that have to do with a murder case? Well, science taught us differently. We now know that it is a strong right arm of every law enforcement officer. Wherever he goes, he knows that the laboratory at the FBI is working to perform scientific miracles that will make even this smallest little bit of evidence—this hair—tell its true story in the courtroom. During last year it made almost 185,000 scientific examinations, an increase of some 12 percent, and its services—remember this because this is so true of the service of the FBI—are free of charge to law enforcement agencies anywhere in this Nation of ours.

Surely this is the real spirit of cooperative law enforcement when a local sheriff or chief of police or an officer like yourselves needs only invest in the cost of one of Uncle Sam's airmail stamps, or if you don't think it's that important, a 4-center, and you will secure, without any additional cost, the complete scientific advice of this great organization. Your FBI National Academy, also, is a splendid example, as the Senator has pointed out, of the value of knowledge, experience, and esprit de corps—and there is nothing like it anywhere except in the U.S. Marines. It and the FBI are just two peas in a pod when it comes to esprit de corps. Now all of this, my friends, can be transmitted into the flesh and blood of men like you who are giving your lives to the profession of law enforcement.

In your weeks here in Washington, you have accomplished much more than just earn this diploma that the Assistant Attorney General will award you today. You are taking back with you the wisdom gained by an organization—by thousands of its agents—throughout the country working against the criminal. Yes, and against the subversive, too. This storehouse of FBI information, this accumulated experience of law enforcement over years and years is a repository of the highest of ideals and most practical of everyday experiences. We in America, I deem it, are indeed fortunate to have this storehouse working for us on a 24-hour-day basis for the welfare of all of our people.

And now, my fellow officers, because I feel too that I am sort of a member—I hope you don't object—there is just one more thing that I want to mention, and it's this training program that the Senator so eloquently spoke of. I take it from what little experience I've had in law enforcement, although it does cover a lifetime almost, that the most important duty of every officer—every police officer—in the United States is to inform himself of the latest and the most efficient police methods that are available. In this field, as the Senator says, the FBI has erected what, to my mind, is its most imposing and, I know, its most lasting monument. Last year alone it conducted over 2,500 police training schools—all at the request of local officers like yourselves. It sponsored nationwide law-enforcement conferences. Its special agents—and I want to salute them, too, for they are the men who are really out on the frontline—gave thousands of lectures in local communities throughout this country on modern crime detection. The Academy has graduated over 3,800 officers, and after graduation they have gone back home and now enjoy top rank in their profession. One out of every six—just imagine, 1 out of every 6 of the 3,800 who are graduates here—are chiefs of police in their communities. Ninety-four are sheriffs of a county, and almost a fourth of the States have as their top public safety director a graduate of this same Academy from which you become a graduate today. I say that this is a most impressive record.

Now, my friends, Heaven's first law is peace and order. The first one in the administration of justice is a continued observance by police officers of all of those civilized, well-established, and fair rules of conduct that meet our standards of decency.

Upon this first duty every man's liberty not only depends, but the very strength of our country exists and rests. While there is always a time for law, especially now with crime on the rise as it is, still there is never a time in my book which warrants the sacrifice of the inalienable constitutional rights of the individual. We have created courts to protect these rights. The courts, however, you must remember, can proceed only on a case-by-case basis. Because of this, results on a case-by-case basis often appear obscure and are often most disheartening. Courts of course know that. They fully appreciate the difficulties that face you law enforcement officers. But courts, remember, cannot wear blinders. It is the bad case—the Senator mentioned a couple of them, and I agree with the principles stated in those cases—it's the bad case on the facts that makes what we often call the bad law. But, I believe, bad cases teach that law enforcement does not need to cut corners on

the law. The strict observance of the legal rules which the law lays down gets the best results, and that's why the FBI is great today—it has at all times honored and protected the rights of the individual. In carrying out this mandate of the law you too must see to it that every police establishment in the United States does likewise. And the most effective way to insure it is to require your officers to engage in what I call a continuous "in service" training. In that way, you can carry home with you and there transmit the tradition of the FBI that you have learned so much about here in Washington. Through in-service training you can, with the continued cooperation of the FBI, keep your officers advised not only on the requirements of the law, but also the most modern techniques of crime detection.

And so today I salute each and every one of you graduates. And a special one for my old friend and fellow Dallasite, the captain, too. I know that when you return to your respective communities you will take with you the lessons that have been taught you here in this Academy. Through them may you not only increase the efficiency of your organization, but likewise the security of every community in this great country of ours. And so I say: "Good morning, officers, and may God bless you."

Dinosaur National Monument

SPEECH
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

The House in the Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6597), a bill to revise the boundaries of Dinosaur National Monument and provide an entrance road or roads thereto, and for other purposes.

Mr. ASPINALL. Mr. Chairman, my opposition to the amendment offered by the gentleman from Pennsylvania [Mr. SAYLOR], primarily is that the amendment, by striking out certain language, will remove from the bill a perfectly proper and workable provision which merely declares that the Secretary of the Interior must carry out well known constitutional requirements in the acquisition of privately owned lands.

I refer to that portion of article V of the Constitution which provides that private property shall not be taken for public use without just compensation.

The language that would be stricken by the pending amendment reads as follows:

Provided, That in the acquisition by purchase or exchange of any privately owned land within Dinosaur National Monument, the Secretary of the Interior is authorized to make equitable and reasonable allowances, as determined by him, for the value of any grazing privileges appurtenant to such privately owned land.

The committee's report—Report No. 1651—describes the meaning of this language as follows:

The second proviso authorizes the Secretary of the Interior, in fixing the price to be paid on acquisition by the Government of privately owned lands newly included within the boundaries, to include an allowance for added value arising from Federal land grazing privileges appurtenant thereto. This latter provision, the committee has been advised, is in accord with the standard appraisal practice in public land grazing areas which recognizes that buyers and sellers, in bargaining for the sale of base ranch properties, take due account of the added productivity and value arising from relationship to appurtenant Federal range.

In opposition to this language, in his separate views in the committee's report, the gentleman from Pennsylvania stated:

The last proviso of section 3 authorizes the Secretary of the Interior in the case of purchase or exchange of privately owned lands within the monument, to make equitable and reasonable allowances for the value of any grazing privileges appurtenant to such privately owned land. This discretion vested in the Secretary, in my opinion, goes too far.

I must differ with my colleague from Pennsylvania on this point. The practice set forth in the language merely conforms to the standard real estate appraisal practice in public land grazing areas. This practice is accepted by the Lands Division of the Department of Justice. It is recognized in decisions of the Federal courts, and I cite as directly in point the case of *United States* v. *Jaramillo* (C.C.A. 10, 1951, 190 F. 2d 300). This case dealt with the valuation of certain condemned privately owned base ranch lands in New Mexico to which were appurtenant certain national forest grazing lands administered by the Forest Service. The court held in part as follows:

In the judicial determination of fair value as just compensation for the land taken, the highest and most profitable use for which it is reasonably adaptable may be considered, "not necessarily as the measure of value, but to the full extent that the prospect of demand for such use affects the market value while the property is privately held." *Olson* v. *United States* (292 U.S. 246, 255, 54 S. Ct. 704, 109, 78 L. Ed. 1236). See also *Boom Co.* v. *Patterson* (8 Otto 403, 98 U.S. 403, 408, 25 L. Ed. 206); *Mitchell* v. *United States* (267 U.S. 341, 344, 45 S. Ct. 293, 69 L. Ed. 644); *McCandless* v. *United States* (298 U.S 342, 56 S. Ct. 764, 80 L. Ed. 1205); *United States ex rel. T.V.A.* v. *Powelson* (319 U.S. 266, 275, 63 S. Ct. 1047, 87 L. Ed. 1390); (2 Lewis Eminent Domain, 3d ed., sec. 707, p. 1233). All rights, easements and privileges appurtenant thereto should be considered in estimating its fair value or compensation to be paid, taking into account also the possibility of their being discontinued without resulting obligation (2 Lewis Eminent Domain, 3d ed., sec. 721, p. 1262). In determining the adaptability of the lands as a ranch, it was therefore proper to take into consideration the availability and accessibility of the permit land as an appurtenant element of value for ranching purposes, provided that consideration is also given to the possibility that the permits could be withdrawn or canceled by the Government at any time without constitutional obligation to pay compensation therefor.

This case has not been overruled or superseded, and is reported by the Lands Division, Department of Justice, as being the rule in effect today.

I trust, even though the pending amendment should be adopted, and the language is not later restored, that the Secretary nevertheless will have authority to observe constitutional principles in the valuation of properties, since in the condemnation of the land, should it be necessary, those principles certainly will be applied by the courts.

Rebuttal of Minority Views on H.R. 12176

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. GATHINGS. Mr. Speaker, in the closing hours of this Congress legislation vital to the continued supply of food and fiber to the American consuming public will be considered. This legislation has been given careful study by the 33-man House Committee on Agriculture and a report (No. 1642) has been issued covering the history of the legislation and the purpose of the bill, H.R. 12176.

Included in the report was the minority view expressed by three members of the committee.

An analysis of the minority views has been prepared. Because of the element of time, it might not be possible to get this analysis into the hands of all Members, so in order that such information may be made available, I wish to include this rebuttal report as a part of these remarks:

REBUTTAL OF MINORITY VIEWS ON H.R. 12176

The minority report on H.R. 12176 consists of 6 sections. There is substantial duplication of argument in many of these sections. This rebuttal will therefore, seek to deal with the major subject matter issues raised in the minority report, rather than a section by section analysis.

THE WAGNER-PEYSER ACT

Section VI of the minority report sets forth reasons why the minority favors the Department of Labor's action in issuing regulations governing the employment of farmworkers under the asserted authority of the Wagner-Peyser Act.

The minority report misses the point. Whether the regulations are good, bad, or indifferent is irrelevant and immaterial.

The important issue here is that it is the Congress, and only the Congress which should decide such a policy issue, that the Congress has not at any time enacted any law intended to give the Department of Labor the authority they say they have, and that if the Congress should ever decide to give the Department of Labor such authority, it should be only as the result of proper legislative process involving affirmative and intentional enactment after proper hearings, committee consideration and debate in both Houses.

Each and every Member of Congress should vigorously defend the prerogatives of Congress, whatever his ideas may be as to the type of legislation that ought to be enacted in any field.

Proper legislative process is fundamental to our constitutional concepts, basic to the freedoms of our people, and a right of every citizen.

Executive agencies should administer laws as the Congress actually intended when the laws were enacted. When they depart from

this function and engage in writing laws by the issuance of regulations, it becomes the duty, right and responsibility of the Congress to clearly and unmistakable assert its prerogatives.

EFFECT OF MEXICAN PROGRAM ON DOMESTIC FARM WAGES

In section 1 of the minority report it is asserted that domestic farm workers "earned an average of $761 in 1958 for their agricultural labors." This is a grossly misleading statistic. Hundreds of thousands of farmworkers are people who are not really in, or part of the labor force. They may work a few weeks during seasonal harvest periods picking apples, cherries, berries, cotton, etc. In many cases they are not employed or looking for employment or available for employment during most of the year. In many other instances they are employed at other occupations during a major portion of the year. Thus, to say they only "earned an average of $761 in 1958, for their agricultural labors" is a meaningless assertion that proves nothing.

In section 1 and throughout the minority report selectively culled statistics or unfounded argumentation is used to contend that farm wages are being seriously affected by the Mexican farm labor program. For example in section 1(a) it is said that wages for harvesting cotton in New Mexico have declined 10 percent; in section 1(b) it is said that farm wages in areas where Mexican workers are employed are "declining or remaining the same" in most instances; in section 1(d) that "we must strongly reject the idea that driving farmworkers deeper into poverty is the solution * * *"; in section 6 that "the continuation of the Mexican program would literally increase the destitution * * *" of domestic farmworkers.

What are the facts with respect to farm wages? No one contends that farm wages are high, but they are increasing and increasing in all areas.

First, let us summarize the farm wage situation nationally. In table 1 of the May 19 issue of the "Farm Cost Situation" published by the Department of Agriculture, the index of farm wage rates is shown as follows:

1947–49	100
1950	99
1951	109
1952	117
1953	120
1954	118
1955	120
1956	124
1957	130
1958	134
1959	142
January 1960	147
April 1960	151

Thus, in 1959 farm wage rates had increased 42 percent above 1947–49. The upward trend has continued in 1960, and as of April, farm wage rates were 51 percent higher than in 1947–49.

The Department of Agriculture also reports quarterly in the periodical "Farm Labor Situation" the "composite rates per hour" earned by farmworkers for each State. These rates are substantially lower than real earnings because (1) they do not include perquisites (housing, meals, transportation, utilities, etc.) which are a substantial portion of the total wage paid farmworkers and (2) because they do not include earnings of piece rate workers, who ordinarily earn substantially more than hourly workers. However, they are the best available, and are probably a fair measure of trends.

Here is a comparison of the changes which have taken place in the 10-year period 1949 to 1959. The average annual rates (simple average of quarterly reports) are shown below for the States in which the major portion of Mexican workers are employed:

	Dollars per hour		Increase	
	1949	1959	Cents	Percent
California	$0.891	$1.160	26.9	30.1
Utah	.694	.950	25.6	36.8
Arizona	.633	.878	24.5	38.7
New Mexico	.524	.682	15.8	30.1
Colorado	.633	.856	22.3	35.2
Texas	.534	.725	19.1	35.7
Oklahoma	.621	.839	21.8	35.1
Arkansas	.437	.623	18.6	42.5
Wisconsin	.605	.824	21.9	36.1
Michigan	.585	.823	23.8	40.6
U.S. average	.559	.796	23.7	42.3

NOTE.—Data does not include any valuation for perquisites nor any estimates for piece-rate workers, which are normally higher than hourly earnings.

These are not fragmentary, selected statistics. They disclose the average factual situation. They substantially understate the real wage for reasons stated above, but do illustrate the trend. They demonstrate that the assertion of the minority report, that farm wage rates are declining in areas using Mexican nationals is factually unfounded Farm wage rates are increasing in all areas and the rate of increase is of the same general magnitude in all areas.

EFFECT OF MEXICAN PROGRAM ON EMPLOYMENT OF DOMESTIC FARMWORKERS

Throughout the minority report there are numerous assertions that domestic farmworkers are taking their places. For example, in section 1, it is said that domestic farmworkers "were able to get an average of only 128 days of farmwork" and that the Mexican farm labor program "is a major factor in creating the * * * great underemployment of American farmworkers." In section 1(a) is an assertion that Mexican workers were brought into the United States "even though serious underemployment existed among domestic farmworkers."

These assertions evidence a major misinterpretation of the farm labor situation. There may be underemployed domestic workers, but not at the time or place Mexican workers are employed.

The important and significant thing to remember in connection with the farm labor problem is the seasonal variation. Thus, in 1959 the number of hired farmworkers in the United States was 918,000 in January, and 2,894,000 in September. ("Farm Labor Situation," U.S.D.A.). There may be unemployed workers in the early months of the year, but they are or can be employed during summer and fall harvest seasons, during the period in which most Mexican workers are employed.

The second major factor that needs to be recognized in this connection is the location of underemployed farmworkers. These are primarily in the Southern States. It is no answer to the farmer in California or Colorado to say there are underemployed farmworkers in Georgia or Alabama.

Nor is it necessarily to be concluded that it would be wise to uproot Southern workers from their homes, to move them to California or Colorado for temporary work on seasonal crops, and by such means to create a larger group of migratory workers.

Thus the minority assertion that Mexican workers are brought in despite underemployed farmworkers in the United States is a grossly misleading assertion.

THE USE OF MEXICAN WORKERS ON SKILLED JOBS

The minority report says in section 1(c) that "braceros are increasingly used in year-round occupations. Approximately 20,000 of them are known as specials and work the entire year in this country. This represents 20,000 jobs which should be filled by underemployed American workers."

This is not a complete description of the special program, but in any event the argument is irrelevant, since the special program has been terminated and is not likely to be resumed.

The minority report then goes on to say that "instead of working on only unskilled jobs, tens of thousands of braceros are employed as tractor drivers, vegetable packers, truckdrivers, irrigators, and in other skilled jobs."

In the first place there has never been any supposition that Mexican workers were to be employed only on unskilled jobs, nor any definition of what was a skilled worker. Be that as it may, Mexican workers are not employed as truckdrivers. If they are in an occasional instance, it is a violation of the program. Their employment in vegetable packing would also be a violation of the program, except in those few instances in which produce is placed in a shipping container in the field as an incident to and part of the harvest operation. Mexican workers are on occasion employed as tractor drivers or irrigators, but there is nothing particularly skilled about either of these occupations, and these are often operations that are performed during the time of year in which there is a general shortage of domestic farmworkers in an area.

THE CONSULTANTS' REPORT

The minority report points out that consultants appointed by the Secretary of Labor reached certain conclusions relative to amendment of the Mexican program. The minority would adopt these conclusions as theirs.

We do not believe it is necessary to comment on these recommendations at this time, or that their consideration is pertinent to consideration of H.R. 12176, for the following reasons:

The Department of Labor has received the consultants' report, and has so far made no recommendations for revisions based on this report, or on other recommendations it has received.

The Department in its testimony said it would be prepared to submit recommendations next year with respect to revisions of Public Law 78.

The proposals of the Department, the consultants' recommendations, and proposed revisions from other sources, need to be carefully considered by both the House and Senate Agriculture Committees.

A full term of the Congress will be needed for such consideration. In the meantime, the enactment of H.R. 12176 is essential to avoid disruption of the administration of the program, and so that farmers will be informed concerning the labor outlook in making their plans, this winter and next spring, for their 1961 farming operations.

THE FAMILY FARM ARGUMENT

The minority report seeks to establish that a small percentage of all farmers employ most farm workers, that the operators of family farms are competing with cheap labor or corporation farms, and that the termination of the Mexican program would therefore be of advantage to the family farm.

This gives a wholly erroneous picture. Whether or not a farmer employs large numbers of seasonal workers is not determined very much by the size of his operations. It is determined by the crops he produces. In general, farmers who are engaged in the production of grains, of forage, livestock, poultry, and most field crops do not hire many workers, and where they do employ a worker or two, it is usually permanent hired men or members of the operator's family. But a producer of fruits, vegetables, berries, cotton, or sugar beets, small or large, has a substantial labor bill. These are the commodities with the large requirements for seasonal

workers, which employ most Mexican workers.

For these commodities, all farmers, except the very smallest, must hire approximately the same number of workers per unit of production as their larger neighbors.

In fact small- and medium-sized farmers must ordinarily employ more labor per unit produced than large farms. The reason for this is that the large farmer has probably made a substantial investment in mechanizing his operations and by such means has reduced his labor input per unit of production.

It is of vital importance that national policy be based on correct factual understanding in this connection. A tight farm labor situation created by termination of the Mexican worker program, or by arbitrary reduction in the number admitted, would disastrously affect the interest of small and medium sized operators. Large farmers would be hurt too, but not as disastrously. New and revolutionary labor saving equipment is being adopted by farmers at a rapid rate. In most instances the major delaying factor is the cost of such equipment, $17,000 to $19,000 for a modern 2-row cotton harvester, even more for some of the newest vegetable harvesting machines.

The small operator cannot afford to buy this equipment, and even if he could afford to buy it, the costs must be spread over many units of production to warrant its economic use.

This is such a vital point that it needs to be repeated. For crops with a high seasonal labor requirement, as farm wage rates rise, the large farm can usually reduce its labor input per unit of production more rapidly than the small or medium sized farm.

If the increase in wage rates is moderate and gradual, as during the past 10 years, the small and medium sized farmer may be able to adjust to new conditions and costs. One of the important adjustments that comes about in time is the development of custom operators using the more expensive type of equipment. But it is important to avoid drastic and rapid change, if the interests of the family farm are to be safeguarded.

We have gone into this matter at some length because the argument of the minority report in this respect has been advanced many times, and at first glance appears logical enough. Yet upon closer examination it is clearly erroneous.

There is one point in the minority report that is minor, yet so misleading that it should be commented on. The minority report says that tomato production in bracero dominated States was more than 40 percent above the 1949–55 average, while tomato production in other areas was declining.

The State producing most of the tomatoes in the bracero dominated area is California. But California farmers pay the second highest farm wage rates of any State. The reason for the major increase in canning tomato production in California has nothing to do with farm wage rates. The reason is that tremendous improvements have been made in methods of producing tomatoes in California, which have tripled yields in a decade or so and produced a uniform high quality tomato well adapted to canning purposes.

The following wire has been received from the manager of the San Joaquin Farm Production Association, in the center of the tomato producing area in California, "Workers averaged 1.14 per hour picking tomatoes 1959."

IRRELEVANCIES

Section 1 of the minority report deplores the fact that farmworkers are not covered by Federal legislation relating to minimum wages and hours, collective bargaining and unemployment insurance.

These are all issues on which much could be said on both sides. Congress can choose to enact legislation on such matters when and if it chooses to do so. This is irrelevant to consideration of H.R. 12176.

In section IV(c) the minority report sets up a straw man and then proceeds to knock it down. In this section the minority discusses whether or not domestic farm workers are reliable, and reaches the conclusion they are. This is argumentative, and in any event has no relevancy to the issue and is no part of the majority consideration.

Again in section VI(b) the minority report stigmatizes some of the testimony presented to the committee. This was not a unanimous reaction, but in any event is irrelevant and no part of the majority consideration.

CONCLUSION

There is little merit to the minority report. It should have no influence on the action taken by the Congress on H.R. 12176.

Wilkes-Barre Welcomes AHEPA

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. FLOOD. Mr. Speaker, last weekend some 1,200 Americans of Greek extraction from Pennsylvania and West Virginia, members of the American Hellenic Educational Progressive Association, known more familiarly as AHEPA, held their 28th annual sessions in the city of Wilkes-Barre. As further recognition of this large event, I include an editorial from the Wilkes-Barre Times Leader of Saturday, June 18, 1960, which comments upon the meaning of AHEPA and that organization's objectives:

WELCOME TO AHEPA

Back in 1935, Wilkes-Barre was host to 300 delegates and visitors to the district 4 convention of the American Hellenic Educational Progressive Association, more familiar to the public as AHEPA. Today, some 1,200 Americans of Greek extraction from Pennsylvania and West Virginia descended on the city for the organization's 28th annual sessions which will continue through Tuesday. The P in AHEPA obviously is not without meaning on the basis of its growth and achievements during the intervening quarter century.

AHEPA over the weekend will be in friendly surroundings. A district session also was held here in 1950 and innumerable meetings have been held in this area by subordinate bodies.

AHEPA stresses the fact that it is an American organization, composed of citizens of Hellenic ancestry and dedicated to charity, education, benevolence, religion, and liberty, be it civil, religious or intellectual. It stresses obedience to law and loyalty to the American way of life. Discussion of creeds, politics, and other topics, likely to incite personal animosities, is banned at meetings. It is against the principles of the organization for any chapter to exercise pressure on behalf of legislation. Individual judgment is encouraged in accordance with the dictates of conscience.

Naturally, the organization has, among its principal objectives, a fusion of American and Hellenic cultures. Members are urged to take an active part in community affairs, keeping in mind the exhortation of Pericles to the youth of Athens to "strive to leave our city not only as good but even better than we found it."

It is a privilege to welcome to Wilkes-Barre again visitors with these high ideals.

The Most Dramatic Convention Speech of Them All

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I am including a feature article written by Boyce House, a valued personal friend of mine and an extremely gifted writer, which deals with the celebrated speech by William Jennings Bryan at the 1896 Democratic convention.

Since this year is the 100th anniversary of the birth of the Great Commoner, and since we are looking toward the approach of the national conventions, I thought this extremely well-written account of that historic event would be of timely interest:

THE MOST DRAMATIC CONVENTION SPEECH OF THEM ALL

(By Boyce House)

How a 36-year-old lawyer-editor stampeded a national political convention with a speech and became the youngest man ever nominated for President is the greatest Cinderella story in all the annals of American politics.

It was 1896. A panic gripped the land. The farmers, especially of the West and South, in desperate straits, felt that if there were more money, conditions would improve. Silver had been demonetized years before and many came to believe that the country's economic salvation depended on its restoration; so "free silver" became the cry—"the free and unlimited coinage of silver at the ratio of 16 to 1." Many opposed this bitterly and feeling grew intense.

Congressman Richard P. "Dick" Bland of Missouri had been the leading advocate of the white metal. Others in the race for the Democratic nomination for the Presidency included former Gov. Horace Boies of Iowa, Gov. Claude Matthews of Indiana, Senator J. C. S. Blackburn of Kentucky, Robert E. Pattison of Pennsylvania, John R. McLean of Ohio and former Gov. Sylvester Pennoyer of Oregon.

There was still another, William Jennings Bryan, who considered himself a candidate but this idea was shared by almost no one except faithful friends from his home State of Nebraska. He had been elected to Congress in 1890, re-elected in 1892 and was his party's candidate for U.S. Senator in 1894 but the Republicans won the legislature (Senators were elected by the legislature in those days). During his first term in Congress, Bryan made a masterly speech on the tariff. Then he became interested in the silver question and, during his second term, he made a brilliant address on silver.

Besides his acquaintance with the members of his party in Congress, Bryan had, through a series of speeches in the South and West, come to know free-silver leaders in those sections. He participated in a conference in Memphis to organize the silver forces of the country; he sent out a draft of a free-silver plank for the national platform

and, as editor of the Omaha World-Herald, he mailed copies of his editorials to editors and many other influential men. In addition, he carried on a heavy correspondence. Bryan knew personally more delegates to the convention than any other man.

Yet he was not regarded as a contender. When Bryan told Champ Clark that he held some hope of being the choice of the convention, the Missouri Congressman was amazed. But Bryan was sufficiently optimistic that he persuaded his wife to attend. He brought along $100 to defray his expenses while in Chicago. The Palmer House was full and so they registered at a small hotel close by.

He arrived several days ahead of time in order to help plan the strategy of the silver forces; and, before the convention opened, he went to a Nebraska town to debate the money question. There was a passage which he had used a time or two before and then had, as he himself later said, "laid it away for a proper occasion," and, in this debate, he gave the passage a final tryout.

Bryan had been named a delegate and his Nebraska friends were confident that if the "boy orator of the Platte" could be heard, he would make a great impression. He himself, however, states in his memoirs, "While I had, before the convention met, regarded my nomination as a possibility, I had relied upon what I called the logic of the situation rather than upon the influence of a speech."

There was a serious obstacle to his addressing the convention. The "gold crowd" had sent a contesting delegation from Nebraska. Bryan had hoped to be temporary chairman of the convention and make the keynote address but he had not been seated as a delegate when the convention began. In fact, it was not until 2 days later that he won his fight before the credentials committee. Then he hoped to be named permanent chairman of the convention since this would give him the privilege of a speech; but, by that time, he was receiving some slight mention as an aspirant for the presidential nomination and so friends of other candidates objected that it would be unfair to make him the permanent chairman. Another was chosen for the honor. It appeared, therefore, that Bryan was not to have an opportunity to speak.

And then an unlooked-for development occurred. Senator James K. Jones of Arkansas, chairman of the Resolutions Committee, asked Bryan to take charge of the debate for the silver forces. Afterward, Jones said he made this request because Bryan, alone among the silver leaders, had not addressed the convention; the others had been called on while the delegates were marking time—waiting for committee reports—which was during the period that Bryan had been waging his fight for a seat before the credentials committee and, afterward, had been serving as a member of the committee drawing up the platform.

The only speakers for silver in the debate were to be Senator Ben "Pitchfork" Tillman of South Carolina, and Bryan. Tillman wished to close and, of the hour and a quarter allotted to each side, he desired 50 minutes. Senator David B. Hill of New York, in charge of the debate for the gold side, objected to a closing speech of such length, so Tillman agreed to open. Bryan, therefore, would get to make the final speech of the debate. Thus had fate, after tantalizing delay, fitted the pieces, one by one, into place.

Another stroke of fortune for Bryan came when the convention adjourned until the next day, which gave him time to plan his address. He put into the proper place his definition of a businessman and, for the close, he chose the passage which he had laid away for a proper occasion.

Besides being a delegate and a candidate, Bryan was covering the convention for the Omaha World-Herald, of which he was editor, at a salary of $30 a week. Picture him then in a room, in his shirt sleeves, collar and tie discarded, as he was writing an account of the day's events when a delegation of Senators and Congressmen entered. They came to urge him to support, for the nomination, Senator Teller, of Colorado, a Republican who had bolted the GOP convention on the silver issue. The young man listened courteously, then said that he did not think Teller could be nominated.

"Then who do you think can be?" one asked.

In a mild tone, Bryan replied, "I think I have as good a chance as anyone."

Amazed, the visitors looked at him as though they had not heard aright. One managed the politeness to inquire on what he based his hope. Bryan answered, "I have my own State's delegation and, on the second ballot, "I expect to have half the votes of Indian territory." There was an interruption and he did not finish; though, truth to tell, he had very little more on which to base his prediction.

Back on the sidewalk, the distinguished men looked from one to another and then burst into laughter at thought of a man who hoped to be nominated because he had the small delegation of his own State—and half of Indian territory on the second ballot.

Eighteen thousand packed the coliseum for the debate on the platform. Bryan had his customary feeling before a speech of unusual importance: weakness at the pit of the stomach and a desire to lie down. This of course was not possible so he busied himself with a sandwich and a cup of coffee as he waited for the debate to get under way.

The silver men constituted two-thirds of the delegates and they were confident that Tillman, a forceful speaker, would rise to the occasion. Imagine then how great was their disappointment when, picturing the struggle as a sectional fight, he was actually hissed, whereupon he became angry. After Tillman had finished, Senator Jones went to the platform and rebuked him by stating, "I protest the charge that this is sectional."

Hill then spoke but he could scarely be heard beyond the small area occupied by the delegates. He was followed by Senator William F. Vilas of Wisconsin. Former Governor Russell of Massachusetts, who was to close for that side, complained to Hill that Vilas was taking his (Russell's) time. Bryan, sitting across the asile, heard the complaint and offered to extend the time 10 minutes if a like extension was granted him. Hill and Russell agreed—another fortunate circumstance for Bryan as he needed that much more time for the speech he had planned.

Among those who beheld the unfolding drama was a young newspaperman of North Carolina who was destined to become one of the South's outstanding editors, Secretary of the Navy in World War I and ambassador to Mexico. Josephus Daniels (in his "Editor in Politics," University of North Carolina Press, quoted by permission) said that Russell's speech "was classic; his every sentence was chiseled and he spoke with a sincerity and earnestness that captivated those who heard him." But the thousands in the galleries had to strain their ears to catch his words; and this had been the case also when Vilas was on the platform. Hill, as has already been noted, could not be heard by the galleries at all. (This was, of course, long before public address systems.)

An Atlanta newspaperman, Clark Howell, scribbled on the back of an envelope. "This is a great opportunity" and handed it to Bryan, who wrote underneath, "You will not be disappointed" and handed the envelope back.

As the able addresses of the gold advocates were given, the convention majority sat in sullen and ever-growing frustration. The New York World correspondent had depicted the situation perfectly when, the day before, he wrote, "The silverites have neither machine nor boss; the opportunity is here; the man is lacking." Bryan himself knew what the occasion called for, "All that was necessary to success was to put into words the sentiments of a majority of the delegates—to be the voice of a triumphant majority"—("Memoirs," Bryan, completed by his wife, Mary Baird Bryan, John C. Winston Co., quoted by permission).

And now it was Bryan's turn. The hoped-for moment had arrived. He walked down the aisle with quick tread, climbed the steps to the platform two at a time, turned and faced the audience. They saw one who was every inch an Apollo, young, lithe, with flashing eyes. A faint smile upon his lips, he at once began speaking, "Mr. Chairman and gentlemen of the convention,"—the words rolling to the farthest reaches of the auditorium—"I would be presumptuous, indeed, to present myself against the distinguished gentlemen to whom you have listened if this were a mere measuring of abilities; but this is not a contest between persons. The humblest citizen in all the land, when clad in the armor of a righteous cause, is stronger than all the hosts of error. I come to speak to you in a cause as holy as the cause of liberty—the cause of humanity."

Bryan (says Daniels) "did not seem to raise his voice at all. He seemed to be speaking with less effort than anyone who had preceded him. His voice was made for great gatherings." Not only was it an instrument of volume, of carrying power, but there were resonance, flexibility and organ-like melody, perhaps the most superb voice that American oratory has ever known. Truly, the orator of silver's cause was silver-tongued.

His nervousness had left him and he felt as composed as if he were speaking to "a small audience on an unimportant occasion." The silver delegates began to smile and to nod with satisfaction. To one side in the audience was former Governor James Stephen Hogg of Texas, a huge man, and at the other side, equally huge, was Ollie James of Kentucky. The sight of these two, their faces beaming with delight, was very heartening to Bryan throughout the speech.

In the preconvention campaign, Bryan said, the silver Democrats, with a zeal rivaling that of the Crusaders who followed Peter the Hermit, had gone "from victory unto victory until now they are assembled, not to discuss, not to debate, but to enter up the judgment already rendered by the plain people of this country." These militant words were what the majority had been waiting for and there was terrific cheering. Daniels records, "Bryan had not been speaking 5 minutes before he held the convention rapt. I had never dreamed that a mortal man could so grip and fill with enthusiasm thousands of men." The audience seemed to rise and sit down as one man, rising and shouting at the close of a sentence; then, as another sentence began, the auditorium was as still as a church.

Bryan proclaimed, "There are two ideas of government. There are those who believe that, if you will only legislate to make the well-to-do prosperous, their prosperity will leak through to those below. The Democratic idea, however, has been that if you legislate to make the masses prosperous, their prosperity will find its way up through every class which rests upon them.

"You come to us and tell us that the great cities are in favor of the gold standard; we reply that the great cities rest upon our broad and fertile prairies. Burn down your cities and leave our farms, and your cities will spring up again as if by magic; but destroy our farms, and the grass will grow in the streets of every city in the country."

His closing words were, "Having behind us the producing masses of this Nation and the world, supported by the commercial interests, the laboring interests and the toilers everywhere, we will answer their demand for

a gold standard by saying to them: You shall not press down upon the brow of labor this crown of thorns; you shall not crucify mankind upon a cross of gold."

There was silence and he had walked almost to his seat when someone shouted; then bedlam broke loose. A parade around the hall began, led by the Nebraska delegation. Bryan was lifted on the shoulders of admirers. Pale from his effort, he had to hold to keep from falling and asked to be put down. Men hugged him, shook his hand, shouted in his ears. For 30 minutes, the wild demonstration continued.

While the tumult was raging, a delegate said, "You can be nominated if your friends will prevent adjournment." Bryan replied, "If their desire to nominate me will not last until tomorrow, would it last during the campaign?" The platform was adopted, then the convention adjourned until the next day. Bryan was nominated.

And, after paying his hotel bill and other expenses, he had $40 left of his original $100.

The famed editor of Emporia, Kans., William Allen White, a stanch Republican, he recorded that the speech "fired the hearts of that convention and, tingling over the telegraph wires of the land, enthralled the Nation. * * * Up to that moment, probably, no single speech in American history, by any man in any case—not even by Webster, by Clay or by Calhoun in the Senate in their noblest moments, tuned into the will of Americans so much moving emotion as that Bryan speech in the Democratic national convention of 1896." To the present-day reader who wonders how a speech on a money question could have been so stirring and so tremendous, these words of Daniels may be illuminating:

"The truth is, free silver was the expression of the hope for legislation of a people who had been through the panic and hard times and were seeking to strike at Government by privilege. * * * It was a conflict, rather, of man versus money. * * * They believed that Bryan was a young David with his sling, who had come to slay the giants that oppressed the people."

As to the campaign itself, Bryan waged, almost singehanded, the most spectacular fight in the Nation's annals. He traveled 18,000 miles by train and made over 500 speeches to over 5 million persons. No man in the history of the world had ever before spoken to so many in the same space of time. And he polled the largest vote a Democrat had ever received until then—but William McKinley was elected.

Twice more, Bryan was his party's nominee and, in 1912, he played a major part in bringing about the nomination of Woodrow Wilson. No other man was ever the foremost figure in the affairs of a major party as long as William Jennings Bryan, the darkest of dark horses who captured the Presidential nomination with the magic of a speech which, occasion and purpose considered, was probably the greatest masterpiece since Mark Anthony spoke over the corpse of Caesar.

Address by Joseph W. Martin, Jr., of Massachusetts

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks I am very pleased to include a splendid address made here in Washington a few weeks ago by our distinguished colleague from Massachusetts, the Honorable JOSEPH W. MARTIN, JR., before the annual meeting of the Rivers and Harbors Congress.

The address follows in full:

REMARKS OF HON. JOSEPH W. MARTIN, JR. OF MASSACHUSETTS, AT THE OPENING SESSION OF THE 47TH NATIONAL CONVENTION, NATIONAL RIVERS AND HARBORS CONGRESS, ON THURSDAY, MAY 26, 1960, AT THE MAYFLOWER HOTEL, WASHINGTON, D.C.

Mr. Chairman, once again it is my happy privilege to extend a greeting to the National Rivers and Harbors Congress.

This is the 47th annual meeting of the congress. During 36 of those years, I have been a Member of the House of Representatives, and partially because my own district has been so concerned with the development of our water resources, I have had far more than a casual interest in the work and the objectives of the Rivers and Harbors Congress and I have been pleased to be associated with you as a vice president.

It is not an exaggeration to say that most of the progress that has been made in recent decades in the development of America's water resources has been due to the sense of urgency which has been stimulated by the activity of the National Rivers and Harbors Congress.

The success the congress has had in encouraging and promoting the effective use of water and waterways is due in no small measure to the excellent leadership of such dedicated public servants as our chairman and my good friend, Congressman OVERTON BROOKS. Throughout his career he has been an outstanding exponent of the development of our water resources and his tireless work in behalf of the programs of this organization has made an exceptional contribution to the attainment of our objectives. He has earned the sincere gratitude of all who realize what the full use of water resources means to the progress and prosperity of America.

Organized over a half century ago, this congress has given invaluable assistance to regional, State and local governments in the conservation, development and control of the Nation's precious water supplies. It has always been nonpartisan in character and has never waivered from its singleness of purpose which is the sound and swift development of our water resources.

On the membership rolls of the organization are Governors, mayors, State legislators, water experts from industry, and I am proud to say—many of our colleagues in the House and Senate.

It is not mere coincidence that the period of greatest development of our water uses covers the life span of this congress.

It has been the principal promoter of an ever increasing degree of Federal participation in meeting State and local needs, notably in the fields of flood control, navigation, irrigation and conservation.

Because the organization has no ax to grind except the progress of the national welfare as related to the use of water, it has historically had an influential voice in the executive and legislative branches of our Government. Its close relationships with committees of Congress, with the Corps of Engineers, the Bureau of Reclamation and some 40 other Federal agencies dealing with water problems have resulted in great benefits to the prosperity of the Nation.

Improvements to rivers, harbors, inland waterways, and the Great Lakes system under the Federal navigation program have now resulted in an all-time high tonnage of more than 1 billion tons of waterborne commerce a year.

Under the Federal flood control program begun in 1936, 343 projects costing $933 million have been completed and 96 others costing $3.2 billion are under construction.

A problem closely associated with the activities of the Congress—the abatement of water pollution—is deserving of our energetic advocacy.

Because it has such serious implications for the health of our people, pollution of our streams and rivers is becoming an increasingly grave national problem.

I firmly believe this menace should be attacked on a broad national front. It cannot be lightly dismissed as wholly a local responsibility. If we do, the desired improvements will never be made.

The plain facts are that in local communities where the pollution problem is most acute, the local governments simply cannot raise the necessary funds to eliminate the sources of infection without Federal assistance. They are already carrying a heavy tax burden. Rivers recognize no State boundary lines and neither do the germs of pollution which too many of our rivers are carrying to the detriment of many communities.

From personal experience, I know of several communities in my own district which will be unable to cope with their pollution problems without Federal aid, and there are several hundred cities and towns in a similar condition.

Nature has endowed our land with an abundance of water, but it is obviously a relatively fixed supply. An increasing population and expanding industry are drawing more heavily each year on the available sources. More water is being consumed and more wastes are being discharged into our streams. These wastes cause the pollution which imperils our domestic water supplies, industrial uses, agriculture, fish, shellfish, and wildlife and recreational facilities.

When it is realized that two-thirds of our people get their drinking water from surface water supplies into which disease-carrying bacteria and toxic substances are being discharged, the menace in such a condition to the health of the Nation becomes real.

The cure for this serious situation must be the construction of waste treatment and sewage disposal facilities wherever the problem prevails. I ask you if this is not a real problem for our Federal Government to aid?

Recognizing the fact that additional Federal aid was needed to assist and stimulate local communities to clean up their water supplies, Congress this year passed a law increasing the existing authorizations by $40 million a year. This seemed to be a relatively small price to pay for safeguarding and improving the health of our people through supplies of clean water, especially when American taxpayers are spending substantial sums abroad in Asia and Africa, through mutual assistance funds, for the very same purposes.

The legislation was vetoed and the veto was sustained.

This has not, however, eliminated the problem. Pollution will be a continuing and increasing difficulty. It will not go away by itself.

I hope the Congress will continue the battle and employ the weight of its great influence in attacking this grave problem again at the next session of Congress.

The improvement of our waterways for shipping has resulted in enormous economic benefits to the Nation. We have seen countless instances as proof of this. Personally I am most familiar with one project with which I have been closely associated throughout my congressional life. That has been the development of the harbor at Fall River, Mass., a project which the Rivers and Harbors Congress endorsed. The development of this harbor has made possible the accommodation of ships of greater tonnage, bringing lower transportation costs to the industries in the area and encouraging new industry to locate there.

From my summer home on Cape Cod, I can look out from my front porch to the approach to the Cape Cod Canal. Every day can be seen huge vessels using the canal and materially cutting down sailing distance by avoiding the longer and sometimes hazardous voyage around Provincetown.

On a visit to Germany several years ago, I sat in a hotel on the banks of the Rhine and marveled at the constant flow of commerce which takes advantage of this fine waterway. What the Germans have done with the Rhine, we can do with the development of our own waterways. Without the Rhine, industrial Germany could not have achieved its great growth.

Unfortunately, expansion of the rails is not likely in the future. Railroads are essential and we must not let them decay. But we most supplement their transportation efforts through progress in theexpansion of our waterway system.

History has borne out the economic value of our waterway projects. They will continue to contribute many advantages to a growing country. They will play a major role in the economic destiny of our country. We must do our full share in the greater and more prosperous America that lies ahead.

Social Security Program Discussed in 20th Annual Report of Board of Trustees—No. 1

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ALGER. Mr. Speaker, in order to give the Members as complete a picture as possible of the social security program before we are called upon to vote to further increase benefits and extend coverage, I would like to call your attention to the 20th Annual Report of the Board of Trustees of the Federal Old-Age and Survivors Insurance Trust Fund and the Federal Disability Insurance Trust Fund, House Document No. 352 of this Congress. For special emphasis, I ask you to read the following discussion of the actuarial status of the trust funds, as it appears in the report.

ACTUARIAL STATUS OF THE TRUST FUNDS

Old-age, survivors, and disability insurance benefit payments will increase for many years—not only in dollars but also as a percentage of taxable payroll. Long-range estimates are needed to show how much the cost is likely to increase and to indicate whether the scheduled tax rates are adequate. This section presents cost estimates that are revisions of those in the previous report. Revision was made to reflect recent operating experience, especially in regard to the relatively new disability insurance program, and to use the 1959 earnings level (instead of 1956).

The cost of benefits to aged persons, which constitute almost 90 percent of the total cost, will rise for serveral reasons. The United States population cannot continue to increase indefinitely; births cannot continue indefinitely to exceed deaths. When a balance is reached or a reversal in the present trend occurs, the population as a whole will have become relatively much older. A relatively older population will also result because the present aged population is made up of the survivors from past periods when death rates were much higher than they are now; thus, in the future, relatively more persons will attain age 65 and older ages.

The cost of the program is thus closely related to the ratio of the population aged 65 and over (potential beneficiaries) to the population aged 20–64 (potential contributors). At present this ratio is 16.7 percent. In a stationary population with present death rates it would be 24.9 percent, but such a situation would be very unlikely to occur for many decades. It is expected that this ratio will eventually become even greater because of further decreases in mortality.

Another reason for the increasing cost is that the proportion of the aged population receiving benefits will increase. Many of the present persons aged 65 and over were not in covered employment long enough to obtain benefits, or, in the case of widows, their husbands were not sufficiently long in covered employment. Although the system began in 1937, many jobs were not covered until 1951 or 1955. It is estimated that the proportion of the aged population eligible for some type of benefit under the system will increase from the present level of about 73 percent to between 92 and 97 percent by the end of the century.

Because the actual cost could reasonably vary over a wide range, three complete sets of estimates are made—low cost, intermediate cost, and high cost. The cost estimates are based on high employment and 1959-level earnings assumptions. Each provides estimates of such items as taxable and creditable payroll, contributions, beneficiaries, benefit payments, and administrative expenses for every future year. The data are presented here for selected future years. All figures are assumed to remain constant after 2050.

It is considered likely, although by no means certain, that actual costs as a percentage of payroll will lie between the low-cost and high-cost figures. The intermediate-cost estimates of beneficiaries, benefit payments, and payrolls are taken halfway between the low-cost and high-cost figures. The intermediate percentage-of-payroll figures are obtained by dividing total benefit payments by taxable payroll, each on the intermediate basis, and are therefore not exactly equal to the average of low-cost and high-cost percentages.

Table 20 shows benefit payment costs for selected years and the level-premium cost, all expressed as percentages of payroll, under each of the three estimates. The level-premium cost is that constant combined employer-employee tax rate that, together with a tax on the self-employed at 75 percent of such combined rate, would exactly pay for all future benefits and administrative expenses, after making allowance for the effect of the existing trust fund and for future interest earnings. All percent-of-payroll figures are adjusted so that they represent the tax rate that employees and employers combined, and the self-employed at three-quarters of the combined rate, would have to pay in any given year to meet exactly the benefit disbursements in that year. Tables 21 and 22 show, for each set of estimates, the contributions, benefit payments, administrative expenses, amount paid to or received from the railroad retirement system, and the balance in the trust funds for selected years.

TABLE 20.—*Estimated costs of old-age, survivors, and disability insurance system as percent of payroll,[1] high employment and 1959 level earnings assumptions, 1970–2050*

[In percent]

Calendar year	Low-cost estimate	High-cost estimate	Intermediate-cost estimate [2]
	Old-age and survivors insurance benefits		
1970	6.60	6.93	6.77
1980	7.49	8.51	7.99
1990	7.69	9.74	8.66
2000	6.90	9.85	8.25
2025	7.78	12.98	9.94
2050	9.86	14.82	11.78
Level-premium cost [3]	7.35	9.61	8.38
	Disability insurance benefits		
1970	0.25	0.41	0.33
1980	.27	.47	.37
1990	.23	.43	.32
2000	.22	.46	.33
2025	.28	.54	.39
2050	.32	.58	.42
Level-premium cost [3]	.26	.46	.35

[1] Taking into account the lower contribution rate for the self-employed, as compared with the combined employer-employee rate.
[2] Based on the average of the dollar costs under the low-cost and high-cost estimates.
[3] Level-premium contribution rate, at 3-percent interest rate, for benefits after 1959 taking into account interest on the trust fund on Dec. 31, 1959, future administrative expenses, the railroad retirement financial interchange provisions, and the lower contribution rates payable by the self-employed.

TABLE 21.—*Estimated progress of old-age and survivors insurance trust fund, high employment and 1959 level earnings assumptions, 3 percent interest basis* [1]

[In millions]

Calendar year	Contributions	Benefit payments	Administrative expenses [2]	Financial interchange [3]	Interest on fund	Fund at end of year [4]
	Actual data					
1951	$3,367	$1,885	$81		$417	$15,540
1952	3,819	2,194	88		365	17,442
1953	3,945	3,006	88		414	18,707
1954	5,163	3,670	92		468	20,576

2025	2,714	1,524	59	5	4,853	167,197
	High-cost estimate					
1970	$1,206	$954	$33	−6	$204	$7,127
1980	1,360	1,262	39	−2	319	10,979
1990	1,515	1,290	42	−1	462	15,966
2000	1,698	1,552	49	−1	684	23,520
2025	1,921	2,076	58	−1	1,235	42,283
	Intermediate-cost estimate					
1970	$1,209	$768	$30	−$3	$244	$8,590
1980	1,390	1,002	33	1	457	15,868
1990	1,593	1,022	38	2	760	26,365
2000	1,850	1,224	45	2	1,224	42,312
2025	2,317	1,800	59	2	3,048	104,882

[1] At 3 percent, except 2.6 percent in 1959, 2.7 percent in 1960, 2.8 percent in 1961, and 2.9 percent in 1962.
[2] The actual figures are somewhat understated because the old-age, survivors and insurance trust fund currently bears the administrative expenses of this program and is later reimbursed therefor by this fund.
[3] A positive figure indicates payment to the trust fund from the railroad retirement account; a negative figure indicates the reverse.

Social Security Program Discussed in 20th Annual Report of Board of Trustees—No. 2

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. ALGER. Mr. Speaker, following is a continuation of the discussion of the actuarial status of the social security trust funds from the 20th annual report of the Board of Trustees:

ACTUARIAL STATUS OF THE TRUST FUNDS

Annual benefit payments as a percentage of payroll are less than the scheduled tax rates in the early years (with a few exceptions), but—except under the low-cost disability estimate—eventually rise well above the ultimate scheduled combined employer-employee tax rate of 8½ percent for old-age and survivors insurance and one-half of 1 percent for disability insurance. To measure the extent to which the financing arrangements of the system result in a surplus or deficiency, a level rate equivalent to the actual increasing contribution rates has been computed, taking into account future interest. The level-premium equivalent of contributions minus the level-premium equivalent of benefit and administrative costs, after making allowance for the effect of the existing trust fund, gives the amount by which the contribution rate in all years would have to be changed to put the system in exact long-range balance according to the estimate. A negative figure indicates that an increase is needed. The figures shown below, in percentages of payroll, are computed on a 3-percent interest basis as of the beginning of calendar year 1960:

Item	Low cost	High cost	Intermediate cost
	Old-age and survivors insurance		
Contributions [1]	8.20	8.14	8.18
Benefit cost [2]	7.35	9.61	8.38
Net difference	.85	−1.47	−.20
	Disability insurance		
Contributions [1]	0.50	0.50	0.50
Benefit cost [2]	.26	.46	.35
Net difference	.24	.04	.15

[1] Based on adjusted payroll that reflects the lower contribution rate for the self employed as compared with the combined employer-employee rate.
[2] Including adjustments (a) to reflect lower contribution rate for the self-employed as compared with the combined employer-employee rate; (b) for interest on existing trust fund; (c) for administrative expenses; and (d) for the railroad retirement financial interchange provisions.

In view of the very long-range nature of these projections and the many variable factors involved, the deficiency for the old-age and survivors insurance system under

the intermediate-cost estimate is so small that the system may be considered in approximate actuarial balance; on a 3½-percent-interest basis (well below current market yields on long-term Government securities), instead of the above deficiency of 0.20 percent of payroll, there would be a surplus of 0.04 percent. The disability insurance system is more than in actuarial balance under all three estimates. The estimates contained in the previous report showed about the same results for the old-age and survivors insurance portion of the program. On the other hand, the disability insurance system was shown to be in almost exact balance. The more favorable current status of the disability insurance trust fund arises from a detailed analysis of actual operating experience that recently became available. Further discussion of this matter is presented in appendix I.

If the experience exactly follows the assumptions, the deficiency would gradually increase under the high-cost or intermediate-cost estimate for the old-age and survivors insurance system, while the surplus would increase under the low-cost estimate for old-age and survivors insurance and under all the estimates for disability insurance. Any deficit or surplus in the contribution schedule (as compared with the required level-premium tax rate) gradually increases through the years because of the effect of interest accumulations. In the case of a surplus, the excess contributions actually earn interest, while a deficit grows because of annual interest that would have been earned if the proper contributions had been paid. With continuing study of the emerging experience under the program, there will be ample time to make any changes in the tax rate that may be necessary to keep the system in actuarial balance.

It is important to note that these estimates are made on the assumption that earnings levels will remain at their present magnitude into the indefinite future. If earnings levels continue to rise, as they have in the past, the benefits and taxable earnings base under the program will undoubtedly be modified. If such changes would be made concurrently and proportionately with changes in general earnings levels, the future year-by-year costs of the system as a percentage of taxable payroll would be the same as those shown. However, the existing trust fund accumulated in the past, and its interest earnings, will represent a smaller proportion of the future taxable payrolls than if earnings were not to increase in future years. As a result, since interest earnings of the trust fund will play a relatively smaller role in the financing of the system, the net level-premium cost—taking into account benefit payments, administrative expenses, and interest on the existing trust fund—would be somewhat higher. If benefits would be modified to reflect changes in earnings levels although not in full but rather only in part, or with a time lag, a still different cost situation would develop. Again, the effect of such changes can be observed in ample time to make any needed changes in the contribution schedule.

This analysis includes the benefits and contributions in respect to all persons anticipated to be covered in the future under present legislative provisions. There would be a large deficiency if account were taken only of the benefits to be paid to workers who have been covered by the system in the past and to their dependents and survivors, the future taxes to be paid by such workers, and the existing trust funds. In a private insurance company it is necessary to set up reserves equal to all currently accrued liabilities, since the company cannot compel individuals to become new policyholders and must be in a position at any time to pay all benefits which will become payable with respect to its present and past policyholders using only its present assets and the premiums to be paid by present policyholders. In analyzing the actuarial condition of a compulsory social insurance system which will continue indefinitely, however, the income and benefits with respect to new entrants can properly be included, thus obviating the need to set up reserves for all currently accrued liabilities.

Mrs. Thomas F. Heffernan

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. FLOOD. Mr. Speaker, I note with deep regret the passing last week of Mrs. Thomas F. Heffernan, widow of the former publisher of the Wilkes-Barre Sunday Independent and mother of that newspaper's present publisher. Mrs. Heffernan was a kindly woman and held in great respect throughout the community. She was a devoted mother and wife and reared a fine family. Mrs. Flood joins me in extending our profound regrets to the Heffernan family in this period of their great loss.

As a further extension of my remarks, I include two editorials—one from the Wilkes-Barre Times Leader of Saturday, June 18, 1960, and the other from the Wilkes-Barre Sunday Independent of June 19, 1960, both of which comment upon the death of Mrs. Heffernan:

[From the Wilkes-Barre Times Leader, June 18, 1960]

MRS. THOMAS F. HEFFERNAN

The death of Mrs. Thomas F. Heffernan, widow of the former publisher of the Sunday Independent and mother of the present publisher, recalls the community's golden era and her own gracious role in it.

Most of Mrs. Heffernan's contemporaries are gone, time having taken its inevitable toll. In death, she joins a distinguished company.

A daughter of Mr. and Mrs. Thomas Easen of Plymouth, Mrs. Heffernan devoted herself to her family and friends in keeping with the practices of her generation and the tradition of her English forebears. A self-effacing woman, her domain was the home and her achievements were to be found in good works behind the scenes and in such fundamentals as kindness and hospitality.

[From the Wilkes-Barre Sunday Independent, June 19, 1960]

A CHAPTER ENDS

Louise E. Heffernan, widow of the late Thomas F. Heffernan, long publisher of the Sunday Independent, died last week.

If only because of the manner in which she helped provide some of the original financing and a great deal of the original enthusiasm in the acquiring of this newspaper, the passing of Mrs. Heffernan must be noted by those now carrying on.

In addition, however, so long as she was able, she continued to provide the kind of unwavering support and encouragement which only a woman can.

Actuarial Anesthesia—No. 1

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. ALGER. Mr. Speaker, in an effort to determine the actuarial soundness of the social security system, I heartily recommend a paper presented by Mr. Ray M. Peterson before the meeting of the Society of Actuaries in November 1959. That you may become acquainted with some of Mr. Peterson's thinking on this vital subject, I include a few brief excerpts from his paper, "Misconceptions and Missing Perceptions of Our Social Security System":

INTRODUCTION

The report of the Advisory Council on Social Security Financing stimulated the observations in this paper which aim to look beyond the Council's terms of reference as limited by statute and its interpretation of its responsibilities.

The actuaries of the Social Securty Administration and the U.S. Railroad Retirement Board have done skillful professional work in the public interest by furnishing reliable benchmarks to test the actuarial equivalence of contributions and benefits under the Social Security and Railroad Retirement Acts. It is no criticism of their activities to suggest that all actuaries have a responsibility to make clear to the public the limitations of the significance of actuarial calculations. Actuarial equations cannot measure the contributor's willingness and capacity to pay. They cannot measure the soundness of the principles of equity between individuals and generations, the readiness of individuals to accept such principles, nor the extent of their understanding. Actuarial balance sheets cannot assure good housekeeping by government in funding retirement programs; they do not reveal the broad social and economic effect of compulsory programs; they cannot control the extent of the obligations one generation places upon another. Actuaries should be the first to warn that actuarial balance, while a necessary condition, is not a sufficient condition. The work of the actuary must not become a soothing agent that unduly quiets a legitimate concern as to the truly successful operation of programs established by one generation which will have powerful effects upon future generations.

Over 20 years ago, there were scholarly debates by actuaries on social insurance financing which are well worth rereading at this time. Those debates between the reservites and the current-costites, probing economic and social aspects of financing old-age benefits, constituted a great public service at the time. While the author has no deliberate purpose to revive that debate, he will not be disappointed if the observations here made stimulate a lively and responsible interest among the younger members of the Society of Actuaries.

Jeremy Bentham, a leading intellectual of the early 19th century, had considerable to say about the fallacy of irrevocable laws in his The Book of Fallacies, published in 1824. Speaking of the sages of a prior generation, he wrote:

It is their prodigious anxiety for the welfare of their posterity that produces the propensity of these sages to tie up the hands of this same posterity forevermore—to act as guardians to its perpetual and incurable

weakness, and take its conduct forever out of its own hands.

If it be right that the conduct of the 19th century should be determined not by its own judgment but by that of the 18th, it will be equally right that the conduct of the 20th century should be determined not by its own judgment but by that of the 19th. And if the same principle were still pursued, what at length would be the consequence?—that in process of time the practice of legislation would be at an end. The conduct and fate of all men would be determined by those who neither knew nor cared anything about the matter; and the aggregate body of the living would remain forever in subjection to an inexorable tyranny, exercised as it were by the aggregate body of the dead.

There is probably no other legislative enactment that commits future generations to greater obligations than our Social Security Act. Although section 1104 of the act makes changes possible, only a major economic crisis would justify a reduction of benefits in the minds of the people, particularly the millions of pension recipients. As a matter of good faith, there is no question but that the benefits promised are intended to be permanent and assured. Some years after the enactment of the original Social Security Act, Franklin D. Roosevelt supported the contributory principle in these words:

"We put those payroll contributions there so as to give the contributors a legal, moral, and political right to collect their pensions and their unemployment benefits. With those taxes in there, no damn politician can ever scrap my social security program."

The author's purpose is to (1) try to attain a greater insight into the nature and significance of the social security financing method, and, to that end, determine whether the operations of the railroad retirement system give us any clues as to what we may expect in the future under the social security financing method, (2) examine the image in the public mind of the social security financing method and its significance, (3) identify some questions as to the social and economic impact of the social security financing method, (4) examine the income tax treatment of social security contributions and benefits, and finally, (5) set down some conclusions.

The author wishes to acknowledge at the outset the indispensable value to this discussion of the voluminous actuarial literature produced by the actuaries of the social security and railroad retirement systems.

NATURE OF SOCIAL SECURITY FINANCING METHOD

The evolution of the principles underlying OASDI financing is described in Actuarial Study No. 49, Appendix I. Briefly, the financial mechanics are: the primary source of the money for current benefit payments is the current contributions from employees, employers and the self-employed; a fund of "modest" amount is developed which arises from any excess of current contributions over current benefit payments; this fund permits a contribution schedule which progresses in an orderly known amount, acts as a buffer for variations in contributions and benefit outlays, and provides a modest current income source from interest earnings.

Although this system has been termed a "limited reserve" or "modified pay-as-you-go" system, no single technical term for it has been found. Economists usually include social security benefits with what they call "transfer payments." This suggests that since, for the most part, current contributions are merely transferred to current payees, the "transfer method of financing" would be a good descriptive phrase.

In describing the evolution of the financing method, we read in Appendix I of Actuarial Study No. 49:

"As is often the case in this country, the answer was arrived at through a pragmatic political process rather than a theoretical philosophical process. And, as is also often the case, the pragmatic process has resulted in an answer which has, to date at least, worked out satisfactorily. Just as the benefit formula is a blend of equity and adequacy, with much greater emphasis on the latter, so is the financing method of a blend of "reserve" and "pay-as-you-go," with the latter having the greater weight. Both of these blends, with the weight shifted to "adequacy" and "pay-as-you-go," respectively, were inherent in the 1939 amendments and have met the very severe tests to which they have been subjected in the unprecedented conditions of the last 20 years."

Is there danger that we are overoptimistic as to the success of the financing method to date? It has been operating during a period when the system was immature and the contributions modest, when the actuarial or money value of the benefit to a recipient has been many times the amount of contributions made with respect to the recipient.

Has the blend been so bland as to blind us to blunders?

What is the extent of the blend of adequacy and equity? Some idea may be gained from a cost analysis of the OASDI system (as it was before the 1958 amendments) for present members and new entrants appearing in Actuarial Study No. 48. We read:

"The level-premium cost, after allowing for the existing fund, is 16.10 percent for present members as compared with 4.93 percent for new entrants (the latter figure is the normal cost). The sum of the present value of the contributions to be paid under the present schedule by present members and the existing fund is $269 billion less than the present value of benefits to be paid to them and their dependents and survivors; * * *. On the other hand, there is a "surplus" of $228 billion for new entrants."

The level-premium equivalent of the present value of contributions with respect to present members, as given in the study, is 6.74 percent of payroll compared with 16.10 percent of payroll—the value of benefits. In decided contrast, the level-premium equivalent of the contributions with respect to new entrants is 8.30 percent of payroll compared with 4.93 percent as the value of benefits. Present members and their employers, as a class, pay only about 42 percent of the value of their benefits, whereas new entrants and their employers will pay 169 percent of the value of their benefits. The equivalent level contributions of 4.15 percent for employee new entrants pays over 84 percent of the cost of their benefits. It is worse for the self-employed new entrants. Their equivalent level contribution is 6.23 percent of payroll or 125 percent of value of benefits. In this connection, it is important to recognize that, as employee unions have bargained for welfare and pension benefits, they have come increasingly to maintain that the employer contribution is in lieu of wages, that the contribution for pensions is a deferred wage and as a result the line between employee and employer contributions becomes less well defined. Hence, new entrants to the system may come to look upon the total of 8.30 percent as a cost to them for which a 4.93-percent value is obtained.

What is the extent of the blend of "pay-as-you-go" and "full reserve"? During the next decade, when the OASDI trust fund may be from two to three times the annual rate of benefit payments, the interest on the fund will be 6 to 9 percent of the benefit payments, say an average of 7½ percent. For a mature "full reserve" system, interest income would be 40 to 45 percent of pension outlays. It may then be said that the blend is about five-sixths "pay-as-you-go" and one-sixth "full reserve."

We need to know more about the kind of economic organism that we have created in the social security and railroad retirement systems. Legislation enacted today sets in motion forces which reach far into the future. In order to measure the significance of such forces, we need to appreciate that these retirement programs are dynamic economic instrumentalities. They are growing economic organisms. They have built-in features which generate and guide the pattern of growth. We must be able to detect symptoms in their growth behavior which may portend future trouble.

Need for Expansion of Sugar Beet Production

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. SHORT. Mr. Speaker, the attached news release pursuant to a meeting of sugar beet growers in Grand Forks, N. Dak., is indicative of the feeling of all of those associated with sugar beet production in the Red River Valley of North Dakota and Minnesota.

It is interesting to note that in the face of strong feelings that now exist in regard to our relationships with Cuba, these people who are so dependent upon sugar beet production for their livelihood are only asking to be given the benefit of our increased consumption in the United States as our population grows and deficits that may occur because of adverse crop conditions in domestic areas.

Our present Sugar Act expires at the end of December 1960, and it is of paramount importance that Congress make proper provision for the extension of the act before Congress adjourns. Sugar beet production could be expanded tremendously in North Dakota and could be of great importance in stabilizing our farm economy. It is my hope that in extending the Sugar Act, Congress will give due consideration to the merit of allowing our sugar beet producers in the United States to expand their acreage as our domestic consumption increases.

The news release follows:

SUGAR BEET GROWERS MEETING, GRAND FORKS, N. DAK., JUNE 14, 1960

At a meeting in Grand Forks, June 14, conducted by North Dakota Economic Development Commission, Minnesota Department of Business Development, and Grand Forks Chamber of Commerce, attended by the membership of the undersigned organization as well as representatives of business and industry closely allied with the beet sugar industry we strongly commend and endorse efforts to secure a renewal of the Sugar Act with such changes as will give the United States producers the following:

1. All of the annual increment resulting from increased consumption.

2. All of the deficits that occur in domestic areas.

We give full and enthusiastic support for such provisions in the pending Sugar Act legislation.

We assert that such redistribution of this country's sugar market is not only in the interest of thousands of growers who wish to produce sugar but also in the interest of securing suppliers from reliable sources within the boundaries of our own country.

We vigorously protest the injustice of assigning to Cuba ever increasing quotas yearly while domestic growers need to expand our sugar production for both agricultural and economic reasons.

Signed:

C. Einar Johnson, Warren, Minn., president, Western Sugar Beet Growers Association.

R. T. Adams, Fisher, Minn., president, Red River Valley Beet Growers Association.

Byron M. Henson, Hallock, Minn., president, Minn-Dakota Sugar Beet Development Association.

Leo Yaggi, Breckenridge, Minn., president, Southern Red River Valley Beet Growers Association.

The Vocational and Prevocational Training Possibilities for the Cerebral Palsied

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include a speech delivered by William P. McCahill at the Eighth Institute on Cerebral Palsy, Boston University, College of Liberal Arts, Boston, Mass., June 13, 1960.

Mr. McCahill is the Executive Secretary of the President's Committee on Employment of the Physically Handicapped. He is an acknowledged expert in the field of vocational training and well qualified to discuss the topic he chose, "The Vocational and Pre-Vocational Training Possibilities for the Handicapped":

THE VOCATIONAL AND PREVOCATIONAL TRAINING POSSIBILITIES FOR THE CEREBRAL PALSIED

(Remarks of William P. McCahill, Executive Secretary, the President's Committee on Employment of the Physically Handicapped, at the Eighth Institute on Cerebral Palsy, Boston University, College of Liberal Arts, Boston, Mass., June 13, 1960)

Were I to be asked to discuss the basic programs and policies of the President's Committee on Employment of the Physically Handicapped, I would, naturally, discuss them on a broad front, not covering specific disabilities but, rather, the importance of the hiring of physically disabled men and women in our industries.

However, there has been assigned to me by your chairman the topic of "The Vocational and Prevocational Training Possibilities for the Cerebral Palsied." While I have had the pleasure of addressing United Cerebral Palsy at a regional convention some time ago, my talk at that time was on the program of the President's Committee, rather than specific disabilities, and it has been necessary, therefore, for me to acquire facts from various sources which, I hope, grouped together, will enable me to answer some of the problems involved.

The United Cerebral Palsy associations estimate that nearly 600,000 persons in the United States are affected by the physical impairment of cerebral palsy, of whom approximately 200,000 are under 21 years of age. About 10,000 babies are born annually with cerebral palsy. As you know better than I, this impairment is characterized by loss of voluntary muscle control.

Vocational rehabilitation for persons with cerebral palsy has been a matter of much concern to United Cerebral Palsy associations, and its 342 affiliates located in various cities and towns throughout these United States. They have realized from the start that the first step in the direction of vocational rehabilitation for these people was one of evaluation. They were not altogether disappointed when the record of the Office of Vocational Rehabilitation disclosed the fact that only a very small number of persons with cerebral palsy were listed as rehabilitated during these past few years because sufficient funds were not available to the Office of Vocational Rehabilitation for this evaluation procedure which, in some instances, may take as long as 1 year, whereas persons handicapped through accidents require little or no evaluation.

Congress was aware of these difficulties when Mr. JOHN E. FOGARTY, of Rhode Island, chairman of the House Subcommittee on Appropriations, on January 14, 1956, stated: "Now that we are aware of the problem, we shall do everything within our power to stimulate the vocational rehabilitation program so as to provide more help for the victims of cerebral palsy."

On March 5, 1956, the House Appropriations Committee in its report to the House of Representatives stated: "For some years, the committee has been concerned with the fact that the States have not given as much attention as they should to rehabilitation of the more difficult cases, such as cerebral palsy, the mentally retarded, etc."

The Office of Vocational Rehabilitation at about the same time gave official recognition to the need of help to persons with cerebral palsy because on March 9, 1956, Miss Mary E. Switzer, Director of the Office of Vocational Rehabilitation, in a memorandum to heads of departments and independent establishments, stated: "There is a special need for your leadership in the employment of the cerebral palsied."

Again on March 13, 1956, in a letter by Miss Mary E. Switzer, as director, to State boards of vocational education and divisions of vocational rehabilitation on the subject of employment of the cerebral palsied, she stated: "The number of handicapped men and women in Federal employment is increasing but we are not sure there has been a proportionate acceptance of the more severely handicapped—the cerebral palsied among others. We want to encourage all appointing officers to make a fair appraisal of each handicapped applicant—whatever his disability and degree of impairment may be—in terms of his employability in the jobs available now and prospectively. It is our hope that this release will help unlock one door to the employment of the cerebral palsied. Your followup is necessary to open other doors for their placement in Federal service. And I cannot stress too strongly the value of personal contact by the State agencies with the appointing officers."

These directives naturally alerted the local offices of vocational rehabilitation and more attention has been given to persons with this handicap.

A cerebral palsy work classification and evaluation project by the Institute for the Crippled and Disabled began in January 1955 under the sponsorship of five community agencies. A subsequent grant-in-aid was received from the Office of Vocational Rehabilitation, U.S. Department of Health, Education, and Welfare, in June 1955. The sponsoring agencies were: New York State Division of Vocational Rehabilitation, New York State Employment Service, United Cerebral Palsy of New York City, United Cerebral Palsy of Queens, Institute for the Cripled and Disabled.

Efforts were made in this study toward accomplishing the following goals:

(1) To deal in a practical fashion with the immediate pressing vocational problems of the cerebral palsied adult awaiting service.

(2) To attempt to establish a standardized operating procedure designed for the observation and evaluation of each individual in a work setting which would be of practical value to other communities throughout the country.

(3) To start developing a broad work classification system based on the individual's generalized motor organization, including hand and finger control, visual motor coordination, speech, special senses, intelligence, emotional functioning, and vocational performance in the work setting.

As part of the evaluation process at the institute, each client received a complete medical review, including occupational and physical therapy, psychological testing, psychiatric screening, if indicated, speech and hearing examinations.

At the conclusion of the evaluation, a case conference was held with all professional disciplines attending and also representatives from the sponsoring agencies actively participating. At this meeting a total rehabilitation plan was formulated.

The fourth annual report recently issued by the Institute for the Crippled and Disabled, on the subject of cerebral palsy work classification and evaluation, describes the followup procedure of 168 cerebral palsied persons who were evaluated between April 1, 1955, and October 1958. Of this number, 111 persons, or 68 percent of the total caseload were recommended for direct placement or vocational training, 47 of whom were employable, 28 unemployable, 12 in training, 9 pending training, and 15 in high school.

I don't want to create the impression that 68 percent of persons with cerebral palsy are employable. The fact is that this 68 percent represented a group who were eligible for evaluation for their recognized potentialities but not necessarily employable in the open market.

For the most part, these 111 individuals were considered nonfeasible for training purposes prior to the development of this specialized project for evaluation.

Mr. Martin Moed, coordinator of the adult evaluation project for cerebral palsy, to which I just referred, recently delivered a paper at a program services workshop held in Columbus, Ohio, in which he stated, among other things: "Because of the complexity of the disability, little is known about the vocational abilities of the cerebral palsied. In every community, large or small, the problem of finding a job is overwhelming. A survey of 200 ambulatory adults in New York City revealed that only 42 were employed and a subsequent followup, unfortunately, revealed that only 32 of the 42 were still working. Two studies in Schenectady and Erie Counties in New York State indicated that 61 percent of the cerebral palsied population were unemployed and of the remaining individuals employed, almost half had only part-time jobs. A recent unpublished 10 year study of handicapped individuals who completed a leading New York City college course revealed that the handicapped cerebral palsied was not able to utilize his training to the fullest. The average wage was about $50 per week and 25 percent of the group were unemployed."

I don't suppose it is necessary for me to discuss with you a bill introduced by Congressman ELLIOTT in the House of Representatives to provide evaluation of rehabilitation potentials and rehabilitation services

to handicapped individuals who as a result thereof can achieve such ability of independent living as to dispense with the need for expensive institutional care or who can dispense with or largely dispense with the need of an atendant at home; to assist in the establishment of public and private nonprofit workshops and rehabilitation facilities and for other purposes.

There is no nationwide program of the type contemplated in this proposed law. Professional people in rehabilitation facilities throughout the country are demonstrating daily that many of the most severely disabled people can achieve remarkable results with the right kind of programs. Rehabilitation services of the kind contemplated in this act are no longer experimental.

Vocational Rehabilitation agencies are best qualified by philosophy and experience to deal with the problems of severe disability on a nationwide basis. The addition of Independent Living Rehabilitation Services is a logical extension of the vocational rehabilitation services they now provide. This act contemplates no new types of services because these agencies already have effective working relations with the facilities and professional groups that may be utilized in the provision of Independent Living Rehabilitation Services.

So you see, therefore, that this problem has been studied from many angles by the various voluntary and public agencies engaged in the work of helping children and adults with cerebral palsy to take their rightful place alongside their more fortunate brothers and sisters—part of the never-ceasing struggle to preserve the concepts we hold dear.

One of the public agencies, the Bureau of Employment Security, is preparing an interviewing guide for the use of counselors and placement workers in assisting persons with cerebral palsy. Current plans call for the publication of this guide, during fiscal year 1961, as an addition to the series of "Interviewing Guides for Specific Disabilities." The guide is intended to meet a long-felt need for such an aid to counselors and interviewers in public employment offices. It may also prove a useful tool to guidance and personnel workers in other agencies.

The guide will follow the format of the other disability guides of the series, with four main sections: (1) Description of Disability, (2) Evaluation of Work Capacity, (3) Definitions, and (4) Cooperating Agencies.

The description of the disability will contain explanations of the various types of cerebral palsy, which are distinguished according to the nature of motor involvement. The major types to be included are: (1) spasticity, (2) athetosis, (3) ataxia, (4) tremor, and (5) rigidity. Mental, emotional, hearing, visual, and speech defects are also described as resultants of brain damage in the cerebral palsied.

The section dealing with the evaluation of work capacity should be especially helpful to those who must perform this function for the cerebral palsied. The varied manifestations of physical and sensory impairments and the mental and emotional disturbances which are sometimes present make realistic assessment of work capacity in persons of this group a difficult problem. This section will list the factors which must be considered in evaluating the work capacity of such persons and points out the significance of each factor in counseling and placing them.

Definitions of terms commonly used by physicians and other specialists engaged in habilitation or rehabilitation of the cerebral palsied will be listed to aid in the interpretation of medical and other reports. A list of agencies and organizations which provide services needed by the cerebral palsied will also be included.

The Civil Service Commission in the near future will issue an informational pamphlet discussing the employment policy of those individuals with residual of cerebral palsy and other neuromuscular (nerve muscle) disorders.

A preview of the content of that pamphlet, through the courtesy of Dr. Chapin, Medical Director of the Civil Service Commission, briefly is as follows:

(1) With respect to cerebral palsy, multiple sclerosis, and all the numerous and varied disorders classified as neuromuscular, as with all physical defects or deviations from the normal, the Civil Service Commission holds that these conditions alone should not keep a person from being employed in the Federal service if he can qualify competitively and perform all the duties of the position he seeks effectively and without hazard to himself or others.

(2) Proper placement in these conditions is a prime consideration and since most of these persons are visibly handicapped, improper placement is less excusable than in a number of other handicapped groups. In other words, it is important that we do not employ these folks with the objective of having them perform only part of the duties. Since practical experience has taught us that to do otherwise, leaves the employee so hired in the unenviable position, at a later date, of being required to perform duties that he should not have been expected to do in the first place.

(3) In connection with the consideration of applicants with a spastic condition or involuntary movements of the upper extremities the Commission, through test development research, has modified test material without interfering in its competitive nature to the extent of enlarging space for recording proper answers, since these conditions ordinarily would interfere with proper machine scoring and result in these applicants being at a disadvantage in competition.

In several ways, the work of the Federal-State program of vocational rehabilitation has been directed more and more toward those who have cerebral palsy, dystonia and associated brain damage problems. This has taken the form of services to the cerebral palsied by the State agencies, research into rehabilitation methods by universities, rehabilitation centers and others, the support of new facilities, and the conduct of specialized training courses.

In 1958, nearly 1,000 persons with cerebral palsy were rehabilitated through the State rehabilitation agencies. This, of course, is not a large number in terms of those who need service, but it is important because it represents a sizable increase over earlier years. It is important to note, too, that all of those individuals not only receive various services but were placed in jobs as a final step in their rehabilitation. Ninety-one percent had been unemployed when rehabilitation services began—yet many of these people became professional workers, others entered skilled occupations, some became clerical and sales employees. Where the few who had worked had earned only about $93,000 a year as a group before rehabilitation, these 1,000 cerebral palsied individuals earned more than $1,600,000 in their first year of employment.

These figures promise to increase sharply in the next few years—not simply because of normal growth of State agencies and their services, but because a number of things are being done to insure a better job for more cerebral palsied people. The stepped-up activities of parents groups and other voluntary organizations is being supported by increased activities by the States and by the Office of Vocational Rehabilitation.

Research and demonstration grants have been made to 11 organizations, some of them to develop new mehods and procedures in work with the cerebral palsied, others to establish demonstration programs for evaluating the potentials of those who have cerebral palsy. One research grant, to Dr. Irving Cooper in New York City, is especially interesting. As you may be aware, Dr. Cooper has been one of the pioneers in surgery to eliminate the uncontrolled tremors of cerebral palsy. This, of course, makes rehabilitation possible for many persons who could not be helped otherwise, either functionally or vocationally. His project has been devoted to developing and refining some of the postsurgical rehabilitation methods that should be carried out to help the patient recover function as fast and as fully as possible, and to prepare for activity and useful work.

In another phase, the Office of Vocational Rehabilitation and the State agencies have been helping to meet one of the very urgent needs—the need for more and better facilities in which to serve the cerebral palsied. Through grants to voluntary organizations, many communities have been helped to establish the special facilities they need, so that all the cooperating organizations—public and voluntary alike—have at their disposal the special centers and clinics they need to do an adequate job for the cerebral palsied.

At the same time, a program of training grants has been developed, aimed at one of the most serious deficiencies we face today—the lack of properly trained professional workers to serve the cerebral palsied and other persons with handicaps. The shortages of physicians trained in this work, of physical therapists, occupational therapists and others represents a basic obstacle in all our efforts, for nothing else counts unless we have the people who perform this work for the CP patient. Today more than 30 medical schools are teaching the principles of rehabilitation to all their medical students, and many of them are providing residency training in physical medicine and rehabilitation for the physicians coming into this important specialty. Other groups of therapists also are in training, in increased numbers—and most important, all of the professional workers in these courses are acquiring an understanding that disability and rehabilitation call for a team operation, in which many professions must cooperate for the ultimate benefit of the patient.

Seminars such as the Boston University project today are helping speed the day when a larger percentage of the cerebral palsied will find increased opportunity for gainful employment. It remains in the providence of God to say when medical or scientific breakthroughs will come to help speed the day when we can say with confidence that CP's have as much chance as other severely disabled persons.

A quotation which I have on my desk may be most appropriate for my conclusion. It reads: "On the plains of hesitation bleach the bones of countless millions who, at the dawn of victory, sat down to rest, and resting, died."

We may not be at the dawn of victory, but we certainly are not on the plains of hesitation. I know I speak for the President in commending all of you for your dedicated efforts.

Competition Between East Coast and West Coast Shipyards

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. GARMATZ. Mr. Speaker, for some years the Members of the House

representing districts on the east coast in which shipbuilding is a major industry, have been endeavoring to eliminate a provision of the Merchant Marine Act of 1936 which grants a 6-percent differential to west coast shipbuilders.

In the 84th Congress and again in this Congress, I introduced legislation to repeal this provision. The Merchant Marine Subcommittee has held hearings on this legislation and strong evidence was presented indicating that the differential is no longer necessary to enable the west coast shipyards to compete with the east coast, southern, and Great Lakes yards.

In this connection I would like to insert in the RECORD a reprint from the Baltimore Sun of June 7, of an article written by Helen Delich Bentley, maritime editor of that paper, which I believe strongly supports our contention that steel and other major components are now available on the west coast and that with efficiency of operation the west coast yards are able to meet the competition of the east coast yards without the additional 6 percent subsidy. The article follows:

LAWYER GETS CREDIT FOR BUILDING BIG SHIPYARD

(By Helen Delich Bentley)

SAN DIEGO, CALIF., June 6.—The man responsible for making a big shipyard out of the former boatyard of National Steel & Shipbuilding Corp. is 37-year-old Milton F. Fillius, Jr., who was graduated as a lawyer at the University of Michigan in 1949.

His title is executive vice president of the yard.

He's described even by Edgar F. Kaiser, president of Kaiser Industries, as "The Boss."

Milton Fillius was "The Boss" when National Steel made its first pitch for big ship construction by winning the award for the contract to build two freighters for the American Export Lines from the Bethlehem Steel shipyard.

INTERESTS WIDE

At that time, N.A.S.S.C.O., commonly referred to here as "Nassco" was owned by Charles A. Smith, chairman of the board of U.S. National Banks, a local chain and owner of the San Diego Padres, among other financial interests, including a giant tunafish packing plant. Mr. Smith recently sold out to a combine headed by Kaiser interests, but Mr. Fillius remains at the helm, calling all of the actual operating shots.

As the combine was entering the picture, Nassco became the actual low bidder on another contract to build four freighters for American Export lines.

And it doesn't intend to stop there. National Steel now is to bid on contracts for 12 more ships to be offered by the Federal Maritime Board along with subsidized American-flag steamship lines.

"We are sharpening our pencils so we can bid on these next ships," is the way Mr. Fillius and Mr. Kaiser describe it.

MORE WAYS PLANNED

Although the yard now has only two major ways—both recently installed—it is preparing to build two more as soon as the tunafish plant of Mr. Smith is moved out within the next 2 months.

At this point the shipyard can compete with any other yard on the west coast and intends to become even more competitive, not only with them, but with all the east coast yards as it did in the last American export contract.

Nassco has several advantages. Its average wage of the sheet-metal workers, riveters, welders, and fitters is $2.77 an hour on a 3-year contract. This compares to $2.80 in Baltimore. The craftsmen, such as carpenters, machinists, painters, electricians, receive $2.72 and are due for a raise to $2.79 July 1, on a contract running until July of 1961.

Altogether the yard deals with 11 unions, "but we have a favorable labor climate" is the way Mr. Fillius describes it.

In addition, the Kaiser Steel plant at Fontana, 100 miles away, produces heavy plate and all the heavy major steel components which once were transported from east coast steel plants. This has been a major factor in Nassco entering the big ship field.

Representative SHELLEY, Democrat, of California, made it clear here this weekend that he and all other west coast Congressmen were going to continue to fight hard to make certain that National Steel and other west coast yards receive their share of new ship contracts.

This launching (of the export aid) is a realistic example of what the Congressmen from California have done to reestablish shipbuilding on the west coast and we intend to keep it here," said the Congressman on the Appropriations Committee.

"When it comes to the shipbuilding fight, we have organized a bloc of Congressmen from California, Oregon, and Washington who work together. We do not care where, just so the contracts go to the west coast. This ship symbolizes that the western shipbuilding industry not only has made a real effort to stand up, but to expand and to survive."

AMALGAMATION OF FIRMS

National Steel is a 50-acre amalgamation of several firms that might be considered rather incongruous when thought of in terms of a shipyard. They gradually are being molded into a compact unit to form a modern yard so they can compete with the best of the old-line yards with young men at the helm and using only modern equipment.

The outstanding example is the Linde cutting machine which can cut steel components of the ship in about one-tenth the time it takes by the older method, saving tremendous costs in manpower and time. One operator can make eight cuttings at a time by electrical impulses copying the image off a pattern drawing either to full size or quarter-inch scale.

The original firm was National Iron Works, a steel-fabricating concern when Mr. Smith took over in 1933. He moved it to the waterfront when he decided to build tuna boats to go with his tunafish packing business. During the war, the yard built barges and small naval auxiliary craft.

OTHER INTERESTS SUPPLANTED

Mr. Fillius, who served in the Navy, decided to come to San Diego after he finished his law training as an assistant to Mr. Smith. Somehow, the two got off into shipbuilding on a major scale and now that has supplanted all of the other financial interests of the groups involved.

The tunafish plant is being moved away to make more room in the palmtree surrounding setting for big-ship construction. Already taken over is a small repair yard of Martinolich and the former 28th street mole where naval vessels once docked. This is used for prefabricating and small repairing and outfitting.

Although the entire plant covers 50 acres of ground, none of the land is owned by the plant, but by the Harbor Board of San Diego which owns all the waterfront land in the city limits under a State law. National Steel leases the land as do the major aircraft plants located on the waterfront and employing over 28,000 persons in this metropolitan area of more than 1 million persons.

Why All This Fuss About Braceros?

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. GATHINGS. Mr. Speaker, in a short time the House of Representatives will be considering legislation to extend the provisions of Public Law 78 for an additional 2 years. This is the law, first passed in 1951, that provides for the legal and regulated entry of Mexican farmworkers to the United States during seasons of peak labor needs to work the crops that feed this mighty Nation of ours. These supplemental farmworkers, absolutely necessary if we are to continue to feed and clothe this Nation from our domestic farms and ranches, have recently been subject to all sorts of propaganda utterly fantastic.

As a factual report, the Farm Journal of October 1959, carried an article written by Mr. Charles E. Ball of their field staff. Mr. Ball made personal inquiry into the antiwetback program, and his findings will be of great value to Members seeking a clear answer to the situation and "Why all this fuss about braceros?":

WHY ALL THIS FUSS ABOUT BRACEROS?—MEXICANS ARE HAPPY TO GET JOBS IN THE UNITED STATES, AND U.S. FARMERS ARE GLAD TO HAVE THEM—BUT NOBODY CAN AGREE ON HOW THE BRACERO LAW SHOULD BE ADMINISTERED

(By Charles E. Ball)

Jose Camarillo Torres considers himself a lucky man. He is now working in the United States.

But Jose—one of some 400,000 Mexican braceros—is a hot topic in the South and West right now.

A bracero is a Mexican national, authorized to work in this country by a law passed in 1951. This law gave our Secretary of Labor authority to negotiate a work agreement with the Mexican Government.

But Jose's luck may not last forever. Last year, 432,857 braceros came to our country to help farmers in 25 States harvest their crops. However, the work agreement between the United States and Mexico expired June 30—and has been extended month to month since then because the two governments haven't known quite how to write a new one.

Jose and others like him are at the center of an emotional controversy between farmers and ranchers, the U.S. Department of Labor, labor union officials, and religious leaders—to name only a few.

Last week, Secretary of Labor James F. Mitchell visited, unannounced, some labor camps in Santa Clara Valley, Calif. He called them filthy, closed one down and told farmers there to clean up the rest.

But Jose Torres isn't mad at anybody. He's feeling good. When I met him last month at the Eagle Pass, Tex., Reception Center, he had all his papers approved and was eagerly waiting for a bus to Lamesa where he would pick cotton. He will be here only 3 months, then he'll return to his family.

His job at home was "driving oxen on a corn and bean farm." The pay was 3½ to 5 pesos a day, the equivalent of 28 cents to 40 cents. But he and his wife decided that if he could work 90 days "across the river," for wages of $5 to $8 a day, then maybe they

could move into the village, buy the five children some clothes, and send them to school.

Mexican Government officials like the program, too. They say that braceros learn new farming practices in the United States. From 1946 to 1955, Mexico increased agricultural production 100 percent.

"They see higher standards of living," one Mexican consul told me, "and set their own goals higher."

Last year, the 432,857 braceros that worked on U.S. farms sent an estimated $34 million home, making this second only to the tourist trade as a source of dollars. Then who is unhappy and why? Well, let's look at the unhappy groups one at a time.

Farmers and ranchers need and want braceros, but don't like the way the U.S. Department of Labor administers the program.

"The USDL is dominated by labor unions," farmers claim, "and the unions would like to see the whole program scuttled so they can eventually unionize farmworkers."

"We're skeptical of the new contract, because the last one was weighted in favor of the bracero," says Jim Walsh, a member of the Rio Vista Farm Harvesting Association, Mission, Tex., which now has 1,200 braceros under contract to pick cotton. "He has all the guarantees and we have none."

Here are a few assurances a farmer must give the bracero:

A guaranteed minimum of "the prevailing wage in that area." If it is piece rate work, such as picking cotton or tomatoes, then 90 percent of the workers must receive over 50 cents per hour or the piece rate goes up for all.

Housing and food (for cooking facilities) up to USDL standards.

Insurance including $5,000 accident policy; a $500 nonoccupational (off the job) accident policy; $1,000 for natural loss of life; $2,000 accidental death; and a $350 burial policy. This costs the farmer $4.50 per manmonth, $2 of which can be deducted from the bracero's check for the nonoccupational policy.

A guarantee that he will be employed three-fourths of the time, or that he'll get subsistence if it rains and he cannot work 64 hours per 2 weeks.

To those not up against the problem, all these might sound reasonable, but here's what farmers and ranchers say: "The housing standards are unreasonable," asserts rancher T. A. Kincaid. "In many cases the house that the ranch owner moved out of and turned over to them won't pass USDL inspection."

"The minimum wage is not a part of the law," declares Ed Bush, of the Texas Cotton Ginners Association. "It's the Secretary of Labor's idea—a perfect example of law by administrative edict rather than by congressional intent."

"There's no end to the harassment, and changing of rules," declares C. B. Ray, manager of the Valley Farm Bureau. "In 1 year, they changed the formula for determining prevailing wages three times.

"The 90–10 formula is another example of harassment and administrative edict by the Secretary of Labor," he adds. "It's not in the law. It's just a built-in spiral to raise wages. If you have 10 cottonpickers and 2 sit on their sacks and fail to earn 50 cents per hour, you're supposed to raise the price rate for all. As a result, some farmers already see a slowing down in production of the braceros."

In California, the battle goes on over braceros. The AFL–CIO is attacking the program while trying to organize farmworkers. Backing them up is Gov. Edmund Brown with a proposed minimum wage. "His administration has really antagonized farmers," says one capital observer. "Farmers are taking on the Governor and labor every chance they get."

Ranchers have a different problem from framers. Ranchers must certify that they will pay a minimum of $110 per month, plus room and board, if they get a bracero from the bullpen or $125 if they get a special.

From the bullpen they take any man. A special is a man that they know and request by name.

"This is pretty expensive labor," says Rancher Rick Alexander, "when you figure the fringe benefits—food and housing, processing charges, transportation, insurance, etc.—for men who can't speak our language, can't get a driver's license, can't run into town for supplies."

For several years, ranchers found that to get a special processed, they must pay a "mordida," the Spanish word for tip or bribe to an official.

They squawked, but grew to accept it as a cost of doing business. Officials on both sides of the river—in Mexico and in the United States—deny any knowledge of it. But ranchers insist, "No one can live or work in the area without knowing about it."

Ranchers say mordida is the custom and way of life in Mexico. Until a year or so ago, many ranchers were calling it an advance to the bracero, then deducting it from his first paycheck.

Much less mordida is paid today than in years past, say ranchers, but it still exists.

What, then, would farmers and ranchers like in the next contract?

"We'll just do well to hold our own," says Harold West, president of the Texas Farm Bureau. "But we really don't know what is in a contract until the USDL starts interpreting it.

"Their interpretations sometimes are absurd," he continued. "What we would like is for the USDL to ease the pressure just a little so we can get back to the business of farming."

Labor unions admittedly don't like the bracero program. "It depresses overall wages and drives many of our own farmworkers out of State," says Jerry Holleman, president of the AFL–CIO in Texas.

"If Texas farmers would pay our domestic migrants the 50 cents an hour they pay the bracero, plus the cost of the fringe benefits, the domestics would stay and farmers would have better labor at no more cost."

Some religious leaders are unhappy about the program, too. "It's a national disgrace, the American badge of infamy," charges Catholic Archbishop Robert E. Lucey. He is concerned about the disruption of homelife back in Mexico; about the spiritual life of the men while away; and the depressing effect of bracero wages on other migrant labor.

Of course, farmers heartily disagree. "We've got to have braceros," declares J. B. Kirkland, who contracts 25,000 a year for the Trans-Pecos Cotton Association. "They harvest 80 percent of our cotton in this area. And this is as sound a labor program—for both sides—as I have had experience with in 46 years of farming."

Kirkland and his association have a modern dispersing area that operates year-round in Pecos, Tex., for braceros on their way to local farms. It's a $300,000 plant, including dormitories, a cafeteria, a hospital, a doctor, and nurses.

So the argument rages. Regardless of who is right, there's one result:

"The USDL has harassed us and increased costs until we're forced to mechanize," sums up C. B. Ray. "Farmers in our four counties have bought some 250 cottonpickers in the last 3 years—and are doubling that number this year.

"We're preparing for the day when we won't have to depend on braceros at all."

Is Liberty Possible Without Law?

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, June 21, 1960

Mr. KEATING. Mr. President, the American Bar Association Journal recently contained an article entitled, "Our Freedom Based on Law—Is Liberty Possible Without Law?"

The author of this article, David O. Boehm, Esq., is a leading member of the bar in Rochester, N.Y., my hometown. He has been very active in public affairs, and although still a young man, has already become an outstanding community leader.

His article in the A.B.A. Journal eloquently discusses the mission of lawyers and the significance of the rule of law. He concludes, after citing many historical examples, that it would not be possible to have liberty without law, since the two are inseparable.

I know that Mr. Boehm's learned and instructive comments on this subject will be of interest to many Senators, and I therefore ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR FREEDOM BASED ON LAW—IS LIBERTY POSSIBLE WITHOUT LAW?

(By David O. Boehm)

In a way, any talk upon the subject "Our Freedom Based Upon Law" seems, at first glance, somewhat paradoxical. For, although much has been said in the past and will be said in the future about law being the safeguard of liberty, nevertheless down through recorded time much has also been said about law and lawyers in a much more disparaging fashion.

For example, as far back as 1621, Burton, in his "Anatomy of Melancholy," quoted the proverb, "He that goes to law holds a wolf by the ear." And the title of Arbuthnot's political pamphlet in 1712 is "The Law Is a Bottomless Pit." Shakespeare was even more direct. One of the characters in his plays urges with great force, "Let's kill all the lawyers."

And yet the satirical comment, the jokes and gibes that continue even today suggest that to men in society the law always has been a familiar thing, a thing which they knew had the capacity for greatness, and which was discussed not for what it could do but what mankind wanted it to do—much as Brooklyn in the past affectionately called its favorite ballclub "Dem Bums."

Through history, the law has been so much a part of man that in early days he incorporated it in all his religious beliefs. In a savage society it became a system of taboos. The Romans made it a goddess and when Moses descended from Sinai he carried with him, as a divinely revealed thing, the Tablets of the Law. It was too well understood even to require comment that God was on the side of the just and thus the first trials in England before the Norman invasion consisted of the ordeals by fire and by water whereby a verdict was established in a supernatural way. Even today we speak about going through fire and water for something or someone.

When the Normans conquered England, there was added ordeal by battle and it was here that the idea of the advocate, or lawyer, first became manifest in the person of the champion willing to do battle for an accused. Ivanhoe battling at the lists for Rebecca is a familiar example of this early type of law court where the judgment was supposed to be resolved not in favor of strength, but of right.

To point out that this may not have always been the case does not diminish the natural urge that man felt for a system of justice that could result in justice. In other words, the belief was equivalent to the fact and though the operation of law, compared to today, may have been crude and primitive, nevertheless it was crude and primitive only because it represented the society that it was in. The instinctive need for law was there just the same.

LAW EXISTS BECAUSE IT HAS TO

And so law exists because it has to. As a societal thing—evolved out of the customs and traditions and experience of a society which became codified—it must develop slowly in the same way that the community about it develops. But to the individual in need of a justice which may take a new or novel form, this very slowness, this painstaking exercise of deliberation before discarding one rule for another is irksome and sometimes infuriating. And so this individual, with a strong belief in the rightness of his cause, invents another proverb about the law, or creates a new condemnation of it. Sometimes this takes the form of calling for its complete abolition—a society without law—where men will live amicably together in a natural state because men are naturally good.

So Rousseau believed—but all the ambitious experiments which he inspired proved only that when men live in anarchy they cannot live together. Whereas man may be good, all men are not good.

But anarchy is not and never has been a formidable enemy of law. It is the opposite extreme, tyranny or absolutism, with which law has bitterly and tenaciously contended through the centuries. It is a demon that says to the individual who cannot find satisfaction in the law—"Eliminate the law's delays—remove the lawyers and their technicalities; with one stroke I can give you what you want because I am above the law."

This is a siren song that has attracted many and even democracies have yielded to it. In times of stress, the early Romans appointed dictators, the Hebrews gave up their judges for a King because of the emergency created by the Philistinian wars, and Abraham Lincoln, during the Civil War, suspended the writ of habeas corpus and permitted the trial of civilians in the various Northern States by Army generals in direct violation of the Constitution.

The times required, it was felt, speedy law, and so the people gave up their own individual rights in submission to the State. In a crisis this may be necessary. We all remember the war emergency powers Congress gave to President Roosevelt during the last war.

IMMEDIATE "JUSTICE" MAY BECOME INJUSTICE

But when the individual demands justice so immediately, so urgently, that he feels it to be injustice to make him wait for its proper exercise, then law's worst enemy grows strong. In the dark of night the lynch mob draws the rope around its victim's neck and strangles him without a trial. The mob is always eager for quick and speedy justice. In the People's Court of the French Revolution, Mme. LaFarge clicks her knitting needles and watches the accused nobility appear before the judges, who are also the prosecutors and the jury, and the accused are condemned almost before they can draw a breath in their own defense. Quick justice—speedy justice. The sharecropper and the aristocrat are both victims of this demoniac urge that whispers "Execute them before some smart lawyer with his technicalities and tricks can save them."

It is when the individual or a group of individuals is most anxious for speed in the exercise of the law that the law must act as the checkrein. How careful was the War Crimes Tribunal to avoid even the suspicion of being a drumhead court. How slowly, and to some, how tediously it examined and analyzed the proofs and accusations. And yet, in spite of the immense care and caution with which it managed its power, there were those among it who still remained uncertain, not as to whether Goering and Himmler and the others were guilty, but as to whether the judges had the right to judge the accused and condemn them as war criminals. This was the first time that such a tribunal had ever sat, the first time men were being tried for crimes of war against nations and people. But this was not a star chamber where confessions were extorted out of the accused, nor where a mob in a turbulent courtroom clamored for brutal revenge. It was an example of law in its endless, cautious search for truth and the principles of justice. Yet, there were and are great judges and legal scholars in many nations who wondered whether even this slow and painstaking trial, with its rigid and careful adherence to all the rules of law and the protection it gave the accused, was not wrong because it was too novel, too new and, therefore, suspect.

In a sense, therefore, it is almost the duty of the law to be unpopular. As someone pointed out "All the world hates an umpire." Frequently it runs against the tide of great popular feeling and emotion. It provides sanctuary to men who are regarded as deadly enemies of the community or of the nation. It restrains and inhibits the floodwaters of popular prejudice and compels them to flow into society's proper conduits. It is a shield not only against the mob, but against the tyrant.

We see it, as Ben W. Palmer points out, in "Demosthenes, defending the democracy of the ancient world against the totalitarian menace of Philip of Macedon; undefended Cicero, standing for the republic and leveling the shafts of his eloquence against an Antony whose aroused assassins menaced him at the doors of the senate house; Papinian, facing certain death for refusing the Emperor's demand that he give a legal opinion justifying the Emperor's assassination of his own brother; Malherbes, during the French Revolution, going to the guillotine because he dared to defend his king; John Adams, in the face of public clamor, defending the redcoats charged with murder in the Boston massacre; William H. Seward, risking his professional and political career by acting as counsel for a poor insane Negro charged with murder."

There was Erskine, almost at the risk of his life in an England fearful and apprehensive of invasion by Napoleon, defending Tom Paine of the crime of sedition for having written a pamphlet which spoke favorably of French republicanism; not only defending Paine, but obtaining his acquittal. And perhaps the greatest of them all, Edward Coke. When King James angrily said that it was treason to affirm that the king was under the law, Lord Coke, defying imprisonment in the Tower of London and the headman's ax, declared that though the King ought not to be under any man, he was under God and the law.

This does not imply that the interpreters of the law—the judges who make the decisions and establish the guideposts—are above it. They, too, are men and capable of error and no one is more aware of this than the judges themselves. As the late Justice Jackson pointed out, the Supreme Court is not final because it is infallible; it is infallible only because it is final.

I have tried to show here by example rather than mere declaration that law does protect and guard our liberties—that without law, there is no freedom. And because by conferring a right upon one man, it may deprive another of his, it must be slow, it must be deliberate as well as considerate. Nor does this mean that the law is rigid or inflexible; but when it changes, when it adjusts, it is to develop with the developing society about it.

As Viscount Bryce said in his book, "The American Commonwealth," everything that has power to win obedience and reverence must have its roots deep in the past. The more slowly institutions have grown, so much the more enduring are they likely to prove.

The law therefore is the slowly reasoned will of the people, rather than the mere momentary willfulness of the king, or even of the majority. As an example, the 18th amendment has come and gone in our time, but the first 10 amendments are still with us and will be with us so long as our democratic form of government exists.

Is it possible to have liberty without law? This can be answered with the words of Charles Evans Hughes: "Liberty and law are one and inseparable."

Common Site Picketing in Construction

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. GIAIMO. Mr. Speaker, in consideration of the interest of this House in proposed amendments to the Taft-Hartley Act which would affect secondary boycott provisions, I wish to call the attention of my colleagues to the following report. This study was prepared and submitted to me by Mr. Sar A. Levitan, specialist in industrial relations, who is with the economics division of the Library of Congress Legislative Reference Service.

The report follows:

COMMON SITE PICKETING IN CONSTRUCTION
SECONDARY BOYCOTTS

The Taft-Hartley Act contains a prohibition against secondary boycotts. Section 8 (b) (4) (B) makes it an unfair labor practice for a labor union to "induce or encourage * * * a strike or a refusal * * * to perform any services, where * * * and object thereof is * * * forcing or requiring any person * * * to cease doing business with any other person."[1]

The meaning of this section has been a source of controversy since the enactment of Taft-Hartley in 1947. Some have claimed that the intent of Congress, and that sound public policy, would require the outlawing of all types of secondary boycott—attempts to influence an employer by exerting economic or other pressures against persons who deal with the employer.

Union spokesmen have naturally opposed this stringent interpretation of the ban on secondary boycotts. They assert that a com-

[1] Before the passage of the Landrum-Griffin Act, this ban on secondary boycotts was contained in section 8(b) (4) (A) of the Taft-Hartley Act.

munity of interest exists among workers in a given industry or occupation, and they insist that undercutting of union wages or working conditions by one employer may jeopardize union standards established in other sectors of the industry. Unions, therefore, justify the use of boycotts against any employer who jeopardizes established union working conditions.

This controversy played a major role in the congressional debate of 1959 in connection with amending the Taft-Hartley Act. As finally adopted, the Labor Reform Act of 1959 included some specific additional restrictions upon the use of secondary boycotts in labor-management disputes.

In applying the ban on secondary boycotts, the National Labor Relations Board and the Courts have adopted the position that the prohibition of secondary boycotts contained in section 8(b)(4)(B) must be interpreted to harmonize "the dual congressional objectives of preserving the right of labor organizations to bring pressure to bear on offending employers in primary labor disputes and of shielding unoffending employers and others from pressure in controversies not their own." (*NLRB* v. *Denver Building Trade Council*, 341 U.S. 675, 1951.)

THE CONSTRUCTION INDUSTRY

The application of section 8(b)(4)(B) presents special problems in the construction industry. This is due to the special nature of the industry and the structure of the unions representing construction workers in collective bargaining. According to a U.S. Labor Department publication, the construction industry has been characterized as a "group of related firms whose principal common denominator is the employment of the same labor force in bargaining with the same trade unions." (Labor Management Relations in the United States, Bureau of Labor Statistics, Bulletin No. 1225, p. 3:09). Eighteen different unions within the AFL–CIO comprising the Building and Construction Trade Department, in addition to the Teamsters Union, claim jurisdiction over various groups of workers engaged in the construction industry. These unions are organized on a craft basis.

The industry is highly organized and according to the Bureau of Labor Statistics about 2.3 million of the 2.6 million employees in the contract construction industry in 1958 belonged to these 20 unions. This estimate may, however, exaggerate union membership since it is based on union claims and also includes unemployed workers as well as some who may have retired but still are maintained on union rolls. (Directory of National International Labor Unions in the United States, December 1959. Bureau of Labor Statistics. Bulletin No. 1267, table 7, p. 12.)

The National Bureau for Economic Research estimated that in 1953 union membership in the building and construction industry accounted for 84 percent of total employment. According to this study, union membership in 1953 accounted for 2,198,000 out of the total 2,622,000 persons engaged in the construction industry. (Leo Troy, Distribution of Union Membership Among the States, Occasional Paper No. 56, 1957, table 6, p. 24.)

The construction industry is normally divided into four broad categories: Heavy highway and engineering construction; commercial, industrial and public building construction; homebuilding; and maintenance and repairs. The extent of unionization is highest in the first 2 categories of construction. The extent of unionization also varies according to geographic location and size of community; unionization is more widespread in larger metropolitan areas. Geographically the construction unions are weakest in the South and strongest in the mid-Atlantic States and on the Pacific coast.

Much of the homebuilding construction is done by small contractors employing nonunion labor. As the following table indicates, almost 3 out of 4 workers in the construction industry were employed in 1956 by firms having less than 100 employees compared with 1 out of 5 in manufacturing.

Distribution of employment by size of company—Construction and manufacturing (1956)

Number of employees in company	Percent of total employment	
	Construction	Manufacturing
Total	100	100
1 to 7 employees	23	2
8 to 19 employees	19	4
20 to 99 employees	30	14
100 to 999 employees	21	27
1,000 and over employees	7	53

Source: Health, Education, and Welfare Department, Bureau of Old Age, Disability and Survivors Insurance.

Employer organization has developed much less than union organization in the industry. While employer organizations are organized along national, regional and local lines paralleling the craft organization of the employees, most of the collective bargaining is done locally by the employer craft associations and the unions in each craft. However, in many cases the local construction associations bargain with all their building unions in the same area. A study by Profs. William Haber and Harold M. Levinson found that there is a wide variety of combinations of union-management groups which may engage in bargaining, so that "it is all but impossible to present a simple picture of the industry's collective bargaining pattern." (Labor Relations in the Building Trade, University of Michigan, 1956, p. 40.)

COMMON SITE PICKETING

Normally, any construction job involves a general contractor and a number of subcontractors engaged by the general contractor to perform some specialized parts of the project, such as, installing electrical equipment, plumbing, plastering, or painting. This situation creates the uniqueness of applying the ban on secondary boycotts contained in section 8(b)(4)(B) of the Taft-Hartley Act to the construction industry.

Basically the question revolves around the relationship between the various subcontractors or employers on the site. If it is to be assumed that each employer is an independent entity, then the ban contained in section 8(b)(4)(B), prohibiting a union from engaging in a strike when an object thereof is to force an employer to cease doing business with any other person, would apply to unions in the construction industry picketing a site where many employers are engaged. Such picketing runs the risk of being prohibited by section 8(b)(4)(B) as a secondary boycott within the meaning of the act.

In 1950 the NLRB adopted a set of four basic tests that must be satisfied if common site picketing is to be considered legal:

1. Picketing must be carried on only when the primary company actually is doing business at the common site.

2. The primary company must be doing its normal business at a common site.

3. The picketing must be carried on reasonably close to the place where the primary company is carrying on its business.

4. The picket signs must state clearly that the picketing is aimed only at the primary company. (*Moore-Drydock* (92 NLRB 547).)

At the same time the National Labor Relations Board held that where a union pickets a common site for the purpose of forcing a building contractor to cease doing business with his subcontractors, it is engaged in an illegal secondary boycott. In other words, the contractor and the subcontractors are not "allies," and, therefore, not exempted from the secondary boycott ban of section 8(b)(4)(B) (*Denver Building Trades Council* (82 NLRB 1195).)

The Supreme Court upheld the National Labor Relations Board ruling that picketing by a union is prohibited under section 8(b)(4)(B) if the object of the picketing is to force a contractor to cease doing business with a nonunion subcontractor. The Supreme Court added that the law would have applied even if the union may have had other objects in the picketing. (*NLRB* v. *Denver Building Trades Council* 341 U.S. 675 (1951).)

The impact of Moore-Drydock and Denver Building Trades Council decisions must be considered jointly. In the latter case the National Labor Relations Board and the Supreme Court apparently held that picketing by a union in the construction industry is subject to the criteria laid down in the Moore-Drydock case. Spokesmen for the unions in the construction industry have insisted that the application of the Moore-Drydock tests for legal picketing, which involved a ship repairing company and an operator of a vessel which happened to be docked at the shipyard, should not be applied to the construction industry. The Moore-Drydock case involved two separate employers engaged in different businesses while the construction of a building, spokesmen for construction unions agree, should be likened to a single enterprise. The result of the application of the Moore-Drydock criteria for legal picketing, according to the building unions, has been to effectively eliminate not only secondary but also primary picketing on a construction site.

This Supreme Court decision in the Denver case has been a source of controversy over the past 9 years. A number of attempts have been made to amend the Taft-Hartley Act so as to reverse the Denver decision as far as the construction industry is concerned. In 1954 President Eisenhower recommended "that the act be clarified by making it explicit that concerted action against * * * an employer on a construction project who, together with other employers, is engaged in work on the site of the project, will not be treated as a secondary boycott."

The House Committee on Education and Labor (committee print, H. Res. 115, Apr. 29, 1954) and the Senate Committee on Labor and Public Welfare (Rept. No. 1211, Apr. 15, 1954) acted favorably on the President's recommendation, but no action was taken on these proposals. The President repeated the recommendation to reverse the Denver decision in 1958 and 1959. In 1960 the Under Secretary of Labor testified in favor of H.R. 9070.

Congress considered the above recommendation in connection with the labor reform legislation debated in Congress in 1958 and in 1959. But neither the Kennedy-Ervin bill as passed by the Senate, nor the Landrum-Griffin bill as passed by the House in 1959 contained any provisions dealing with exempting the construction industry from section 8(b)(4)(B), though attempts were made to write in such an exemption by the conference committee which ironed out the differences between the House and Senate versions of the labor reform legislation of that year. Several of the conferees in 1959 pledged at that time that attempts to remedy this situation would be made in 1960. The Kennedy (S. 2643 and Thompson (H.R. 9070) bills represent an attempt to reverse the 1951 Denver decision.

These bills consist of only one paragraph stating:

"That nothing contained in clause (B) of this paragraph (4) shall be construed to

make unlawful, where not otherwise unlawful, any strike or refusal to perform services at the site of the construction, alteration, painting, or repair of a building, structure, or other work and directed at any of several employers who are in the construction industry and are jointly engaged as joint venturers or in the relationship of contractors and subcontractors in such construction, alteration, painting, or repair at such site, and there is a labor dispute, not unlawful under this act or in violation of an existing collective bargaining contract, relating to the wages, hours, or other working conditions of employees employed at such site by any of such employers."

ARGUMENTS IN FAVOR OF H.R. 9070

1. The Denver Building Trades decision fails to recognize the realities of collective bargaining in the construction industry. It is based on a technicality that the contractors and subcontractors on any construction site are separate employers. Legally this is true, but cursory examination of the interrelationship between the contractor and the subcontractors would show that their operations are closely interrelated and that any contractor before he bids on a construction job must carefully plan the cost and type of labor that subcontractors will supply him for the various tasks usually performed by them. The intent of Taft-Hartley was obviously to ban secondary boycotts which affect neutral employers. This is not entirely the situation that exists in the construction industry. In defense of the prohibition of secondary boycotts, Senator Robert A. Taft stated in the debate on the floor of the Senate:

"This position makes it unlawful to resort to a secondary boycott to injure the business of a third person who is wholly unconcerned in the disagreement between an employer and his employees" (93 CONGRESSIONAL RECORD 4323, April 29, 1947).

Obviously, if we are to follow the Taft reasoning, the ban on secondary boycotts might not apply to the construction industry.

2. In the absence of subcontractors, an employer could not require his union employees to work side by side with a few selected craftsmen who would undercut union scales. In manufacturing, for example, the union would be free to strike and picket an establishment if the employer chose to employ nonunion electricians at rates below union scales. The union would have the freedom to picket the establishment and peacefully advertise that an employer refuses to pay union wages to the electricians, and such picketing would be legal if the majority of the employees in the collective bargaining unit chose to be represented by the union. The structure of the unions in the construction industry, each craft being represented by a different union, prevents this kind of representation. The Supreme Court minority in the Denver Building Trades case characterized this as the "fortuitous business arrangements that have no significance so far as the evils of the secondary boycott are concerned."

The minority of the Supreme Court recognized the realities of the structure of employers and unions in the construction industry by asserting:

"The picketing would undoubtedly have been legal if there had been no subcontractor involved—if the general contractor had put nonunion men on the job. The presence of the subcontractor does not alter one whit the realities of the situation; the protest of the union is precisely the same." (Denver Building Trades Council, 341 U.S. 675.)

3. The ban on picketing in the construction industry, as interpreted by the Supreme Court, undermines the very purpose of the Labor-Management Relations Act, which is aimed in part to "prescribe the legitimate rights of both employees and employers * * *." Evidence presented before the House Subcommittee on Labor-Management Relations of the Education and Labor Committee showed that the decision has encouraged open-shop activities in the construction industry with the accompanying undermining of union scales. It was found, for example, that in some cities union contractors have been replaced by open-shop employers in the construction industry. Indeed, it is significant to remember that the nonunion subcontractor in the Denver Building Trades case paid his electricians 42 cents less per hour than the union scale.

The issue, therefore, in approving H.R. 9070 is whether a union would be permitted to protect the economic interests of the members and preserve the union scale or whether the law would continue to encourage nonunion employers in the construction industry and thereby undermine the union standards.

The fact is that contractors employing union labor have supported legislation aimed at overruling the Denver Building Trades decision; the associations of masons, electrical, and painting and decorating contractors of America support the enactment of H.R. 9070. All these associations have, of course, taken a strong position against secondary boycotts which are aimed at an innocent third party. But they recognize that the needs to preserve union standards in the construction industry require that the unions must be allowed to protect the interests of their members by refusing to work with nonunion workers in the construction industry.

Again, in the words of the Supreme Court minority in the Denver Building Trades case:

"The employment of union and nonunion men on the same job is a basic protest in trade union history. * * * The union was not out to destroy the contractor because of his antiunion attitude. * * * All the union asked was that union men not be compelled to work alongside nonunion men on the same job."

4. Experience has shown that the normal union representation elections cannot be held in the construction industry because of the short duration of employment of any worker normally employed by an employer. The only effective means available for the unions in the construction industry to organize employees and to protect union standards is to picket a job site. In any other industry the union can rely upon the processes of the NLRB to protect the right of the employees to engage in collective bargaining. The Denver Building Trades case has denied unions in the construction industry this elementary protection.

ARGUMENTS AGAINST THE ENACTMENT OF H.R. 9070

1. The major contribution of the Taft-Hartley Act was to limit some of the coercive powers of unions. Section 8(b)(4) restricted the power of unions to engage in secondary boycotts. Senator Robert A. Taft explained the need for this section in the following words: "Under the provisions of the Norris-LaGuardia Act, it became impossible to stop a secondary boycott or any other kind of a strike, no matter how unlawful it may have been at common law. All this provision of the bill does is to reverse the effect of the law as to secondary boycotts. It has been set forth that there are good secondary boycotts and bad secondary boycotts. Our committee heard evidence for weeks and never succeeded in having anyone tell us any difference between different kinds of secondary boycotts. So we have so broadened the provision dealing with secondary boycotts as to make them an unfair labor practice." (93 CONGRESSIONAL RECORD 4198.)

The NLRB and the courts interpreted this provision in light of section 7, which encourages collective bargaining, and section 13, which permits the unions to engage in strikes. The criteria for permissive picketing were laid down in the Moore-Drydock case and in the *Washington Coca-Cola Bottling Works* (107 NLRB 233, (1953)). Construction unions should not be entitled to special privileges going beyond the above criteria. The enactment of H.R. 9070 would turn the clock back and exempt one of America's great industries involving millions of employees from reasonable restriction upon picketing and engaging in secondary boycott.

2. The protector of 8(b)(4)(B) does not extend to allies of the primary employer. Nor does the act, in the words of Senator Taft, "apply to a case where a third party is, in effect, in cahoots with or acting as a part of the secondary employer" (93 CONGRESSIONAL RECORD 8709). But the several contractors and subcontractors engaged in a construction project are clearly not "allies" within the meaning of this interpretation. The relationship of subcontractors to contractors is that of independent producers or entrepreneurs; comparable in many respects to suppliers and major producers in any industry. It is therefore only fair that employers in the construction industry should have the same protection from coercive union activities as is extended by the law to employers in other branches of American industry.

Moreover, all construction workers like other workers are protected in the right to join a union or not to join a union. If the employees of the subcontractor have not joined a union they have the right to protection from coercion by unions not of their own choosing.

3. H.R. 9070 would give unions in the construction industry what amounts to an effective control on all the labor that is being done on a site. By picketing the site a union could force the employer to deal only with union contractors or subcontractors and prevent the nonunion employers from securing any work. Legalizing picketing on construction sites would further increase the considerable power of the building trades union in the industry. It is commonly recognized that the unreasonable work restrictions imposed by some of the construction unions have impeded productivity in that industry and have contributed significantly to the high cost of housing in the United States.

4. Nineteen different unions claim jurisdiction over work done on a construction site. Traditionally, these unions have squabbled among themselves, each trying to get the maximum jobs for its own members. Under H.R. 9070 every union, no matter how small its contribution to a construction job, would be able to force the cessation of operations. This would impose great burdens on the construction industry and further increase the cost of construction in the United States. H.R. 9070 would, therefore, add strength and perpetuate the absolute union structure in the industry by granting undue strength to minority groups within the labor force.

STATUS OF H.R. 9070

The Subcommittee on Labor-Management Relations of the House Committee on Education and Labor held hearings on H.R. 9070 and companion bills during February 1960. In April the full committee reported out the bill by a 19 to 6 vote. The conflicting views on the bill were presented in House Report 1556 (pt. I, April 27, 1960, and pt. II, April 28, 1960, 86th Cong., 2d sess.). As of May 31, 1960, the bill was pending before the House Committee on Rules.

On May 26, 1960 Senator JOHN F. KENNEDY announced on the floor of the Senate that the Senate Subcommittee on Labor will hold brief hearings on S. 2643 (companion bill to H.R. 9070) "within a few days and all necessary steps will be taken to bring this measure promptly to the floor of the Senate" (CONGRESSIONAL RECORD, May 26, 1960, p. 10405, daily ed.).

Social Security Program Discussed in 20th Annual Report of Board of Trustees—No. 3

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ALGER. Mr. Speaker, to complete the discussion of the actuarial status of the social security trust funds, I include the following continuation of remarks taken from the 20th annual report of the board of trustees:

ACTUARIAL STATUS OF THE TRUST FUNDS

CONCLUSION

Both the contribution income and the disbursements of the old-age and survivors insurance trust fund have been increased substantially during the past 5 fiscal years. The increase in the contribution income resulted partly from the rise in earnings levels and the normal growth of the labor force and partly from the increases in contribution rates in 1954 and 1959, the extension of coverage to additional types of employment by the 1954 and 1956 amendments, and the increases in the maximum limit on taxable earnings from 1955 and 1959.

Old-age and survivors insurance trust fund disbursements, however, have risen even more sharply than contribution income. Basic factors in this increase are the long-term growth in the aged population and, more significantly, the lengthening period during which workers have had an opportunity to acquire the quarters of coverage required to be insured. More immediate causes have been the amendments to the Social Security Act during 1950–58, which extended the program's coverage, lowered the requirements for eligibility to benefits for persons who retire (and for the survivors of individuals who die) in the early years of the program, reduced the minimum retirement age of women from 65 to 62, increased the benefits payable, and liberalized the retirement test.

As a result of the rapid rise in disbursements, the outgo of the old-age and survivors insurance trust fund exceeded its income by $216 million in fiscal year 1958 and by $1,271 million in fiscal year 1959. The assets of the trust fund were, of course, available to cover this excess of outgo over income in both years. Under the contribution schedule as revised by the Social Security Amendments of 1958, however, total receipts are expected to exceed total disbursements in the 5 fiscal year period 1960–64.

Long-range cost estimates show that the old-age and survivors insurance program is in close actuarial balance. In other words, the system will have sufficient income from contributions based on the tax schedule now is the law and from interest earned on investments to meet payments for benefits and administrative expenses over the long-range future.

Aggregate income of the disability insurance trust fund during the period immediately ahead will continue to be wholly sufficient to meet aggregate disbursements and in fact will build up a substantial fund. Long-range cost estimates show that the disability insurance program is more than in actuarial balance.

In its 19th annual report, the Board of Trustees presented its comments on the report of the Advisory Council on Social Security Financing. The Board expressed full or partial agreement with certain of the Council's recommendations that would necessitate changes in the law. Modified in accordance with the views of the Board, the proposed changes in the law are as follows:

(1) The so-called three times rule (requiring the Board of Trustees to report to the Congress whenever it expects that in the course of the next 5 fiscal years either of the trust funds will exceed three times the highest annual expenditures from such fund anticipated during that 5-year period) should be eliminated from the law.

(2) The law should be amended to state that the Board of Trustees shall meet not less frequently than once each 6 months.

(3) In order to permit the flexibility which occasional special circumstances might require, the law should be amended to allow the purchase of marketable securities only when such purchase would be in the public interest.

(4) The statutory formula fixing the interest rate on special Federal obligations issued for purchase by the trust funds should be changed so that the interest rate on such issues will approximate the average market yield on marketable Federal obligations that are due or callable 3 or more years from the time when the special obligation is issued.

An administration bill (H.R. 9148) incorporating these recommended changes was introduced in the Congress in September 1959.

Steel's Sick City

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a newspaper article by George J. Church, of the Wall Street Journal. This article appeared on June 20, 1960, under the title of "Steel's Sick City." The 14 steel mills in Youngstown for the past 5 weeks have been working at less than half their furnace capacity; however, this is just part of the story. The recession in 1958, when the steel industry hit a low of 47.1 percent, the plants in Youngstown got to 26 percent and stayed under 40 percent for 9 weeks.

I call this excellent article to the attention of all Members in the hope that some alleviation of the pain and hardships inflicted upon the many good families affected by this work slowdown can be considered:

STEEL'S SICK CITY—THE INDUSTRY'S DECLINE HAS ITS HEAVIEST IMPACT ON YOUNGSTOWN'S MILLS—OLD PLANTS, LACK OF WATER TRANSIT LIFT COSTS, LEAD TO EARLY, DEEP CUTBACKS—CIVIL WAR FURNACE IS IDLE

(By George J. Church)

YOUNGSTOWN, OHIO.—"I've never seen so much of this stuff piled up in one place before in my life. When we're running right, we use it fast. But working the way we are now, we can't do anything but store it."

Speaking is an official of United States Steel Corp., as he sweeps an arm toward a mountain of what looks like black dust; the mountain towers over visitors in a storage yard of the company's huge Ohio works here. The "dust" actually is iron ore, "sintered" or

concentrated for feeding into the five blast furnaces that rear their smokestacks skyward a few paces away.

But only two of the blast furnaces are pouring red-hot molten iron into the giant ladles placed under them; the other three stand quiet and lifeless. A short walk away in the open-hearth shop, steelmaking fires can be glimpsed through the doors of only 6 of the row of 15 furnaces. The blackened walls of the others enclose nothing but empty air. One or two appear to stand in ruins, surrounded by piles of crumbled brick and lacking roofs and walls; mill officials hastily explain they're being repaired while they're not needed to melt steel.

POINTING UP STEEL'S TROUBLES

With a few minor variations, this forlorn scene could be duplicated this week in almost any of the mills that have given this city of 165,633 folk most of its fame and money. For the pile of sinter and the smokeless stacks stand as symbols of a harsh economic fact usually reported only in the abstractions of statistics. In the midst of what is still a period of general prosperity, the steel industry has stumbled into something that looks suspiciously like a recession—and the steel industry in Youngstown has fallen into a recession about which there can't be any doubt.

It's a recession that so far, even in Youngstown, hasn't been noticed much outside the mills themselves—mostly because the worst of it has come only in the last 6 weeks and its effects haven't had time to spread. Unemployment compensation and the supplemental unemployment benefits paid by mills to their laid-off workers have propped purchasing power so well that so far in 1960 Youngstown department stores are still hanging onto a 4-percent sales gain over 1959. Savings accounts have begun to dwindle at the city's three leading banks, but at the end of May they were still up 1 percent to 2 percent from a year ago. City fathers are worrying that lower collections from the municipal income tax will delay some street-repair jobs, but they have still passed out raises totaling $400,000 annually this year to all city employees.

It's a recession, too, that may not go on too much longer. Steel executives are forecasting an upturn by midsummer, as steel users finish cutting inventories. Already some Youngstown mills report orders from such big customers as automakers are picking up slightly in anticipation of 1961-model production.

LOWEST RATE SINCE 1930'S

It's a recession, nevertheless, that in the mills can't be mistaken for anything but what it is. For the past 5 weeks, the 14 mills in the steelmaking district of which this city is the capital have been working less than half their furnace capacity—the only place in the country where that is true. During Memorial Day week a group of big steel works ringing the city cut back to an operating rate of less than a fourth of capacity, the lowest oldtimers can remember since the depression of the 1930's; layoffs swelled so alarmingly that the Ohio Bureau of Unemployment Compensation had to hire a ballroom from a Polish-American social club, increase its staff to 75 from the normal 60, and work them until 9 p.m. three nights to keep pace with the jobless-pay claims.

And it's a recession that has been getting to be a common experience in Youngstown. For at least the last 3 years (official statistics go back only that far) the Youngstown district's steel operating rate has lagged behind the industrywide pace through slump and boom alike. In the 110 nonstrike weeks since the start of 1958, the district's operating rate has exceeded the national average just once (in early January this year) and trailed it 108 times—65 times by a margin of 10 percentage points or more. Meanwhile, the district's share of national capacity has been shrinking for at least the last dozen years—from around 13 percent in 1948 to 10.4 percent now.

Steel slumps begin early in Youngstown. The nationwide steel operating rate did not go below 90 percent of capacity this year until the end of March; Youngstown's rate fell under that mark 7 weeks earlier.

The downturns also go deeper. The low rate for the whole industry in 1958 was 47.1 percent of capacity; Youngstown got down to 26 percent—and stayed under 40 percent for 9 weeks.

And recovery takes longer. Coming out of the 1958 recession, nationwide steel operations crossed the 70 percent of capacity mark in September of that year. The Youngstown district rate did not get that high until February of 1959—5 months later.

BEHIND YOUNGSTOWN'S TROUBLES

What's wrong? In part, of course, Youngstown's mills share the troubles of the national steel industry: Capacity to make steel at least temporarily exceeds the Nation's ability to use it; growing competition from low-priced imported metal; and, especially important now, extreme vulnerability to any switch among consumer-products makers from inventory building to inventory cutting. Plenty of steel men will tell you, too, that Youngstown's troubles of the last 3 years have been a temporary phenomenon.

But there does seem to be at least four reasons for Youngstown's persistent difficulties. And while they don't make very comforting reading, they may be of interest outside Youngstown and outside the steel industry. For they do suggest some of the factors that can cause a segment of a basic industry—and a community—to lag behind in industrial progress. The four reasons are these:

Unbalanced production capacity: "What is happening now can be explained pretty simply," says A. S. Glossbrenner, president of Youngstown Sheet & Tube Co., the city's biggest employer. "A great deal of our capacity here is in pipe, and demand for pipe has been slower than for almost any other steel product."

While a good many people think the reasons are more complex than that, there's no denying Mr. Glossbrenner has a point. Only about 10 percent of all the steel made in the Nation goes into pipe, but 30 percent of the metal melted in Youngstown does; at Republic Steel Corp.'s works here the ratio at times runs up to 75 percent. What's worse, a good deal of the pipe capacity is in oilfield tubular goods, and a low rate of well drilling has made this portion of the business even less prosperous than the pipe market generally. The oil and gas industry was the only consuming field to buy less steel in the first 4 months of this year than in the like 1959 period.

A hefty chunk of the Youngstown-made steel that doesn't go into pipe winds up in autos; United States Steel's Ohio works is almost totally dependent on this market. And Youngstown's mills make a lot of semifinished steel that's shipped elsewhere to be rolled into final shapes. But they make next to no tinplate, the steel item that often holds up most steadily in recessions; little galvanized steel; few plates and structurals.

Old facilities: The nearby Lowellville, Ohio works of Sharon Steel Corp. has one blast furnace dating back to the Civil War era; though enlarged and rebuilt several times, the furnace is fed via elevator-borne wheelbarrows, rather than by modern skip hoists. The Lowellville plant appears to have become a marginal facility that works only when demand is strong enough to soak up all the steel that can be made anywhere. It was closed during almost all of the 1957–58 recession, and went down again on March 28 this year; there's no word from Sharon when it might reopen.

About 25 percent of the capacity of the United States Steel and Republic works in Youngstown itself is still represented by Bessemer converters, which refine steel by blowing air through molten iron. Nationally, the Bessemers have been on the way out for decades; they represent little more than 2 percent of all American steel capacity today.

Republic insists its Bessemers are still useful. John H. Graft, district manager, says a number of customers still demand Bessemer-grade steel in preference to open-hearth metal, and Republic is working its Bessemers now while some of its open hearths are idle. United States Steel, however, concedes its Bessemers are obsolete and ought to be replaced; it hasn't worked them in 2 years.

When steel companies don't have enough orders to keep all of their plants running at full capacity, they're likely to cut back first at their oldest, least efficient plants, because that's where their steelmaking costs are highest. The fact that Youngstown has more than its share of such facilities tends to sharpen the impact of any steel industry downturn here.

Lack of water transportation: Youngstown is not linked to the Great Lakes by a navigable waterway. So all the iron ore coming to district mills has to be hauled 50 to 80 miles by rail from such points as Ashtabula, Conneaut, and Cleveland, Ohio, after arriving at these lower Lake Erie ports from Labrador, northern Wisconsin, and the Masabi ranges of western Minnesota by boat. "And I've heard the haul from Conneaut to Youngstown costs as much as the haul from Masabi to Conneaut," asserts one knowledgeable Youngstownite.

This situation, like Youngstown's relatively high proportion of older production facilities, tends to raise steelmaking costs. It thus is another factor that tempts steel companies to cut back here when demand declines. Moreover, there's evidence it has held back some needed modernization and construction of new facilities at district mills.

Laurin Woodworth, United States Steel's Youngstown district superintendent, for instance, thinks the company's McDonald Finishing works in the district needs a new rolling mill to produce larger coils, to which customer demand is switching. So far, however, McDonald is getting only what Mr. Woodworth terms a compromise solution—a welding line to weld coils together. Meanwhile, Mr. Woodworth ticks off, with a trace of envy in his voice, a string of new rolling mills being installed at other United States Steel plants, such as a new plate mill at the Gary, Ind., works on the southern shore of Lake Michigan. "We just have to wait our turn, and when facilities are being expanded, there's a tendency to put the new units in a mill on a body of water where you don't have higher raw steel costs to start out with," he says.

DISTANCE FROM MARKETS

Youngstown is what steel men call an export area—meaning not that it ships steel to foreign countries, but that little of the steel made in Youngstown mills is fabricated into end products in this district. Accordingly, it has to be shipped elsewhere to be used. And when total steel demand falls, fabricators tend to concentrate their buying among nearby mills and to cut their purchases from faraway steel works.

This is just the reverse of the situation that obtains in such areas as Detroit, Chicago, and St. Louis. These areas consume far more steel than they produce, and mills there normally operate at rates considerably above the industry average. Last week, for

instance, while the steel industry nationwide was operating at a scheduled 62.3 percent of capacity, and the Youngstown district at 43 percent, St. Louis and Detroit mills both were scheduling output at better than 77 percent.

Youngstown has long recognized its need for more fabricating activity, and the Youngstown Area Development Foundation, a group financed by the town's businesses, has been trying for 15 years to bring in more steel users. It's making some progress; Carl Gangloff, executive director, tells visitors of one pipe fabricator that has all but promised to move in, and several others which are considering Youngstown sites. But the going has been slow.

Why? Town businessmen usually answer that the United Steelworkers Union forces Youngstown fabricators to pay the same wage and benefit scales in force in the steel mills themselves—$3.10 an hour average base pay—and thus to compete on an unequal basis with fabricators elsewhere who pay lower rates.

Many steel fabricators in other major steel-producing centers also are organized by the USW. But fabricators outside such steel centers generally are not unionized by the Steelworkers.

"I know one fabricator who has a plant here and three others in different States," asserts A. E. Adams, gray-mustached president of Youngstown's Union National Bank. "He tells me that he's losing money here, while all the other plants are making a profit—purely because of labor differential. And he also tells me that if his plant here is still losing money by the end of the year, he'll close it down."

USW OBJECTS

The USW, as might be expected, objects bitterly to this argument. Paul Evans, international staff representative at the Youngstown office of the union's District 26, flourishes an Ohio State tabluation of average wages in all the State's counties, based on unemployment compensation tax collections. This shows the average manufacturing wage in the four counties around Youngstown to be $103.36 a week, slightly below the State-wide average of $105.34.

"We won't give an inefficient plant a break to make it more competitive with a plant in the same area," grumbles the husky-voiced Mr. Evans, "but when a company can show us it's really in trouble, we'll let up. I myself negotiated a contract a few years ago with a small pump company near here that proved to us they had to borrow money from banks three times during the year to meet the payroll. The basic steel pattern that year was a 12½ cent hourly raise. We took 2 cents."

With all these problems, what can be done? One thing, of course, is to give the mills new and more modern equipment—and the steel companies are pushing some modernization programs. These programs probably would have been launched sooner if there were bigger steel markets close by, or if Youngstown had good water transportation facilities. But, early or late, the modernization programs promise some improvement in Youngstown's competitive position.

"I get tired of hearing this stuff about Youngstown dying," says a spokesman for Republic. "With the investment we've got in our plants here, we can't let it die."

Republic is backing its position with considerable cash. Though its mills in Youngstown and nearby Warren, Ohio, have only about 29 percent of the company's steel-melting capacity, Republic is believed to be spending there about 40 percent of the $159 million it has earmarked for new equipment at all its mills this year. Key project is a $45 million hot-strip mill for the Warren plant, but Warren also is getting a new galvanizing line. The Youngstown works, meanwhile, has installed and is currently revving up a new $2 million mill for making plastic-coated pipe, a new product Republic is counting on heavily to meet competition from nonsteel materials for pipe that must resist an abnormal amount of corrosion.

A NEW PLANT

United States Steel, though it hasn't yet allocated money to replace its Bessemers in Youngstown or to give McDonald mills the new coil rolling mill Mr. Woodworth wants, has built at the Ohio works a new ore-sintering plant, which started up 2 years ago. This facility concentrates low-cost ores that otherwise couldn't be dumped into a blast furnace in sable form, thus cutting steel-making costs. United States Steel also has rebuilt all the five blast furnaces at the Ohio works in the last few years. "In effect, we have a new blast furnace plant," says one of Mr. Woodworth's assistants.

Youngstown Sheet & Tube this year is rebuilding the 79-inch hot-strip mill at its Campbell works on the outskirts of town to roll larger coils (precisely the project Mr. Woodworth wants for United States Steel's McDonald mills); it also is undertaking what it describes as "an extensive rehabilitation" of the coke plant at its Brier Hill works inside the city.

Youngstownites also have been trying to diversify the area's economy to lessen its dependence on steel, which now accounts for over 40 percent of manufacturing employment, and they claim some progress. Mr. Gangloff's Area Development Foundation claims to have brought in industries which created some 15,000 new jobs since 1945 in such fields as rubber, electrical products, and paper products. Currently it's going hard after distribution warehouses, stressing Youngstown's central location, straddling major rail lines halfway between Cleveland and Pittsburgh, and has scored here, too. Two years ago it swung a new General Foods Corp. warehouse for the city; a month and a half ago Top Value Enterprises, Inc., took over a 110,000-square-foot Youngstown building to store the merchandise it passes out in return for the trading stamps handed out at supermarkets, gasoline stations, and other establishments.

The foundation also has known considerable frustration, however. In the early postwar years it had great success in attracting aluminum extrusion companies, but rough competitive times later caused many either to fold up or move out; Mr. Gangloff can count only 62 in the area today against a postwar peak of 89. One of the foundation's original aims also was to drum up support for the Lake Erie-Ohio River Canal, a $100 million project to be built with Federal funds, that would have allowed ore to come to the district's mills by boat. But opposition from the railroads and other communities long ago killed the scheme. "Its present status? I don't think it has any present status," confesses Mr. Gangloff sadly.

And what once promised to be the foundation's greatest coup is still hanging fire, for how long no one knows. This is an assembly plant General Motors Corp. once planned to build on a 1,200-acre site at nearby Lordstown, with a planned initial employment of 8,000 and a possible eventual payroll of 20,000. G.M. bought the land for the plant in 1956 and still owns it, but it began by postponing construction for 6 months, then indefinitely, and still hasn't turned a shovelful of earth. Just what is holding the auto giant back isn't known; Youngstownites suspect the 1958 recession and current uncertainty about the future production balance to be struck between compact and standard-sized cars have had a lot to do with it.

The Great Need for Medical Care for the Aged

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. FRIEDEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely article published in the Baltimore Evening Sun of Monday, June 20, 1960, calling to the public's attention the growing problem of that city's sick, aged, and homeless:

NURSING HOMES—A GROWING PROBLEM FOR THE CITY'S SICK, AGED, AND HOMELESS

(By Richard Pollak)

(Hundreds of Baltimore's aging sick and disabled are receiving substandard care in commercial city nursing homes. The problem is particularly acute among persons on welfare or of moderate means. This is the first of four articles on nursing homes and the life facing many of the people living in them.)

On the third floor of a large, gray building in West Baltimore is a room where six men are waiting.

They are waiting without hope.

They are sick, old, and without a home of their own.

They are 6 of the more than 1,500 Baltimoreans who have been placed in the city's nursing homes. Five of these men are on public welfare, as are almost half the patients in the homes.

In 1951 two city councilmen urged, after hearing testimony before the council's committee on health, that the city's nursing homes be investigated thoroughly before a major public scandal developed.

In 1956 a survey by the Committee on Medical Care of the State Planning Commission revealed that of 1,073 nursing home beds then in Baltimore, 742 were in buildings that did not meet minimum standards for fire safety.

NEED CRITICAL

Early last year the Maryland State Health Department admitted that the need for nursing home beds for welfare patients and persons of moderate means was critical.

The plight of the six men on the third floor of the home in West Baltimore illustrates the situation in some of the city's nursing homes.

In this home, 83 infirm old people linger from meal to meal and day to day, like vegetables in an almost ignored garden. Eighty of them are on welfare.

Shafts of bright sunlight slant through the windows into the third floor room, but there is nothing cheery about the scene these rays spotlight.

SIDE PARALYZED

The youngest of the men in the room is Frank B., a Negro farm laborer in his early fifties whose right side was paralyzed several years ago when he suffered a stroke. Frank has no money and no relatives able to take care of him, so he is a ward of the city.

The department of public welfare pays him $115.50 a month which he turns over to the nursing home.

The department of public welfare also gives him $3.50 a month for clothing and any other needs.

He is a handsome man whose round face is distinguished by the symmetry of a neat, gray goatee and mustache. The stroke left his mind and speech only slightly impaired.

"Since I came here I haven't done a thing," Frank said.

He has been at the home more than 3 years.

"I just sit," he added, after a thoughtful pause.

WORLD DESCRIBED

The world in which Frank sits consists of a wooden chair, a bed and a small, rickety wooden night table that holds most of his possessions. In his present state of health, he could live another 25 years in that world.

Above the bed a yellow raincoat and battered hat hang, apparel now useless to him.

"I would like to be working, but I am unable. I could paint and read a little. I seldom get any books. No one ever comes to see me," he said, staring almost lifelessly at one of the four familiar walls.

"About a third of the people here have relatives that visit them occasionally, but the others depend on outside organizations," said the head nurse at the home.

PRAYER SERVICES

"The Red Cross comes in once a month, and ministers also come by and hold prayer services," she added.

Beyond these organized and infrequent attempts to give a trace of meaning to his life, Frank must depend on the five companions who share his room for conversation. Four of them are senile.

The one who is mentally alert is Charles H., a 78-year-old diabetic who has been sitting in his corner of the room for 4 years.

"Do you ever go outside, Charles?" he was asked.

"If I did they would never get me back," he replied.

"What do you do besides read magazines?"

"Sleep and eat."

Charles' answers, like Frank's, were neither biter nor sympathy-seeking. They came reflexively, with a toneless matter-of-factness.

RESIGNATION COMPLETE

Life, for however long it lasts, will continue to have the strict limitations of a world bounded by bed, chair, and night table unless some outside assistance materializes. Frank and Charles recognize that fact. They are resigned, and their resignation is complete.

But what of their companions in the room?

John R. is 68. He left the home in 1955 after a 2-year stay when relatives came for him. Last February he was returned. He is incontinent and senile. The relatives found it impossible to take care of him. He now spends his day reading ancient issues of a weekly magazine, nothing more.

Robert M. is 84. He has been at the home for 6 years and suffers from extreme paralysis, the result of a stroke. He can barely talk, and leaves his bed only for an hour each day to sit in an adjacent chair.

EXTREME SENILITY

Charles L. is in his fifties. He has arthritis and is incontinent. He is in the extreme stages of senility. When his meals are served he asks how much he owes and demands to know why the other men in his room are not paying.

Douglas W. is 77. He is incontinent, extremely senile, and suffers from heart disease.

While the two coherent men in the room talked one afternoon, Mr. W., sitting in the chair next to his bed, urinated on the floor.

The head nurse summoned an aide, who responded and mopped up the area. Nobody changed his clothing. He remained in the chair, his head bowed upon his bed.

MAZE OF CORRIDORS

The room in which these men exist is 1 of more than 20 in the half-century-old structure. A maze of narrow corridors connects room after room of lonely human beings.

Most of these rooms hold more than one person, some as many as eight. Fluorescent lighting guides one through the catacomb-like passageways, but inside many of the rooms it is perenially dusk.

Tooth brushes are hung on racks in hallways. Toilets are left unflushed in foul-smelling bathrooms. Garbage sometimes remains on trays in hallways following a meal.

Care is given patients by a staff composed largely of nurses aids.

And the subjects of this setting are the sick, old and forgotten.

LICENSED ANNUALLY

The west Baltimore home is 1 of more than 30 commercial nursing homes in the city.

Like the others, it is licensed annually by the Maryland State Health Department.

Officials of the health department admit privately that in many homes violations of regulations are overlooked because strict enforcement would close the home.

Nursing homes vary greatly in size, cleanliness and efficiency.

The greater the number of welfare patients in a home, the more inadequate the care is likely to be.

The fact that more beds and better care are urgently needed for welfare and moderate income patients does not mean that no vacancies exist.

SURVEY CITED

A survey by the State health department last December indicated that 11 of the city's 31 commercial nursing homes had 78 vacancies among a total of 402 beds. Yet the number of walfare patients in those 11 homes totaled only 8 at the time.

Seven of the eleven homes had no walfare patients at all despite 31 vacancies.

And in the city's 3 nonprofit nursing homes totaling 312 beds, there were only 3 welfare patients, although 11 vacancies existed.

On the other hand, the December count revealed that the 575 beds in 9 of the city's other proprietary nursing homes included 364 welfare patients. Twenty-seven vacancies existed in these 9 homes at the time.

REGULAR RATES

The department of public welfare pays $3.75 a day for full nursing care, whereas regular rates in the city's nursing homes range from that figure to $10 a day, and up.

The head nurse at the west Baltimore home, the institution's only registered nurse, freely admits she cannot attract qualified people for her staff.

The home pays its nurses aids less than $25 a week, and the staff's 3 licensed practical nurses receive about $55 weekly.

But low pay is not the only deterrent. "Nurses don't want to get involved with many of the nursing homes because of the conditions," says Ruth Moubray, executive secretary of the Maryland State Nurses Association.

HARD TO ADJUST

"And nurses often find it hard to adjust to caring for the aged because in so many cases there is so little optimism for improvement of the patient.

"Caring for the senile is not challenging," adds Miss Moubray, in trying to pinpoint the general attitude of a nurse toward the homes.

Care and physical conditions vary considerably in the city's private nursing homes. Some of the homes are spotlessly clean, cheerful, and uncrowded. However, the costs in most of these homes put them out of the reach of low-income people.

IN CONTRAST

In contrast to the west Baltimore home is another nursing home on the northern edge of downtown Baltimore.

All of the rooms are sunny and well-lighted. The corridors are wide and the ceilings high. And the home is clean.

Of the 50 patients in this home, only 17 were on welfare. The private patients, of course, pay more than the $3.75 a day total allotted by the welfare department.

But in one essential way it is exactly the the same as its delapidated and unsanitary west Baltimore counterpart: Its patients have little to do. Most of the time is spent waiting.

The man who owns the west Baltimore home has no delusions about the inadequacies of his institution. The poor conditions in the home are due largely to the almost 100-percent burden of welfare patients, he says.

FORTY-FIVE THOUSAND DOLLARS PUT IN

"Since I took over this home 7 years ago, I have plowed about $45,000 into it, and that's a conservative estimate," said the manager.

But, conservative or not, his estimate admits of an investment in a profitmaking institution that grosses more than $100,000 a year.

The man who runs the home on the edge of downtown Baltimore said he had, in partnership with another man, recently invested more than $200,000 in establishing another nursing home.

Tribute to Chief Judge John W. Murphy

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. FLOOD. Mr. Speaker, a former member of this distinguished body, Chief Judge John W. Murphy of the U.S. Court for the Middle District of Pennsylvania, was recently awarded an honorary degree of doctor of laws by the University of Scranton. In further recognition of that impressive honor, I include an editorial from the Wilkes-Barre Times Leader of Wednesday, June 15, 1960, which comments upon the distinguished career of Chief Judge Murphy:

TRIBUTE TO JUDGE MURPHY

The honorary degree of doctor of laws, conferred on him by the University of Scranton at the commencement exercises, and the accompanying citation, hailing him as a "just and wise administrator of the law and a devoted and well deserving servant of his country," constituted an impressive tribute to Chief Judge John W. Murphy of the U.S. Court for the Middle District of Pennsylvania. Adding to the distinction was the fact that he was the only recipient of an honorary degree on this occasion.

A graduate of the college and law school of the University of Pennsylvania, a lawyer by profession, an assistant district attorney in Lackawanna County and a Member of Congress before he was elevated to the Federal bench, Judge Murphy has been identified with the law all of his adult life.

Moreover, he had the good fortune, like former Gov. Arthur H. James and so many successful men in the anthracite region, to launch his career as a slate picker in the breaker, as good a place as any in the old days to start the climb up the ladder of success. The fact that he came from a family of 12 children also did him no harm since it taught him responsibility early in life. And his foresight in being born in Avoca provided him with an excellent starting point. His decision to cross the line and set up residence in Lackawanna County was just

a matter of geography, as a glance at a map of northeastern Pennsylvania will establish.

Luzerne County, through the years, has followed the progress of this native son with no little satisfaction. The newest honor that has come to him adds to local pride in his achievements and in the recognition he has received from so many sources.

Will We Point With Pride?

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. SCHERER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech:

WILL WE POINT WITH PRIDE?

(Speech by GORDON H. SCHERER, Republican, Ohio, at Convention of National Society of Professional Engineers, Boston, Mass., June 10, 1960)

When President Eisenhower took over in 1953, he decided that a new and dynamic highway program had to be brought into being to break the traffic bottlenecks and snarls that were slowly but surely strangling a large segment of the American economy. He decided that our outmoded and deteriorated highway system had to be rebuilt in the shortest possible time to reduce the tremendous loss in life and property which was increasing at an alarming rate.

Those of us on the Roads Subcommittee in the Congress, who in 1954 began the formulation of legislation to make the President's program a reality, at first had no conception of the magnitude of the undertaking, even though we knew that we were embarking on the biggest public works program in the history of the world. We had only a faint glimmer of the difficult and complex problems which would be encountered in the planning and construction of this highway system.

We get some idea of the magnitude of this program when we realize that, if we could have a public works program which would combine the Panama Canal, the Grand Coulee Dam, and the St. Lawrence Seaway into one tremendous construction project, and then multiply it 35 times, we would have the equivalent of this highway construction program I am talking about today.

This highway effort which is now under serious attack from various quarters contains some new, basic, and sound provisions and principles. If we lose our perspective, some of these landmark provisions of the act are going to fall. You men of the engineering profession should be in the frontline of the fight not only because of your own personal interests but also because the basic concepts and principles established in the 1956 Highway Act conform to the general ethics which are a guide to the engineering profession.

Let's take a brief look at the four benchmarks of this historic legislation.

The 1956 act for the first time provided that highways should be built and the money spent where the need exists, where the roads would do the most good for the general public, where they would relieve the terrible traffic congestion which is adversely affecting our whole economy, where they would cut the terrific accident and death toll. In support of this principle, the 1956 act, insofar as the Interstate System is concerned, did away with the old pork-barrel formulas for distributing funds and specifically provided that the money should be spent where the need exists.

Let us move on to a second, basic principle enunciated by the 1956 act. For more than two decades the Federal Government has been going deeper and deeper into debt. During practically all of these years we have had unbalanced budgets and have engaged in deficit financing, thereby feeding and accelerating the ruinous fires of inflation which have devalued Uncle Sam's dollar all over the world and increased the cost of everything we buy and sell.

In the 1956 Highway Act we finally decided to pay for this tremendous public works program as we built it and not pass the cost on to our children.

Third, we provided that the beneficiaries and users of these highways should pay for them in proportion to the use and benefits derived. I, for one, recognize that we must reexamine—and we will—whether or not those who are now classed as users and beneficiaries are paying fairly in accordance with this principle. We must also decide whether or not the tax base should be broadened to include others who may be beneficiaries of this program but are presently contributing nothing to the highway trust fund.

Prior to the passage of the 1956 act the highway program went along on a sort of hit-or-miss plan. Congress appropriated funds every 2 years. The States, highway engineers, contractors, and suppliers were never certain as to the amounts that would be available. There could be no planning ahead. In the 1956 act, as I have said, we provided for a 13- to 16-year construction and financing program. We thought we could complete the entire job in that time. Thus the States, highway engineers, contractors, and others could plan a well-integrated program. They could safely expand their organizations to do the job.

Some will say: "Well, SCHERER, if these are such fine and sound principles, why are we now facing such a crisis in this highway program? Why all the bitter and unpleasant controversy?" Let me tell you.

During the hearings on the 1956 act we were told by the experts that the 40,000-mile interstate system would cost $27 billion to build. Today we know that, in order to complete the interstate system as now contemplated, it will cost $40 billion or more. Of course, the cost of the ABC system has increased in almost the same proportion.

Why almost a 50 percent increase in a 4-year period? Who goofed? Let me tell you five things that happened which put us in this precarious financial condition.

You will recall that sufficient revenues were provided for the trust fund over the 16-year period to pay the estimated cost of this program. Here's what happened.

1. The trust fund absorbed, as was not contemplated, approximately $1.5 billion of highway obligations due and owing on the effective date of the 1956 act.

2. In 1958 Congress, particularly the Senate, got the recession jitters and provided in the 1958 act for an acceleration of the road program by $1.6 billion. This was done without providing the revenue for the trust fund to meet this increased cost.

3. The Senate also added 1,000 miles to the 40,000-mile interstate system. These are often called political miles. Again, no revenues were provided for the trust fund to pay for this additional mileage.

4. Highway standards and requirements were increased to take care of some local needs. Standards had to be increased because, like our population, there was an unexpected and unforeseen increase in motor vehicles. Even since 1956 motor vehicle use on our highways had increased at a far greater rate than was predicted by the experts just 3 years ago.

5. The original estimates of cost on which the 1956 act was based were made rather hurriedly by the State highway departments in 1954. There were some miscalculations. From 1954 to 1958 construction costs and right-of-way acquisitions increased by about 12 percent because of inflation.

We can now understand why on July 1, 1959, almost $500 million then due the States for obligations already incurred could not be paid. We can now understand why the apportionment of the $2.5 billion provided for fiscal year 1961 could not be made, and why this July only a token apportionment of the $2.2 billion for fiscal year 1962 could have been made.

It was apparent on January 1, 1959, and to some of us sooner, that the trust fund was busted. The President immediately asked for and additional 1½-cent increase in the Federal gas tax in order to meet the crisis. This would have made up the deficiency.

The Congress faced three alternatives: pass the 1½-cent gas tax increase; stop the road program for a little over 2 years, which, of course, would have been disastrous for the country and for those industries which had expanded their organizations at the request of the Congress to accomplish this mammoth highway construction job; or, third, borrow the money and go further into debt with all of the attendant evils which I have pointed out resulting.

The majority in the Congress dawdled and politicked for 9 months while the road program started slowly to grind to a halt. Finally in September of last year they provided a 1 cent gas tax increase for 21 months. The balance was provided by deficit financing as a result of diversions from the general fund. Of course, the total amount provided for 1960–61 was far short of the moneys contemplated to be spent under the construction levels provided in the 1956 act. The interstate construction levels for these 2 years have had to be cut back between 20 and 25 percent.

Now there are a lot of people in the United States who either through ignorance or politically motivated, are blaming the administration or the Bureau of Public Roads for these cutbacks, for the so-called contract controls that have had to be put into effect.

This is pure and unadulterated nonsense. The responsibility lies with the Congress for not providing the necessary funds. Furthermore, the Congress enacted the so-called Byrd amendment which in effect says that the Bureau of Public Roads cannot approve contracts unless there will be sufficient money in the trust fund to pay the Federal Government's share when the States present their bills for reimbursement.

Now while we have had a cutback for these 2 years, I feel confident that this program will be straightened out, that it will go forward as contemplated in the 1956 Highway Act. As you know, there are two reports called for by the 1956 act. These will be before our committee next year. These reports, resulting from exhaustive, scientific studies, will enable us to determine the many highly controversial questions that have temporarily stymied the program.

Here is what these two reports will tell us:

1. Should the tax base for the trust fund be broadened to include other than highway users who may receive benefits from our modern highways, such as adjoining landowners, Department of Defense, and so forth?

2. What effect do various vehicles have on the highways and the life thereof, and what standards and costs of construction are made necessary to carry and support the different sizes and weights of vehicles?

3. What is the fair and equitable share of the taxes or charges that each class of highway users should pay?

4. What will be the actual cost of completing the Interstate System?

5. Are highway users paying too much or too little of the cost of building and maintaining highways?

6. Are commercial vehicles paying too much or too little compared to passenger cars?

7. Should standards of construction, right-of-way widths, etc., be increased or decreased?

8. Is the Interstate or ABC System being discriminated against?

9. Should the formula of sharing costs between the States and the Federal Government be changed?

Now you have seen what has happened and what can and in all probability will be done to get this program back on schedule. In the meantime, unfortunately, when the funds ran out, when the construction program had to be curtailed for the reasons I have shown, there were some people, both in and out of Congress, who panicked. There were others who wanted to and did make political hay out of the high crisis.

They looked for scapegoats. The Bureau of Public Roads and State highway departments became the chief whipping boys and so did private consulting engineers. In the short space of a few weeks we developed an amazing number of sidewalk highway engineers and experts on road legislation.

The country was led to believe from the way some people talked that the depleted condition of the trust fund was due to the fact that the highway engineers and others had gone hog-wild with the people's money.

Charges of waste, inefficiency, and even fraud in the administration of the highway program were hurled about with some abandon. State highway departments were repeatedly accused of squandering money on the Interstate System because the Federal Government was paying 90 percent of the cost. It was argued that by raising the State's contribution to the Interstate System, this waste could be stopped.

Now I would be the last to say that in a program of this size, the biggest public works program in the history of the world, one encompassing the whole United States, one involving millions of people, both in government and in private industry, you are not going to have some mistakes, inefficiency, waste, and even fraud.

In speech after speech, as far back as in 1956, I discussed at length the necessity of guarding against waste, graft, and fraud in a program such as this. I pointed out the necessity of having a committee maintain constant surveillance over this program in order to keep these incidents at a minimum.

What some of us wanted was a committee which realized that in a program of this magnitude there was bound to be negligence, fraud, and graft, but a committee that would keep these incidents in proper perspective with the entire program.

We did not want a politically inspired committee which would leave the public with the impression that the whole program was fraught with waste, inefficiency, and fraud. We wanted a fair comparison between the deficiencies in the program and the magnitude of its accomplishments.

We did not want the public misled by charges of wholesale overdesigning, frills, excessively wide rights-of-way, and unconscionable engineering costs unless and until such wholesale charges were proved by competent evidence.

As you know, there was eventually appointed a Special Highway Investigating Committee. Whether we got the type of committee that was wanted only time will tell. I have been highly critical of some phases of this committee because of the political connotations attached to its organizational makeup and some of its activities.

The committee recently completed hearings in connection with the construction of a bypass around Tulsa, Okla. These hearings were an elaboration of a local grand jury investigation which had returned a series of indictments for fraud in connection with the building of this bypass. Both the grand jury investigation and the hearings revealed evidence of gross fraud and chicanery.

Employees of the State highway department, some of them inspectors and engineers, readily admitted that they had engaged in various fraudulent practices. Their conduct was certainly reprehensible, not only insofar as this particular job was concerned, but also because it gave to those who were seeking headlines and wanting to discredit the road program the opportunity to throw an ominous shadow over this great construction effort. For this reason their acts were more reprehensible.

There is no question but that the conduct of these people in Oklahoma weakened the confidence of the public in this great highway effort and hurt it badly.

Frankly, as I have indicated, this is not only a vitally needed construction program in which we are engaged, but to date it has been a highly successful one. We can point with pride to hundreds of fine accomplishments resulting from the competent and dedicated service of the men in the Bureau of Public Roads—headed by that excellent administrator, Bert Tallamy, and his assistants, Frank Turner and Ellis Armstrong—the fine service of the overwhelming number of State highway engineers and their staffs, and of you men in the private engineering organizations.

This unfortunate fiasco in Oklahoma should be a lesson to all of us that we must be extremely careful and scrupulously honest in every phase of this program; that, like Caesar's wife, we must even be above suspicion, because there are always those who for political considerations or otherwise are willing to tear down at the slightest pretext. Unless we follow this course, we can discredit and bring about a dangerous curtailment of this highway construction program. This will be a disservice to the Nation and certainly a disservice to those whose business it is to build highways.

Now let me pass for a minute to another and a little brighter note. All of us are aware of the fact that, as the result of the shortage of money in the trust fund and the charges of frills and overdesign, the Bragdon staff at the White House was about to make recommendations that the Interstate System in urban areas be substantially cut back. The adoption of such a policy would have been a serious mistake. I feel certain that such a policy and such a course have now been averted. But all of us who are interested in highways must keep on top of the efforts that will continue to be made by some to cut back on standards and design.

Let's be sure that such a mistake is never made.

Remember we are building these roads so that, when they are completed about 1975, they will be able to handle 1975 traffic. Traffic like our population is now increasing at a rate far exceeding that predicted by the experts just 4 years ago. We need to build permanence into the new highways to protect this multibillion dollar investment from becoming obsolete at the very moment it is completed.

In the years past the most crucial failure in highway construction has been to underestimate traffic, the potential of the automobile, and the urgent need for sufficient highway capacity. We must realize that, if we cannot buy rights-of-way adequate for future widening, we do not have the correct location. As Charles Noble, the former Ohio highway director, said: "We must not allow today's desires and pressures to blind us to tomorrow's needs."

In the Wall Street Journal, we find this quote which pretty well answers the question as to what constitutes real waste: "Some of these plans may look too big for their britches in 1959, but they will fit just right in 1979. It does not make sense to build something new and then have to rebuild it in 10 years. That is real waste."

Before concluding, I want to discuss briefly the problem with which you here today are most vitally concerned, namely, the use of private professional engineers by Government agencies in the construction of public works.

As I have previously pointed out, when it was found that this great highway program which had started with so much promise was grinding slowly to a halt because of the lack of money in the trust fund, some people began to look for scapegoats, either to excuse their own failures to act or to make dramatic headlines. One of the principal charges was that the Interstate System was overdesigned; that the rights-of-way were too wide, and the interchanges too complex; and that the entire highway layout was adorned with too many frills. It was then that the roof fell in on you consulting engineers and you wondered who had kicked away the supports.

Well, I will tell you. These charges of overdesign were the answer to the professional bureaucrats' prayer, the boys who believe in bigger and bigger government and the paternalistic, all-powerful state. For quite some time these professionals have been attempting to build up and expand the engineering departments of the Federal Government. This is the very nature of the bureaucracy with which we are plagued in this country and, believe me, it is not confined to one department, one agency, or one field of activity.

You private engineers should not get too chesty and feel that you are the only segment of private enterprise that is constantly being given the bum's rush by the professional bureaucrats and politicians who believe that the Great White Father in Washington knows best. This charge of overdesigning gave these boys the club they have been looking for to knock you completely out of government work. So you were charged with overdesigning and overbuilding so that your percentage cut for engineering services would be higher.

Now, as I have indicated, with a program of this magnitude, in all probability we will find occasionally where this charge can be justified. You have some bad apples in the engineering profession, the same as we find in other professions, in business, in labor, and in government—but not quite as many proportionately. However, we cannot tar the entire engineering profession or let the bureaucrats get away with it because of a few bad boys. But, believe me, they are trying.

To say that the taxpayer will save money by having the various agencies of the Federal and State government set up huge staffs and bureaus to perform all of the engineering services required by government for all of its public works programs, including highways, is plain, unadulterated nonsense. I have been around Washington just long enough to know that, whenever it is possible to have private enterprise perform a service, it is done more economically and more efficiently than when government tries its hand.

Let me give you the prize example. As you know, during the 8 years I have been in Congress, I have been a member of the Committee on Public Works. I have heard the liberals, the spenders, the proponents of big government and the welfare state, use TVA as an example or yardstick of a successful Government operation. Every time the proponents and operators of the Tennessee Valley Authority come before our committee, they go back to the valley with their arms in slings from patting themselves on the back for their accomplishments.

I am no engineer, I am no businessman, just an ordinary lawyer, but if I could not operate an enterprise successfully if the

Government gave me all the money to start the business, provided additional amounts when I needed to expand it, and did not require me to pay any income taxes, my parents ought to disown me.

Now why do I mention TVA? Simply because it is the best illustration of the point I want to make. Of all the Government agencies, TVA is the only one that has its own fully staffed, engineering department and never uses private consulting engineers in any way. You guessed it—it is at the head of the class—it takes first prize as having the highest engineering costs of all governmental agencies for the type of engineering services required. Need I go further?

The Atomic Energy Commission which has only a skeleton engineering staff of its own to make preliminary studies and to supervise the Commission's construction projects, makes the greatest use of private consulting engineers. According to the Hoover Commission task force report, its engineering costs are 5.23 percent which are the lowest of any Government agency. It is significant that those agencies which make the least use of private engineering organizations have the highest costs, some running as high as 17 percent. In fact, the engineering costs of agencies increase in proportion to the lesser use they make of the services of private engineers.

And don't let those who are crying crocodile tears and looking for whipping boys because of the increased costs of the highway program tell you that it is different when it comes to highway engineering services. The companies and organizations which built most of our toll roads with private capital have used the highest standards of highway construction because they want to be able to handle the tremendously increased traffic loads in the next 5, 10, and 15 years. The toll road people, to be able to pay off their bondholders, had to keep their costs at a minimum. All the engineering work on these toll roads was done by private consulting engineers. These costs, as you know, averaged approximately 8.79 percent. This is considerably lower than the engineering costs for any publicly constructed highways. By contrast, the State of California which has a fine highway engineering department, and does all of its own highway engineering services has a comparable cost of 24.1 percent.

Now don't get me wrong. The various highway departments of the several States are excellent organizations headed by competent and dedicated men who are doing an outstanding job in getting this mammoth highway program underway. To their credit they have used, particularly in urban areas where the design is unusually complex, consulting engineering firms. It is not the fault of these men if their costs are higher.

This always happens, as I have pointed out, when Government performs a service. It is the very nature of bureaucracy. It is the result of the way Government works, the result of political and other pressures, and the fact that the department does not have to make a profit or pay taxes as do your private organizations.

There are peaks and valleys, as we all know, in highway construction. We had a cogent example last year when the highway program ground almost to a halt because Congress dawdled and politicked and for 9 months failed to provide the necessary monies for the depleted trust fund. A great big valley resulted which hurt everyone connected with the highway program. The contractors and engineers who had expanded their organizations and invested large sums of money, some through borrowing, in order to meet this great construction challenge, were left sitting, holding the bag because of the drop-off in awarding contracts they had been promised by the 1956 act.

As I have said, there are peaks and valleys in this game. When a State highway department builds up an organization of sufficient magnitude to take care of the engineering services that are so vitally needed during the peaks, then it has a lot of people sitting around, twiddling their thumbs during the valleys. This costs money—this is waste—and it is not the fault of the State highway engineer if the professional politicians want that kind of operation and adopt that kind of a policy.

In contrast, the private consulting engineer during the off seasons has his organization geared to perform a dozen different types of engineering services not only for other agencies of Government but also for the great private industrial empire in this country.

I am aware of the fact that the General Accounting Office of the Government, which is not entirely free from the attitude of the professional bureaucrats I have been talking about, last year complained about the use of private consulting engineers on the highway program and blamed some of the increase in costs on their use. Now, as I have said, you are going to find an occasional instance where they will be able to substantiate that charge, but I will bet my last dollar that on the thousands and thousands of highway projects, this charge will not stand and that the very opposite is true. In fact, if you read GAO's report carefully, you see that it makes the general charge without substantiating it by competent evidence or reasonable arguments.

Let's look at a few of the excerpts from the report and findings of the task force of the Hoover Commission on this very subject. We find this language:

"The Atomic Energy Commission has the most efficient design and construction procedures of all Government agencies. AEC takes full advantage of the services of private architect-engineer and construction organizations by contracting all phases of its design and construction work. Its small technical staff is engaged in preparation of preliminary plans and budgets and in the supervisory control normally exercised by a client employing an architect-engineering firm.

"If other Federal agencies could attain the operating efficiency of the AEC, the savings to Government in just the cost of design and supervision of construction, on the basis of present volume of business, would be more than $100 million annually."

In another part of its report, we find this language:

"The Tennessee Valley Authority is the only Federal organization of the eight under consideration which does not use the services of private engineering-construction organizations. Its costs for engineering and construction services are abnormally high."

Finally, the Hoover task force makes this recommendation:

"That the Federal design and construction organizations retain in their own organizations only the personnel required for preliminary study, preplanning and budgeting, and essential supervisory management and control, and that they contract to private architect-engineering and construction firms design and supervision of construction to the maximum extent consistent with national security."

In spite of the findings and recommendations of the Hoover Commission, you are going to have an increasing demand for bigger and bigger engineering departments and for the elimination of private engineering services in Government work. The only way to stop this assault on this particular segment of the private enterprise system is to bring about an informed public opinion through an educational process.

This special Highway Investigating Committee, of which I am a minority member, is going to investigate private engineering costs. I assure you there is a lot of preconceived sentiment for the reduction or elimination of private consultants in highway work. Of course, they will overlook that section of the Highway Act which says:

"It is declared to be in the national interest to encourage and develop the actual and potential capacity of small business and to utilize this important segment of our economy to the fullest practicable extent in construction of the Federal highway systems, including the Interstate System. In order to carry out that intent and encourage full and free competition, the Secretary should assist, insofar as feasible, small business enterprises in obtaining contracts in connection with the prosecution of the highway program."

We must insist that before any action is taken, an unbiased study be made of highway construction engineering costs by both Government agencies and by private engineering companies. In other words, the Hoover task force report made in 1955 must be brought up-to-date. I myself have no doubt as to the outcome of an impartial survey, especially if there is taken into consideration the fact that the private organizations pay taxes back to the Federal Government on whatever profit they make.

Commencement Address by Senator Keating at Pace College

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. LINDSAY. Mr. Speaker, I am pleased to insert in the CONGRESSIONAL RECORD an address by my colleague the Honorable KENNETH B. KEATING before the graduating class at Pace College, which awarded him an honorary doctor of civil law degree. The subject of Senator KEATING's remarks is timely and it is another indication of the distinction with which he serves New York.

The address follows:

I am indeed honored to be here with you today, and to have the opportunity to address you, on this day that means so much in your lives, this day that is at once an end and a beginning.

Many senior classes have gone out from your fine college in the past. None, I am certain, goes out into a world of greater ferment, of greater challenge, and, potentially, of greater opportunity. You do not embark upon a placid sea of history. The tides of change, of evolution, yes of transformation, are running high.

The world of your graduation is no longer the world of your matriculation at Pace. The pressures of events have reshaped it, literally before our eyes, in the immediate past. Yesterday is a land we shall never see again. We stand, all of us, at the threshold of a new and exciting tomorrow—a tomorrow that holds hope as well as danger—but whose immense challenge to the human mind, the human heart, and human energies is unparalleled in history.

The first graduates of Pace lived in the context of America, in the well-bounded confines of their chosen careers and surroundings. In a sense, they were hermetically sealed against pressures from beyond our shores.

It is your destiny, in this year of 1960, to live in the context of humanity, in a world where all men are your neighbors,

where what happens anywhere is something that happens to you—that touches your life, that leaves its mark in your mind and in your heart.

Korea, Lebanon, West Berlin, Ghana, South Africa—these were once names to memorize in a geography lesson. Today they have become names that we live rather then learn—for they are a part of the fabric of the new history—the world-spanning history that leaves no man an island, no man a hermit.

One of the great challenges, therefore, that confronts you today is to equate yourself with this new-dimensional world, to widen the vistas of your intellect and your spirit in order to encompass the full range of the vast human experience in which you are now called upon to participate. Alexander Pope once wrote: "The proper study of mankind is man." Today, we can well paraphrase that historic line by saying that "the proper preoccupation of man is mankind."

Consider for a moment the tremendous phenomenon that is taking place in Africa. After centuries of being locked in the chrysalis of time—whole nations—millions of people—are emerging into the sunlight of a destiny of their own. And as they emerge, into freedom, into self-determination, they pose a challenge which each one of us, as brothers in freedom, must feel, to which we must respond.

It is heartening to know that the Government and people of the United States are, in fact, responding to this monumental challenge. Under our mutual security legislation, we now operate programs in 13 African nations and territories.

By June 30 of this year, we will have about 780 American technicians in all of Africa, and we expect to increase this number to 1,000 in the coming year. This is no more than a first step on the stairway out of darkness—for the challenge of Africa will be a continuing, an expanding one—and it must ever be considered by each of you as a personal challenge to free men. Africa is not remote. It is only a heartbeat away, on the map of humanity.

And no farther, too, are the lands of Asia, of the Far East, of South America—wherever the quest for human dignity, for self-realization, for lives unyoked to degradation or tyranny stirs men to make their own history rather than to have it made for them.

If the challenge presented to us by these emerging nations were confined to the purely economic realm of support and assistance, it would still be of awesome magnitude. But it is a challenge compounded and intensified—because the great drama of this emergence of new nations is being played against the ominous backdrop of a world struggle between freedom and tyranny.

This great silent struggle is precisely the effort on the one hand to extend the area of human freedom and on the other the effort to reduce that area. History shows us how fragile, how perishable a commodity freedom is. Nations once free are no longer free.

They have been manacled by tyranny—or their freedom has slowly, subtly been eaten away by the termite colony of infiltration and propaganda. In Cuba we have the chilling paradox of a nation that lost its freedom while ostensibly fighting for it—that threw one brutal master only to be mounted and ridden by another.

The great and overriding point to remember is that we are not mere spectators wherever freedom loses ground. We are involved — inescapably involved — because whenever and wherever in the world the enemy of freedom gains a yard, we are forced back a yard.

And here is the greatest challenge of all—not only because it is the supreme challenge in point of meaning for our lives—but because it is the easiest to avoid. We are prone to make the defense of freedom a vested interest of government, rather than a personal and deeply felt responsibility of each of us as individuals. Do not, I pray you, catch this fatal disease of apathy. It does not become a young heart. It does not become a young intellect. For apathy is a way of dying, not a way of living—throughout history it has been the suicide weapon of men who mistook freedom for a jewel that could never be stolen.

Stop with me for a moment to reflect on how your freedom came about. You accept it as a birthright—but ponder on how it was born. You didn't have to lift a finger for it—because young men before you—from Lexington through the centuries—whole generations of men your age, yes and even younger—bought freedom with their blood, and left thousands of unlived years on the battlefields of the world—so that we, you and I, might meet here today as free men and women, unchained, unbowed, unmastered.

Thus, the defense of human freedom is more than a challenge to you. It is a sacred and unending responsibility.

We must not wait until it is in jeopardy, or lost, to discover how priceless a gift we hold. For when it is lost, it is the young people like yourselves who must win it back. The youth of Hungary had to meet that historic test—and they met it with a heroism so magnificent, so memorable, that it touched the hearts of free men throughout the world. In other lands, still fresh in memory are the spontaneous marches against oppression—marches in freedom's name—and the marchers, the fighters, the victors, were in the flower of their youth—but old enough to know that nothing in this world is more worth fighting for than human dignity, than the right to think, to speak, to act as free men.

May you never, please God, be put to the test of regaining your lost freedom—but if there is one thought I would leave with you today it is this: Freedom is not an heirloom that is passed on automatically from one generation to another. It is rather a treasure left in trust—a treasure that is kept only so long as it is guarded—and it is best guarded when its irreplaceable value is burned into the hearts and minds of those in whose custody it is left.

There is one last challenge I would touch upon on this day you enter the world of your careers. It is the personal challenge that each of you must feel instinctively, and deeply—the challenge to make the most of your life, to realize to the full your talents and capabilities, to make those you love—and those you will love—proud of who you are and what you represent in their lives. I would counsel you sincerely, as you embark upon your careers, to think more of the giving of yourself than of the getting in terms of money. If you live your life on the gold standard—with everything calculated in salary return—you are missing the true and wonderful adventure of life—which is the growth of you as a person, not the growth of your bank deposits.

I do not suggest that you cultivate insecurity, but I would warn you against a too intense preoccupation with security. Life can be a dull and empty journey if your mind is on the destination rather than on the pleasure and excitement of the journey. Security is not the proper business of young people. Always consider it a fringe benefit of life, not an ultimate reason for diligence and dedication.

And I would counsel you to treasure above all else your personal dignity—the sense of yourself as a God-made individual, distinct, not identical, mindful that you wear nothing more precious than your name. Be zealous to conform, not to each new style in thought and taste, but to the inner compulsions of your own spirit and intellect, of your individual concept of the true, the good, and the beautiful.

Today, this moment, you hold your life-to-be in your hands. The true spending of it is not in the currency of days and years, but in the deeper, richer exchange of the offering of your talents, your energies, your gifts of heart, to making this a world that will be—because you have lived in it—a finer dwelling place for all humanity.

Senator Harry F. Byrd and the National Parks

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. HARRISON. Mr. Speaker, Virginians know well the part played by Senator HARRY F. BYRD in the establishment of the Shenandoah National Park and the Blue Ridge Parkway.

Throughout the National Park Service, his appreciation of the Nation's natural wonders and his active enjoyment of the out-of-doors have won him the highest respect from professional conservationists.

It was particularly fitting that Senator BYRD should have been invited as principal speaker at the dedication of the James River Bridge on the Blue Ridge Parkway, June 11, 1960.

Under leave to extend my remarks in the Appendix, Mr. Speaker, I include the remarks of Director Conrad L. Wirth of the National Park Service in introducing Senator BYRD on that occasion:

Distinguished guest, ladies and gentlemen, I bring you greetings from Secretary of the Interior Fred A. Seaton, who is unable to be here. He told me that he wanted very much to come, but his many commitments made this trip impossible. He asked me to tell you of his friendship for your senior Senator—the principal guest and speaker here today—for whom the Secretary has great respect and admiration.

This bridge we are dedicating today is just a short span of concrete and steel across a river. But the river it spans and the parkway it connects are both considerably longer, and that fact makes this a rather special bridge in many ways.

The river follows a meandering course eastward across the Old Dominion, through regions rich in American history, through the Commonwealth known as the "mother of States" and the "mother of Presidents." I might add that she is also the mother of the man who has—I believe—the distinction of having represented her people in the Senate of the United States for a longer period than any other statesman in Virginia's history.

It would indeed be a pleasure for me to follow the course of the historic James River through this fair State and relate to you just how closely your principal speaker is related to Virginia history. Such a theme would offer unlimited source material and at the same time give me the opportunity to mention the many National Park Service areas located in the Old Dominion.

Instead of following the James River into Virginia's history, however, it is more appro-

priate today that I stay here on the parkway—amid Virginia's scenic splendor—and talk briefly about the man who is, in large part, responsible for the Blue Ridge Parkway.

In the 1930's, as Senator, he was the first one to suggest the Blue Ridge Parkway to President Roosevelt while riding together to Big Meadows for the dedication of Shenandoah National Park. The President said that it was a fine idea and that the Senator and Secretary of the Interior Ickes should get together on the plan. The Senator was appointed chairman of a committee to obtain the rights-of-way for the Virginia section of the parkway and largely as a result of his efforts, the States of Virginia and North Carolina donated the rights-of-way 500 miles long and an average of 1,000 feet wide.

Secretary Ickes, telling this story in the Saturday Evening Post of December 23, 1933, said: "For one thing, I hope to see the system of national parks greatly enlarged. * * * The other day I listened to Senator BYRD, of Virginia, as he sketched his vision of a road * * * from the Shenandoah to the Great Smoky National Park. The President amplified the picture. He said he would like to see the road (the Skyline Drive in Shenandoah National Park), sweep down the Blue Ridge, joining the Senator's project."

Thus the dedication of this new bridge today means more than just the completion of another bridge. Far more significant is the fact that it represents, almost virtually, the completion of the Blue Ridge Parkway in Virginia. Senator BYRD can be justly proud that the ribbon cutting ceremony this afternoon will open 111 miles of continuous driving along the parkway. This means that a total of 210 miles of parkway are practically completed in Virginia. Only 14 miles circling the city of Roanoke remain to be constructed. By 1966 the entire 477-mile parkway from Shenandoah to the Great Smokies will have been completed, and a dream will have become a reality.

Thrilling as this thought is, the finishing of the Blue Ridge Parkway has entailed much more than just the building of a road. Through the Nation Park Service's mission 66 program, many historical, cultural, and educational exhibits are being completed adjacent to the parkway and concurrent with its construction. Complementing the inspirational values which millions of visitors derive from the natural scenes changing each season, consider the Mountain Farm Cabin, with its early 19th century stone fences; Mabry Mill and the old blacksmith shop, both in operation and representing Virginia's old-time mountain industry; consider the nature trails, the campgrounds and the picnic grounds, the comfort facilities. These are just a few of the facilities that have been, and will continue to be provided through mission 66.

A small footbridge will be constructed directly beneath the larger vehicular bridge we are dedicating today. From the parking area, visitors may walk across the footbridge to one of the most unique interpretive areas planned for the parkway. A short trail will lead to one of the old locks of the James River and Kanawha Canal. We plan to restore this lock and a short section of the canal. This will be the only preservation of the James River and Kanawha Canal in existence.

George Washington envisioned this canal and Benjamin Harrison got the project started. It was to have ben 485 miles long and one of the most ambitious canal projects along the eastern seaboard. Although progress in railroad expansion rendered the project obsolete, 90 of the stone masonry locks were built and nearly 200 miles of the canal were completed and used between 1794 and 1880. The end of the era of canals, however, did not make Washington's vision any the less great.

Canals were superseded by railroads, but I doubt that any substitute can come along to supersede the Blue Ridge Parkway and cause it to be of no further value to the American people.

For all of these things—these scenic and historic values—which have been preserved for all Americans for all time, we acknowledge our debt of gratitude to the man who envisioned this magnificent parkway along the crest of the beautiful Appalachian highlands.

But this parkway is not the only evidence of Senator BYRD's service to the National Park System and the welfare of his beloved State of Virginia.

Let's take Shenandoah National Park. How many here remember the Governor's address before the General Asembly of Virginia, January 16, 1928? Here are a few excerpts from that address:

"Large as our tourist stream now is, however, it will reach the flood stage once the Shenandoah National Park is established. Sensible men who have studied the prospects, predict that many millions of dollars will be brought each year into the State and that the revenue from the increased tax on gasoline consumed by these thousands of cars will compensate the State treasury many times over for the appropriation I recommend.

"The U.S. Government will develop and maintain forever the park as the great playground of the East, once it is established. A skyline highway will be built along the crest of the Blue Ridge Mountains forming a wonder way over which the tourist will ride comfortably in his car while he is stirred by a view as exhilarating as the aviator may see from his plane.

"The people of Virginia have subscribed $1,011,798 to purchase the land that must be presented to the National Government. On the condition that all pledges be collected so far as possible I recommend that you appropriate $1 million, payable out of the surplus, to make possible the establishment of this park. The appropriation should, of course, only be expended providing the land can be purchased at reasonable prices.

"It should be noted that no increase in taxes is required to make this appropriation as it will be taken from the surplus in the State treasury.

"The entire State will be benefited by locating in Virginia, in conjunction with the Great Smoky Park in North Carolina and Tennessee the only Federal parks east of the Mississippi River. Once established here the eyes of the millions of the East will turn gratefully to Virginia when spring returns each year and the call comes to go to the great out of doors. They will come here from the habit of coming, spend their money here while many will yield to the charm of Virginia and remain permanently with us."

He also was instrumental, as Governor, in getting for Virginia—and for the many travelers who visit this beautiful State—the highly-valued historical markers along your highways.

There are a great many things I could say about my friendship for Senator BYRD. He is a great lover of the outdoors and sincerely appreciates the scenic beauties of the national parks. He believes in people enjoying and protecting our great national heritage of scenic beauty and historic objects. There is no other Senator as widely traveled in the parks. It is expected, around my office, that when Congress indicates it will take a recess I will get a call from Senator BYRD about a trip to one of the national parks he has not visited yet. I'm frank to say, we are running out of parks. Further, I should hurry to add, that all of the Senator's trips to the parks are personally financed trips—not Government financed.

On the evening of April 16 of this year—at the Tuolumne Meadows Ranger Station, at an elevation of 9,500 feet in Yosemite National Park—I appointed Senator HARRY F. BYRD an honorary park ranger. The next morning—Easter Sunday—Honorary Park Ranger BYRD was the only U.S. Senator required to be on duty in a national park, serving as navigator to the pilot of a Sno-Cat skimming over snow covered mountain meadows on an inspection of the park. Monday morning he was up and out at 6 o'clock inspecting the trails and campgrounds as usual.

In writing Ranger BYRD, Superintendent Preston of Yosemite stated that he was glad to know that we now had rangers that could appropriate as well as spend money. I don't think the superintendent knows the Senator desires to reduce the national debt. I could tell you a lot more about Ranger BYRD, such as the time he walked the legs off of me for 3 days in Glacier National Park—tomorrow he is going to drag me over Old Rag—but I must get back to the task assigned to me. It seems a little out of order, even to me, for a Yankee-born Federal official to come down in Virginia to introduce a BYRD to Virginians so I'll just say, here he is, our good friend as all rangers are, the Honorable HARRY FLOOD BYRD.

Expansion of Classroom Television Hinges on Magnuson Bill Now Before Congress

---

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 21, 1960

Mr. MONRONEY. Mr. President, George W. Oakes, a contributing writer for the Washington Star and other newspapers, has done several very interesting and illuminating articles recently on television in the United States and abroad, some of which other Senators have seen fit to place in the RECORD.

His very excellent article last Sunday on educational television in the Star brought back to public attention the Senate's educational TV bill, which was passed a year ago and is awaiting action by the House Rules Committee. His story also describes the accomplishments in this unique field, including the activities of the Oklahoma ETV Authority in my own State. I ask unanimous consent to have printed in the RECORD, an article "Expansion of Classroom Television Hinges on Magnuson Bill Now Before Congress," by George W. Oakes, from the Washington Sunday Star, June 19, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXPANSION OF CLASSROOM TELEVISION HINGES ON MAGNUSON BILL NOW BEFORE CONGRESS

(By George W. Oakes)

Educational TV will receive its greatest boost from the Federal Government if the Magnuson bill is passed by the House and signed by the President. It was approved by the Senate more than a year ago.

The bill provides Federal grants of $1 million for each State and the District of Co-

lumbia and Puerto Rico for the establishment or improvement of educational TV broadcasting facilities for public schools and colleges and adult training programs.

The bill is now in the House Rules Committee, where a combination of southern Democrats and Republicans has refused to report it. A vote of 6 to 5 last month stopped it. If the bill does clear the Rules Committee, it is generally agreed, it would probably pass the House.

As reported by the House Interstate and Foreign Commierce Committee the Senate figure in the bill has been cut to $750,000 per State and matching State grants would be required to meet the Federal contribution. Also not more than $150,000 would be available for each TV station. This was done to distribute the money as widely as possible.

Federal funds would construct and maintain educational TV stations owned and operated by State TV authorities, public colleges or universities, or nonprofit community TV organizations or foundations. Both open and closed circuit TV stations would be built. The Secretary of Health, Education, and Welfare, acting on the advice of the Commissioner of Education, would be required to approve all requests for Federal funds.

LITTLE MONEY AVAILABLE

The major reason why there are at present only 48 educational TV stations in this country instead of 267 for which VHF and UHF channels have been reserved by the Federal Communications Commission is the fact that too little money has been available to set them up. Commercial interests are pressuring the FCC to release the unused channels.

The Ford and other foundations, as well as nonprofit community efforts, have taken the lead in organizing those educational TV stations now on the air. However, the Ford Foundation, which enabled the first 20 stations to start operations, including that in Hagerstown, Md., is not making further capital grants for this purpose.

A total of $250,000 is needed to buy the basic equipment for such a TV station, considerably more than most local groups can raise. But $150,000 of Federal funds could give the needed impetus to State and local organizations to get the rest of the financing.

Although no Federal funds could be used for programs or personnel, the increase in the number of stations would encourage a greater unification of the material that educational TV stations put on the air. The bill specifically forbids any Federal control over programs.

At present educational TV stations are located mainly in large population centers where financing was available. The proposed bill would tend to spread stations around the country and give people in rural and remote areas a chance to benefit from educational TV programs.

CORPORATION'S SUPPORT

Supporters of the proposed legislation include not only educators and civic-minded citizens but corporations like Westinghouse which operate large commercial TV stations. As Donald H. McGannon, president of Westinghouse Broadcasting Co., testified before the Senate committee, "industry's future depends on education and the training of its scientists, research personnel and management manpower." Praising this view, Senator MONRONEY, a member of the committee, remarked, "I can remember times when, in some quarters, educational television was anathema to commercial television broadcasting."

Since the fall of 1958 the Federal Government has been stimulating the development of educational TV through the National Defense Education Act. Some $4 million in Federal grants have been made available for research and experimental projects to improve school and college teaching. Many of these educational TV programs have been prepared in cooperaton with local communities who have provided $1.5 million to match the Federal funds. Thirty-one such projects were launched last year.

For example, in Texas 11 colleges and universities are joining together to improve their educational TV operations under one Federal grant program. In Maine talented students in far-off country districts now benefit through TV from superior teaching otherwise unobtainable. In Oregon an educational TV program has been started to meet the growing needs of junior college students. At the University of Miami an open-circuit TV program is operating during the summer session to help bridge the gap students face between high school and college.

POTENTIAL IS GREAT

The experience thus far gained has convinced Office of Education officials of TV's potential to raise our teaching standards and improve instructional methods. They believe that the proposed legislation will, by speeding proper use of this new medium, lift the quality of instruction all the way from the preschool to the graduate school level. Also they have little doubt that the States will match the Federal grants.

These are examples of educational TV operations throughout the country which would serve as patterns for those to be established under the proposed law:

State authorities

Alabama was the first State to set up a statewide educational TV network. The programs, serving 80 percent of its population and under the direction of a State TV commission, range from teaching on nearly all academic levels to those appealing to a general audience. Two hundred and fifty schools participate. The network broadcasts about 66 hours a week from 8:45 a.m. to 10 p.m. weekdays. State legislative appropriations for this service have totaled nearly $2 million.

The Oklahoma ETV Authority was established in 1953. Two major stations in Oklahoma City and Tulsa, owned and operated by the authority, reach approximately 1,770,000 people in the State. Programs include lessons in chemistry, trigonometry, physics, advanced algebra, and geology.

School system ownership

In Denver the public school system, with a capital investment of $410,000, began student and adult programing in January 1956, with the aid of 20 community and State educational organizations in the area.

Other successful school operations are in Atlanta and Louisville. In Atlanta six daytime hours are devoted to in-school telecasting and 2½ hours at night for adults.

University ownership

Some of the outstanding examples of this type of station are those owned and operated by the University of North Carolina, Michigan State University, the University of Illinois and Ohio State University.

Community ownership

Nonprofit ETV stations that have achieved national prominence are those in Pittsburgh, Chicago, San Francisco and New Orleans. Often in such operations civic leaders have brought together all educational facilities of the city to provide the most effective programs—the schools, museums, and public libraries.

The proposed legislation would make more certain the establishment of Washington's first ETV station in September, 1961. This project is sponsored by the Greater Washington TV Association. As it will be on a UHF channel, sets will have to be converted to receive its programs. At present the association conducts on Channel 5 one-half hour elementary science programs 5 days a week. Next September there will be two science courses.

If the Magnuson bill is enacted, the association plans to construct a station and offer four daily hours 5 days a week.

It is doubtful whether the District of Columbia school system will participate in TV classroom programs. Last January School Supt. Carl F. Hansen decided to end the special science TV course which fifth and sixth graders watched this year.

After several years experience with TV classroom instruction Dr. Hansen believes that it is not yet able to be adapted to the District of Columbia school curriculum. For one thing it is hard to gear a TV program to classroom work unless it offers materials and skills not at the command of the teacher. Also he feels there is the danger that the classroom teacher may lose control over what is to be taught and thus be unable to fit the instructional program to the problems of a particular group of students.

Nevertheless Dr. Hansen does not exclude the possibility that, after further study, TV teaching could be successfully used in the District of Columbia school system. The Board of Education will therefore cooperate with any new educational TV station organized here.

Dr. John Vaughan, Crusader Against Cancer, Retiring

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ROGERS of Texas. Mr. Speaker, a man is retiring from the medical profession next Saturday after a lifetime of devoted service to his fellow men. Unselfish and humane service may not be unique among doctors, but this pioneering physician has campaigned against pain and disease with courage and determinattion for 50 years. A crusader against cancer and builder of hospitals as well as an aggressive healer of individuals, this man is a credit to the medical profession of the State of Texas and to the Nation at large. He is Dr. John Vaughan, of Amarillo, Tex., and his story is ably told by Mrs. Jean Ehly in the following article from the June 19 Amarillo Sunday News-Globe:

CRUSADER AGAINST CANCER FOR HALF CENTURY RETIRING

(By Jean Ehly)

There are crusaders against cancer but the fiercest opponents are often today's physicians who battle it as they would a mad bull or a cornered rattlesnake.

That is the way Dr. John Vaughan, 322 Sunset, who retires from the medical profession this month, feels about the disease he has fought during his half-century career.

Dr. Vaughan is a 1909 graduate from the University of Texas Medical School in Galveston.

He began his career as a general practitioner or country doctor in Williamson County. For the past 34 years he has practiced in Amarillo, being the first physician to introduce radium and deep X-ray to this city.

Dr. Vaughan, who has treated thousands of cancer patients from Texas, New Mexico, Colorado, and Kansas, relaxes his concentration on the cancer issue only when discussing his country doctor days all over the West, when doctors considered themselves as "specialists in the spin and its contents."

He tells of the hundreds of appendectomies and of the babies delivered in farm homes with only a kitchen table or a door severed from its hinges as an operating table. He sees no fallacy in TV westerns, since he's extracted many bullets from feudin' westerners, sometimes treating the wounded of both factions.

He was the first (and once the only) doctor in Williamson County to own a car, a cherry red Maxwell, which he abandoned for horseback and saddlebag medicine kits when the roads were muddy. As a general practitioner in Liberty Hill he was often reimbursed for his services with portions of beef, hog, and eggs. Sometimes in the cotton country, he wasn't paid till the crop was harvested.

"Country doctors answered every call day or night, even though a supposed heart attack turned out to be a gas pain," he said. "Once in Liberty Hill, I put a notice in the paper asking people to call me at night only in an emergency so I could get some sleep. Country doctors drove miles between patients, often arriving too late for meals, and as a result nearly starved to death."

There were few major instruments then, so the doctor had to ask the patient many questions to determine his ills.

Dr. Vaughan's most TV-thriller-type case involved some backwoods religious fanatics who barricaded a farm house against any medical aid for a woman who'd been in the throes of childbirth for 3 days. The community had chosen up sides. One group was for the doctor, while the fanatics relied only on the power of God to save the woman destined to die without medical assistance.

"To avert mob action, I called in the sheriff and the county health officer and by threats of jail for the offenders, we saved the woman's life," he said.

Dr. Vaughan went from general practitioner into general surgery and in 1920 pioneered in X-ray and radium, being one of the first physicians in the country to so experiment.

This physician's zeal and pioneering spirit for general radiology cost him in his hands. Four fingers are missing.

In explanation he said, "Many early doctors gave their hands in radiology. We operated under the fluoroscope to remove needles, bullets and other foreign objects from the patients. We knew we could be burned by X-ray, but in an emergency, a doctor must get foreign objects from the patient's body lest it be fatal. Doctors exposed themselves to repeated radiation which often causes skin cancer."

"My fingers became so burned and cancerous they had to be amputated," he added.

But this did not slow up the doctor. He simply crusaded more astutely in the cancer cause with the four fingers of his left hand and two on his right hand.

"Today the surgeon does not lose his fingers because there are specialists—radiologists—to do the work," he explained.

This physician has built and owned two hospitals—one at Liberty Hill; the other at Taylor, Tex. His wife learned what nursing she knows under her husband's tutelage and often administered ether and helped him deliver babies in nurse shortages of those pioneering days. He came to Amarillo to practice in 1927.

Dr. Vaughan then as now bitterly condemns the quacks who try to treat cancer. He most stringently advises people to have periodic checkups if the cancer toll is to be diminished.

"We have more skin cancers in Amarillo and its 100-mile area than in any part of the United States per population because of exposure to so much sunshine at high altitude," he said.

As a hobbyist, Dr. Vaughan has hunted big game from Old Mexico through the Rocky Mountains to Montana. In Arizona he found buck deer horns in the death lock. "If their horns become so locked, they starve and are devoured by varmints," he explained. The museum at Canyon now has the horns.

In comparing physicians' habits of today and yesterday, Dr. Vaughan said, "People are treated in the hospitals instead of their homes by the doctors today. If a city physician answered every call of every stranger at all hours of the night in cities of this size, he'd never get any sleep."

"It is wise for people to revert to the family doctor policy. If your physician knows you, he'll come day or night. But if you phone just any doctor out of the yellow pages, he may not come, as he could be run to death by people who may not even be ill."

Dr. Vaughan's story is almost history, since there are only 10 living physicians from his graduating class. The most intriguing thing about this doctor is that there is no sensitivity or bitterness over the loss of his fingers. He simply gave them for science. Mostly, he gets tensely aggressive at the mention of cancer and its toll to others. You feel how tenaciously he has hunted it down and cut it out these many years. You feel that his victories in cancer were the very lifeblood of his profession from which he retires June 25—"at high noon," as he said, with a whimsical smile.

Nixon's Primary Outlay Reaches the Fantastic

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. MOSS. Mr Speaker, in these preelection days it is entirely fascinating to watch the ubiquitous Madison Avenue public relations experts working overtime at political facelifting and creating favorable public images for those candidates for national office who can afford to pay their fees.

The wares of the Madison Avenue boys come high, which of course means that only the really well-heeled candidates can take advantage of these special services. This fact and others dealing with the modus operandi of the bigtime public relations organizations, particularly the five firms employed by Vice President NIXON, are set forth in the following editorial from the Sacramento (Calif), Bee, of June 11, 1960, which, under leave to extend my remarks, I herewith include in the RECORD:

NIXON'S PRIMARY OUTLAY REACHES THE FANTASTIC

Whatever his party affiliations, the average Californian must have been astonished by the saturation advertising and public relations job done by Vice President RICHARD M. NIXON, the only avowed serious contender for the Republican presidential nomination, in the primary election campaign.

There were five expert public relations organizations working for him, all trying to convey the impression he was the beneficiary of a great, untutored grassroots surge. NIXON as much as possible tried to assume a role of being above the battle, a statesman too busy to do any electioneering.

Thus he played both sides of the street, the statesman going about his chores of being Vice President while reaping gain from a most carefully planned political campaign.

Just before the primary election a paid political TV program put together to resemble a public service documentary and virtually implying NIXON to be the author of the Marshall plan was shown on many channels. NIXON was billed as "Ambassador of Peace." This commercial certainly could have tricked the unwary into many false assumptions about the magnitude of NIXON'S accomplishments and the void of his mistakes.

And NIXON'S face was shot on the television screen so frequently a few days before election he seemed omnipresent.

The money spent must have been staggering. The whole job makes questionable the implications of the NIXON camp of vast expenditures by Senator JOHN F. KENNEDY of Massachusetts, Democratic presidential candidate in West Virginia.

The chief thing NIXON succeeded in accomplishing, so far as the actual presidential campaign goes, was proof that powerful and wealthy influences are behind his candidacy.

Many may ask why a candidate unopposed for nomination should try so frantically and expensively to win votes. The answer is obvious. He was seeking to disprove the assertion NIXON cannot win and thus head off any successful move at the convention to draft Gov. Nelson A. Rockefeller of New York. Here was one occasion when the genius of NIXON for understatement was tossed to the wind in his obsessive passion to reach the top.

Just Kids?

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. SCHERER. Mr. Speaker, in its editorial of May 26, the Wanderer, a national Catholic weekly, discusses the San Francisco riots against the House Committee on Un-American Activities. I commend to the Members of the Congress this editorial entitled "Just Kids?":

"JUST KIDS?"

In the "Wanderer Forum," several readers report at firsthand their impressions of the student rioting that took place last week against the House Un-American Activities meeting in San Francisco.

That their observations are not farfetched or overdrawn is borne out by reliable information from other informed sources.

The Los Angeles Catholic weekly, the Tidings, called the student rioting a disgraceful spectacle, enough to cause grave concern for all Americans. It quoted San Francisco Police Chief Thomas Cahill's statement to the effect that the students had been infiltrated by agitators "who whipped the group into a mob frenzy." It cited the fact that the notorious Harry Bridges was present at the riot scene and had defended the innocent kids. Also, the notorious longshoreman, Archie Brown, former candidate for public office on the Communist ticket, who added to, if he didn't spearhead, the San Francisco rioting.

Meanwhile Republican Congressmen GORDON SCHERER, of Ohio, and AUGUST JOHANSEN, of Michigan, said that the San Francisco demonstrations were Communist-directed.

"Hard-core Communist functionaries," they said in a joint statement, "were in the crowd inciting it to break into the hearing

room which was already filled to capacity."

Scherer also scored Mayor George Christopher of San Francisco for surrendering "to Communist directed mob violence" when Christopher (who put out the red carpet for Khrushchev last September) told the committee not to meet in City Hall the next time it comes. The Mayor said nothing about scoundrels, traitors, and irresponsible hoodlums no longer being welcome at City Hall.

The New York weekly National Review, gave this sequence of the incidents leading up to the student rioting:

1. For months the Communist press (the Worker in the East, People's World on the west coast) cranked up a campaign to abolish the House Committee on Un-American Activities (HUAC).

2. On January 9 of this year, People's World reported that Eleanor Roosevelt and Frank Wilkinson agreed, in joint conference, to "project" the "historical appeal" for getting rid of the committee. (Frank Wilkinson is a Communist agitator, out on bail for a contempt conviction, who poses as an officer of the Communist-front Emergency Civil Liberties Committee and as executive secretary of a west coast Communist front, the Citizens Committee to Preserve American Freedom.)

3. Shortly thereafter Congressman JAMES ROOSEVELT introduced in Congress a bill to liquidate the committee.

4. The HUAC subpoenaed about fifty witnesses to appear in a room assigned for hearings in the San Francisco City Hall, for an inquiry into communism in northern California. JAMES ROOSEVELT, later reinforced by one of his mother's columns, denounced the hearings as "an attack on our schools."

5. The hearings were held during the week of May 9. Several straightforward witnesses, including Karl Prussion, who operated in the Communist Party under FBI direction, disclosed the subversive pattern. Forty-odd witnesses shouted, screamed, and cursed the committee, refused to accept Chairman EDWIN WILLIS' rulings and took the fifth amendment.

6. On May 13, a crowd of several hundred, most of them students—among them a dozen or so foreign-exchange students on State Department stipends—jammed the entrance to the meeting room, the corridors and the square. They yelled, brandished placards ("Witch-Hunters Go Home"), shoved, groaned, littered up the place. One of them knocked out a policeman by hitting him on the head with a stave. The police, trying to prevent serious trouble, suffered nine casualties against four for the rioters, and finally broke the crowd up with fire hoses.

7. Police Chief Thomas Cahill and other observers noted among the "impetuous" students: the aforesaid Frank Wilkinson; Harry Bridges, Communist boss of the Longshoremen, and his attorney, Vincent Hallinan; Merrill Brodsky, Archie Brown, and other known Communist agitators.

8. On May 15, San Francisco Mayor George Christopher—Khrushchev's most genial host on last summer's visit, and subsequently his most genial and admiring guest on the mayor's return visit to Russia—issued a statement that the hospitality of San Francisco city hall will no longer be extended—to scoundrels, traitors, irresponsible hoodlums and misguided enthusiasts?—No: to the House Committee on Un-American Activities.

Small wonder that, with student riots starting up in Montevideo, Seoul, Ankara, Trafalgar Square, and now San Francisco, the Tidings opines that the spectacle is "enough to cause grave concern for all Americans."

Sheriff's Resolution on National Defense

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. JENNINGS. Mr. Speaker, among the most patriotic, dedicated citizens of our Nation are the sheriffs who take a commanding role in the maintenance of law and order in our communities and counties.

The National Sheriffs' Association held its 20th annual convention in Colorado Springs, Colo., last week. The attendance was the largest in the association's history.

The convention adopted a resolution that sets forth very clearly the association's thinking on the all-important question of national defense. A copy of this resolution has been sent to me as a former member of the association and, under leave to extend my remarks in the RECORD, I commend this resolution to the attention of my colleagues:

UNCLE SAM, STOP PLAYING GAMES

Whereas this great Nation is faced with the deadly peril of softness within and from the avowed efforts of destruction from without; and

Whereas the President of all of the people of the United States has been insulted by the dictators of those nations who have sworn to destroy our democratic society; and

Whereas the United States of America was founded and made great by a group of angry, dedicated men who opposed tyranny, both from within and from without the Nation; and

Whereas the threat and danger to the United States and her allies is now: Therefore be it

Resolved by the National Sheriffs' Association, in meeting assembled this 15th day of June 1960, at Colorado Springs, Colo., as follows:

1. That the Federal Government stop playing at the game of the civil and military defense of the United States;

2. That both the elected and appointed representatives of the Federal Government tell the people of the United States the hard, cold unvarnished truth and facts about our civil and military defenses;

3. That the President of the United States, as Commander in Chief of our Military Establishment and the Congress of the United States, act now to provide for the common defense of the United States in both the civil defense program and the Military Establishment whereby no nation or group of nations would dare attack either the United States or her allies;

4. That the two great political parties in their forthcoming conventions in debating the issue of peril to the United States demonstrate to the world that the dedication of the people of the United States is first and foremost to the preservation of individual liberty and freedom, and that our Government was and is established to effect the safety and happiness of all people everywhere and that we hold the peoples of other nations—enemies in war, hot war or cold war; in peace, friends;

5. That the sheriffs of the several States hereby reaffirm their dedication to carrying out the objectives set forth in this resolution of giving the people of the United States an invulnerable civil defense program and Military Establishment now.

CHARLEY MEYER,
Beaumont, Tex., Chairman.
C. A. KACKMEISTER,
Saginaw, Mich.
G. L. GORMLEY,
Mays Landing, N.J.
JAMES G. CLARK, Jr.,
Selma, Ala.
JOHN M. GOLDSMITH,
Radford, Va., General Counsel.

Investment of U.S. Firms in Europe

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mrs. KELLY. Mr. Speaker, we are all aware of the overwhelming problems faced by many segments of American industry. This is a result of competition from low-priced foreign production and the importation of their products.

While I do not fear true and fair competition, the problem involved results from the low wage scale paid to labor by foreign industry.

The Subcommittee on Europe of the Foreign Affairs Committee of the House of Representatives conducted a special Study Mission to Europe in the fall of 1959. As chairman of the group, I issued a House Report No. 1226.

In this report, recommendations were made concerning this problem on page 3, recommendation 3, as follows:

3. A continuing study must be undertaken by the Committee on Foreign Affairs of the impact on the American economy of the investment of U.S. firms in Europe to determine the extent to which new markets are being found, the extent to which those firms are looking to third markets, and the extent to which the products of such firms are produced for export to the United States (p. 14).

This recommendation was further explained in the report on pages 12 through 14, and I include several paragraphs:

The division of Europe into two trading blocs warrants a tempered appraisal of the future. Europe's economic upsurge and the division of its principal traders into two groups pose new problems. While each bloc is committed to more liberal trade patterns, the economic and political policies and attitudes they adopt in pursuit of this objective may have serious repercussions for the free world. Should the division result in attitudes and policies perpetuating conflict and discord between the two blocs it may be expected that the Soviet Union will use such division to its advantage. Deeply rooted discords and old traditions should not be allowed to rise again. Our concern is reflected in the statement of the official in one country who expressed the hope that Spain would not be permitted to enter either bloc. When questioned on this statement it was corrected on the basis that it was said jokingly.

Should the United States exert its influence to bring the Six and the Seven together? This is not an easy question to an-

swer. If the two groups pursue independent and mutually exclusive economic policies, the effect on European unity can be fatal to the Continent's continued development.

An encouraging note that European trade policies will continue to move in a more liberal direction is the recent reduction of import quotas. At the GATT (General Agreement on Tariffs and Trade) session in Tokyo this fall our delegation took the position that countries emerging from balance of payments difficulties reduce the use of import quotas. The convertibility of the main trading currencies of the world removed any balance of payments justification for their continuation. Several principal trading countries—the United Kingdom, France, West Germany, the Netherlands, Japan, and Sweden—have made reductions in this discriminatory practice while others are giving careful study with a view to following a similar course. The study mission believes this is a significant step toward stimulating world trade in general and encouraging, in particular, American exports. It urges that the administration press for further reductions that will result in the removal of all quota limitations originally imposed because of difficulties in foreign currency holdings.

One way by which American industry can enjoy the benefits of either of these larger European trading areas is to establish itself within the borders and become something of an expatriated industry. Or what is more likely, American industry will set up European subsidiaries to meet the demand of that market. Both of these approaches have been used by American companies and others are actively exploring the desirability of establishments in Europe. In any event, the impact of these movements on the U.S. economy, desirable and undesirable, should be the subject of continuing appraisal.

Exporters and importers will have to give serious thought to their place in the European market. The aim of the six Common Market countries is to move toward a common external tariff. The Outer Seven, as a measure of self-protection, have joined together to reduce their tariffs vis-a-vis each other. Exporters of raw materials and agricultural commodities will probably be least affected. Tariffs on these items are either nonexistent or inconsequential. But segments of American industry may well be hurt as competitive European industries strengthen themselves behind a protective wall.

The Department of Commerce has only recently started a study of the extent to which the U.S. imports are the products of American owned or controlled business enterprises overseas. This is a study the results of which will be available in June 1960. It should be kept current so that the Congress can readily determine whether domestic output is adversely affected by this type of import and what measures, if any, should be taken.

The problems raised by the migration of U.S. capital are not limited to a narrow economic range. They encompass basic foreign policy decisions. The attitudes and decisions of foreign governments in matters of foreign trade are interlaced with, and reflected in, their political and military determinations. Many sections of the Mutual Security Act—under which we conduct major aspects of our foreign policy—reflect a concern for the American economy. For these reasons the study mission recommends that the Committee on Foreign Affairs give continuing study to the impact on the American economy of investment abroad by U.S. citizens and business firms.

American exporters will have to do a harder job of selling better quality merchandise that is produced more efficiently. One hopeful sign, though not too imminent, is that more of Europe's wealth will come into the possession of its consumers. Both of the two trading groups are so recent in origin that statistics can give little guidance as to their effect on trade. Some small encouragement may be derived from the trade figures for the first 6 months of this year. Both imports and exports within the two groups and between the two groups have risen.

On the other hand, the following table derived from Department of Commerce figures, shows that U.S. trade with the 13 countries included in the two blocs is marked by a growth in imports and a decline in exports.

U.S. exports

[In millions of dollars]

	Annual			January-June 1958	January-June 1959
	1956	1957	1958		
OEEC countries, total	4,751.6	5,305.8	4,101.8	2,048.2	1,837.3
Common Market countries (6)	2,895.3	3,122.3	2,427.9	1,242.0	1,185.9
EFTA countries (7)	1,616.5	1,756.0	1,431.7	671.3	670.6

U.S. imports

[In millions of dollars]

	Annual			January-June 1958	January-June 1959
	1956	1957	1958		
OEEC countries, total	2,743.1	2,940.1	3,168.2	1,453.4	2,069.0
Common Market countries (6)	1,415.4	1,543.7	1,673.7	747.4	1,120.8
EFTA countries (7)	1,216.5	1,253.5	1,374.7	631.6	863.4

One of the industries which has been involved and hurt, and which will be even more adversely affected in the future, is the clothing industry—textiles.

On June 9, 1960, Mr. Louis Scalise, vice president of Witty Brothers, Inc., in accepting the presidency of the New York Club of Fashion Designers, made several suggestions to combat the problems facing his industry. I wish to call to the attention of the House of Representatives the remarks which were made by Mr. Scalise:

As you all know, I participated recently in the annual convention of the Amalgamated Clothing Workers at Miami Beach as one of their guests. There, much discussion took place about the problem of competition from foreign markets. It is this matter—competition from foreign markets—that makes me particularly aware of the responsibilities which the president of the I.A.C.D. and other clubs must now assume. I welcome this challenge because I believe that we must in the coming year use all our resources to combat this threat to our industry.

Recently some one, in a joking manner, said that Commerce Department officials observe that the man to be pitied is the American industrialist—every time he puts a new product on the market the Russians invent it a week later, and within 2 weeks the Japanese are making it cheaper. But this is really not so funny. Of utmost importance to us would be the passage of legislation curbing such imports through higher tariffs, quotas, or any other possible means. I feel that we must right here and now designate a committee officially to work on this. We must combat competition which is based on impossibly cheap labor.

As businessmen we cannot fail to see the dangers in allowing this condition to continue to exist. We are now buying our fabrics from Japan—yet, throughout the country a large percentage of people who want work in the textile field cannot find employment, and mills are standing idle. Shouldn't we work toward enacting legislation in Washington to subsidize these idle mills so that we can put these people to work and manufacture fabrics at a price where we can compete with the foreign suppliers?

The way things are going today, it is very likely that in the not too distant future Japan, instead of being willing to sell us the fabrics only, will refuse to sell us anything short of the completed garments. We are starting to receive finished garments now. Even though we are an association of designers, we are also businessmen, and as such we must make the competition harder for the foreign markets to meet—we must work harder to make better fashions—and we must make the pace faster. This, together with trying to push through legislation, is what we must do to protect our futures in the men's clothing industry.

The Late Honorable Douglas Elliott

SPEECH
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. FENTON. Mr. Speaker, I yield to the gentleman from Pennsylvania [Mr. FULTON].

Mr. FULTON. Mr. Speaker, this is a sad occasion of sorrow for everybody in the House, especially for those of us who knew DOUG ELLIOTT. When we were advised of his passing we were shocked, because he had such a bright future ahead of him.

When Congressman DOUGLAS ELLIOTT came to Congress from the Pennsylvania State senate I was more than pleased about it. I had been a speaker at the Lincoln birthday observance at Gettysburg a few years ago when I first heard him speak. I saw the wonderful reception he received when he was finished speaking and what a fine opinion his friends and neighbors had of him. I think the Congress has lost a promising Member. I join in expressing our sincere sympathy to his wife and children.

The Decay in Its Soul

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. SCHERER. Mr. Speaker, the lead editorial in the Richmond News Leader of June 14 is entitled "The Decay in Its Soul." It is one of the most powerful, penetrating and serious indictments of the peoples of the West in their whole attitude and approach to the machinations of the Communist conspiracy and its threat to Western civilization.

The editorial refers to Dr. Charles H. Malik's address in the restored hall of the House of Burgesses. My experience as a Member of the House Committee on Un-American Activities for 8 years confirms Dr. Malik's conclusion that "he finds nothing but intellectual and spiritual surrender to the Communists; and that there is no fierce determination to defeat communism to roll back the Communist frontiers, to sell Western ideology; that there is at most a desire 'to contain' Communist imperialism, and that there is an apathetic notion that 'coexistence' is the finest of all answers."

I commend this editorial to every Member of Congress:

THE DECAY IN ITS SOUL

It was almost 6 o'clock Saturday afternoon before Dr. Charles H. Malik began his address in the restored hall of the House of Burgesses in Williamsburg. It was hot in the crowded chamber, and the lights set up for television cameramen added to the discomfort, but for a solid hour Dr. Malik made his listeners forget all this. His address merited a place among the truly great speeches of this century. In phrases that smashed home with the repetitive impact of a battering ram, he summarized the weakness of the West before the dynamic aggression of the Communist East. His indictment was not only surpassing oratory; it was also, may God yet save us, a terrible statement of the truth.

Excerpts from Dr. Malik's address occupy most of today's editorial page. If our readers take time for nothing else in the paper this afternoon, we would urge them to read this. Cold type can convey nothing of the passionate conviction and personal magnetism the Lebanese diplomat brought to the occasion, but even this much of his speech may set our readers to thinking. It is late for the West. We shall be exceedingly fortunate—more fortunate than a decadent people deserve—if it is not too late.

The awful charge he brings against the free world is summed up in a shocking line: "The decay in its soul." He points to the swaggering Khrushchev, who would bury us, who would see our grandchildren under Communist rule. Khrushchev believes this completely. And Dr. Malik glances about the West, searching in vain for a single Western leader who believes in his heart that communism will collapse, that the Kremlin's grandchildren will know political freedom. He finds nothing but intellectual and spiritual surrender. There is no fierce determination to defeat communism, to roll back the Communist frontiers, to sell Western ideology; there is at most a desire "to contain" Communist imperialism, an apathetic notion that "coexistence" is the finest of all answers.

Is it inevitable that communism must expand, that freedom must diminish? Those who accept this hypothesis—and there are millions of American who do—are already Marxists in Dr. Malik's view. They are unwilling to take a moral responsibility for Western failures; they are not agreeable to the sacrifices that must be faced if Western civilization is to survive.

One does not have to search far to find examples of the passive, fatalistic attitude Dr. Malik decries. Among our colleges and universities, it is the liberal organization, with the liberal faculty sponsor, which attracts the greatest prestige. It is the charming apostle of appeasement who commands the students' acclaim. In Tokyo, a hundred thousand militant students, organized and aroused by Communist propaganda, demonstrate against Eisenhower; when Khrushchev visited the United States last fall, a pitiful handful of American students raised some feeble placards—only to be shooed off by police.

The leading media of public opinion in this country, the great newspapers of Washington and New York, the influential monthly and quarterly journals, have an editorial range from soft to softer. They wage war upon communism with beanbags and toy swords; they have rinsed their mouths with Listerine; they would not offend.

This insidious rust eats at the iron that once constituted a hard core of freedom. We temporize. We excuse. We look upon peace, as Adlai Stevenson urged, as "paramount," forgetting that peace without freedom is meaningless. The American people are brave, generous, anxious to please, eager to make friends; but they are lazy, they are politically inert and philosophically illiterate, and they are afraid to make enemies.

Dr. Malik said it all in his moving and eloquent address of Saturday. In a part of his remarks not printed here, he begged Western leaders to adopt a fresh and vigorous attitude, to believe in freedom, to seek the liberation of nations now under Communist rule. Failing this, our institutions must continue to weaken and decline, and our glittering cities, as Eliot once remarked, must look forward to the pitched tents of new barbarian hordes.

Lost Face

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very timely editorial which appeared in the Boston Herald on June 17, 1960:

LOST FACE

All Americans are relieved that President Eisenhower will not be called upon to risk his personal safety in riot-torn Japan. But their satisfaction is tempered by the knowledge that U.S. foreign policy has suffered another defeat.

For there is no blinking the fact that cancellation of the President's visit was a defeat.

The great majority of the Japanese people are undoubtedly friendly toward the United States and its Chief Executive. Most of the students who participated in the "Ike Stay Home" demonstrations were more anti-Kishi than anti-Eisenhower. But the Reds pushed the riots for all they were worth, and Moscow is trumpeting that Japan has repudiated not only Eisenhower but the whole Western camp.

This kind of half-truth can do enormous harm in Asia and Africa, where many can't tell the difference between propaganda and fact.

Our best hope at the moment is that the Communists will overdo it and cause their strategy to backfire. The United States has momentarily lost face, but most Japanese will feel that their country has lost face even more. The inability of the democratically elected Kishi government to control the actions of an extremist minority raises questions not only of the competence of the government, but also of the ability of Japan to maintain a parliamentary democracy.

If the revolutionary conditions now prevailing in Japan force Mr. Kishi to call for new elections, there may be a popular revulsion against the left and a strengthening of the moderates in Parliament, which would be a serious defeat for Moscow.

But the United States must act with caution as well as dignity, if the situation is to be resolved favorably. It may even prove desirable for us to renegotiate the United States-Japanese security treaty, which touched off the trouble. Although Mr. Kishi's Liberal-Democrats undoubtedly speak for the majority on most issues, many observers think they cannot do so on this. Neutralist feeling is strong in Japan, as it is in most of free Asia. It would be unwise for the United States to demand a greater military commitment from Tokyo than the people will wholeheartedly underwrite. A question has, in any case, been raised.

In the long run the important thing is to conserve the natural good will which Japan feels toward us and the West. We have lost face. But we have not lost Japan. We must play now for the larger stakes.

Southeast Shippers Oppose Airlift of First-Class Mail

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. CUNNINGHAM. Mr. Speaker, the Southeast Shippers Advisory Board recently adopted a resolution expressing opposition to the airlift of any class of mail other than airmail and urging passage of H.R. 9488 and S. 3214.

I can report to the House that the Post Office and Civil Service Committee this morning reported H.R. 12595, an amended version of H.R. 9488.

The Southeast Shippers Advisory Board is composed of more than 800 representatives of the principal shippers and users of rail transportation in 9 Southeastern States. The resolution adopted by the board at its 130th regular meeting in Memphis June 9 follows:

Whereas the Southeast Shippers Advisory Board, whose membership is comprised of representatives of the principal shippers and users of rail transportation in the Southeast, is interested in and vitally concerned with the financial ability of the railroads to render economical and efficient service and to maintain an adequate car supply with which to render such service; and,

Whereas for many years the railroads generally have been experiencing deficits from the operation of passenger service and such

deficits have seriously affected the financial condition of the railroads, and the revenues realized from freight operations have been required to offset deficits from passenger operations; and,

Whereas since 1953 the U.S. Post Office Department has been experimenting with the transportation of first-class mail by air, and that bills have been introduced in Congress which would have the effect of allowing the Post Office Department to contract with airlines for the transportation of mail, other than that on which airmail postage has been paid, by air on a permanent basis, all of which has affected and in the future will seriously affect the revenues of the railroads and result in a further impairment of their ability to render economical and efficient service, and provide an adequate supply of freight cars for the users of freight transportation; and,

Whereas there have also been introduced in Congress bills which would prohibit the transportation by air of any class of mail on which postage other than air mail postage has been paid: Now, therefore, be it

Resolved by the Southeast Shippers Advisory Board, That it hereby declares its opposition to, and urges defeat of, Senate bill S. 2402, and House bill H.R. 8296, and any and all other bills which would authorize the U.S. Post Office Department to contract for the transportation via air of any class of mail other than air mail, and that this Board declare itself in favor, and urges passage, of Senate bill S. 3214 and House bill H.R. 9488, or any appropriate other bill which would prohibit the U.S. Post Office Department from arranging for the transportation by air of any class of mail other than that on which proper air mail postage has been paid, and that appropriate Members of Congress be advised of the action of this Board by furnishing them a copy of this resolution.

Abuse of Our Patriotic Impulses

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. ROGERS of Texas. Mr. Speaker, the vigorous opposition of all true Americans to the threat of international communism is axiomatic. The awful purposes of this massive conspiracy and its extensive efforts to smother the dignity of mankind are a compelling matter of record for all who care to use their eyes.

The obligation of every American is clear: Communism must be fought and defeated in its efforts to inject a poisonous substance into the bloodstream of liberty. But the battle for freedom cannot be waged, Mr. Speaker, by a people who have been frightened by scare propaganda and who lose all their sense of direction.

A fine example of clear thinking in this field may be found in the following editorial by my good friend Harold Hudson, editor of the Ochiltree County Herald in Perryton, Tex. A stanch foe of communism and all its insidious disguises, Mr. Hudson courageously illustrates a difference between firm opposition to Marxist teachings and a cynical, low-pitched, and frenzied opposition which constitutes an abuse of our patriotic impulses.

The editorial follows:

[From the Ochiltree County Herald, June 16, 1960]

FROM THE SIDELINE

(By Harold Hudson)

There is a growing group of professional anti-Communists who make a pretty good living selling their wares, and all have really nothing to offer except a magazine or newsletter of some kind. We had two such visitors in the office last week and while it was perhaps coincidence, we had the feeling that the anti-Communist field is getting overcrowded. The first fellow called us into our office, shut the door, and in deep secrecy showed us his credentials, consisting of a printed identification card. Said he had our name referred to him as a defender of faith, a foe of subversives, and a man who believed in doing the right thing.

The right thing, in this case, consisted of slipping our visitor and his organization a paltry $15 per month to carry on the work. When we asked what work, he pointed out that his group mailed out circulars by the bale, had the teachers and preachers on their mailing list, and men like him worked tirelessly covering the country recruiting members for the cause, at $15 per month up. He said we had no idea how close we were to going under to communism. Said there was actually a red cell right in Borger, which is mighty close to Perryton and we had better get alarmed about it. Said his organization needed lots of money to carry on the fight.

We never could close in on him when it got down to specifics. Of course his information was classified. All he wanted was to get the money and be on to the next recruit. Seemed downright hurt and disappointed when we declined to join up. We apologized for taking up his time. The other anti-Communist was selling much along the same line. Said he would see that the teachers got a copy of his magazine every month and we never could figure out why the teachers got such close scrutiny. Anyway, we disappointed No. 2 as much as No. 1.

We were so impressed by No. 1 that we followed him down across the street from the Perryton Hotel and saw him get into a new blue Cadillac and pull away from the curb. Since all windows were rolled up and it was a hot day, we deduced that the Caddy was air-conditioned. The other fellow got away before we learned his mode of transportation. We decided that our non-air-conditioned 1957 Chevrolet looked mighty poor in comparison to our visitor's car, and he was right in that it probably does take a lot of money to keep the anti-Communist battle going.

A Veteran Railroader Retires

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1960

Mr. ROBISON. Mr. Speaker, railroading is an important part of the economic life of my congressional district in the southern tier of New York and two major railroads, the Erie and Lackawanna, span the 37th district from east to west. As a result, I have a considerable body of constituents who are railroad men or who have now left the rails to retire.

All of us know the tremendously important role which the railroads played in opening up our continent and in developing the economic life of the country by providing a means of goods distribution from coast to coast. This would not have been possible without dedicated railroad employees, many of whom spend their entire working life in railroading. As a tribute to these men and in recognition of the lifetime of service which they have given to railroading, I bring to your attention a story concerning the retirement of one of the most popular railroad men in New York State—Conductor Tom Tobin of Hornell, N.Y., who recently retired from the Erie Railroad after a career of 51 years with the line.

To Conductor Tobin, no passenger was ever just a fare. They always found in him a willing and sympathetic ear. He shared their joys and sorrows. Parents sending small children to visit grandparents checked with Tom for the date of his next scheduled run confident that he would keep an eye on the children.

The greatest satisfaction of his 51 years of Erie service: "I never had a wreck. I'm glad of that."

Mr. Speaker, as a tribute to all retired railroaders throughout the country, I ask that the following story from the Elmira (N.Y.) Sunday Telegram of May 29, 1960, be included with my remarks:

THEY'LL MISS BIG TOM TOBIN—VETERAN RAILROADER TO MAKE FINAL RUN TUESDAY

(By Andy Lamb)

HORNELL.—Life on the Erie Railroad's Susquehanna Division just won't be the same after Tuesday. That's the day Big Tom Tobin will swing out of the depot, cock his conductor's hat for the last time and get train 2 underway with a wave of his arm.

For Thomas R. Tobin, as he was christened more than 67 years ago at Addison, it will be the end of 51 years of railroading, all on the Susquehanna Division. His life for years has been tied to the 224 miles of track between Hornell and Port Jervis.

Through the years he's built and kept hundreds of friendships along the line. His booming voice and crashing laugh are as well known as the railroad itself. There will be many old friends who will miss the year-round arguments about baseball, a subject Tom discusses with authority.

"Say I see that feller Casey Stengel outguessed himself again yesterday," is a common greeting for riders he knows are Yankee fans. "Why I told you all along it will be Cleveland. Why don't you admit you don't know anything about baseball?"

Retirement means just taking it easy for him. He never has been a man to bother with gardening or other hobbies. "I've seen a lot of miles go by and now I'm going to take it easy," he said. "I'm not going to sit in a rocker because I don't have one. I'll ride the trains once in a while to say hello to my friends."

Tobin started working for the Erie in 1909 carrying water when the Elmira, Corning & Waverly streetcar line was being built. The next year he worked with a section gang transferring railroad cars at Addison.

He went braking in 1912 and the pattern was set. He became a conductor about 1920 and a passenger conductor in 1935. Trains 2 and 5 have been his regular run since 1945.

His service was interrupted only for World War I when he served overseas with the 148th Infantry of the 37th Division.

With his wife, the former Mary Higgins of Wellsville, he lives at 17 E. Main Street.

H.R. 8860, A Bill To Stabilize the Mining of Lead and Zinc by Small Producers

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. METCALF. Mr. Speaker, H.R. 8860, which I have cosponsored, would stabilize the mining of lead and zinc by small producers, conserve domestic reserves of lead and zinc, provide jobs for unemployed miners and payrolls for the depressed business communities which serve them.

The measure would authorize stabilization payments to domestic producers of lead and zinc. These payments would make up the difference between the stabilization price of 17 cents per pound for lead and 14½ cents a pound for zinc, and the price received by the producers in the open market. Payments would be limited to "small domestic producers," defined in the bill as those producing or selling up to 2,000 tons of lead and/or 2,000 tons of zinc in a 12-month period.

Current prices (13 cents for lead, 12 cents for zinc) are below the domestic cost of production.

As they have done previously, administration agencies are leading the opposition to this legislation, claiming, among other things, that the import quotas imposed late in 1958 are doing a job. Secretary of the Interior Seaton says the quotas "have already materially assisted in stabilizing the domestic lead and zinc industries." As far as the small miners are concerned, they have been stabilized right out of business.

In 1956, U.S. mine production of lead totaled 348,329 short tons, of which 18,610 came from Montana mines. In that same year, we imported 458,553 tons of lead. Preliminary figures for 1959 show that total domestic production fell to 253,260 only 7,520 tons of it mined in Montana. Imports totaled 410,954 tons.

For zinc, the picture is the same. In 1956, domestic mines produced 537,643 short tons, 71,865 of it mined in Montana, and we imported 770,775 tons. Last year, total domestic production fell to 416,965 short tons, of which only 27,560 tons was mined in Montana.

As you can see, foreign producers still dominate the market, as they have for at least 10 years. Imports of lead, 75 percent of U.S. production in 1951, rose to 91 percent in 1958. From 72 percent of U.S. production in 1952, imports of zinc increased to 119 percent in 1958. In the same period, domestic mine output of lead dropped 35 percent and that of zinc fell 37 percent.

In 1956, there were 696 individual mines in the United States producing lead and zinc. By 1958 this number had dropped to 447.

The decline in domestic production of ores and concentrates has brought a depression to our mining centers, among them Butte, Mont. Thousands of men have been laid off. When their unemployment compensation benefits were exhausted, they were forced to turn to welfare agencies. The loss of payrolls multiplied throughout the business community as merchants were forced to cut back in their operations.

Our domestic mining industry is basic in peace, vital in war. We cannot stockpile a mine for emergency use. When necessary daily maintenance ceases, shafts and tunnels shift or fill with water, gas creeps in, supports give way and roofs collapse, machinery deteriorates rapidly, and it may take years to get that mine back into production.

Maintenance of a healthy, active domestic mining industry is in the national interest. This bill would help.

Canada-United States Are Interdependent

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, I include in the RECORD an article appearing in the Boston Sunday Herald, June 19, 1960, under the Canadian Trade and Finance section entitled "Canada-United States Are Interdependent," by Richard B. Wigglesworth, U.S. Ambassador to Canada.

Hon. Richard B. Wigglesworth served as a Member of the U.S. Congress for 30 years. He is a dedicated public official who has the admiration of all who know him. I know many of his former colleagues in Congress are proud of his fine record. I can say that the people of the 13th Congressional District of Massachusetts hold him in high esteem.

Today it is of the utmost importance that we in the United States continue the friendly relations that have existed between Canada and our country for more than 250 years.

Our Government has an able representative in Ambassador Richard B. Wigglesworth. His statements on United States-Canadian interdependence are well worth reading.

As the Congressman now representing the district formerly represented by our distinguished Ambassador I know I echo the sentiments of all of his former constituents when I say "well done":

[From the Boston Sunday Herald, June 19, 1960]

AMBASSADOR CITES UNITED STATES-CANADIAN INTERDEPENDENCE

(By Richard B. Wigglesworth, U.S. Ambassador to Canada)

The most important factor in Canadian-American relations is the great interdependence of these two North American partners whose friendship, cooperation and understanding long have been an unparalleled example for the rest of the world.

Canada and the United States are tremendously important to each other. They do more trading with each other than with any other countries in the world. Canadians use more American goods than any other people, and the United States is Canada's best customer.

In addition, there is the matter of investments. Canada's recent extraordinary growth and economic development is attributable in large part to the investment of private funds from the United States. The Canadian economy is growing rapidly and it imports more goods and services than it exports. This results in a balance of payments deficit. This deficit is, in fact, covered by a continued flow of capital funds from the United States for investment or for lending.

Some Canadians worry about this because they do not like the idea that their country is, so to speak, in debt to another country on so large a scale. They realize also, however, that the capital makes Canada grow, that it provides new employment and other opportunities for Canadians, that it does not interfere in any way in the internal or domestic society of Canada. Consequently, Canada remains receptive to new investment and offers good opportunities to the American investor.

American money invested in Canada approaches $15 billion. On a per capita basis, however, Canadians have invested much more in the United States than Americans have in Canada.

We have in reality in our two countries a common market for investment funds, and these funds move freely from one country to the other, depending on the judgment of the investor.

Canadian-American interdependence in trade and investment is closely paralleled by interdependence in defense. In the air age, national boundaries are quickly crossed. The basic hostility of the Soviet Communist world toward the free world requires appropriate mutual security arrangements with each nation contributing to the common defense.

Canada and the United States are allies in the North Atlantic Treaty Organization (NATO). They are closely linked bilaterally by the North American Air Defense Command (NORAD). In NATO the Canadians and the United States share their defense problems with their European and other North Atlantic allies. In NORAD the Canadians and the United States have an integrated air defense system in which a combination of Canadian and American officers are in command over all forms of air defense. American planes and Canadian planes, in effect, fly wing to wing in unity.

NATIONS NEED UNITY

This is defense as it should and must be for the times in which we live. Only through unity can we protect our separate national lives and independence. Only through unity can we do our fair share in accordance with our national traditions in the interest of the free world.

In an interdependent environment in economic and defense affairs, the relations between the Canadian and American Governments ought to be good. They are. They are fundamentally healthy, and they are steadily improving. We are moving in the right direction.

However, good relations are neither automatic nor easy. Our two nations are interdependent, but they also compete. For example, both countries sell wheat on world markets. There is competition in metals, in petroleum, in other fuels, and in manufactured goods.

There are instances where people on one side of the boundary wish to use certain natural resources to their own advantage, and possibly to the disadvantage of people

on the other side of the boundary. Care and attention to relations are essential if fair dealing, cooperation, and understanding are to be achieved.

We have an elaborate set of arrangements for keeping the two governments and peoples in touch with each other. We are constantly seeking new ways of improving understanding and of finding solutions to problems as they develop. Canada has an able and effective Embassy in Washington. It is headed by a distinguished Canadian Ambassador Arnold Heeney. Through this channel the Canadian Government can bring directly to the attention of the U.S. Government its views on any problem. The U.S. Embassy in Ottawa is constantly in touch with various departments of the Canadian Government.

JOINT BOARDS

In addition to the normal diplomatic and consular channels, there are certain special joint boards and commissions which handle business between the two countries. There is the International Joint Commission which is responsible for dealing with problems of water and waterways along the boundary. Over the years the International Joint Commission has painstakingly and carefully solved many knotty and difficult problems.

There is also the Permanent Joint Board on Defense. This exists to resolve many detailed problems of defense relationships.

A new type of arrangement was established at the suggestion of President Eisenhower in 1953. At that time it was agreed to set up a Joint Canadian-United States Committee on Trade and Economic Affairs. It consists of the ministers of External Affairs, Finance, Trade and Commerce, and Agriculture on the Canadian side, and of the Secretaries of State, Treasury, Agriculture, and Commerce on the United States side.

This committee meets periodically. The last session was in Washington in February. The immediately preceding session was in Ottawa a year ago January. I had the privilege of attending both of these sessions. I can give direct testimony on the usefulness of this Committee as a means for establishing close personal relationship between high-level officers of the two governments.

The Committee on Economic Affairs is paralleled by a newer committee. It was established when President Eisenhower was in Ottawa in July 1958. This is the Joint Cabinet Committee on Defense. It considers at Cabinet level a number of the important defense problems which our two countries face. The last session of this Committee took place in Washington at Camp David during the autumn. Again I am able to give direct testimony on how useful and effective this Committee is for developing common understanding and effective working relationships between the two countries.

The sale of energy from one country to the other sometimes produces problems. Arrangements under which the United States imports Candian hydroelectric power have been functioning for many years. More recently, other forms of energy such as oil and gas have entered the economic picture in Canadian-American relations.

In 1959, the United States exempted Canadian oil from import restrictions. This action was welcomed in both countries as a contribution to our mutual well-being. Only recently, Canada approved the export of gas to the United States. The flow of Candian gas across the border should be helpful to both our countries and estimates predict it will bring some $75 million annually to Canada within a few years. Details are under continuous consideration by the National Energy Board in Ottawa and the Federal Power Commission in Washington.

CANADIANS DISTURBED

Canadians have been disturbed over restrictions which the United States has imposed on the importation of lead and zinc. The American lead and zinc industry has had serious troubles for the past several years, and the U.S. Government tried a number of measures to alleviate this distress. The effort always has been to find means which did not involve restrictions on imports from friendly countries such as Canada, Mexico and Peru. Finally, however, the United States found it necessary to impose import quotas. These quotas have not been particularly harmful in their application to Canada, and the Canadians have continued to sell substantial quantities of lead and zinc in the United States.

The Canadian Government, however, has understandably been disturbed over the principle of U.S. restrictions on this type of import. Continued contact between the Governments in this connection has tended to promote better understanding, if not complete agreement.

GREAT RESOURCE

A current problem of importance is the question of the development of the Columbia River Basin. This is actually and potentially a tremendous resource for western Canada as well as for the northwestern part of the United States. Arriving at an agreement as to the best way to use the resources of the Columbia River Basin to benefit both countries and to avoid damage to either is extremely complicated and difficult.

Negotiations are now underway, and no one expects them to be easy. Nevertheless, with good will and a proper spirit of give-and-take, a solution to the Columbia River Basin problem can be found.

A proper view of Canadian-American relations must encompass the problems which we face together in other parts of the world. These problems do not separate us; rather they bring us together. Our interests, our objectives and our policies are parallel. Both countries want a world in which trade may occur without discrimination and in accordance with sound economics. Both countries want effective programs of aid for underdeveloped areas.

PROBLEMS NOT EASY

We cannot of course expect to have all problems quickly and easily settled. Nor can we expect to find a time when there are no outstanding problems between the two countries. They occur in the best families. The main point to emphasize is that most problems are solved, in a practical and equitable fashion. When there is a will on both sides to examine any question and to discuss it with a view to finding a mutually satisfactory answer, then close and good relations between the two Governments and a spirit of cooperation will prevail. Relations between Canada and the United States should continue to be to the entire world an example of good neighbors living peacefully and profitably next to each other; an example of good neighbors facing the world overseas with determination to assure the acceptance of the values of democracy and free institutions which both countries cherish in common.

The recent failure of the Paris summit conference has pointed up the necessity for the closest cooperation between Canada and the United States.

This is not a time for discouragement. It is a time for cool and realistic appraisal, for the closing of ranks for renewed determination to do everything in our power to achieve a just and lasting peace for which so many in the world hunger.

The challenge to Canada and the United States as North American partners demands that—

1. We preserve our liberty and strength, and resist the drive of international Communist imperialism;

2. We keep the inescapable struggle to which we have been challenged from exploding into war;

3. We preserve in the long-range search for a world order capable of securing peace with freedom and justice.

Because of our location, our resources, our history and our traditions we in North America are called upon to play a leading part in responding to the challenge. Our failure to do so would be the failure of the free world.

I am confident that we will not fail.

Together with our allies and partners in the free world we can and must meet this challenge.

Actuarial Anesthesia—No. 4

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ALGER. Mr. Speaker, following are further observations on the social security system by Mr. Ray M. Peterson:

MISCONCEPTIONS AND MISSING PERCEPTIONS OF OUR SOCIAL SECURITY SYSTEM

(By Ray M. Peterson)

3. Can the social security system become an engine of inflation?

The First National City Bank of New York expressed concern about this question in its monthly letter for May 1958. Here is what they said in part:

"There is also the matter of the direct role the social security program would play in generating inflationary forces if it is repeatedly liberalized and financed by constantly rising taxes. By 1975, even assuming the present tax rate schedule is not increased, the businessman will face a payroll tax of 4¼ percent. They were scheduled in 1958 to increase to 4½ percent by 1969.

As this tax burden rises, pushing up operating costs, the natural inclination of the businessman is to protect profit margins by raising prices. Moreover, the heavier tax bite reduces take-home pay and workers want larger pay raises.

As prices go up, social security checks don't go as far, and pressure is put on the Congress to boost monthly benefits to keep up with the cost of living. Taxes are then raised to pay for increased benefits and the spiral takes another upward whirl."

Marcus Nadler, professor of finance at the New York University Graduate School of Business, recently made this statement regarding the relation of an existing inflationary condition and the operations of pension programs:

"Within the next decade * * * the number of people aged 65 and more living on savings, pensions, and social security benefits will increase materially. These people are not likely to sit by and see their economic security further undermined [by inflation] without protesting or without bringing political pressure for remedial legislation.

"Since private pensions, based on actuarial calculations, cannot easily be increased, the greatest pressure will be on the Federal Government to raise social security payments and on State and local governments to raise pensions. This may lead to a material increase in social security and local taxes, in turn reducing take-home pay of employed persons and adding to the tax burden of the employers. Or it may lead to increased Federal and local government expenditures and larger deficits, further feeding the forces of inflation."

In the course of the nationwide debate taking place in Great Britain with respect to its national pension system, the British actuaries have warned of the inflationary

aspects that may exist in overgenerous state programs. In a summary of a discussion by the members of the Institute of Actuaries, the following remarks by Mr. B. Robart appeared:

"The likely effect of an extended scheme on the problem of inflation could take several forms. Any failure to ensure the necessary increase in productivity to enable the benefits to be met in terms of real value would itself be inflationary. That appeared * * * to be a strong argument in favor of a state scheme's being restricted to basic need or of at least partial funding. In that an extension of national pensions requiring higher contributions would act as a disincentive to saving in general, it would be inflationary in effect. Even more would a built-in cost-of-living adjustment be inflationary in effect and would strike a tremendous blow at the existing occupational pension schemes. * * * It seemed to him that the fundamental needs to be kept in mind in any extension of state pension benefits were, first, that they should be framed on sound financial principles and, secondly, that they should be conducive rather than hostile to a stable currency. * * * As a profession they could not emphasize too strongly that a false step in the vital matter of state pensions could do irreparable damage to the economy for years to come, would inevitably continue the reduction in the real value of the currency, and perhaps place an impossible burden on the shoulders of future generations." (Shades of Jeremy Bentham.)

The following wise warning by a prominent Swedish financier seems to have gone unheeded when the Swedish Parliament adopted a compulsory national old-age pension program on May 14, 1959, providing a total state pension of two-thirds of earnings at age 67 with substantial contributions from employers and participants which are estimated to produce a public pension fund of 50,000 million crowns ($10 billion) by 1990. The pension legislation passed the Second Chamber by 1 vote, the Social Democrats together with the Communists having control 116 to 115.

"A serious warning should be sounded against the idea that the required capital supply could be secured by various forms of forced savings including such obligatory pensions as is now talked of in various countries. Such systems would not be effective without giving up basic freedom. Experiences from certain countries show how forced savings have failed to be anti-inflationary as the impact of this measure has been eluded by counteractions taken by people not wanting and not needing to accept the imposed hardships. Such countersteps could include bigger wage demands and diversions of savings from voluntary accounts to forced accounts. On the other hand a country like the Soviet Union has managed to extract forced savings with considerable success but at what price we all know.

"We can—apart from moderating trade union demands and election promises—do no better than limiting the public sector and drastically promoting voluntary savings to invest more to get more goods. This policy would have to include a general overhaul of taxation not to punish savings and productivity as now. Savings would be deductible from tax. It must pay to save and to work."

Barbara Ward, English economist and writer, recently stressed the importance of capital accumulation for world needs in the economic competition with the Soviets and suggested that government could help by offering tax inducements to trade unionists who agree to long-term wage agreements, with a heavy emphasis on deferred benefits which maintain standards in old age—that is, the encouragement of advance funding for privately arranged old-age benefits as distinguished from augmented state pensions on a pay-as-you-go funding basis.

In meeting the old-age income needs of a nation, the author believes in can be done in a way involving a vicious circle which should be carefully avoided or a virtuous circle which should be earnestly cultivated. He would like to have this belief confirmed or concincingly disproved.

Here is the vicious circle.

(1) Generous state pensions with little reliance on private voluntary pension programs. This would arise from political pressures and humanitarian considerations to assure older persons of completely adequate income.

(2) Effects of generous state pensions.

(a) Employee—increased reliance on Government; savings discouraged.

(b) Employer—greater operating costs.

(c) Economy—decrease in productivity and increased government financing of old-age benefits.

(3) Inflation.

(4) Demand for or automatic increase in pensions.

(5) ——— and the vicious circle resumes.

Here is the virtuous circle.

(1) State pensions covering only basic needs with major reliance on private programs and savings. There should be no escalation provisions which aim to grant immunity to inflation to a special segment of the population.

(2) There is a margin for savings and capital accumulation under private programs. Burden of cost of state pensions on employees, employers, and government is not heavy.

(3) Capital accumulation nurtures increased productivity.

(a) Inflationary pressures forestalled with no demand for increased pensions.

(b) Controlled increase in pensions provided as real total product permits. Pension claims are established with cost consciousness of the amount of advance funding required to support them.

(4) Funding for larger pensions again contributes to capital accumulation.

(5) ——— and the virtuous circle continues.

4. Will the willingness and capacity of our working population to pay increased social security taxes be seriously affected by the great financial demands for educational facilities during the next 10 years (to say nothing of the cost of national defense, highways, improved medical care, cultural pursuits, etc.)?

Estimates of population changes by age groups shown below indicate the great increase in the need for educational facilities compared with the small increase in number of working persons who must pay the cost. From 1955 to 1970, the total number of young people, taken as those age 0 to 24, mainly a dependent group, will increase 40 percent or 30 million; the total number of older people, i.e., those 65 and over will increase 42 percent or 6 million; but the middle-age group 25 to 64, largely the producers, will increase only 12½ percent or 10 million. There are already many evidences of taxpayer reluctance to pay the cost of educational facilities and other community needs. In the U.S. News & World Report, May 18, 1959, the situation is evaluated in an article entitled, "Coming: Revolt by Local Taxpayers?" Two paragraphs are quoted:

"Government, at all levels, is hungry for money. Taypayers are grumbling more and more over the cost of government.

"What you find to date is this:

"1. People still are voting for the things they want when payment can be made through borrowing. Between 70 and 80 percent of all bond issues submitted to voters—both in number and amount—have been approved over the past 10 months.

"2. Local politicians are continuing to gamble that the public will go along with steady increases in existing tax rates and imposition of new taxes to provide the money for most of the things the people would like to have.

"3. People are voicing increased resentment at tax increases, but irritation still has not led to actual revolt in most States and communities. Some local politicians, however, look for irritation to flare into revolt by 1960 unless present trends are checked.

Population increase projection from 1955 to 1970

Age group	Increase in numbers	Percentage increase
	Millions	
0 to 4	4	20¾
5 to 14	12	37½
15 to 19	8	68
20 to 24	6⅓	56
25 to 44	1	2
45 to 64	9¼	27
65 and over	6	42

Leading educators are pleading for massive Federal intervention in the educational area involving the expenditure of tens of billions of dollars. How will the demands of social security contributions be accommodated in this tax-ridden environment as it becomes more acute during the next 10 years? With almost domonic precision, we have managed, by a "pragmatic political process," to establish for 1969 the peak of social security and railroad retirement tax rates when the costs of education will, no doubt, be reaching a new critically high point. Is it possible that we are establishing claims on future national income for the older segment of population at the expense of adequate provision for the coming population explosion among our youth?

"Montana Semper" Fights Back

EXTENSION OF REMARKS

OF

HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. MOORE. Mr. Speaker, this year the Nation has been attracted to the State of West Virginia by reason of the emphasis, and I must state overemphasis, of the living conditions that exist among some of the mining camps of our States, especially the areas wherein the mine itself is no longer working and the people have continued to live in the mining community under substandard conditions. This is a matter which most West Virginians are not proud of, but we feel very keenly that for the most part, the problems that exist in West Virginia in the end must be solved by West Virginians.

Mr. Speaker, it was a distinct privilege of mine to join with the residents of a little mining town which for the past 37 years has had no mining operation to absorb the employment of the community. Subsequent to the closing of the mine, the community fell back—its streets, its homes, and its business community became blighted and the individual citizens had not a great deal of interest. On June 3, I joined with the residents of the town of Montana, Marion County, W. Va. I was the principal speaker at a civic affair wherein that community was awarded first place in West Virginia's country life contest.

This award came about because the people in the community became revitalized. They formed an improvement association and by community effort have improved their homes, their streets and surrounding area so as to make this former mining community an outstanding example of what West Virginians can do to remove part of the blight that exists in these mining areas of our State. So much enthusiasm was placed in this program that it received a $500 cash award in the community life program, which is jointly sponsored by the Monongahela Power Co. and the Agriculture Extension Service of West Virginia University.

To list the many improvements that community cooperation has brought about would take several pages of the CONGRESSIONAL RECORD.

Mr. Speaker, I ask unanimous consent to include in my remarks an article written by Joseph E. Hoffmann which appears in the Sunday Gazette Mail of Charleston, W. Va., which calls the attention to all similar communities the outstanding job that these 75 families of Montana, that I am privileged to represent, have accomplished:

(By Joseph E. Hoffmann)

Montana, a little hamlet of 75 families in Marion County was a few years ago a good place to be from, far away from, but today it has a bustling chamber of commerce of 72 members with a vim and vigor unmatched anywhere.

Yet, Montana officially died in 1923. Montana was a coal mine town and a thriving one with its own train station, town park, streets, and company store. But when the coal mine pulled out the town died. In recent year it was practically buried under tangles of briars, brush, trash, and abandoned buildings.

Those that stayed in the village found work within driving distance, lived on pensions, public assistance, or odd jobs. They raised families and the families called Montana their hometown, but they weren't particularly proud of it. The briars continued to grow, the streets narrowed, the junk accumulated, and the people waited in the forlorn hope that maybe somebody else would do something.

The symptoms of rigor mortis were all around. The Boy Scout troop disbanded, the Girl Scout troop ended its work. The boys who wanted to play on a team went elsewhere to join a ball team. One day the church steps fell through.

Finally, the streets became so bad that a woman fell in a chuck hole and broke her ankle, the Coca-Cola company that had taken the "Coke" to every corner of the world included darkest Africa threatened to stop delivery in Montana. Caskets had to be carried by foot about half a mile to the cemetery because the hearse couldn't get any closer.

The spark that raised Montana from the dead came about rather simply. Frank Spevok, who works as a quality inspector in the decorating department at Owen-Illinois in Fairmont; Donald Curnutte, a finisher at Fairmont Aluminum Co., and Stanley Munza, Montana's postmaster and general store operator, talked it over.

"Let's call a community meeting," they decided, "and see if we can do something about our streets and, maybe, start a Montana Improvement Association."

Montana has a strong religious core. Perhaps someone started the first meeting with the text of "God helps those who help themselves." One thing is sure, Montana reversed its philosophy from "Let's sit it out and see if something happens," to "Let every man do his part and let us all do it together—Now."

Here are some of the things that have happened in the past 2 years:

Montana Improvement Association rented a bulldozer and scraped all of the village streets. Alex Greenlee and the Murphy brothers, Bill and Wayman, members of the road committee, knocked on every door collecting $1 here and $2 there. Truckloads of gravel and reddog, about 350 of them, were hauled and spread on the streets to cover the mud and fill the holes.

Every day became a work day. Crews of neighbors bought, begged or borrowed tile and dug culverts for the streets.

Plats of the village were found someplace. On those plats streets were discovered and these were opened up out of the tangle of brush that covered them.

And, Montana discovered the power of letter writing. Letters went out to State, city and county officials and to influential citizens. And, the letters did something. One result was a $25,000 State road project that resurfaced the secondary road from Fairmont, 6 miles away, to Montana. Maybe nobody said it in as many words, but this project gave Montana the "big lift." You could feel it throughout the community—"Someone does care about Montana," was the feeling, "If, we can show them we care about ourselves."

Montana had learned its letter writing lesson well—a letter of thanks went to State Road Commissioner Patrick C. Graney. His answer came back:

"I appreciate your thoughtfulness in writing to express approval for the works. * * * It is always nice to know our efforts are appreciated."

Letters went to the city of Fairmont. On the road to Montana is located the Fairmont Sanitary Land Fill. Trash trucks had left their litter for 100 yards both sides of the entrance. Now, thanks to Montana's calling attention to it, the litter is gone, the entrance to the land fill is neat and persentable.

When winter came and with it the snows, Montana pampered its "expressway to Fairmont."

At every spot where ice would make the road dangerous, containers of cinders were placed. On snowy mornings, shift workers didn't worry the road commission about cinders. They scattered the cinders themselves on their way to work.

Montana needed street lights. Before, the late homecomer parked his car as close to his house as the streets allowed and scrambled through the chuck holes and felt his way through the briars. But now, with comparatively wide and smooth streets he needed lights.

Doors were knocked on again. This is the system that resulted: Twenty-six lights are placed at all necessary points in the village. These are 200 watt bulbs in reflectors on 15 foot posts. The wire runs from the post to the nearest residence. There it is plugged into a time-lock and into the homeowner's electricity. The homeowner pays for the electricity—Montana Improvement Association puts in the light and replaces bulbs. Workers on the late shift tell their neighbors when they expect to be home and the clocks are set accordingly.

The cleanup spirit went through the village. One resident, Fred Fortney, cleared a lot between his home and the church. It looked so good the owner donated the lot to the church for a parking lot. Harvey Hughes and John Zahora probed into the undergrowth adjacent to their homes, moved 10 truckloads of junk included rusted-out car carcasses and resurrected the village grove where once all community events centered.

The Little League baseball team was organized with Kenneth Lough as coach. The rented bulldozer cleared off a ball diamond in the middle of the village and Coca-Cola, the roads again passable for its trucks, installed a baseball scoreboard.

One lady of the community, Gertrude Clayton, who is now living with relatives in Ohio, turned her vacant house over to the Montana Improvement Association for a community building. The overgrown grounds were cleared, the house repaired, and the once empty dwelling is now the center of activities, ranging from the monthly meetings of the improvement association to engagement showers, receptions, and Little League meetings.

The community cemetery was cleared out. The MIA bought an additional acre of ground, laid it out in lots, and then, for added embellishment decided to get a World War II gun for a memorial. They wrote their Congressman, they wrote the War Department, they wrote the Surplus Property Administration and then, working with Congressman ARCH MOORE and the Fairmont Post, No. 17, American Legion they received a 3,280 pound gun, automatic, 37 mm, M1A1, on mount, combination, M54. This will be silvered, mounted and landscaped in front of the flag pole in the cemetery.

Frank Spevok, president of the MIA, keeps everyone informed with a monthly newsletter. This goes not only to members, but also to the few not belonging and to a long mailing list of out-of-town friends of the community.

After the "essentials" were done the momentum continued. Street markers were erected. Pine seedlings were distributed to all who wanted them. Pine plantings were made in vacant areas. Trees along the streets and in the grove were whitewashed.

Birdhouses were built and placed along the streets. Each house was given a house number by the MIA. Directional markers "To Montana" went up on all surrounding intersections. A Christmas outdoor lighting contest was held and community fairs and socials became regular events.

The atmosphere changed in the community. Stanley Munza puts it just right:

"A few years ago if I saw some guy in my front yard poking around, I'd throw a rock at him. Now, I know that he is either picking up a tincan or on his way in to say 'Hello.'"

Two houses burned in Montana. Money was collected for the families and then Montana branched out into area improvement. The MIA is working with several other communities to organize the Winfield district volunteer fire department. They expect delivery of a $25,000 firetruck in the near future.

The Montana community enrolled in the country life program sponsored by Monongahela Power Co., and the Agricultural Extension Service of West Virginia University.

This is a program for small communities, rural or suburban, and it makes annual awards for community achievement. The program is designed to show smaller communities how they can make progress through community cooperation. Montana naturally enough ranked in the top class in this year's program and will share a third of the $500 award money. The presentation was made at a community meeting on June 3 in the Montana grove.

What's next? The Montana Improvement Association has quite a number of projects ahead, including the first department. They hope to get city water piped to the community, they need another 350 truckloads of gravel on their village streets, and they are hoping that a nearby industrial site, which Monongahela Power Co. controls under option for industrial development, will bring a new plant near them. When this new industry comes, Montana will be booming again, not as a coal mine town, but as a pleasant residential suburb.

A 30-foot cross, lighted by bulbs purchased by individuals and changed in color at intervals as a memorial, burns every night atop a 150-foot slag heap adjacent to Montana.

"The slag heap," says Frank Spevok, MIA president, "is at last redeeming itself." "The cross," he says, "has been an inspiration to all of us and reminds us every night that God helps those who help themselves."

Suburban Rail Transportation Can Save Our Cities

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. MULTER. Mr. Speaker, on March 24, 1960, I introduced H.R. 11378 to assist State and local governments in improving mass transportation services in metropolitan areas.

In this connection, I commend to the attention of our colleagues the following address delivered by Mr. W. P. Kennedy, president of the Brotherhood of Railroad Trainmen, before Lodge 160 of the Brotherhood in Philadelphia, Pa., on April 26, 1960:

SUBURBAN RAIL TRANSPORTATION CAN SAVE OUR CITIES

(By W. P. Kennedy)

A NEW DAY IN TRANSPORTATION

It has been a long and hard road workers in rail transportation have been forced to travel during recent years when our industry has been undergoing nothing short of a revolution. But we appear now for the first time to be emerging on the main line ahead. Our locomotives have been dieselized, our signal devices made automatic, our switch yards controlled by pushbuttons, our freight cars enlarged, and IBM "brains" are threatening to displace even train dispatchers.

No, it is not the end of automation that is in sight ahead for us. It is a fact that even with all the billions of dollars invested in new technology that takes away jobs, more work on the railroads is in sight. For no matter how many of our tax dollars are used to keep the planes flying or to maintain smooth highways for the trucks to travel, we still need more and more modern railroad trains in freight and passenger service.

Nowhere in these United States has this major fact been brought home so sharply in recent years as in this heavily populated and highly industrialized State of Pennsylvania. For no one can travel the congested highways of this Commonwealth or see the poor use and waste of rail facilities but is convinced that the modernization of freight and passenger services by rail is the main answer to our transportation problem.

It is becoming clear to all that we need more and better train services, that to modernize them is the most economical way to move the added millions of tons of freight cheaper and faster, and the hundreds of thousands of commuters more safely and quickly, than any other way. We need to replace stub-end stations with through stations at platform levels, to unify terminals, to develop continuous flow patterns of rail transportation to and through our metropolitan areas. We need to replace obsolete, unhygienic old rattlers by quick loading-unloading, air-conditioned, cushion shock-absorber cars. It is the public interest that is being served here.

What has been lacking up until now has been a recognition by rail management, regulatory agencies like the ICC, the States, and national administrations that we must turn to the railroads to meet our mass transportion needs in this 20th century, just as we turned to them in the pioneering days when the Nation was first bound together by bands of steel rails which made our progress possible.

Piggyback—Modern way to move freight

It took a long time to come around to piggyback as the modern answer to the need for cheap, fast, efficient hauling of freight. Here is the way to assemble job lots of goods in containers or trailers at some central point, load them on flatcars, carry them to their destination and make door delivery. Here is the efficient way to use the already installed rails, signaling devices, and experienced manpower for intercity and transcontinental movement of all kinds of freight. Here is the answer to the costly construction of more main highways, now overcrowded with slowmoving, oversized, and overloaded trucks that cause such disastrous accidents and such high cost wear and tear on our roads.

When we in railroad labor leadership began pointing out the advantages of piggyback operations, we were lone voices crying in the wilderness. But today there is four times more freight hauled piggyback than 5 years ago. And in this last year alone the gain in piggyback freight was 50 percent. The future of piggyback as a major way of moving freight is now assured.

It must be remembered that much of this is new freight business, not merely a new way of hauling freight that customarily went by flatcar or boxcar. Here is one answer to the competition of the trucks. For piggyback freight moves faster, with less breakage and loss, and much cheaper than by truck, either across town or across the Nation. We of railroad labor stand shoulder to shoulder with progressive management in going out after this new business, for it points the way for the rails not only to regain their position of leadership in freight haulage, but in expanding operations to create new jobs, better pay, and more employment for all rail workers.

The plight of passenger train service

How about the passenger business decline that has seen train after train taken off their runs, the crews idled, and many among our people made permanently unemployed? How about the failure of the railroads to furnish passenger service to commuters and others who now live in our suburbs and have to reach the offices, factories, and shops located miles away in metropolitan areas?

This passenger problem is nationwide in scope and requires National and State as well as municipal action by those in authority. There are over 16 million people in the United States today entirely dependent on some form of public transportation to get from place to place, going to and from work every day. More than 100 million people now live in the major population centers of the Nation. By 1975 it is estimated that 80 percent of the entire population, or fully 172 million persons, will live in these metropolitan areas and most of them will need some form of daily passenger service.

Presently, we are investing $41 billion in a Federal-State highway system. Even before it is built and in use, much of it will prove obsolete, for highway traffic is growing so fast. The amount of money the people will have to devote to a more adequate highway system, if we do not divert much of the present passenger traffic off the highways and onto the railroads, can hardly be calculated. This one feature of public expenditures could come mighty close to bankrupting us. And still it will not provide safe, fast, healthy, and convenient means of transporting our people to and from their daily work and recreation.

If we attempt to use streets and highways to move millions more traveling Americans, we are bound to end up as has Los Angeles already. Ours will be a smog-ridden, hazardous and nerve-racked people, facing each new day more tired and less healthy than the day before. Consider Los Angeles, where in the vain attempt to maintain the city's business activities, 28 percent of the city is taken up with streets, freeways, and serviceways. Another 38 percent of the city's land is used for garages, parking and loading facilities and other installations directly related to the automobile and truck. Fully two-thirds of Los Angeles' valuable land is now covered with concrete. Still the traffic is dangerously congested, moves at a snail's pace during the rush hours, and an entirely new system of transportation is under consideration.

The Philadelphia experiment points the way

Philadelphia has blazed the trail that may become the way to solve such problems of passenger service. In October 1958, your city voted $160,000 to pay the extra costs of operating one commuter line by the Pennsylvania and Reading railroads for a 6 months' trial period. This experiment was on the route to Chestnut Hill, and the number of trains was increased a third while the fares were reduced. The entire program was within the city limits. Later, another similar plan was provided for the northeast section of the city served by the Fox Chase Branch and Reading railroads.

What did these pioneer experiments prove? Reduced fares and better train service can attract people back to the trains. An additional 270,000 passengers rode these lines during the first 6 months' operation. Instead of the 6 percent annual decline in passengers of the preceding years, there was an actual gain of 17 percent in passengers during the experiment.

But even this increased patronage was not sufficient to make up the losses in lowering the fares to a point where travel by train would again prove attractive enough to bring passengers back on the trains. Your own city solicitor, Dave Berger, has concluded from these experiments that low fares, improved service, better equipment on mass transit systems can bring back public transportation and make it an attractive and popular means of commuting to the great shopping and employment centers of our metropolitan areas. But it will do so at first only if part of the cost is met from the public purse.

A new policy for public transportation

We are now reaching a great and revolutionary change in public policy and public thinking about passenger service on the railroads. We have seen more than one example where rail management has sought to discourage passengers from using their trains, seeking abandonment of train service so that they can devote their time and equipment to moving freight that brings in profit.

We have seen the public forced to make big investments in automobiles and load their family budgets with the high costs of their maintenance just to get the man of the family to work every day and the family out for some recreation over the weekend.

We have burdened our Government with the high costs of building and maintaining superhighways that never catch up with the growth of trucks and autos. We pay out more for autos and their upkeep than we do for the education of our children, and see expensive gasoline go up in exhaust fumes that blight our cities with choking smog. Yet right there, already installed, are the tracks

and facilities to move our growing masses of people by train.

A new program for modern passenger service

What is the key to unlocking this complicated puzzle? It has been found in part at least by your own city Mayor Dilworth in the creation of the Passenger Service Improvement Corporation of Philadelphia, a public service corporation. This progressive mayor in this great city recognizes in time that the way to preserve and expand the commuter service which is essential to the city's very life is to put the trains back on the rails to bring the people here.

This program was approved by the Railway Labor Executives Association in a meeting which I attended last July, by which the city will control and operate all rail commuter trains serving the city. It is set up as an independent agency of 15 board members, 11 selected by the mayor, 1 each by the railroads and 2 by railroad labor.

All revenues from fares and other sources of income on these trains will go into the treasury of this new corporation. In return, the railroads will receive an amount covering their direct costs of operation. The corportion will determine train schedules, kind and amount of equipment needed, service improvements to be made, promotional activities and other such managerial functions. The railroads will continue present employment practices and contracts as required by State and Federal laws and collective bargaining.

Here is a beginning step decidedly in the right direction of providing rail passenger services in an up-to-date and modern way as a public service. Here is recognition that we need this service, even though it must be provided in part at least as a charge against the taxpayers, just as surely as we need roads and bridges, streets and sewage systems, schools and libraries. That is what a public service means, the provision of something widely required for decent living which cannot or will not be offered by private industry at a profit, but which the public determines they want to provide for themselves.

The Philadelphia plan contemplates extension as needed to cover the major part of the entire metropolitan area. This will mean extending the program by agreement to other adjacent communities in order to provide a complete passenger service. When once such a program begins and proves successful, it is but a logical step to go ahead and include more areas, more communities within its activities. That is what is likely to take place here. My own belief is that Federal action will soon be required, for this is not strictly a local or even a State problem.

Laggard railroad management abandons passenger train service

Providing adequate up-to-date passenger services for the people of this Nation wherever they may reside has become a national concern. It has become so in the first instance because some rail management is right now trying to get rid of passenger trains rather than seeking ways of increasing their service. They got a provision written into the Federal Transportation Act of 1958 which allows them to make quick moves to abandon passenger services where they could show that any such trains were not profitable. They removed all State supervision of train service by State utility commissions, and tied the hands of the Interstate Commerce Commission pretty effectively.

For under this new law they can abandon a train without any public hearing before the ICC, just by putting the Commission on notice, and when the ICC does hold the hearing it is powerless to halt the discontinuance on the railroad's showing that it is losing money. The public's need has been entirely lost sight of in this way of abandoning railroad service. Cities are entirely forgotten by this method, and whole communities can be destroyed merely by the act of rail management bent upon shedding itself of troublesome and profitless business.

The railroads have been quick to make use of this provision in the new law, and slow to try to find ways to maintain service such as the imaginative Dilworth proposal offers. In one case close by, the Lehigh Valley proposed to discontinue all its passenger service. The ICC conceded after a public hearing that the businessmen witnesses had amply demonstrated the need for continuation of such service because of the close connection between industry in the Pennsylvania area with the New York metropolitan area. Yet such is the law that despite the showing made before the ICC and its own finding of need, the Commission was not able to order continuance of all passenger train service.

That is why I say we need Federal legislation based on a new conception of railroad service as an essential public service. That is why we in railroad labor are fighting not only for our own jobs down at Washington and at the State capitals of all our States, but we are making the people's fight for a cheap, modern, comfortable, dependable rail transportation system which individual passengers cannot make for themselves. That is why we gladly join hands with such progressive leaders as the mayor of your great city in seeking practical ways to maintain and increase passenger service on our railroads.

And the future grows brighter every day we continue this fight. Had railroad labor just sat on its hands, and let management abandon trains at will, there would have been few defenders of the people's interest in low-cost passenger transportation facing rail management in public hearings and before legislative bodies.

Had there been no powerful and well-intentioned rail labor organizations capable of exerting organized pressure in high places of government; had there been no political program of supporting candidates for responsible public office such as we have carried on so well for years in the Brotherhood of Railroad Trainmen, we would have seen the Nation stripped of its passenger trains long ago.

Main steps to be taken

Now, having held on during a very rough ride, we are being joined by great cities themselves who see in the loss of passenger trains their own lifeblood of commerce and trade ebbing away. And we have been joined by big taxpayer groups who see in the colossal roadbuilding program underway a tremendous burden of taxation being put on their shoulders for generations to come, with no end of it all in sight, except as we return to the railroads and put a modern passenger system back on the tracks.

Here are the main steps in the program as we in railroad labor see it.

First, we must revise the 1958 Transportation Act which the railroads rushed through the Congress under the pretense that if it were not passed they would go bankrupt. We must take out that section dealing with quick abandonment of trains without proper safeguards of public hearings by the ICC within the localities affected. To do that we are supporting a measure introduced by the chairman of the Interstate Commerce Committee of the U.S. Senate, the able senior Senator from Washington, WARREN MAGNUSON, and carrying the signature of 30 Senators who know this is in the public interest. I refer to S. 3020, and I urge that you write your Congressman and Senators, in support of early hearings and passage of this measure.

Next, I endorse, and we in railroad labor support, such efforts as Mayor Dilworth's Passenger Service Improvement Corp. of Philadelphia. It is my hope and expectation to see these public service passenger corporations spring up all across the Nation. But as they reach out beyond the city limits, they must make compacts and agreements with other incorporated communities, and take up the intervening suburban areas as well. So that inevitably we come back once more to the need for Federal legislation setting up national policies and laying out the guidelines for a national system of passenger service offered as a public service which the privately owned railroads do not believe they can render any longer at a profit to their bondholders.

We might as well face the fact that the railroads are up against an almost unbeatable proposition. The modernization and operation of passenger service in many places is no longer profitable on their heavily watered stock and bond values. Railroads are carrying a tremendous tax burden on their property, something on which their competitors, the trucks and airplane companies, have been given huge subsidies by the public. Several States and localities have belatedly come to realize the need of the railroads for tax relief. But even when this comes, it comes too late to save our passenger service. We need to provide direct aid for that.

We had better face the fact that we will provide far less in direct taxes to make up the difference between a reasonably priced passenger ticket that a worker can afford to pay and what it costs to carry him by rail to his job than if we continue to wreck enough city buildings and pour enough concrete to permit every driver riding alone in his car to take it into the city and park it within reasonable walking distance of where he works.

As for the commuter himself, once he has the chance to use a modern passenger service at low cost, with stops conveniently placed near his home and place of work, he can cut his family budget for operating his auto by two-thirds and raise his standard of living and comfort materially.

The program before Congress

Finally, I can report another great step forward taken by the mayors of 11 cities and the chief executives of 16 railroads meeting in Chicago in January 1959 at the instigation of your own Mayor Dilworth. There they set up a joint committee of rail management and city officials to study this passenger commuting problem on a continuing basis.

In November of last year officials of the New York Central, New Haven, Pennsylvania and Erie and the Association of Western Railroads met with city officials of New York, Philadelphia, Washington, Cleveland, St. Louis, and Milwaukee to draw up a program. This committee laid out four steps to be taken by the Congress which these men regarded as vital to the Nation as a whole. Here is the first comprehensive program ever offered by such powerful forces and is deserves the thoughtful consideration of every person interested in railroad operations.

The four steps which Congress should take are:

1. That a national policy should be established by the Congress for a balanced and coordinated transportation system.

2. That the Federal, State and local governments be asked to develop rational tax policies for the railroads.

3. That Federal loans be made available where necessary to municipalities or publicly constituted bodies for new commuter equipment and improved facilities and for the improvement of intracity mass transportation facilities; these to be long-term low-interest loans.

4. That a study be made of grants-in-aid by the Federal Government to communities or duly constituted public bodies which have a sound plan for the permanent improve-

ment of commutation or other intracity transportation facilities, this to be modelled on the present urban renewal program.

Action was not long in coming from the Congress, at least a beginning that can lead to final action. Senator HARRISON WILLIAMS, Jr., of New Jersey and Senator JOSEPH S. CLARK, of Pennsylvania introduced a bill just 2 weeks ago, S. 3278, which embodies most of the recommendations made by the mixed committee of rail officials and city officers.

This bill serves notice on all elements in the Nation that they now have the opportunity to decide whether they want to modernize their passenger services on the railroads. Whether they want to cut their cost of living by eliminating the wasteful and uneconomic use of private autos for travel which good commuting service can provide more conveniently and with so much less strain on their health and purses. The taxpayers can now make the decision to end this subsidizing of highways and superexpressways for the use of giant trucks and trailers that are a chief hazard to life and property.

This bill tells the city officials, owners of city property, businessmen, and civic leaders that there is a way to stop the senseless and costly demolition of useful structures to make way for parking lots and roadways for automobiles that never actually solve the needs of the commuting public and continue to destroy property values and cause more businesses to desert the cities.

This proposal recognizes that the most effective use of Federal funds depends on adequate and comprehensive planning to provide the passenger service needed and solve the growing problems of paralyzing traffic congestion in our metropolitan centers. No longer do we need to go ahead with blinders on, failing to consider the place of cities in our urban and suburban development programs. For Federal funds would become available and put to use as provided in the Housing Act to help determine the transportation needs of metropolitan areas and to program the most efficient use of existing and new facilities to provide such transportation.

Instead of waiting until the problem of commuter service is beyond solution, when billions more of public and private funds have been invested in wasteful ways of getting to and from our cities, this new approach would take stock of things as they are today. A national program would emerge from that inventory, so that we can get on with the job of putting the passenger service of our railroads in first class condition as a public service.

Nor would all this cost the taxpayers nearly so much as the present haphazard way of building more public roads and driving more private autos. For the bill by Senators WILLIAMS and CLARK, S. 3278, provides that the funds of the Housing and Home Finance Agency could be drawn upon to provide loans at low interest rates up to a total in the first instance of $100 million to States and local governments for plans to develop a modern passenger service.

For those among us who still doubt whether the Federal Government should enter this field of providing the people of the Nation with passenger train service as a public service, I want to point out to you that we are doing no more here than we have done and are continuing to do in a wide range of public services. The competing forms of transportation, the trucks and airplanes, have the aid of the Federal and State governments. The Department of Commerce in Washington recently published a lengthy report on the transportation needs of the Nation and recommended that the Federal Government encourage long-range planning and programming to modernize our transport system in which the Federal Government has a great stake both for national welfare and defense.

This is no losing proposition offered in the Williams-Clark proposal. This provides for the rapidly expanding future of rail passenger service. It is not so much a revival of passenger trains, as a whole new era of modern transportation in which we rail workers will play a leading part. Just as I pioneered in the name of the Brotherhood of Railroad Trainmen in helping launch the piggyback movement some years ago, so now I am dedicating some of my time and energy to this new and modern program for putting passenger trains on the rails of the Nation. This it what I believe to be constructive railroad labor leadership not only in behalf of our individual members and their families but in the interest of the great public which we serve.

IN SUMMARY

The issue before us is great and compelling. It is the issue of the hour in transportation circles. It boils down to this—shall we keep our economical system of mass transportation by rail up to date and in operation to meet the needs of the public, or shall we bankrupt ourselves in a vain and wasteful effort to provide every motorist with direct and speedy safe access to the heart of our great cities and parking space when he arrives?

The answer is overwhelming that modern railroad transportation of a growing population is the best, the safest, the most economical and the most convenient form of transportation we have as yet devised. The problem of making this into a public service meeting the needs of the people is now on its way to solution. The road ahead is straight and clear, and the throttle of public opinion is being pressed in that direction.

The Failure of Our Foreign Policy

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an address which I delivered at the opening session of the 14th biennial convention of the Affiliated Young Democrats of the State of New York on Friday, June 17, 1960, at the Hotel Piccadilly in New York City:

Mr. Chairman, my good friends of the Affiliated Young Democrats, ladies and gentlemen, it is a pleasure to be back with you again. I appreciate very much the invitation of my dear friend and your very able State president, Harold Moskovit, to participate in this opening session of your 14th State convention. May I take this opportunity to extend to you my best wishes for a most successful convention.

Nineteen hundred and sixty is a most important political year for us Democrats. This could very well be a year of great victory, if we show the necessary courage and bring the true facts to the American people. It could be a year of great disaster, for America as well as for our party, if we should nominate the wrong candidate. Knowing you as I do, I feel that I can speak my mind.

For the next 5 months, until election day, you and I are going to be very busy people. It will be our job to help clear up the confusion and the smokescreen of the Republican apologists, who will seek to explain away the mistakes of this Republican Administration with the aid of Madison Avenue tactics and unlimited funds.

And while I am on this subject, may I say that I am strongly opposed to Madison Avenue technique, regardless of which party indulges in it, when it comes to nominating and electing a President of the United States. We are not trying to sell a piece of soap or a brassiere which would make all women look like Miss America. We are endeavoring to sell a man with all of the virtues and shortcomings of a human being, except that he must be the best man this country has to offer for its highest position of leadership.

Time was when we would search for that kind of a man in every nook and corner of the land. He did not have to be rich or have a wide TV grin. You and I know that an Abe Lincoln could not have run for the Presidency in this day and age for the simple reason that he couldn't afford to pay for the television and radio time and the newspaper publicity. Is this good for America? Are we getting the best man in public office? Think about it, if you please.

What are some of the major issues of the day which demand that we nominate and elect, not the richest man or the one with the most charming smile, but the best man that America has to offer at this crucial time?

Take the international situation, for example, which involves such problems as peace or war, the security of our country, and our very survival in the future. When you try to engage the average citizen in a discussion of foreign policy, he will usually shrug you off. It is too technical for him. It is something which is out of his realm of interest, something remote and unreal. But ask the same person whether he would like to see another world war prevented, or whether he would rather see his children marching off to war, his country attacked, his city bombed and destroyed, his whole life disrupted—and he will react promptly and with utmost interest.

It is clear, therefore, that when it comes to foreign policy we need a man of proven ability, one who has demonstrated responsible leadership, if we are to survive as a free nation and as a world power. I cannot emphasize this too strongly for you.

We must remember at all times that we are dealing with the most cagey, the shrewdest, the most unorthodox enemy in all history, who utilizes every phase of human activity in the process to bring us to our knees—political, economic, psychological, technological, cultural, and at the opportune moment also military. A struggle of this type, whether you call it "cold war," "protracted conflict," or by any other name, can be very quickly lost if we are unaware of the tactics of the enemy, or if we refuse to recognize that we are in the midst of a desperate struggle for survival.

Just to show you what kind of an enemy we are dealing with, I want to quote to you from a brochure which recently came to my attention, where the basic guidelines for the Communist conflict against us are stated as follows:

1. Knock off your enemies one by one, as they become exposed.
2. Keep the enemy off balance.
3. Sap the enemy's will to resist.
4. Avoid a frontal assault, a knockout punch, until such time that it can succeed without powerful retaliation.
5. Divide the battlefield into a peace zone and a war zone. Whatever the Soviet Union does comes within the realm of the peace zone; whatever the United States does comes within the realm of the war zone, because the United States represents "warmongering imperialism."

This is not a new concept. It is new to us, but actually it is an old oriental concept which has been practiced in the past by both China and Russia. In fact, it was an

old Chinese militarist named Sun Tzu, who wrote some 2,500 years ago:

"To fight and conquer in all your battles is not supreme excellence; supreme excellence consists in breaking the enemy's resistance without fighting."

And that is exactly what communism is trying to accomplish: To break our resistance without fighting. It is using every possible means—diplomatic pressure, economic competition, scientific achievements, propaganda, culture, education, and other ways—to convince us that we are inferior, that our tactics are stupid, that we are doomed, that we should give up the struggle before we start.

Unfortunately, the leadership this Nation has been given during these past seven and a half years has been anything but inspiring and mature, anything but virtuous and honorable, and very often anything but the truth.

The damage done to our prestige abroad is quite evident to all by now. Under the Democratic administrations of Franklin D. Roosevelt and Harry S. Truman we enjoyed the trust and cooperation of many nations. They were our willing allies in war and peace. They were our dependable friends in the international councils. I leave it to you to make your own comparison of the situation today, where nations all over Asia, Africa, Latin America and elsewhere jeer at us, berate us, condemn us at the least provocation, show disrespect to our highest officials and our flag. Never in my life do I recall witnessing such a "hate America" campaign as exists today throughout the world. I am not going to try to explain it, I am merely citing a fact—no matter how much it hurts.

Who is to blame? Is it President Eisenhower? No. He was a very capable general and a great war hero, but he allowed himself to be captured by the old guard Republicans—as the next Republican Presidential nominee is sure to be. You know what the policy of the old guard has always been: Prosperity at any price; business as usual; get rich quick; and the public be damned.

What bothers me today is the irrefutable fact that this great land of ours is in mortal danger, our very survival as a free Nation is at stake. There have been many warnings, including some from Republican ranks, but the top men of this administration profess not to see any such danger.

To my mind, the most critical indictment of the present administration is the fact that it has failed to ask Congress for sufficient ballistic missiles and manned aircraft to close the growing deterrent gap relative to Soviet Russia in the area of massive weapon systems. Mr. Khrushchev would not be talking as tough as he now does, if we were as strong as we should be.

It is my view that, at this very moment, we are losing world war III for a number of reasons. Let me mention a few of these reasons: lack of a sufficient and timely intercontinental ballistic missile (ICBM) program; lack of proper defense against a submarine attack; lack of an adequate civil defense program; lack of a weapons program and policy to deter limited aggression; lack of an adequate space program; and, finally, lack of recognition that we are, and for a long time have been, actually engaged in world war III.

I know this to be a fact because, as a member of the House Committee on Science and Astronautics, I have learned in these past 2 years that modern weaponry, in the hands of the Soviet Union, can be assumed to have reached a qualitative and quantitative point at which our incalculable power to destroy an aggressor can probably itself be destroyed now in the matter of minutes.

Let me try to make this thought a little clearer. It is by this time a matter of common knowledge that a revolution in the development of arms has taken place on both sides of the Iron Curtain over the past decade. We speak of the most fantastic weapons, but let us not forget for a single moment that the Russians have such weapons, too. We have no monopoly in this field.

The most amazing thing about it is that this revolution in arms is not yet fully recognized or acknowledged at the policy-formulating levels of the present administration in Washington—but you can be sure that it is not only recognized by those who determine policy in the Kremlin, but it is being utilized for every possible advantage it can give the Russians.

I emphasize these things merely to point up the danger which America and the free world are facing. As we look back in retrospect of events in recent years, we must reach the conclusion that we need never have gotten into the position in which we find ourselves today. Certainly we had the resources, the money, the scientists, and the manpower to have retained the supremacy that we enjoyed during and after World War II. But we have neglected to use all this to our advantage, because of the desire on the part of the Republican leadership to balance budgets, to economize on expenditures, and to play favoritism toward certain groups.

We are in this mess now because the Republican Party is, and always has been, the party of a single interest—the party of big business. The Democratic Party, on the contrary, has always represented the interests of all the people, of the entire Nation. The Republican Party was a bankrupt party 8 years ago—not financially—but bankrupt in ideas. It received a temporary respite because its ticket was headed by a national military hero, who first found it expedient to become a member of the Republican Party after he had retired from the Army and had become a candidate for public office.

In conclusion, I wish to State my opinion that the failure of the summit conference, the increased tensions and demonstrations against the United States in other countries, plus the inability of Japan to guarantee the safety of a President of the United States, mark a complete failure of the present administration's foreign policy. This, in itself, calls for a change in administration.

Yet, I must warn you, that we can lose the election next November 8 if we permit Madison Avenue tactics to prevail. The people of America and of the free world will be the losers if the nominee of the Democratic Party is picked by the same pressure methods as those used by the Republican Party in foreclosing a convention fight.

We must allow a free choice to be made at the Democratic convention. All the candidates must have a chance to be heard and to state their views on the major issues, so that the American people may have all the facts. Unless we do this, the people will not have much to choose from in the election.

Address by Chaplain William E. Powers on Armed Forces Sunday, Fort Richardson, Alaska

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include an address by Chaplain William E. Powers on Armed Forces Sunday, May 15, 1960 at Fort Richardson, Alaska. Lieutenant Colonel Powers is Deputy Staff Chaplain in the Alaskan Air Command and a priest of the diocese of Grand Rapids, Mich. The address follows:

ARMED FORCES SUNDAY 1960

Thoughts, reverent and profound, dominate the hearts of Americans today as we pause amid the complex labors of the present to commemorate Armed Forces Day. It is America's expression of belief in the military might of her stalwart sons and daughters joined in a brotherhood of mankind under the fatherhood of Almighty God. Today in so many great metropolitan centers and country crossroads the theme of Armed Forces Day—"Power for Peace"—is consecrated by her appreciative citizens as they pray for peace. Yes, this is God's country—the expression of almost every returning service personnel approaching the shores of the United States. God's country—his concept of home. This idea was in his dreams as he lay sweating in the stinking jungles of Burma. Thoughts of home took the chill from the frost and foggy watches on the Aleutians. It guided his steps as he slugged his way along the frozen reservoir to Heart Break Ridge and Pork Chop Hill. It was his guardian angel of hope as he bailed out over Cho-da and So-ka-ri. Yes, in all these places he was a stranger. To him none of them was God's country—only home, sweet home. Little wonder he prayed that soon he might return home when peace had come to the world. He found in prayer a power so necessary for peace.

On this Armed Forces Day it is well that we consider "Power for Peace" in terms of living in peace. Is our Nation's wealth measured in terms of material progress, our power for peace? No—not the visible trappings of affluent life, mighty cities, the great marts of trade, harbors crowded with the commerce from the four corners of the earth. They never have and never will assure a nation's prosperity in terms of peace. Material things in their very nature are subject to change. Cultures and civilizations constructed on changeable values change with such values. Men come and go as do nations. There must be something stable, something solid upon which to build a program for peace. Such a program of necessity demands the recognition that all men are created equal, with inalienable rights to life, liberty, and pursuit of happiness. This brotherhood of mankind realizes its filial obligation to "Our Father Who Art in Heaven." And in asking "Thy Kingdom Come, Thy Will Be Done on Earth" we must use material things for the purposes for which the Creator of Heaven and Earth made them. Our power for peace comes from heaven. It is the consciousness of Almighty God that will give dignity to the actions of man and empower his relationships with fellow man with the true concept of brotherly love. Then, and then only, will mankind live in peace.

Power for peace must be perfected by prayer for peace. It is not the might of man, but rather the right of God that will bring peace to our day. The propositions of man receive their dynamic impact when indorsed by the dispositions of Almighty God. In building a much better world for tomorrow man must be much better disposed today. This means that definite arrangements be made to recognize Almighty God as the Father of nations. We may well take to heart the warning of the royal psalmist. "Unless the Lord build the city, they labor in vain who build without Him." We must strive to make our way with the blessing of Him who is "the way, the truth, and the life." It is the consecration of this great Nation to Almighty God seeking first his

kingdom and justice. Then we can pray humbly and meekly in possessing the blessings of peace.

Under the fatherhood of God man is spirited to recognize his brother in the great family of nations. As prayer perfects power for peace, charity consecrates a common bond of brotherhood among mankind. For it is in loving that man really lives, just as it is in living that man loves.

We must be conscious of the rights to life, liberty, and the pursuit of happiness so characteristically the inheritance of all the children of men. This deep sense of consciousness stems from the scriptural reminder that God made man to his own image and likeness. There is, then, an equality that defies reduction through religion, race, or color, whether here or abroad. Hence, at all times we must be prepared to defend our objectives as a peace-loving nation measured in terms of God-fearing citizens.

In using the material elements of the world for the purposes of construction—we must ever be conscious that they also possess the elements of destruction. "Power for peace" must be expressed in terms of living—not the results of dying. This sense of consciousness must sting us today. More than 1 million men have been killed in defending the American way of life. One million men. This is greater than four times the combined population of Alaska—including all personnel. More than 1 million men were wounded in World Wars I and II and the action in Korea. Thousands of these men are patients today in 160 Government hospitals, of whom the Veterans' Administration reports that one-half of them are mental cases. This means the minds of men who go to battle and fight for their lives cannot take the terrific impact of war conceived by fellowmen. This is indeed a very sad commentary on our 20th century civilization. There are more than 1,200,000 men who have served with the U.S. Armed Forces in war combat zones. These know what war really is. But, how few of them are able to know what peace really is? These men and women in the Armed Forces were your personal representatives. And where is the peace for which they so persistently prayed and so valiantly fought? They have seen power used and misused.

It is well—then—to sound a clarion call for caution. Today's display of marshaled militia and mechanical might well remind the world of the possessive strength of the Armed Forces of the United States. May the presence of her military musters signal to the world that the God of the atom and hydrogen is also the God of our fathers. In a wonderful revelation of eternal love Almighty God defended the world with the visible presence of His Divine Son. In that tender hour which heralded His sacred passion and death—the second Person of our Blessed Trinity promised He would send the Paraclete to comfort them and to strengthen them. He told the world of the sanctifying love of the Holy Spirit. This revelation disclosed the secret of the power of God. A power for living, "I have come that you may have life and that in abundance," and a power for loving, "As the Father has loved me, I have also loved you."

Just as the presence of the Holy Spirit imparts the power of the Father and of the Son so also can the presence of the Holy Spirit import the purposeful principles empowered for peace. Peace is a blessing from God—it is a gift of the Holy Ghost. The power for peace must come from God. That power is generated in a dynamo of prayer. The world dreads the secret of nuclear power. The world is afraid of the secrets locked up in the atom and the hydrogen. Strange that the atom and the hydrogen should cause men and nations to cower much more than the fear of the Lord who made the atom and the hydrogen. Could it be that we have grown so cold in our relationships with Almighty God that the fear of reprisals would burn us more than the heat of such nuclear agents or destruction? Just as we are confident in our possession of some of the nuclear secrets so should we be equally as confident that the secret lies in its advantageous use as a powerful prayer for peace. Our help, our strength, our might is not the power and the strength and the might of nuclear energies. Our power and our strength are in the name of God who made the atom and hydrogen and locked therein the very secret that humbles and ingenious mind of inventive man. It is the Holy Spirit with His divine gifts filling the hearts of the faithful that will keep the spirit of America pure and unsullied—the mind of America keen and sharp in truth—the body of America free from the antibiotics of class destruction—the souls of America retentive of the wonderful image and likeness of its Creator—the heart of America loveable and loving—warm in its protective embrace of those seeking our shores, affectionate in her expressions of tender understanding, but uncompromising with those seeking her destruction.

Armed Forces Day is themed "Power for Peace." Members of her Armed Forces are purposed to pray for peace. Our country will go forward and onward programed for peace only when powered with prayer. And may our prayer be that inspired by the liturgy of Pentecost:

Holy spirit—Lord of Light,
From the clear celestial height,
Thy pure beaming radiance give.
Come, Thou father of the poor,
Come—Thou light of all that live.
Come with treasures which endure,
Come—Thou light of all that live.
Thou of all consoler best
Visiting the troubled breast
Dost refreshing peace bestow.
Thou in toil art comfort sweet,
Pleasant coolness in the heat,
Solace in the midst of woe.
Light immortal—light divine,
Visit, Thou, these hearts of Thine,
And our inmost being fill.
If Thou take Thy Grace away,
Nothing pure in may will stay.
All his good is turned to ill.
Heal our wounds, our strength renew,
On our dryness pour Thy dew,
Wash the stains of guilt away.
Bend the stubborn heart and will,
Melt the frozen, warm the chill,
Guide the steps that go astray.
Thou on those who ever more
Thee confess and Thee adore,
In Thy sevenfold gifts descend.
Give them comfort when they die,
Give them live with Thee on high,
Give them joys which never end.
In the name of the Father and of the Son and of the Holy Ghost. Amen.

Flag Day Ceremony at Food Machinery & Chemical Corp.

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. GUBSER. Mr. Speaker, on Tuesday, June 14, a ceremony at Food Machinery & Chemical Corp. in San Jose commemorated Flag Day, the Army's birthday, and the delivery to combat troops of the first M–113 vehicle manufactured at the Food Machinery plant. The occasion was witnessed by 2,500 FMC employees and 500 invited guests from the San Francisco Bay area.

Principal speaker was Lt. Gen. John Honeycutt Hinrichs, Chief of Ordnance, U.S. Army.

The following are quotations from General Hinrichs' speech. They are found in a news story written for the San Jose Mercury by Norman Bowman:

Even with atomic weapons, it still remains that there must always be a man to fight a man on the ground. Our purpose is to be ready to win such a fight. We must have the best tools possible in such a conflict.

This new FMC lightweight armored personnel carrier which can be air dropped at will, is the best truck I know to help us accomplish such a task.

If M–day comes, this company, this plant, and these skilled workmen have the demonstrated ability to produce for the Nation's military forces one of its strongest muscles.

America's military might is not measured in uniformed men alone—America's fighting men and women are such as you right here today, in this plant.

What About the Other 49 States?

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. SILER. Mr. Speaker, at the request of one of my constituents in southeastern Kentucky, Mr. Edgar Ward of Middlesboro, I call attention to an article published in the Knoxville News-Sentinel on May 25, 1960, showing that Tennessee, since 1936, received $700 million worth of Federal benefits for an outlay of only $312,500,000 in Tennessee taxes. While Senator KEFAUVER of Tennessee said this was not immoral, I wonder what the other 49 States would say. And if this was not immoral, would it not be very inequitable? If the other 49 States themselves follow this same pattern during the next 24 years, as Tennessee has followed it these past 24 years, then Federal bankruptcy certainly looms ahead and the Congress is right now in the process of robbing all the poor people, the common citizens, the little individuals through infernal inflation until all of those victims will look much worse than the man that fell among thieves as he journeyed from Jerusalem to Jericho.

The article that my friend wants inserted in the RECORD and that should certainly be publicized is as follows:

MILLIONS IN AID TO STATE HAILED BY KEEF—$700 MILLION SINCE 1936

GATLINBURG, May 25.—Eight Federal aid programs have returned to Tennessee more than twice what Tennesseans paid in taxes to support them, Senator ESTES KEFAUVER said today.

Since 1936 the programs have provided some $700 million worth of help, compared to Tennessee tax contributions toward these programs of only $312,500,000, he said.

He cited the figures in defending Federal-local participation projects as "a national responsibility" in an address before the Tennessee Municipal League here.

"Tennessee," KEFAUVER said, "has had no fiscal complaints against the operation of Federal grants. It is true that taxpayers of some wealthy States, like New York and California, in effect subsidize Tennessee taxpayers in this regard."

SAYS IT'S NOT IMMORAL

"I for one see nothing immoral about it. The centers of capital in big States draw wealth from our State—wealth which brings no corresponding flow of taxes to Tennessee or her municipalities.

"Every State is at the limit—or close to it—of its taxing ability. So are counties and cities. The Federal Government, on the other hand, even under the restrictive Internal Revenue Act of 1954, is able to assist in many problems which local communities have no way of solving without help.

"Without Federal help, these problems will simply canker and increase and ruin the life of our communities. And the Nation is only so strong as its many parts."

PROGRAMS CITED

These are the programs cited by KEFAUVER, with the Federal help and the amount of Tennessee taxes that supported them:

1. Water pollution control: Since 1956 Tennessee has got $4,500,000; paid not quite $2 million.

2. Hill-Burton hospital grants: Since 1947 Tennessee has got more than $47 million; paid not quite $16,500,000.

3. Federal airport aid: Since mid-1947 Tennessee cities have got more than $21 million; paid slightly more than $5,500,000.

4. Public housing: Since 1938, Tennessee has got $26,200,000; paid in $7 million.

5. Reserved urban renewal grants: Since mid-1949, Tennessee has got $66,500,000; paid slightly more than $16 million.

6. Urban planning: Since mid-1954 Tennessee got $476,000; paid $66,000.

7. Loans for public facilities: Since 1955 the State has got $13,300,000; paid $850,000.

8. Highway aid: Between 1917–43, Tennessee got $79 million; paid $42 million. Since 1946 when highway aid resumed after wartime interruption, Tennessee got almost $444 million; paid $22,500,000.

OTHER AID GIVEN

This, he added, is apart from other Federal aid programs for which he offered no estimate of State participation. Among the State's benefits from these, he said were:

1. $241 million since 1936 in old-age benefits.

2. $31,800 since 1947 to school lunch programs.

3. $13 million in aid to the blind since 1936.

4. $8 million since 1950 in aid to totally and permanently disabled, and $4 million in grants for maternal and child health care.

5. $3,500,000 for help for crippled children, and $2,250,000 for other child welfare services since 1936.

6. $1,700,000 during the past 2 years under the National Defense Education Act.

KEFAUVER said Tennesseans, as recipients of more aid than they pay in taxes "incur a debt to citizens of other States to be scrupulous about our programs and needs to see that the maximum good accrues from these programs."

A Decalog of Decency for Our Age

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. MULTER. Mr. Speaker, on February 7, 1960, at the Chapel of the Four Chaplains in Philadelphia, the "First Spiritual Freedom Citation" was awarded to Rabbi Maurice N. Eisendrath, president of the Union of American Hebrew Congregations.

I am pleased to direct attention to the following excerpt from Dr. Eisendrath's remarks made on that occasion, as follows:

What we require today more desperately than aught else besides is in my judgment a decalog of decency for the relationship between man and his brother man which might read something like this:

I. "I am the Lord thy God" who brought not alone the Hebrews out of Egypt but the Ethiopians from Caphtor and the Arameans from Kir, which means quite simply, as both Moses and Amos would have understood it, that I am the Lord not merely of those Americans who believe today that He is their sole possession but I am the Lord likewise of those hundreds of thousands, even hundreds of millions of humble children of the Divine, behind even the Iron and the Bamboo Curtains. I am the Lord not only of the proud and supercilious whites but I am the Lord also of the colored. I am the Lord who cannot be confined into any structure of stone be it cathedral or church or synagogue, but I am the Lord of the heaven and of the earth, one and indivisible.

II. "Thou shalt have no other gods beside me," neither of status nor of success before which men so grovelingly bow down today, nor of mammon nor of Mars, both of which claim man's seemingly undeviating allegiance in our time.

III. "Thou shalt not take the name of the Lord thy God in vain" by stamping "In God we trust" upon your coins and postage stamps and trusting almost exclusively not in Him but in your proud accouterments of war.

IV. "Remember the Sabbath Day, to keep it holy" in order that through decent leisure men may feel again their dignity as children of the Divine, that they may no longer feel as increasing numbers are coming to believe themselves today, to be mere machines and tools, motes of dust on a vast conveyor belt, slots in an IBM calculator.

V. "Honor thy father and thy mother" that thou might safeguard the security and the decency of the home, that there might be peace again between the generations.

VI. "Thou shalt not murder" either the one or the many, either singly or in the mass, either thy contemporaries in impending incineration or the generations still unborn by polluting the atmosphere with the noxious, noisome, nauseating poisons of nuclear fallout.

VII. "Thou shalt not commit adultery" not merely in person but as a society, by adulterating the ether waves, by the cheapening tawdriness that makes the whole of life seem to the younger generation cheap and leads them into the dens of juvenile delinquency.

VIII. "Thou shalt not steal" either outrightly or more subtly by stealing a man's birthright, by making it impossible for him either because of color or creed or station in life to pursue his education or his employment or to live where he chooses rather than in the imposed ghettoes of our vigilantly guarded neighborhoods of the North as well as the South.

IX. "Thou shalt not bear false witness" by misleading innuendos and rumors and gossip against thy neighbor's faith, precluding every opportunity for advancement even to the highest places in our land to a man because supposedly he pursues some other faith.

X. "Thou shalt not covet" not only thy next-door neighbor's house, nor his ox, nor his ass, but thou shalt not covet the distant nation's missiles to the moon but covet instead thine own divinely decreed mission unto mankind.

This is the decalog of decency which I would have our time, our Nation, our people pursue, so that bound together in life as those four chaplains were in their courageous and comradely death, we might in truth usher in God's kingdom in our time. Yea:

> "He prayeth best who loveth best
> All thing both great and small;
> For the dear God who loveth us,
> He made and loveth all."

Know Thine Adversary: "Soviet Economic Warfare" by Robert Loring Allen

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. PORTER. Mr. Speaker, Robert Loring Allen, now a professor of economics at the University of Oregon in my hometown, Eugene, believes that it is in our interest to be well informed about the Soviet Union. His recent book, "Soviet Economic Warfare," published by the Public Affairs Press, tells us much we need to know as we attempt to make the necessary adjustments for coexistence.

Under unanimous consent I am including a review of Professor Loring's book by Paul Wohl from the Christian Science Monitor for June 2, 1960:

This book gives more than it promises. It touches upon almost every problem of the Soviet economy in its relation to the outside world. Basic principles of Soviet thinking and the structure of Soviet society also are dealt with.

Because of this overall view and the wealth of material it musters, this book is a vade mecum for those who do not have the time for specialized study. As pointed out in Erwin D. Canham's introduction, it is written in accordance with the ancient precept, "Know thine adversary."

At times the emphasis may be so much on the adversary, however, that the reader forgets about the general and very ancient business of economic warfare, which is not peculiar to the U.S.S.R. In the complex society of mass civilization with its huge production potential and many competing monopolies (private, mixed and state), its public utilities, shipping conferences and cartels, economic and political interests frequently are interlaced. When this happens, the state often becomes the agent of particular interest and uses its sovereign rights to enrich the one or the other group and at the same time to further the national patrimony and to strengthen national defense.

The archives of the League of Nations contain much evidence of this kind of economic warfare practiced on a large scale by member nations at a time when the Soviet Union hardly took part in international economic affairs.

Many of the techniques of Soviet economic warfare actually were developed by Germany and Japan.

Professor Allen defines economic warfare as "the conscious attempt to increase the relative economic, military, and political position of a country through foreign economic relations." This definition covers such "Western" practices as shipbuilding and shipping subsidies keyed to admiralty requirement in case of war, the use of freight rates to boost national ports and the national transportation system and the many

subtle forms of selling cheaper abroad than at home.

The Soviets have added new traits to this technique without necessarily improving it. What makes their form of economic warfare ominous to us is their general political goal which differs from that of other economically aggressive countries. Professor Allen discusses Soviet motivation from many angles and also takes into consideration "possibly unresolved policy conflicts within the Soviet councils."

The book shows up the many controversial questions connected with Soviet capabilities, priorities and growth, gives an overall picture of the Soviet trade organization, familiarizes the reader with current reports on Soviet trade practices and with the inroads which the Soviets have made in the main areas of the world.

In the book's final chapter the author presents his views on the prospects of Soviet economic warfare, the ultimate purpose of which, he believes, is "to dominate and control the world." Despite large capability for economic warfare, Professor Allen does not seem to think that the Soviet's prospects are too good. The reader is warned, however, "that trying to see into the future where the Soviet Union is concerned is particularly hazardous."

The value of the book is enhanced by 18 carefully selected statistical tables covering not only the U.S.S.R. but also China and the East European people's democracies.

Actuarial Anesthesia—No. 3

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ALGER. Mr. Speaker, additional excerpts from a paper on the social security system:

MISCONCEPTIONS AND MISSING PERCEPTIONS OF OUR SOCIAL SECURITY SYSTEM

(By Ray M. Peterson)

In order to assure that the public will be willing to pay social security taxes on an initial bracket of gross earnings, it apparently has been necessary to present an image of a close parallel to private insurance. If social insurance were kept at the proper level to meet only social needs, it would have its own merits and distinctive characteristics and it would not be necessary to draw such a close parallel to private insurance in order to gain public acceptance. For the present and probable future level of benefits, however, this private insurance parallel is likely to build up real trouble. If employees are repeatedly told that insurance premiums are being paid by them "and on your behalf by your employer," as Dr. Larson says and Senator PROXMIRE believes, there is a rude awakening coming when younger persons and new entrants come to know (as they should be told now) that the value of combined employee-employer contributions, on the average, is greater than the value of benefits. Congressman CURTIS of Missouri, a prominent member of the Committee on Ways and Means, has introduced a bill, H.R. 7012, "to encourage the use of private benefit plans in lieu of social security by providing that individuals who are eligible for certain benefits under such plans shall not be entitled to social security benefits or subject to social-security taxes." While such a proposal would be virtually impossible to operate, the significant thing is that it has been thought about and the idea proposed legislatively. Such a law would, of course, completely ruin the financing of the social security system, since it must have the subsidy payments derived from the employer contributions with respect to the younger members and new entrants of the future.

If the great socialization of contributions which truly exists is made clear to the public, there may be good reason for concern as to public acceptance of the gross income tax base. The public may well say, "General welfare benefits should be met from general revenues—pay for them by the progressive income tax."

Is there a dilemma developing which will result in eventual public resistance to payment of social security taxes on gross income, no matter which horn is selected?

If the image of social security projected by Government authorities is similar to that of voluntary private insurance, of which we have seen evidence, there may arise a "din of inequity" when it is realized that the value of contributions with respect to current young workers and new entrants is greater than the value of their benefits. If the image projected is the more accurate one of substantial socialization of contributions and not one which parallels the payment of premiums for conventional insurance benefits, a clamor of unfairness may arise over taxing of the initial bracket of gross income—a regressive income tax. The author wonders whether there has been sufficient appreciation of the likelihood of the development of this dilemma. Are we deceiving ourselves as to the successful continuance of the self-supporting principle, or will direct governmental support become necessary? Has the actuarial anesthetic been too powerful?

The author believes that the lesser horn of the dilemma is to be honest as to the true nature of our social security financing method. In lieu of the statement published in the Social Security Administration's booklet previously referred to, "Your Social Security," the author recommends a statement such as the following which does present an accurate image:

"The financing method developed to pay for social security benefits is fundamentally different from that used for private life insurance and pension plans. The money needed to pay benefits to old-age and survivor beneficiaries comes mainly from the current contributions by employees, employers, and the self-employed. For example, for the 10 years from 1956 to 1965, total contributions are estimated as $102.5 billion and benefit payments as $98.5 billion. Contributions have been established in the law so that, over the years, there will be some excess of contributions over benefits. This excess is accumulated at interest in the trust funds. The interest earnings provide money for only 6 percent or 7 percent of the benefits.

"This method is sound and proper for social insurance where the objective is to provide only a basic minimum protection for widows, orphans, and older people. This social purpose makes compulsory participation and contribution fair and proper.

"Under private life insurance and pension plans, benefits are paid for by contributions of individuals, employees, and employers with respect to these particular persons and the benefits secured depend directly upon the amount of such contributions. If we apply the principles of private insurance to social security, this is the way it works out:

"(a) The value of the benefits for most of the present participants is much greater than the value of the contributions made in respect of them by the employee and his employer (or in the case of the self-employed, by himself).

"(b) For present young participants and persons starting to work, the value of the employee's contributions alone will be close to the value of his benefits. Some of the employers' contributions and part of those of the self-employed will be required to provide money for benefits to those now retired and those now at the middle and older ages—that is, those mentioned in (a) above.

"With a clear understanding of this method of paying for social insurance benefits, each generation can be expected to be willing to pay social security taxes in reliance upon similar payments by future generations to pay for benefits to those who are then the older generation."

If this were done, it could well be helpful in keeping social security benefits within the proper limits for covering only social needs.

SOCIAL AND ECONOMIC IMPACT OF SOCIAL SECURITY FINANCING METHOD

The Advisory Council on Social Security Financing recognized that, although a social insurance system is a necessary part of economic security—

"Security depends even more fundamentally on the continued ability of our society to produce a large volume of goods and services under conditions of economic stability. The council has not considered it part of its task to evaluate in detail the effect of this system of social insurance on the stability and productivity of the economy."

The council also declared that the social security—

"Trusteeship is so large and the number of people involved so great that the defeat of beneficiaries' expectations through inflation would gravely imperil the stability of our social, political, and economic institutions."

The author of this paper is not qualified to appraise the broad social and economic impact of our social insurance system, but he does have some questions to which he would like the answers. He is concerned that the limited field covered by the unanimous report of the advisory council will not be generally appreciated and that the report can be a tranquilizer, dulling a legitimate and healthy anxiety which we should have as to the future successful operation of our social security financing method. Social security financing does not operate in a vacuum. Here are some questions he would like answered:

1. How will the margin for personal savings be affected by compulsory social security contributions which are scheduled to increase by 80 percent in 10 years?

Is the relation of social security taxes to total personal savings a matter of significance? For the 3 years 1951–53, social security contributions averaged 20 percent of personal savings which, in turn, were 7.8 percent of disposable income. Then, for the 5 years 1954–58, social security contributions averaged 31½ percent of personal savings which, in turn, were down to an average of 6.9 percent of disposable income. For 1959, social security contributions of $9,612 million will be about 43 percent of estimated personal savings of $22,000 million, and the latter has been estimated as 7 percent of disposable income. If the 1969 contribution rate of 9 percent were in effect in 1959, social security taxes estimated at $17,300 million would be 78 percent of personal savings of $22,000 million. If the steadily increasing social security taxes do reduce substantially the amount available for personal savings, we should be concerned about the harmful effect on all forms of savings and, in particular, the voluntary purchase of insurance and annuity contracts. Is this an important field for research by economists of life insurance companies?

2. How will the willingness to save, particularly for purcha of life insurance, be affected when the margin for savings is reduced and there is increased reliance on

old-age and survivor benefits from the Government insurance system?

To date, it has been generally believed that the social security benefits have been a stimulus for the purchase of life insurance by individuals and the provision of old-age benefits by employers and employees. Is there danger of our becoming so anesthetized by this experience that, without adequate justification, we expect it to continue?

Let us note the manner in which increases in social security survivor benefits arise. First, there is pressure to improve the benefits for those receiving old-age benefits and it is established that an increase is justified; next, old-age benefits are increased for active workers; and then, automatically because of the formula, all survivor benefits are increased. There is thus an enormous increase in life insurance benefits (survivor benefits), not because of a demonstrated need for them with proper regard for other life insurance in force, but because the old-age benefits to present recipients were considered inadequate. This approaches being a strange non sequitur. Here is how outstanding life insurance coverage compares with the life insurance equivalent of the social security survivor benefit coverage:

[Dollar amounts in millions]

Year	Estimated amount of life insurance in force as survivor benefits under OASI [1] (1)	Total life insurance in force in the United States (excluding credit life insurance) [2] (2)	Ratio of (1) to (2) (3)
			Percent
1935	0	$98	0
1940	$42	115	37
1951	170	248	69
1953	298	296	101
1955	344	358	96
1957	425	439	97
1958	475	472	101

[1] Actuarial Studies 16, 29, 31, 37, 43, 47 of Social Security Administration and letter from Robert J. Myers.
[2] Life Insurance Fact Book, 1959.

If the insurance equivalent of survivor benefits under the two Government programs of railroad retirement and civil service are included, the total under Government programs is about $500 billion for 1958.

We see a neck and neck race since 1953, but how long can this be expected to continue? The average amount of OASI insurance equivalent for men progressed as follows:

1940	$2,300
1947	2,300
1951	3,700
1953	6,200
1955	6,900
1957	8,000

This is the kind of race where the added strength and speed of one opponent can cut down the strength and speed of the other opponent—they are not free and independent competitors. Is this an area for research for the market specialists of life insurance companies?

Are there seeds of future trouble for the life insurance business in this competition between the tax-favored compulsory governmental survivors' benefits program and the now more heavily taxed life insurance industry? The following statement of 10 members of the Ways and Means Committee is noteworthy:

Individual economic security is now being provided the public by life insurance companies, other thrift institutions, and through the social security system. It is sound public policy to encourage everyone to provide for his own security on a voluntary basis and our tax laws should encourage, not deter, such efforts. This bill, however, makes voluntary provision for one's own economic security relatively less attractive since it increases the tax on life insurance while investment earnings under the social security system are free from either Federal or State tax. This increases the advantage of the social security system over voluntary individual protection offered by life insurance companies, particularly if the latter must absorb taxes of the magnitude provided in the bill. Public awareness of this differential in cost will most certainly lead to increased demand for larger social security benefits and less incentive to build security on a voluntary basis.

Poland's Millenium: Polish American Congress, Western Massachusetts Branch, Commemorates Acceptance of Christianity by Poland in 963

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. BOLAND. Mr. Speaker, the first mention of Poland in recorded history appeared in the year 963. When Poland accepted Christianity in 966, the nation alined itself with European civilization. The one-thousandth anniversary of these events will be celebrated within Poland in the period from 1960 to 1966.

Mr. Speaker, under the sponsorship of the great Polish American Congress, these events will be commemorated over the next few years by fitting ceremonies throughout the United States. The first of these events took place on May 20 and May 29 in Springfield, Mass. An outstanding program under the direction of the Western Massachusetts Branch, Polish American Congress was unfolded to the thousands of Polish Americans who live in this area and to the general public.

These ceremonies were the result of many months of preparation, planning and hard work. The spirit with which the Polish organizations—churches, clubs, fraternities—entered into this gigantic undertaking was reflected in the tremendous success that was theirs. The Polish people's fervor for Christianity, undying love for freedom and liberty, tremendous contributions to mankind—all were remarkably presented in tableau, parade, and speech.

Starting on May 22 with a tableau depicting "A Thousand Years of Polish History and Culture," the ceremonies were climaxed on May 29 by one of the largest parades in the history of Springfield, by an inspiring "Te Deum" religious exercise in St. Michael's Cathedral, and an evening banquet.

The Massachusetts Legislature recognized the grand observance by enacting a resolution congratulating the Western Massachusetts Polish American Congress, Inc., for initiating the celebration. I include with my remarks at this point a copy of this resolution and the names of its sponsors:

(By Mr. Chmura of Holyoke, petition of Stephen T. Chmura, Joseph Garczynski, Jr., Stanley J. Zarod, Walter T. Kostanski and Thomas C. Wojtkowski for adoption of resolutions by the General Court congratulating the Polish American Congress, Inc., for initiating the celebration and observance of the millenium of Christianity and statehood of Poland.)

HOUSE RESOLUTION 3147

Resolution congratulating the Western Massachusetts Branch of the Polish American Congress, Inc., for initiating the celebration and observance of the millennium of the acceptance of Christianity by Poland, and the statehood of Poland

Whereas the Western Massachusetts Branch of the Polish American Congress, Inc., has voted to observe and to fittingly celebrate the millennium of Poland during May 1960, in the city of Springfield; and

Whereas the celebration of the millennium of Poland marks the 1,000th anniversary of the acceptance of Christianity by Poland, and its alinement with European civilization; and

Whereas the cultural and historical contribution of Poland to our Western civilization, as well as the undying strength and moral determination of the Polish people to resist their oppressors, is firmly rooted and directly attributable to their great and abiding faith in Christianity; and

Whereas despite the many conquests, the tyrants, and now, the Communist yoke, which Poland has had to bear over these 1,000 years, her great religious conviction, and unquenchable spirit have helped her to give to the world such great people as General Kosciuszko, Count Casimir Pulaski, Nicolaus Copernicus, Henryk Sienkiewicz, Joseph Conrad, Frederic Chopin, Ignace Paderewski, Madame Marie Sklodowska Curie and Maria Konopicka; and

Whereas during the observance of the millennium, great anniversaries dear to the heart of every Pole will be observed, including the 150th anniversary of Frederic Chopin's birth; the 550th anniversary of the Battle of Grunwald, when Polish-Lithuanian forces checked the invasion of Central and Eastern Europe by the German Teutonic order; the 600th anniversary of Cracow University; and the 100th anniversary of the birth of Ignace Paderewski, and all these anniversaries will be honored by every Pole for their great cultural and political importance in Poland's history; and

Whereas Poland was the first country in Europe to adopt a constitution establishing a democratic form of government guaranteeing human rights, and civil liberties, to all, while at the very moment this historic document was being written, Poland was under the occupation of a foreign enemy; and

Whereas the parallel between the Polish Constitution, and our National and State Constitutions, is very close and the underlying political philosophies expressed therein revere and cherish the same principles which we here hold so dearly; and

Whereas Poland stands today a shining light as it has been over the past thousand years in the midst of our enemies, who are her enemies, even though under the domination of a godless despot, as a symbol of democracy and true Christian morality: Therefore be it

Resolved, That it is the sense of the general court of Massachusetts, that in the next millennium Poland will experience a rebirth; and be it further

Resolved, That the general court of the Commonwealth of Massachusetts hereby congratulates the Western Massachusetts Branch of the Polish American Congress, Inc., for initiating the celebration and observance of the millennium of the acceptance of Christianity by Poland and the statehood of Poland; and be it further

Resolved, That an engrossed copy of these resolutions be sent forthwith by the secretary of the Commonwealth to the Western Massachusetts Branch of the Polish American Congress, Inc.

Mr. Speaker, I also include a well detailed news story from the Springfield

Union of May 30 relating the Poland's Millenium events.

ONE HUNDRED THOUSAND WATCH POLISH PARADE

One thousand years of Polish history were reviewed by an estimated 100,000 persons Sunday afternoon as one of the largest parades in Springfield's history traversed Main and State Streets. The event marked the millenium of Poland's Christianity and statehood.

Not only did Senator LEVERETT SALTONSTALL, Gov. Foster Furcolo, and all the mayors and selectmen of western Massachusetts take part, but Pope John XXIII in a personal telegram extended his apostolic benediction to all who took part in preparation of the parade, those who took part in the parade, including the viewers, those who attended the religious ceremony at St. Michael's Cathedral, and even those who attended the banquet Sunday night.

BISHOP GIVES TE DEUM ADDRESS

The apostolic benediction carries with it a plenary indulgence provided the usual conditions of confession and Holy Communion and short prayers for the Pope's intentions are met.

In a stirring talk at the conclusion of the parade in St. Michael's Cathedral Most Rev. Christopher J. Weldon, bishop of the Roman Catholic Diocese of Springfield, who read the Pope's personal message, said: "It is good for us who are linked with our Polish brothers by faith to be here on this occasion when we review 1,000 years of Polish bravery and adherence to the will of God.

"Although the leaders of the world stumbled and fell 10 days ago at the summit conference, that does not mean that the peoples of the nations of the world have to stumble and fall with them. On more than one occasion the Polish people have overcome adversity. Yes they have risen to victory when all seemed lost simply because they followed the will of God.

"The Polish people have shown the whole world how to live according to the will of God and when they were called upon to shed their blood in order to follow that will, they understood their blood was mingling with the blood of the Son of God.

"We in this country can follow the example of the Polish people by living according to our faith and by bravely carrying our daily cross according to the will of God. Only when we do this can we be called worthy soldiers of God.

POLAND SETS U.S. EXAMPLE

"Poland has adhered to the faith for 1,000 years and, although we are a young Nation, we can imitate the magnificent example of her people by being brave and accepting the challenge of daily life."

The bishop's talk occurred during the Te Deum service at the end of the parade. Before the bishop spoke, Very Rev. Joseph J. Sielski, MIC, provincial superior of St. Stanislaus Kostka, Province of the Marian Fathers of Stockbridge, spoke in Polish.

The highlight of the service was reached when the choirs, clergy, and congregation sang the "Te Deum"—the triumphant song of the Roman Catholic Church. Benediction of the Blessed Sacrament closed the service.

CHICOPEE MAYOR LEADS

The parade started promptly at 1 p.m. as Mayor Lysek, parade marshal, walked southerly in Main Street from Church Street in the North End. The last unit of the parade passed the reviewing stand in front of city hall at 4:20.

Mayor Lysek was escorted by the marching unit of the Springfield Police Department; Mayor Thomas O'Connor, of Springfield; Rt. Rev. Msgr. John Wieloch; Bishop Weldon; Bronislaus Wegiel, chairman; Victor Szalankiewicz, president of the Polish-American Congress; Senator Saltonstall; U.S. Representatives Edward P. Boland, of Springfield, and Silvio O. Conte, of Pittsfield; the PAC Executive Committee; the parade committee.

Col. John Stefanik, commander of the fighter-interceptor squadron at Barnes Airport, was marshal for the military units in the first division, which included the color guard, the U.S. Air Force Band from Westover Air Force Base, the 567th Air National Guard Band, the Air Force National Guard of western Massachusetts, District 8 of the Polish-American Veterans, led by Comdr. Ignatius Jaszek; the Polish Drum Corps, of Chicopee, making its first appearance; various auxiliary corps, and the Polish Exile Association, which received applause as it passed the line of march.

SECOND DIVISION UNITS

The second division included units from Chicopee, Chicopee Falls, Willimansett, and Adams. It was headed by the Chicopee Police Department marching unit with Deputy Chief William C. McQueen in charge, followed by the Chicopee High School Band, city officials, the fire department unit with Fire Chief Edward Borowiec and Chaplain Edmund B. Walsh in the lead, the Hampden County VFW Auxiliary. Members of St. Stanislaus parish with the pastor, Rev. Simeon Kaczmarek, in the lead, followed by Boy and Girl Scout troops, the Sodality of Our Lady, and the float depicting John Sobieski conquering the Turks at Vienna, which was sponsored by the St. Joseph, St. Michael, and St. Stanislaus Societies.

The Polish Falcon Drum Corps drew rounds of applause and was followed by Polish-American Veterans, Balut Post, with Stanley Zaleski in command. Next in line were the St. Stanislaus Choir, the Rosary Society, St. Ann's-PRCU Lodge 1275, Queen of Poland Lodge No. 433, and St. Lawrence Society, No. 1311, all of whom sponsored the Frederick Chopin float.

The City of the Immaculate float was sponsored by the Holy Name Society and was followed by the St. George Greek Orthodox Church Band.

MIRACLE ON VISTULA

The next float—the Miracle on the Vistula—was sponsored by the Polish Home Association, of Chicopee Falls. Polish National Alliance Lodge No. 711, Polish Women's Alliance of American Group No. 295, Polish National Alliance Group 2934, Polish Men's Citizens Club, and the Committee of Education.

Joseph Dancewicz, commissioner, led the Polish National Band of Worcester, members of PNA, and the float depicting Queen Jadwiga, sponsored by Council 62, PNA.

Edmund W. Trybulski of his committee led the Willimansett group, followed by the float depecting the coronation of the Blessed Virgin as queen of Poland, sponsored by the combined societies of St. Anthony Church.

The Springfield Quarter Midget Racing Association had two floats, one with young drivers waving winner's checkered flags and the other showing various midget racing cars.

Walter Zepka directed the Polish National Alliance Drum Corps from Adams and was followed by Girl and Boy Scout Troops, officials of various Polish societies of that town with a float depicting former President Woodrow Wilson and the Polish President Paderewski drawing up the constitution of Poland following World War I.

THIRD DIVISION

State Representative Stephen Chmura was marshal of the third division which included units from Holyoke, Agawam, South Hadley and South Deerfield. John V. Czelusniak led the Holyoke group followed by Rev. Leonard Pakulski, OFM, Conv. pastor of Mater Dolorosa Church, State Senator Maurice Donahue, Mayor Samuel Resnic, and Asst. Atty. Gen. Joseph Zajac who were followed by a float reviving the memories of authors Miczkiewicz, Sinkiewicz and Konopicka. The Polish Falcon Drum Corps of Meriden, Conn., brought up the rear of this group.

The Agawam High School Band led the members of the newly organized Polish American Club of that town.

South Hadley had two eye-catching units: the fire department group which sang "Sound Off" as it passed the reviewing stand and the float honoring Gen. Tadeusz Kosciuszko, founder of West Point and "father of American artillery." This float was sponsored by the Polish American Citizens Club. The Holyoke Rosary High School band led the Veterans of Foregin Wars, Knights of Columbus, the fire department and the auxiliary police.

SOUTH DEERFIELD

The South Deerfield unit led off with its float of "Light of the World" with the high school band following and heading the various Polish groups of that town.

The Springfield Marksmen won rounds of applause as they led Governor Furcolo and members of his executive council, Judge Stanley Wisniewski, Judge Harry Dziekanowski, Colonel Stefanik, Cornelius W. Phillips, Jr., Governor's aide, Judge Edward Dobiecki, Dr. Anthony Wojciecchowski, Stanislaus Suchecki, Adam Stefanski, Lucy Wisniowski, Walter Stachowicz and Helen Dancewicz.

Mrs. Kay Furcolo, the Goveror's wife, rode in an open car.

State Senator Stanley Zarod was marshal of the fourth division, which included Indian Orchard, Housatonic, Webster, and Ware. Rt. Rev. Msgr. John Wieloch led the Indian Orchard group which consisted of 60 committee members, the Liberty Drum Corps of Westfield, and a float entitled "The Mountaineers," sponsored by 22 societies of Immaculate Conception Church.

HOUSATONIC DELEGATES

Rev. John P. Skowronski of All Saints Church, Housatonic, led the delegation from that town, which included the Great Barrington Precision Drill Team and altar boys carrying a large cross made of red carnations. The Pulaski Band led the marching unit from Webster.

The Ware delegation was led by Casimir S. Skibinski and included several boys in Polish costumes carrying the red and white flag of Poland, the Gilbertville Community Band, a float depicting the Katyn Forest massacre of 10,000 Polish Army officers during World War II, which was sponsored by the combined Polish societies of that town.

The fifth division included Easthampton, Greenfield, Turners Falls, Pittsfield, and Westfield. The marshal was Stanley Paccha. The Easthampton group was led by Police Chief Frank Skrzyniarz and Rev. Stanislaus Zdebel and Rev. John Chwalek. The high school band provided the marching music and a float depicted Gen. George Washington and Col. Casimir Pulaski conferring during the Revolutionary War.

GREENFIELD GROUP

Frank Skowron and Edward Molongoski led the Greenfield and Turners Falls group with music by the Turners Falls High School Band. Rev. Joseph P. Szczepaniak of Turners Falls and Rev. John Klekotka of Greenfield led the church societies and the Polish-American groups.

Lt. Col. Richard H. Mezejewski was marshal of the Pittsfield group and was accompanied by Lt. Comdr. Matthew Wojcicki, WO Alfred Drenzek, Mayor Raymond E. Haughey and other city officials, the Interstatesmen Drum Corps of Troy, N.Y., and several marching units.

Rev. John Blazewicz, MS, of Holy Trinity Church, Westfield, led the group from that city which included a colorful Polish dancing group, the St. Mary's High School Band, and a float showing a Polish homestead in the "old country."

CATHEDRAL BAND ESCORT

The sixth division included Springfield and Southbridge with Joseph Czaja as marshal. The Cathedral High School Band provided the music for the marchers which included John Boduch, unit marshal, parade committee members, Aldermanic President Arthur J. McKenna, Councilmanic President Michael Lopenzo and several members of the common council, Our Lady of the Rosary Church banner, heading the St. Stanislaus Society group, the St. Joseph Brotherly Society, a float depicting the baptism of King Mieszko I, who introduced Christianity into Poland in 960, the Millers Falls Bugle and Drum Corps and a float entitled "Polonia Semper Fidelis" (Poland Ever Faithful).

The Southbridge unit was led by Rev. Martin J. Hanyz, Rev. John Kochanowski, Adam J. Guzewicz, and Stanley Dudek. The Italian Drum Corps of Worcester provided the music for the marching units.

NORTHAMPTON UNIT

The Northhampton and Hadley division's marshal was Walter Drozdal. The Northampton unit was led by Stanley Steliga and consisted mostly of church societies with music provided by the high school band. A float depicted Nicholas Kopernik, father of modern astronomy, and Mme. Curie.

The Hadley group presented a float of Our Lady of Czestochowa with its "Black Madonna" caused by a fire that destroyed everything but the painting, reputed to have been painted by St. Luke the Apostle.

The seventh division was led by Henry Kugler and included Hatfield and Ludlow. The Hatfield Drum Corps furnished the music and a float representing a cemetery of white crosses, was entitled "The Polish Army, 1939 to 1945."

The Ludlow High School Band led the unit from that town which included a float bearing the legend "Poland Enslaved."

Mr. Speaker, the principal speaker at the banquet was Zbigniew Stypulkowski, 56-year-old attorney and one of the leading officials of Free Poland in Exile. At present he is vice chairman of the executive committee of the Polish Council of National Unity, residing in London. A former member of the Polish Parliament from 1930 to 1935, he was a member of the Polish underground government during World War II and head of the Polish national armed forces. In 1945 he was one of the 16 Polish underground leaders invited by Soviet Marshal Zukhov for negotiations. He was later arrested in Moscow and tried by the supreme court of the U.S.S.R. After emerging from behind the Iron Curtain, Mr. Stypulkowski wrote "Invitation to Moscow" which was published in nine languages, and he has devoted all of his time to cooperating with all Poles in the West for the return of freedom and independence to Poland. He is temporarily living in Washington, D.C., as the representative of Free Poland in the United States.

Mr. Speaker, I include with my remarks at this point the inspiring speech delivered by Mr. Stypulkowski and the banquet program. It is significant to read these words in the message of the program: "Let us all work together to make this 'Millennium of Poland' a credit to our heritage." I wish to commend the western Massachusetts branch, Polish American Congress, for it certainly achieved that goal.

Your Excellencies, Reverend Fathers, distinguished guests, ladies and gentlemen, nations differ from people, and particularly from women, in at least this, that the older they are, the more eager are they to admit their age. A nation may indeed do so more candidly, for an admission of long existence is by no means a sign of—or I should say, perhaps is indeed a veritable denial of approaching death.

Conscious of its destiny among this world's family of nations, Poland has completed and lived through a 1,000 years of history. In doing so, it had survived many violent storms of history which repeatedly ravaged its civilizational attainments, its population and its land assets—developed so laboriously and defended so nobly. This nation will live on, for many generations have given it the conviction that while even great nations may suffer disasters, only ignoble ones perish.

The Poles are still a young nation. What better proof of their youth than the fact that within the space of 15 years, they were able to regain their wartime population losses. Let us remember that during World War II, Nazi Germany and Soviet Russia murdered every sixth Polish citizen, being in all over 6 million people. Today, within the present boundaries of Poland, there are 30 million ethnicaly pure Poles of whom one-half are below 28 years of age. Beyond Poland's boundaries are more than 9 million Poles who, in many cases, have become loyal citizens of other countries, such as the United States, Canada, Argentina, France, and so on, but as is most natural, have still retained sentimental ties with the Polish nation. Of these 9 million, there are 2 million either living in the eastern lands of Poland incorporated by force into the Soviet Union or in Soviet prisons and forced labor camps. These still maintain their faithfulness to the Polish nation and are anxiously awaiting the day of reunion.

The Polish nation is characterized by vitality and enthusiasm—universal attributes of youth. In 1920, barely regaining an independent existence after 150 years of subjection, it undertook the unequal fight against Soviet aggression and, at Warsaw, achieved a victory which determined not only the fate of its independence but also protected Europe against the threat of general Communist revolt. In 1939 it rejected Hitler's ultimatum and stood first among nations to defy the might of Nazi Germany. Under enemy occupation it organized its own underground state, with its own army, administration, judiciary and even with its own underground educational system and welfare services. The Polish nation then rose to the heights of heroism in the Warsaw uprising of 1944, exposing its beloved capital to destruction and 300,000 of its inhabitants to annihilation—thus, by its sacrifices of blood and city, certifying its right to freedom and independence before enemies and allies alike. These acts of the Polish nation, during the occupation and the Warsaw uprising are unparallel in the history of our times. For 15 years now, the Polish nation has stood firm in its ceaseless struggle against Soviet occupation in spite of complete isolation from the West. The extent of this struggle and its meaning for the West became more evident in 1956 and are still visible for every careful observer of events behind the Iron Curtain.

A nation capable in one generation of such efforts in defense of its existence has no intention of terminating its history and certainly will not descend into any grave—unless it is accompanied by the whole of our Western civilization if such civilization should ever prove to be indeed decadent.

Since Poland had appeared in full statehood on the European scene a thousand years ago, we must admit that it is quite mature in years. Maturity of age means an accumulation of a long series of experiences. These experiences permit the evaluation of one's errors and shortcomings as well as one's virtues and strength. These experiences give a nation a deeper understanding of the duties which Divine Providence has ordained it to fulfill.

I will not speak of the errors and failings of our Nation during the course of its history. It is not because I fear the time required to do so will result in pleas of mercy from my audience, but rather because the world in general knows our errors and shortcomings better than it does our history. The explanation for this is quite simple: The combined might of Austria, Prussia, and Russia forced the world to recognize the partition of Poland amongst these three and ruined all hopes for the success of several future insurrections. In our time, the might of Soviet Russia forced upon the Western Powers consent—let us hope, temporary in nature—to a new partition of Poland after World War II. Those who perpetrated this assault upon the natural right of a nation to be free and independent were obliged to seek justifications for such a dishonorable deed. Those in turn who sanctioned it were obliged to accept such justifications at face value, in order to salve their own consciences. As a consequence, in the world's historiography there were to be found, alongside just criticism, a great number of invented charges against our Nation, and suppressions and distortions of its historical role. During World War II, in the Polish Government in Exile, there was a special department dealing with correcting such falsifications in the encyclopedias of the world. It successfully accomplished its mission in a hundred-odd serious instances.

I will also not speak in this company of the virtues of our Nation. I know I am sincere friends of the Poles and I know that they, to keep up our spirits, are ready to evaluate us higher than we ourselves would.

I would like, however, upon the background of a thousand years of Polish history, the basic date of which is 966 A.D., to delineate briefly the ordained role of this nation in Europe.

In 966 A.D. Poland accepted Christianity from Rome. This fact determined ever after Poland's allegiance to Western civilization. This made possible the establishment of a barrier to further German pressures for expansion to the east at the cost of Slavonic lands. This German expansion was carried on under the pretext of conversion to Christianity. History has dubbed it "baptism by sword." On the other hand, Poland also acquired the role of the eastern bulwark of Christianity for many centuries thereafter—for Poland had quickly to deal with the problem of the pagan nations of the north and also stood face to face against the Tartar hordes which for 300 years had kept neighboring Ruthenia in subjugation.

The thousand-year history of Poland is marked with ceaseless struggles for the preservation of its independence and its civilization. Within the spheres of Europe proper, it was not until the Battle of Grünwald in 1410 against the Teutonic Knights of the Cross that Poland acquired the means for peaceful cooperation with Germany for several centuries on a basis of equal dealing with equal. On the eastern and southeastern frontiers, Poland's fate depended upon constant preparedness to repel the invasions of Tartars, Mongols, Turks, and their vassal nations. From the middle of the 13th century at Lignica in Silesia, when the conquering march on Europe of the Tartars under the grandson of Gengis Khan was

stopped, to the end of the 17th century, marked by the victory of John III of Poland against the Turkish might at Vienna, the future of Europe—and also of the world at that time—depended upon whether Poland would not fail in accomplishing its mission.

The 18th century witnessed the weakening of Poland. Pillaged and decimated for centuries, the nation finally succumbed under the predatory might of its neighbors, Prussia, Austria ,and Tsarist Moscow. Even this, however, did not occur without Polish resistance. Spiritually rejuvenated by the noble sentiments of the constitution of May 3, 1791, the nation attempted to regain its freedom, unity, and independence, first, under the leadership of Kosciuszko and later under the battle standards of Napoleon. When the Congress of Vienna in 1815 sealed Poland's fate, the desperate nation, in almost every generation thereafter, raised itself in gallant but unsuccessful bloody insurrections.

After World War I, Poland purchased its independence with new sacrifices—in three Silesian uprisings, in the War of Eastern Galicia, and finally in the Polish-Soviet War in the years 1918–20. The last chapter of Polish history in the Second World War and thereafter is sufficiently well enough known to us.

This thousand-year course of my nation's life decisively shaped its personality and placed a peculiarly Polish stamp upon its Western civilization. Its dominant characteristic is to be found in the wellsprings of Polish patriotism. It consists of absolute love, selflessness, and in times of crises leading to unlimited sacrifice. This patriotic love is not tied to consideration of personal interest, it is not dependent upon preserving a way of life, it is free of any illusions of superiority or racism, and it has never led to the plunder of other nations. The relationship of a Pole to Poland, which becomes a concept symbolizing for him the very essence of freedom, is somewhat mystical in nature. It is a relationship very similar to that which one feels toward something or someone very dearly beloved—peace of soul depends upon its preservation, and when lost, the soul knows no rest.

The histories of other Western nations did not shape themselves as did that of Poland. They also were marked with great struggles and efforts, they also had their periods of greatness and downfall, but until now they did not know what it means to lose their own state nor what it means to lose one's freedom by foreign invasion of uncommon duration, nor what it means for several generations to take upon themselves the responsibility of preserving national life while enslaved.

Mr. Chairman, it would be most useful, I believe, if, in our circle of friends of the Polish nation, we could perhaps discuss other aspects of Polish history: How in this nation early developed a sense of personal freedom and a system of democratic government; what role of assimilation Poland played in Central and Eastern Europe; how highly developed were its principles of religious and national tolerance; what role Poland played and still does between Germany and Russia—this would indeed help in understanding Europe as a whole within the present international context; and, finally, what Poland had gained from and what it had contributed to our common civilization. However, time will not permit it now.

If I have permitted myself to draw the attention of you, kind ladies and gentlemen, to the role of Poland as the ancient Eastern bulwark of Western civilization, and to some aspects of Polish patriotism it is because of my deep conviction that Poland must regain her freedom and independence not only for the sake of her sons, not only for the sake of historical justice, but also to enable her to accomplish effectively her traditional and ordained mission.

In order to stem a conquest of the West by Communist Russia, or perhaps in the not too distant future by China, such a nation as Poland is indispensable for the common defense of Western civilization. The patriotic idealism of the Poles would serve well in the defense of the West against the fanaticism of the East.

I pose now one question for your consideration: Can Western civilization afford to gamble away in our times an investment which took a thousand years in Poland to accumulate?

MILLENNIUM OF POLAND BANQUET—PROGRAM

Chairman, Mrs. Joseph Czaja.

Master of ceremonies, Mr. Chester T. Skibinski.

"Star Spangled Banner," "Jeszcze Polska Nie Zginela," Mrs. Edward Sowa, Mr. Joseph Lezon, accompanist.

Invocation, Msgr. John Wieloch.

Dinner.

Community singing, beloved songs of Poland.

Greetings from the city, Mayor Thomas J. O'Connor, Jr.

Greetings from the State, Gov. Foster Furcolo.

Introduction of guests, Hon. Edward P. Boland, Member of Congress, State Senator Stanley J. Zarod, State Representative Stephen T. Chmura.

Greetings, Mayor Edward Lysek.

St. Cecelia's choir, "Czesc Polsce, Czesc Regina Coell," Our Lady of the Rosary Parish, Mrs. Frank Kuczarski, director.

Soloist, Mrs. Joseph Topor, Jr., "Nocturne" (Chopin).

Address, Most Rev. Bishop Christopher J. Weldon.

Mazur Dance, Polish Women's Alliance Group 422.

Address, Atty. Zbigniew Stypulkowski.

Piano solo, "Etude No. 12 in C Minor," "Grande Valse-op-42 in A-Flat," Richard Kozera.

Guest speaker, U.S. Senator LEVERETT SALTONSTALL.

Closing remarks, Mr. Victor Szalankiewicz, president of Polish American Congress.

Benediction, Most Rev. Bishop Christopher J. Weldon.

Boze Cos Polske.

Reception committee, Mrs. Chester Marlowe, Mrs. Frank Kuczarski, Mrs. John Placzek, Mr. Victor Szalankiewicz.

Mayor Wagner, of New York, Speaks Out

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ANFUSO. Mr. Speaker, Mayor Robert F. Wagner, of New York City, is a great American and a great Democrat. He is the illustrious son of an illustrious father, the late Senator Robert F. Wagner, of New York, who made a great name for himself as the sponsor and father of many of our labor laws associated with the reforms enacted during the administration of Franklin D. Roosevelt.

As mayor of the largest city in the world, Robert F. Wagner has given New York a very fine and capable administration under trying circumstances. New York has every reason to be proud of him. The interests of the people are also his interests, and the people of New York City appreciate it.

At the convention of the Affiliated Young Democrats of New York State, held over the past weekend, it was my privilege to share the platform with Mayor Wagner as main speakers. On that occasion, Mayor Wagner delivered a fine address in which he discussed the current political situation in the country. Under leave to extend my remarks, I wish to insert his address in the RECORD:

REMARKS BY MAYOR WAGNER TO AFFILIATED YOUNG DEMOCRATS, HOTEL PICCADILLY, NEW YORK CITY, FRIDAY, JUNE 17, 1960

It is a pleasure to be here tonight amidst so many of my friends in the affiliated Young Democrats. I have had a busy week, a very busy week at city hall, and I know you will forgive me tonight if my speech is not too long. Nobody likes long speeches, including myself. I might add that nobody suggested what I might find my audience interested in, here tonight, so I made what might be called an educated guess, and decided I would talk about politics.

Right now, we are on the eve of a presidential election year—that amazing tournament out of which emerges every 4 years, the man who will be charged with running our Nation, preserving our place in the world, as well as influencing the course of our domestic economy. And, of course, when we elect a President, we are selecting the political party which governs—which will accept the credit, or assume the blame, for the national program in the 4 years next ahead.

To me, and I believe to any thinking man in the field of government, in national politics the party is more important than the personality. I know in advance that I can support, without qualms, the possible nominee of a Democratic convention, while I know also in advance that the Republicans will never nominate anyone of my way of thinking. This may sound like partisanship. If it is, it is justified by a simple look backward into our political history, in which our present lineup of political parties dates back to the Civil War.

It is not exactly a secret that for decades after that conflict, there was a whole generation of our citizens who voted the way they shot—the North and the West for the Republicans—and the South for the Democrats. It was an emotional allegiance, of which the Republicans were the political beneficiaries for years and years and years. The North and the West controlled the Nation, and the Republicans stayed in power.

And what happened is what you would expect to happen to a party that is able to stay in power without doing anything to earn its position of power. It got fat in the pocketbook and it got fat in the head. Its leaders wanted no new leaders to arise to challenge them; its leaders wanted no new ideas to challenge the validity of the status quo.

This was true of the Republican leadership at the time of the populist movement. This was true of the Republican leadership in the time of Theodore Roosevelt, the last man in the Republican Party to present new ideas. They got rid of him as soon as they could, even if they had to rig a national convention and lose the next national election, in order to do it. This was true of the Republican leadership in the twenties, in the time of La Follette and other Republican progressives.

I need not review every decade. Pick it at will, right up today, and you will not find a single new contribution made to our system of government, just one big new idea

worth adopting, which has emanated from the Republican leadership.

This is a nationwide record of voidness. You can look at the farmer in the West, the small businessman in the East, and find equal victims of Republican neglect.

You can scan the record books, the statute books, every book in the public library, and not find anything that represents progress in the field of labor for which the Republican Party can rightfully claim responsibility.

I say to you this is a sterile record, whether presented in the Northeast, or the Midwest. It is a record of a party which has accepted progress only when forced down its throat. It has never led the way.

And this is the party which asks the right to assume national leadership as we enter the new decade, the exciting and important, possibly even fateful years which lie just ahead. I say to you that there is nothing in the Republican record today to indicate ability to develop new concepts to meet new problems, any more than there was in the days of Grant, or McKinley, or William Howard Taft, or Calvin Coolidge or Herbert Hoover.

The very names conjure up valiant defenders of the status quo, whatever it happened to be at the moment, and this we cannot afford today, in a world that changes, and will continue to change, whether we like it or not, and at a pace that is ever more rapid.

Let us look, right now, at some of the Republican remedies for our domestic problems. The present administration came into office pledged to a balanced budget. It was going to accomplish that, it said, by ending the waste of the Democratic administrations which had preceded it. There could not have been much waste, for there has been no balance.

Instead, the present administration, without taking a single constructive step of its own in the field of our domestic economy, has run up the most unprecedented series of deficits in the peacetime history of our Nation. As the President himself has pointed out, it now costs more money to make interest and installment payments on our public debt than it used to cost to run the whole Government.

And as a remedy for inflation, for the rising cost of what we buy, and the lessened value of what we have saved, the administration turned to that remedy hallowed only by its age, "tight money."

I say very seriously that in offering tight money as a palliative today to the menace of inflation, the Republican Party thinking is so obsolete as to approach the asinine. Today, it does not even achieve its goal of cutting the price level. The manufacturer just passes the increased cost of his product, including the increased price of borrowed capital, right on to the consumer, and prices go up, not down. The answer lies, of course, in an economy of full production, to which the National Government is pledged by the Full Employment Act of 1946, but since this might involve some positive action, in new fields, it does not, and cannot, enter the thinking of the Republican Party.

And, as the Republican Party first abandoned the farmer, and then abandoned labor, these groups have switched to the Democratic Party, and were responsible for its uninterrupted series of national successes during the 1930's and the 1940's. The Democratic Party, thanks to this coalition, is the majority party today, in consistent control of the Congress, and out of the Presidency only because of the personality of a national war hero. We could no more have beaten him in 1952 or 1956 than our grandfathers could have beaten Grant in 1868 or 1872.

The next Republican candidate, and I think by now we know who he is, will have to run on his party record, a political handicap he will not enjoy. In fact, he leaks out an occasional word that he is a bit irked about it already. But there will be powerful propaganda forces working in his behalf. And we know that while you cannot fool all of the people all of the time, there are instances when enough of them have been fooled, for the duration of a campaign, to put the wrong party in power.

To counter this we will need the united power of the Democratic majority in this Nation, as represented by agriculture, labor, and the small businesses of our land. Only once in our history, in the case of Woodrow Wilson in 1916, has any other alliance determined an election.

More recently, in 1948, Harry S. Truman showed how the Democratic Party which truly represented the majority of our people could ignore defections from an ultra-radical left and a reactionary right, and still forge ahead to victory, against a Republican Party which stood for nothing but itself.

If need be, we can do it again. In any event, I am sure that we will win the election coming up. I am sure of that because it is vital to the well-being of America that we win. It is vital to the world as a whole that we have in America a Government capable of assessing and meeting the problems of a free world.

It is just as vital to us at home, just as important in our "enlightened self-interest," that we place in full charge of our National Government the party that has proven it can govern, and displace the party that has proven itself incapable of handling the problems of any decade in the lives of ourselves, our fathers, or even our grandfathers. What is the use of kidding? The Republican Party just hasn't got it, never has had it, and never will have it. Let's get with the party interested in the business of preparing America for the decades ahead instead of one still dreaming of political glories that never existed.

Actuarial Anesthesia—No. 2

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks I would like to include some further observations on the social security program from the paper by Mr. Ray M. Peterson:

MISCONCEPTIONS AND MISSING PERCEPTIONS OF OUR SOCIAL SECURITY SYSTEM

(By Ray M. Peterson)

THE TEST OF SOCIAL SECURITY FINANCING IS STILL TO COME

More questions have been raised here than have been answered regarding the true nature of social security financing. The author hopes he will stimulate others to probe more deeply and to come up with some answers.

This probing of the nature of the social security financing method can be fittingly closed by a statement of a perceptive foreign observer:

"The critical test of the actuarial soundness of the program is, however, yet to come, since up to the present the contributors who have retired—with minor exceptions—have, together with their employers, or as self-employed persons, paid for much less than the value of the benefits they have received and will receive. This is readily apparent from the fact that by 1969 the tax rates for old-age and survivors insurance will have to be raised from the combined rate on employees and employers of 4 percent in 1958 to 8½ percent—to provide the benefits contained in the 1958 amendments. Will the Congress permit these required tax increases to go into effect without from time to time raising the real level of benefits further in the next decade? However justified any such increases may be, one consequence of them will be to require yet further increases in the tax rates or in the upper earnings ceiling or, more probably, in both. Sooner or later voices are likely to be raised in the Congress saying that the burden of contributions for the program is becoming too heavy for a significant fraction of the self-employed, or for the lower income groups. Some will demand a subsidy from general revenues, others a change in the tax structure to reduce the burden on those with relatively low income. When this time comes—perhaps within the next decade or two—the determination of the Congress to keep the program both actuarially sound and self-supporting will really be put to the test."

IMAGE IN PUBLIC MIND OF METHOD OF SOCIAL SECURITY FINANCING

A study of the report of the Advisory Council on Social Security Financing and the associated actuarial study No. 49 will give the social insurance student an excellent understanding of the method of financing. But what is the image of the method of financing in the public mind? It is far more important that this image be accurate than that of a limited number of social insurance experts.

The image of the method of financing in the public mind will be formed in good part by what is read in the newspapers and magazines. Here is how the report of the council was presented to the public by some important news channels:

Time magazine, January 12, 1959: "Pay now, buy later. * * * Is the enormous social security fund (current reserves, $22 billion) really secure between the time the wage earner is nibbled and the time he begins to get his payments? Yes, reported a Congress-created advisory council. * * * Their summary: The financing of the old-age and survivors' insurance system is 'sound, practical, and appropriate.' "

Newsweek, January 12, 1959: " 'Sound' and costlier. The Nation's many-billioned social security system, often a target of cautious economists, entered a new era last week with a clean bill of financial health from a panel of probers. * * * Surveying the plan, a special 13-man advisory commission drawn from industry, labor, and government found it 'sound * * * [with] adequate provision for meeting both short-range and long-range costs.' While the social security system will be in the red through 1959, partly because of wider benefits voted by Congress in 1956 and 1958, the commission estimated it would be in the black by 1960, and would stay there 'through 2020 or later' under the current schedule of tax increases."

"U.S. News & World Report, January 9, 1959: 'Why your old-age pension is safe.' You don't need to worry about your old-age pension from social security. The money back of it is safely invested, earning a return. That's the verdict of experts who just concluded a thorough review of social security. What they found is told here."

A new official report on social security offered these findings last week:

"Pensions are safe, the old-age insurance system sound.

"In years ahead, the trust fund out of which pensions are paid will grow.

"The recent shrinkage in this fund is temporary, no cause for worry.

"Payroll taxes should go up again in 1960, 1963, and 1966, as now scheduled in law. A

final 1969 increase, already on the books, might be postponed."

Judging by the following excerpt from an editorial in the Wall Street Journal, its editorial staff, as late as January 27, 1959, had little understanding of the method of financing OASDI benefits.

"The boost in social security taxes on January 1, from $94.50 to $120 (maximum), is just a hint of what is to come. By 1969 the tax will be up to $216, an increase of 80 percent in the next 10 years. The original law in 1937, incidentally, called for a maximum tax of $30. The Government, it would seem, believes that by 1969 the cost of living will have risen to more than seven times what it was in 1937. * * * The whole social security system is now operating in the red."

The headline on the New York Times story of January 2, 1959, was "U.S. Old-Age Fund Declared Sound."

These statements evidence confusion as to what it means to be "in the red" or "in the black" and also as to the significance and purpose of the "fund." The seeming reliance on a "fund" and the use of the term "insurance" throughout the Social Security Act create a semantic facade which is a barrier rather than a help to general public understanding of the method of financing. The placing of the word "social" before "insurance" wherever it appears in the act to convey the idea of socialization of costs might help to distinguish the OASDI method of financing from that of private voluntary insurance.

The law itself gives unwarranted emphasis to the "fund" in section 116(a) of the Social Security Amendments of 1956 which establishes the Advisory Council. The Council was established—

For the purpose of reviewing the status of the Federal old-age and survivors insurance trust fund and of the Federal disability insurance trust fund in relation to the long-term commitments of the old-age, survivors, and disability insurance program.

Then, parenthetically, section 116(d) provides for the Council to recommend changes in the tax rates:

"The Council shall make a report of its findings and recommendations (including recommendations for changes in the tax rates in sections 1401, 3101, and 3111 of the Internal Revenue Code of 1954). * * *"

The mainstay of the financing system, i.e., taxes on earnings of employees, is referred to with the appearance of an afterthought.

There is substantial evidence that the Social Security Administration and other strong supporters of the social security system believe or want to believe that our social security system is very much like private insurance.

In a booklet published by the Social Security Administration, "Your Social Security," Form No. OASI-35, January 1959, the initial statement reads:

"The basic idea of old-age and survivors insurance under the social security law is a simple one:

"During working years employers, their employees, and self-employed people pay social security taxes which go into special funds and

"When earnings have stopped because the worker has retired, or died, or is disabled and is 50 years of age or over, benefit payments are made from the funds to replace part of the earnings the family has lost."

Exactly the same statement, substituting "contributions" for "taxes" would be more appropriate for a "full reserve" private insurance program.

A recent book, "Know Your Social Security," by Dr. Arthur Larson, projects an image of the social security system which emphasizes the similarities to private insurance and minimizes the differences—a bland selling presentation. He writes:

"Social security is a combination of old-age pensions, disability insurance, and life insurance.

"The 'premium' for this combination of benefits is a payroll tax of 5 percent on your wages up to $4,800 a year. The employer in 1959 pays 2½ percent of this, and the employee pays the other 2½ percent. * * *

"Social security is based on the same principle as private insurance, with variations to accomplish its social purpose and to keep it inexpensive.

"Social security differs in important ways from commercial annuities and private life and disability insurance, but the general idea is the same. This idea is that contributions are made by you (and on your behalf by your employer), in return for which you get certain insured rights, including pensions and death benefits."

He writes that "social security is much like private annuities and life insurance," with three main differences which, summarized, are:

Private insurance

1. Privately handled.
2. Benefits directly related to contributions.
3. Legal contract.

Social security

1. Handled by Government—hence contribution called a "tax," not a "premium."
2. Three disproportions: (a) same as applies to any insurance, (b) initial older entrants favored, (c) low-wage earners favored over high-wage earners—last "kind of disproportion is the only important one."
3. Conditions of payments "somewhat more limited."

In characterizing the benefit formula, weighted in favor of low-wage earners, as the only important disproportion, he does not believe it significant that the middle-aged and older members of the present generation get benefits of much greater value than the value of contributions with respect to them and that this subsidy must be paid for by contributions with respect to younger persons and mainly by new entrants, i.e., future generations.

Mutual Security and Related Agencies Appropriation Bill of 1961

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. MERROW. Mr. Speaker, under general leave to extend remarks in the Appendix of the RECORD on the Mutual Security and Related Agencies Appropriation Bill of 1961, I wish to point out that when the measure was before the House, the gentleman from Florida [Mr. SIKES] emphasized the importance of Guatemala to the free world. If Guatemala should ever again fall into the hands of the Communists it would be a tragic blow to the course of freedom in the Americas. The gentleman from Florida is a great student of Latin America and is ever alert to the growing menace of communism in that area. I congratulate both him and the distinguished gentleman from Louisiana [Mr. PASSMAN] for highlighting the necessity for consideration of Guatemala in the category of those countries which confront serious situations requiring grant economic aid. All of us realize the importance of Guatemala and of the outstanding contribution she is making to the free world.

The Alaska Shipping Crisis

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. PELLY. Mr. Speaker, Congress has been granting a Merchants Cooperative Association special privilege in competing with a privately owned taxpaying common carrier steamship line from Seattle to Alaska. In other words, safety regulations through exemption from Coast Guard inspection and manning requirements have been waived to this cooperative merchants service.

The result has been that a few merchants have benefited and certain communities have enjoyed dual service which, of course, is popular. Meanwhile, however, the State of Alaska and all its people have not been benefited. Indeed, the competition of this substandard service has hurt the common carrier who, in turn, has been forced to raise its rates for want of sufficient cargoes.

Now there is a threat of a transportation crisis and reduced service. The two editorials from the Anchorage Daily Times which appear hereafter tell of this situation.

The newspaper does not suggest a solution which it seems to me among other things must include an end to political harassment of the Alaska Steamship Co. and discontinuing discrimination against it such as it inherent in the exemption contained in S. 2669.

These editorials speak for themselves:

ALASKA'S MOST CRITICAL TRANSPORTATION PROBLEM

It is shocking to learn that the Alaska Steamship Line may quit operations in Alaska, except those to Whittier and Seward.

Such action, if brought into reality, will leave many of Alaska's oldest and picturesque communities with virtually no transportation, except by air.

The curtailment would mark the close to an era during which Alaska grew as a maritime region. The first settlers came by ship and established communities along the shorelines. Supplies first moved from Russia to Alaska. They were replaced by the routes that may now be abandoned—between Seattle and the many ports that dot the Alaska shores.

More than history and nostalgia for the old days is involved in the impending transportation problem.

Life and sustenance of such old communities as Juneau, Ketchikan, Wrangell, Sitka, and Petersburg are involved. Nome now has only two or three supply ships a year. Will she have none?

The Alaska Line is the umbilical cord that makes life possible in many of these communities. Most of the foodstuffs and virtually all of the other supplies for sustenance are delivered from Seattle.

Fifteen percent of the population of Alaska lives in the southeastern region known as the panhandle. What are those people to do?

The same problem extends through Western Alaska, including such old and colorful ports as Cordova, Valdez, Kodiak, Homer and Bethel.

If the existig service is to be abandoned, something else must be created to replace it. If the big ships cannot operate profitably, perhaps something smaller must be used.

In facing up to this problem, it would be well for Alaska's leaders to do more than sound alarms and urge relief measures that are impossible.

Criticizing the steamship line will do no good. Besides, why should the line be subject to criticism? The service has been maintained for many years after the smaller ports became deficit operations. It may be that the line deserves commendations for delaying the curtailment so long.

It must also be recognized that the steamship line is under no obligation to operate at a financial loss. If competitive conditions are such that there can be no profit, the operators must make changes.

Alaskans may be quick to suggest that the State enter the steamship business and carry on the services that are about to be abandoned. That would be foolhardy. If private operators cannot do it, the State certainly cannot do it either.

The State has no financial resources that could support such a large and costly enterprise. The same thing is being discovered in connection with efforts to get Alaskans to borrow $23 million for a ferry system that private enterprise cannot justify.

It looks as though the first move is up to the congressional delegation to see what relief they can stir up at Washington.

ALASKA MUST PREPARE FOR SHIPPING CRISIS

The transportation crisis confronting Alaska is far from alleviated by the statements of steamship company officials yesterday.

The officials admitted that the reports of an impending curtailment in services were true. They took exception only to the degree of the curtailment. They emphasized the same as the first reports indicated, that the whole thing was under consideration and no final decision had been made.

It was encouraging that the officials denied that consideration was being given to a curtailment so drastic that only two Alaska ports would be served. But they did not reveal the extent of the reduction that is under discussion.

The steamship company has been the butt of so many rawdy-dowdy incidents in Alaska history that there is reason to suspect that some of its officialdom is developing a persecution complex.

The steamship line has been blamed for the high freight tariffs in Alaska. Increases have brought protests from Alaskans. Interruptions in service during strikes have prompted Alaskans to say that the company did not care whether Alaska got service or starved.

The company has been blamed for the offensive provision of the Jones Act which discriminated against Alaska during its years as a territory. It has been accused of a long list of other things—including wrongful policies as an absentee operator, opposition to statehood, and monopolistic practices. Alaskans believe many of these awful thoughts to be true.

The steamship line, in spite of it all, has a long record of service for Alaska. Frequency of steamship voyages increased as traffic grew. Passenger service was maintained for years after high costs had devoured all profits. The service was suspended only after the losses had been announced at $750,000 for 1 year.

The airplane ran the passenger ships off the ocean. Today something is running the freighters off the seas. Economic factors that have been mentioned are resistance to higher freight tariffs, labor contract negotiations and charter costs with the Federal Government.

It is safe to speculate, too, that other factors are involved in the plight of the freighters. Not the least of them is the new barge service that has initiated operations between Seattle and the Railbelt. The new methods of packing and moving freight in vans is another factor. Perhaps the barges have greater capabilities than steamships in moving tonnages under the new conditions.

Any reduction in steamship service must be followed by a new service to sustain life in Alaska's communities.

If the Alaska Line finds it necessary to quit as much as one port, provision must be made to keep that port supplied. It may mean small boat operations, like bush planes connecting with trunkline operations.

If the Alaska Line can serve the larger places along the Alaska coastline, perhaps small boat operators could find it economical to establish a feeder service to the other ports.

Now is the time to think of these problems. The Alaska Line officials obviously are reluctant to quit or reduce their service. But they cannot overcome the laws of economics with sentiment.

Housing Crazy-Quilt

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. WIDNALL. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include the lead editorial appearing in the Washington Post of June 19, 1960, entitled "Housing Crazy-Quilt." The editorial, which speaks for itself, follows:

HOUSING CRAZY QUILT

The patchwork of housing proposals that Congress is putting together will provide no long-term answers to the Nation's needs in this field, and if the President should veto a bill like that just passed by the Senate, very little of value would be lost. The public housing feature of the Senate bill illustrates how neither Congress nor the administration has addressed itself to the real problems. The Senate would provide authorization for another 25,000 units of federally subsidized homes for low-income families. The administration believes that public housing authority still on the books is ample, that the program has been proved generally unworkable, and that it ought to be allowed to expire.

Yet in Washington alone there are some 5,000 eligible families on the public housing waiting lists. The progress of urban renewal is seriously hampered by the prospect that low-income housing will not be available for families displaced from the slums. And just the other day the Commissioners refused to accept Federal assistance for two new public housing projects and passed up additional Federal aid because proper sites are not available. The Senate has not looked seriously at the site problems and other problems which have slowed public housing to a snail's pace across the country. And the administration has not done so, either. A more imaginative approach is needed.

The same might be said of proposed new urban renewal grant authority. Despite its favored position, Washington has been unable to use all of the Federal aid available to it for renewal. Yet the Capital's need for a vastly accelerated attack on residential deterioration and general central city decay is obvious. Every major city has the same problems. A little more money for programs on the present pattern will not break the logjam. But, again, neither Congress nor the administration has attempted to devise new approaches that might do so.

Some of the Senate proposals are sheer politics. We see no justification whatever for continuing the Veterans' Administration mortgage guarantee program nor for a direct veterans' housing loan program. The regular Federal Housing Administration loan guarantees ought to be—and are, we think, amply liberal for all qualified homebuyers. The House committee proposals for FHA loans on a no-downpayment basis seem to us similarly demagogic. This approach to the Nation's housing needs is as slapdash and frothy as the administration's approach is sterile and hidebound.

We hope the next Congress and the next administration will take time to get at the heart of the country's urban housing problem, to study thoughtfully the often sad results of many of the postwar housing programs and to devise new kinds of assistance. The good thing about the attention to housing in these last days of this Congress is that the Members seem at least to recognize that there are critical problems requiring substantial measures of Federal help and leadership. We hope this campaign will at least ratify that fundamental recognition and point the way toward real solutions in 1961 and beyond.

Actuarial Anesthesia—No. 5

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. ALGER. Mr. Speaker, one of the fine studies of our social security system is the paper presented by Mr. Ray M. Peterson before the Society of Actuaries in November 1959. Included in my extension of remarks is the conclusion of Mr. Peterson's paper and his recommendations:

MISCONCEPTIONS AND MISSING PERCEPTIONS OF OUR SOCIAL SECURITY SYSTEM

(By Ray M. Peterson)

CONCLUSION

The exploration of our social insurance problems reflected in the foregoing observations and questions has led the author to a major conclusion: before any further increase in social security benefits is considered, the broad social and economic impact of the level of benefits and the method of financing should be studied by the best qualified individuals in the United States. The current Report of the Advisory Council is limited to an analysis of the method of financing taken alone—as it might operate virtually in a vacuum. But the broader impact of the system needs study in relation to capital needs, capacity to save, other demands upon our production, and the role of private retirement plans.

The author finds this opinion shared by others. At the 1958 social security hearings, former Secretary of Health, Education, and Welfare Folsom gave the following reply to a question as to whether he would favor a

bill providing a 10-percent increase in benefits with tax sufficient to finance it:

"No, I would not. I would say that, if we plan to consider a broad increase in benefits and taxes, I think it ought to be carefully studied by an advisory council, as in the past. In the past, before any drastic changes were made, they were studied by an advisory council who looked at these problems objectively from various viewpoints. Also, since we have the advisory council on financing working on the problem, we ought to get the report of that council before making changes."

At the same hearings, A. D. Marshall, speaking for the Chamber of Commerce of the United States, emphasized the importance of recognizing (1) that the soundness of the system "depends upon the willingness of those working in years to come to pay larger social taxes," (2) other demands on the patently limited tax sources, and (3) restriction on ability to save by high taxes and discouragement of personal thrift by high benefits. He recommended:

"In summary, we believe a new Advisory Council should be appointed by Congress. The present Advisory Council has a life of 1 year, and the members were selected to study one area only—financing.

"Consequently, a new Advisory Council should be appointed to study these other areas and to make feasible suggestions for constructive action, consistent with the preservation of individual freedom, initiative, and responsibility."

British actuaries also have recently voiced a vigorous opinion in favor of a major study in depth of national pensions in Great Britain. This view is given in a booklet, dated May 1959, entitled "An Appeal to Statesmanship," issued by the Councils of the Institute of Actuaries and of the Faculty of Actuaries in Scotland. Several paragraphs are quoted:

"There has been much useful discussion about national pensions during the past 2 years but some important aspects are escaping the attention they require. To the actuarial profession, with a century of intimate experience of pension schemes, this causes grave disquiet.

"To fill this gap we are issuing this booklet. It is mainly about costs, particularly future costs—not because we think that costs are the only aspects of importance, but because they indicate the obligations placed on future generations.

"It is the voice of the future which is noticeably absent from present discussion; our responsibility as actuaries is to make that voice heard.

"We have explored carefully to see whether there is any form of discipline which can be incorporated into the proposed schemes to insure that they will not be subject to extension without full public appreciation of all the future financial implications. We are convinced, however, that the nature of the schemes precludes an effective internal discipline. The dangers lie in the very nature of any type of graduated pensions where the promises take many years to come to full maturity.

"It is our strong recommendation, therefore, that with the mutual consent of the political parties there should be set up an authoritative and independent body to guide the country through the financial, economic, and technical aspects of this peculiarly difficult problem. Ultimate decisions must rest with Parliament but only after thorough and quiet examination by an independent body."

A major study of our social security problems should include:

(a) An effort to gain a better understanding of the nature and implications of our method of financing.

(b) Development of a clear national policy as to the role social security should play, including solution of the elusive problem of what constitutes basic need and basic floor of protection.

(c) Determination of the best way by which a correct image of the social security system may be presented to the man in the street.

(d) Examination of the desirability of publishing periodically the entry age normal cost, and, in order to show the burden to be borne by future contributions, the changes in the unfunded liability.

(e) Study of what part of our future national income may be soundly committed for the benefit of the older segment of our population.

(f) An appraisal of the income tax treatment of social security contributions and benefits.

(g) An examination of the question of whether a direct subsidy from general revenues will be necessary to make the financing of the present level of benefits popularly acceptable.

(h) A study of what should be the respective roles of a national compulsory pension system and private pension plans, recognizing that, one way or another, our older age population segment will be provided with adequate living income, and also bearing in mind the fact that a national system is financed essentially on a nonreserve basis and private retirement programs are usually financed on a full reserve basis which provides substantial capital accumulations.

Such an investigation should clear the heads of those who have become anesthetized by actuarial balance sheets.

We may speculate that Jeremy Bentham, with an assist from William Cullen Bryant, would advise our generation that it should—

So shape the commitments to be met
By future generations, and
"So live, that when thy summons comes to join
The innumerable caravan, which moves
To that mysterious realm, where each shall take
His chamber in the silent halls of death,
Thou go not,"
with a great feeling of guilt of what thou hast done to future generations,
"but, sustained and soothed
By an unfaltering trust"
that thou hast done right by thy grandsons and granddaughters,
"Approach thy grave,
Like one who wraps the drapery of his couch
About him, and lies down to pleasant dreams."

The Commonweal Discusses Medical Aid for the Aged

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. PORTER. Mr. Speaker, how will we meet the national problem of providing medical care for our senior citizens in a way that is fair and dignified? I recommend the following article which appeared in the May 20, 1960, issue of the Commonweal to readers of the RECORD interested in the field of medical care. Under leave to extend my remarks in the RECORD I now include it:

MEDICAL AID FOR THE AGED—THE GOVERNMENT HAS TO RESCUE THOSE WHO HAVE NO HOPE OF PAYING FOR PRIVATE MEDICAL COVERAGE

(By Edward T. Chase)

The other day a letter to the editor appeared in the Wall Street Journal from a doctor stating that "medicine is apparently doomed to be the first major professional area in our country to be Federalized. (We must not say socialized because it offends politicians.)" One could quarrel with the doctor's choice of words. However, the general point of his comment goes to the heart of the tremendous public debate that is beginning to assume a vital role in this election year.

The debate has taken its departure from the so-called Forand bill, H.R. 4700, to provide those over 65 who are eligible for social security benefits with a modest degree of Government-financed hospital, nursing and surgical care. The Forand bill debate is described by such important publications as the New York Times and Life magazine as the No. 1 domestic issue of 1960.

The American Medical Association, the insurance industry, the National Association of Manufacturers and the U.S. Chamber of Commerce don't think the aged are so entitled. Organized labor and an array of professional welfare workers, associations, sociologists, and consumer groups feel strongly that the aged are entitled to aid.

As for Congress, with the exception of its conservtaive leaders, the Democrats by and large are for the Forand bill (named after its sponsor, Rhode Island's Democratic Congressman, AMIE J. FORAND), while the Republicans are against it. The administration also is against the bill. Yet under the tremendous pressure by the public (and by presidential aspirant RICHARD NIXON) for some action on this front, it has offered to devise a counterprogram that will provide some limited degree of Federal financial aid for the aged ill on a "voluntary" basis.

It is a matter of no small importance that a conservative, big business-oriented Republican administration has agreed with its traditional opponents that Federal aid for the ageds' medical care is a necessary step. As the Wall Street Journal editoralized, such a measure as HEW Secretary Flemming proposes "holds a profound and complex change in the relationship between the citizens and their Government."

What the administration plan amounts to is a program for advancing Federal funds up to an estimated $600 million to the States (who must match the grants roughly on a 50–50 basis) so as to enable them to administer a catastrophe-type health insurance program operated by private insurance companies. It is hard to escape the conclusion that the plan is strictly a political gesture, reluctantly taken to ease the politically untenable situation into which sheer negativism had placed the party. As a catastrophe-type insurance plan, the program is limited to those aged with incomes under $2,500 who elect to participate by paying a $24 annual fee. The first $250 of medical costs is on the patient. After that, the Government pays 80 percent of the cost, and a comprehensive list of medical services ranging from hospitalization to dental care is established as meriting payment. An alternative plan, for those over 65 who do not like the State-run plan, calls for Government payments of half the cost, up to $60, of a standard private major medical insurance policy.

Since everyone from the AMA to the AFL–CIO and in between (e.g., Governor Rockefeller for one) has denounced the plan for various conflicting reasons, it has no chance of going anywhere. Even if by a miracle it should go through Congress, it requires approval by each of the 50 State legislatures.

What the President seems to mean in his point about the voluntary approach to aid is that his administration is against the Forand bill and other Democratic proposals that utilize the mechanism of the social security system in a medical aid program since this system, of course, is sustained by a mandatory tax on employees and employers. President Eisenhower has construed use of social security to mean socialized medicine because in some inexplicable fashion tax-derived funds equate to socialized medicine in his mind. This is one of the truly befuddling terms of our time but one the President has used on a number of occasions. It seems a pity that there is not greater understanding in the White House and elsewhere in the Capitol generally that the most businesslike way to fund a medical care program for the aged is to see to it that each of us puts away a regular amount throughout our working lifetime. Of course this has to be compulsory and it has to be done on a population-wide basis and that is why the social security law is the logical, expeditious, cheapest way to handle the matter. Governor Rockefeller seems to be the only Republican leader to acknowledge this fact to date.

The administration's insurance plan to all intents and purposes is a dead duck right now. However, the Forand bill is not the only one under consideration. Presidential candidates KENNEDY and HUMPHREY have introduced their own Forand-type bills in the Senate and so have Senator MORSE and Senator JAVITS. Senator PATRICK MCNAMARA is readying a new bill at this writing. Senator SYMINGTON is on record as supporting FORAND. Senator LYNDON JOHNSON has remained pretty vague on the point. He and fellow Texan, Speaker RAYBURN, rather hope to persuade the conservative-dominated House Ways and Means Committee, which has bottled up the Forand bill, to report out some kind of bill.

What this adds up to is the fact that there are a number of pending measures to provide Federal aid for the medical care of the aged and that the debate over these measures is going to continue, probably to reach a crescendo in Congress this month and in June. Whatever happens in Congress, the debate will go on between the two parties and between the contending presidential candidates up to election time and probably for many years to come.

Quite apart from the pressures of an election year, it is not difficult to surmise why the furor over the Forand bill has come about. The pressures are economic and demographic in origin and they are powerful. In the decade ending in 1958, medical costs doubled. Hospital costs particularly have risen alarmingly, about 5 percent each year. The hospital has become the center of medical treatment for all, and of paramount importance to the elderly, whose chronic ills lead to long confinements. Drugs and all the paraphernalia of medicine have also risen rapidly in cost in the postwar period, twice as rapidly as all other basic items in the consumer budget. Doctors' fees, let it be noted, have not risen commensurately, and the general inflation in medicine cannot be laid to doctors' charges alone or even predominantly. But the technology of modern scientific medicine, embracing as it does fantastically abstruse and complicated materials and techniques, is inevitably very expensive. And of course it is saving lives and is pushing back the average age when men die.

Here enters the second factor in the situation. A controlled death rate has resulted in a large, growing population of the elderly at a time when not only are medical costs skyrocketing but our automated industrial production machine and our dwindling numbers of family farms no longer have a place for the worker over 65. Se he cannot earn money, and social security provides him barely a subsistence for life's necessities. We now have 16 million in this 65 or over category and it is the most rapidly growing of all age groups.

Nearly all have extremely limited incomes, with 74 percent of those over 65 having incomes of less than $1,000 annually, according to the New York Times, and only some 15 percent with incomes over $2,000. Naturally only a minority, estimated by the Government at 40 percent, can undertake to pay for any degree of health insurance. One cannot blame the private insurance industry, which is another business, after all, for failing to cover these impoverished older citizens. They can't make a profit on them or even contain the insurance losses caused by them.

But one can question the intellectual honesty of the spokesmen of that industry and of organized medicine (individual doctors and insurance executives speak a different line) in their traditional pretension that there is no real problem; that most of the elderly are soon going to be covered by private health insurance; that anyone who needs medical care gets it anyhow (no matter just how); and that any attempt to redress this problem of the aged ill through use of public funds will, in some mystic way, "destroy the doctor-patient relationship," and plummet us into some kind of (unspecified) totalitarian, collective welfare state presumably like Russia, or anyhow England, which is impossible enough. These are the shopworn cliches that have been preached by the AMA and its business cohorts for a quarter of a century.

The reality is that a major illness now constitutes the biggest economic threat that can face a family and an event that, in the case of the elderly, almost invariably spells financial catastrophe. Furthermore, as we have seen, conditions are such that a vast number of these older people are unlikely ever to afford private health insurance. And without it they have in countless instances had to deny themselves needed care.

If we are not, then, to abandon these growing numbers of the aged to inadequate or no medical care, or to terrible humiliations involving the pauper's oath to qualify for public assistance, what are we expected to do? The private profit system in which both insurance and medicine largely operate in this country no longer is accommodating this situation, if it ever did. Where are we to turn? Official organized medicine and insurance never tell us in positive specifics. Instead, the burden of their message sidesteps the central question and focuses on the evils of Government bureaucracy in medicine and business.

We can return logically now to the plaintive assertion of the doctor who laments in the Wall Street Journal that medicine is doomed to be the first major profession to be "federalized." While the horrors of totalitarianism and the "destruction of the doctor-patient relationship" that are supposed to result from this transformation in medicine's status are unproven, to say the least, nonetheless the likelihood is overwhelming, as the doctor suggests, that the Government is indeed about to intrude in medical practice in a way that it has not in the past, a new kind of intrusion that has not hitherto occurred despite the appreciable degree to which Government funds have for many years now been used to fortify various aspects of medicine. (Chief examples: medical research and education; veterans' care; care of the Armed Forces and their dependents; public assistance for the indigent; TB and mental care hospitals.)

The doctor is puzzled by the disturbing fact that it is the noble profession of medicine, of all professions, that must suffer this historic indignity. As the A.M.A. undoubtedly has impressed upon him, once Federal funds are used to pay doctors' services, it follows that the Government is responsible for seeing to it that such funds are not abused. This means a degree of governmental surveillance of fees and charges, precisely the kind of Government intervention that the medical profession abhors the most. For the political spokesmen of American medicine have always gone out of their way to emphasize that medicine is just like any other private business, with a time-honored right to charge what the traffic will bear.

The dilemma that is being touched upon here was aired thousands of years ago by Plato in his dialogue querying, "Is the physician a healer of the sick or a maker of money?" Though the nod in that instance was given to the healer theory, somehow the question has never been resolved by the spokesmen of organized medicine in a manner to settle the issue decisively. Indeed, in the United States what is implicit in our structure of medicine is that the doctor cannot realize his highest potential as a healer unless simultaneously he is unhindered in his efforts to turn a profit while so performing. The fact that our medicine (though not our population's health) is probably unsurpassed by any other nation's in the world indicates that this has not been a bad idea. Nevertheless, despite the truly astonishing triumphs of American medicine and the selfless devotions of most of its practitioners, our medical system is under mounting critical fire and is changing its organizational framework swiftly year after year.

It is necessary to understand that what is happening in medicine is happening in a number of other basic areas in our national life, in transportation, in housing, in urban rehabilitation, in our welfare services. The profit system is proving to be increasingly inadequate in all these important sectors. Fifty or 25 or even 10 years ago discussion of such changes in our economic structure took its departure from theoretical considerations of the relative effectiveness of socialism, on the one hand, and free enterprise on the other. Politicians today still find it expedient to try to press the discussion into these anachronistic terms. Yet even in welfare-state England, we are witnessing—in the case of the profound ideological debate within the Labor Party precipitated by leader Hugh Gaitskell's plea for a revision of the party's unqualified stand for nationalization of production—the fact that consideration of the proper place of private enterprise and government enterprise or a partnership of both cannot be usefully discussed within the narrow cliches of the past.

A more esoteric but very pertinent example of this trend is offered by the insurance industry. In the case of atomic energy, it is necessary that liability insurance be provided for protection of industrial and research organizations using nuclear reactors and other nuclear materials in case of a serious accident which might devastate a large area of a community. The insurance industry wisely realized it could not provide all the necessary funds on an actuarially funded basis. So it organized an industry-wide pool, able to produce $60 million, with the government coming into partnership to make available $2 billion more to cover the worst possible contingency. No one hears complaints of "government interference," "subsidy," or "socialism." The industry reserves these terms for the Forand bill since in the area of health insurance it still feels it can reserve this domain for itself and turn a profit—so long as it isn't forced to take care of the aged. And, of course, if anyone is upset about "subsidy," ponder the extent to which the Federal Government has had to sustain our agricultural economy in the face of a technological revolution in farming that has thrown the balance of supply and demand quite out of balance.

Meanwhile, the most searching critics of the American scene have been scoring us for allowing the proportion of national resources on a per capita basis that is devoted to private wants (tail-fin cars are the most popular symbol) assume an ever larger role vis-a-vis the resources devoted to public needs. The widening discrepancy between private exploitation of our resources and the percentage channeled into public services is found to occur because the nature of necessary public services is such that one cannot turn a profit from them. The intellectual decries the fact that giving precedence to private gain in our highly specialized, intricate culture, in which the degree of interdependence of all our institutions is so marked, leads to a neglect of vital needs.

Against this background take a look at American medicine. The case of the elderly points up the situation graphically. The evidence is overwhelming that neither medicine nor the insurance industry can make a profit or even break even on them. The Government has to come to the rescue, at least to a defined degree, namely for the hard core of the elderly who have no hope of paying for private coverage. The truth is that the Forand debate is reducible to a very simple question: can the private insurance industry devise means to cover these people? So far they are covering only about 40 percent of them with varying degrees of adequacy, according to the Department of Health, Education, and Welfare, and the likelihood of their covering many more of them in the next decade is not encouraging.

Medical care can well be said to fall in line after food, clothing, and shelter as one of the four material necessities of modern life. It is not a frivolity to be dispensed with, like high-tail-finned cars. The fact that science is rendering it ever more expensive and difficult to acquire does not alter the principle.

It is puzzling to many observers to see in what an uncooperative spirit, and how foolishly, organized medicine has responded to the changes we have been sketching here. One cannot readily find another professional group so addicted to cliché, to romantic evasions, to ignorant provincialisms and stubborn refusals to admit the need to adjust to the realities of a changing world. However, when one scrutinizes the climate in which the doctor lives, several reasons can be advanced to explain this behavior, a behavior that has made the AMA disrespected as self-seeking and obstructionist and has soured the overall relationship of the profession with much of the public and has alienated it from organized labor.

First, the doctor is in a position of enormous power, authority, and prestige, a condition which few human beings can take in stride. Remember, the doctor deals with the individual when he is disabled, a patient. And illness and injury are socially acceptable reasons for surrendering one's responsibilities, for becoming dependent, for regressing, as it were, to a childlike status. The doctor is a species of omnipotent father who ministers to us at terribly anxious times. Small wonder that he experiences a sense of dominance that brooks no interference.

Combine this basic situation with the fact that, while medicine is a science, medical practice is in large part an art, calling upon mysterious and wonderful talents that vary from doctor to doctor, talents which each doctor is naturally proud of and cherishes. He enjoys the prestige of being both of science and art, a scientist implementing his procedures with individual genius.

Furthermore, the area in which the doctor works is one of transcendent importance, matters of life and death. This very fact exerts an immense pressure upon us to give ourselves over to the doctor, to accord him unquestioned authority.

On top of this, the doctor is acutely conscious of the fact that he has had to sacrifice years of hard work and relative poverty before he can enjoy the fruits of his work. He accordingly is not disposed to have the period when he comes into his own as a qualified private practitioner beset with bureaucratic regulations that might conceivably interfere in his winning the traditional monetary and status rewards.

It should be borne in mind, too, that the doctor is trained not in politics, sociology, economics or the humanistic disciplines concerned with value judgments, but in scientific subjects. And the doctor is a harassed and busy professional from the start, with little opportunity to study outside of his field. Thus he is only too glad to turn policy matters of his profession over to the political doctors who constitute the active leadership of organized medicine, those who dominate the county medical societies and the AMA.

Given this set of circumstances, the lamentable political antics of the AMA over recent years are not altogether inexplicable. Organized medicine is supported by major groups in business, notably the National Association of Manufacturers and the U.S. Chamber of Commerce, who are similarly addicted to the notion that the profit motive is a dynamic force singlehandedly capable of solving all the dilemmas of the mid-20th century. But an ever larger portion of the medical profession is not being so deceived. The younger physicians and those in research and in teaching will not be bound by the past. They know they must prepare for a rapidly changing future. Government aid, group practice, salaried practice, and fee schedules do not dismay them. Increasingly, we will see them bring to bear upon their social and political and economic problems something of the scientific rigor with which they inform their medical diagnoses. The reason for this is that a great profession, calling upon the highest resources of the human mind and coping with matters of cardinal concern to us all, is bound to adjust itself in a rational way to the social evolution from which none of us can escape.

National Rivers and Harbors Congress: Report of Committee on Industrial and Municipal Water Use and Pollution Abatement

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. BLATNIK. Mr. Speaker, I include in my remarks a copy of the report of the Committee on Industrial and Municipal Water Use and Pollution Abatement to the National Rivers and Harbors Congress 47th annual convention which was held in Washington May 24–26, 1960. This report was submitted to the convention by the vice chairman, Judge J. E. Sturrock, general manager, Texas Water Conservation Association, Austin, Tex., on May 26, and was unanimously adopted. The committee report and list of committee members follows:

NATIONAL RIVERS AND HARBORS CONGRESS 47TH NATIONAL CONVENTION, WASHINGTON, D.C., MAY 24–26, 1960—REPORT OF COMMITTEE ON INDUSTRIAL AND MUNICIPAL WATER USE AND POLLUTION ABATEMENT

The committee reviewed its report adopted at the annual convention of the National Rivers and Harbors Congress held May 15, 1959, and reaffirmed the broad and constructive principles for development of adequate water supplies set forth therein, emphasizing particularly the need for constructive policies relating to conservation, municipal and domestic use, pollution abatement, flood control, irrigation, industrial use and other beneficial purposes.

The vice chairman, presiding in the absence of the chairman, invited the attention of the committee to the fact that H.R. 3610, although passed by the Congress, as urged by the National Rivers and Harbors Congress, had been vetoed by the President and that the veto had been sustained. This bill, the vice chairman noted, would have increased Federal financial assistance to communities for pollution abatement projects:

The vice chairman further brought to the notice of the committee the fact that the President's budget requested only $20 million to implement the grants-in-aid provisions of Public Law 660 for community pollution abatement projects but that the House Appropriations Committee had recommended the maximum amount authorized by law for this purpose.

The vice chairman referred also to the extensive studies and hearings being conducted by the Senate Select Committee on National Water Resources in the field of water resources development, including pollution abatement and industrial and municipal water use, and noted that preliminary releases and reports were highlighting the growing seriousness of the stream pollution problem and the vastly increasing requirements for water use, projecting water requirements by 1980 about double present levels.

The vice chairman further informed the committee that pollution of the Potomac River in the Washington metropolitan area is a problem of growing urgency but that pending legislation before the House Public Works Committee would authorize Federal assistance to the District of Columbia in the form of grants-in-aid to permit completion of an urgently needed system of interceptor sewers by the federally established 1966 time limit.

Reports from representatives of various parts of the country presented dramatic evidence of growing water problems. It is clear that the population of the United States will continue to grow rapidly, that the needs of industry, agriculture, and the general public for adequate supplies of water will continue to mount; and that the growth of industry and population will aggravate and intensify the already serious pollution abatement problem confronting the Nation. Accordingly, the committee reaffirms its conviction that all uses of water are interrelated and are of concern to the public generally, and that conservation, control and equitable disposition of our water resources are matters of profound interest to the development of the national economy and the welfare of all the people. It is evident that the water problem will become as vital to the national interest in 10 years as the missile program is today. Clearly, also the increasing pressures of various public demands for water use urgently require long-range planning and effective coordination to assure maximum realization of the public values inherent in our precious water resources.

In view of the growing importance of water resource development, the following resolutions were unanimously adopted:

Resolved:

1. That the committee records its regret that the President's veto of H.R. 3610, providing increased financial assistance to communities for pollution abatement projects, was sustained and urgently recommends that similar legislation be enacted at the next session of Congress.

2. That the committee recognizes the primary responsibility of local and State governments in the field of pollution abatement but further recognizes the Federal interest in this area and, accordingly, recommends strengthened Federal procedures to supplement local, state and regional efforts to deal with this pressing problem.

3. That the committee records its disappointment in the grossly inadequate request of only $20 million in the President's budget to implement the provisions of Public Law 660 for grants-in-aid to communities for pollution abatement projects but strongly commends the House Appropriations Committee for recommending appropriation of the maximum amount authorized by law for this purpose and urges speedy action by the Senate on the Health, Education, and Welfare appropriations bill.

4. That the committee records its vigorous support and approval of the diligent efforts of the Senate Select Committee on National Water Resources to develop full information looking toward formulation of water resources policies adequate for growing national needs; urges full cooperation by the National Rivers and Harbors Congress with the work of the Senate select committee and urges that most careful and sympathetic consideration be given by the National Rivers and Harbors Congress to the recommendations of the Senate select committee upon issuance thereof.

5. That the committee renews its expression of deep concern regarding the long continuing pollution of the Potomac River in the District of Columbia region and reaffirms its conviction that sanitation standards in the area of the Nation's Capital should set a standard for the world and that the polluted condition of the Potomac River in the District of Columbia metropolitan area demands immediate and constructive action by the Federal Government; that the committee notes with gratification that a satisfactory plan for dealing with the problem has been evolved as a result of an enforcement conference held under Public Law 660 and that as a first step improvements in the Blue Plains sewage treatment plant have been completed; that the committee is strongly of the opinion that additional elements of the plan involving construction of a system of interceptor sewers should be promptly undertaken and to that end recommends support of legislation now pending before the House Committee on Public Works which authorizes appropriation of funds in the form of grants-in-aid to the District of Columbia to enable the District to complete the interceptor sewer project by the federally established 1966 time limit; that to expedite action on this legislation the committee urges the Bureau of the Budget to comply promptly with the request of the House Committee on Public Works for a report on appropriate means for financing this project.

6. That the committee records its continued adherence to the principle that provision be made for storage in reservoir projects to increase needed low flows downstream to the extent warranted at present or during the economical life of the project, without reimbursement, where the benefits of such low flows are widespread, general, and nonexclusive.

7. That the committee recommends improved coordination among the agencies at all levels of government for the more effective development and use of water resources.

8. That the committee recommends a more adequate program to ascertain, assemble, and disseminate in useful form basic data relative to surface and ground water resources; and

9. That the committee recommends that the National Rivers and Harbors Congress investigate the feasibility of public information programs by radio, television, and other means to bring before the public the growing seriousness of stream pollution and of increasing water use requirements emerging from rapid industrial expansion and population growth clearly foreshadowed for the remaining decades of this century.

COMMITTEE ON INDUSTRIAL AND MUNICIPAL WATER USE AND POLLUTION ABATEMENT

Chairman, Representative JOHN A. BLATNIK, Chisholm, Minn.

Secretary, William J. Hull, legislative representative, Ohio Valley Improvement Association, Washington, D.C.

Members

New England Division: Walter G. White, chairman, Water Resources Board, State of New Hampshire, Concord, N.H.

North Atlantic Division: George R. Shanklin, chief engineer, Division of Water Policy and Supply, State of New Jersey, Trenton, N.J.

South Atlantic Division: Miles J. Smith, vice chairman, North Carolina Board of Conservation and Development, Salisbury, N.C. Harry H. Saunders, vice president, St. Joe Paper Co., Port St. Joe, Fla.

Southwestern Division: Judge J. E. Sturrock, general manager, Texas Water Conservation Association, Austin, Tex., vice chairman.

Lower Mississippi Valley Division: Leonard N. White, engineer, Arkansas Geological and Conservation Commission, Little Rock, Ark.; Calvin T. Watts, assistant director, Department of Public Works, State of Louisiana, Baton Rouge, La.

North Central Division: P. W. Fitzpatrick, president, St. Paul Port Authority, St. Paul, Minn.

Missouri River Division: Milo W. Hoisveen, chief engineer, North Dakota Water Commission, Bismarck, N. Dak.

Ohio River Division: Laban P. Jackson, commissioner of conservation, State of Kentucky, Frankfort, Ky.

North Pacific Division: Marshall N. Dana, chairman, Commission of Public Docks, Portland, Oreg.

South Pacific Division: Walter G. Shulz, division chief engineer, Division of Design and Construction, Department of Water Resources, State of California, Sacramento, Calif.

Politics May Serve Needs of the Aged

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following commentary which appeared in the May 18, 1960, issue of the Christian Century. On Wednesday, June 22, we of this House will consider H.R. 12580, a voluminous bill which amends the existing social security regulations.

In my opinion H.R. 12580 takes but a small step toward solving the pressing needs which face our older citizens. I am hopeful that before this Congress ends there will be approved legislation which meets the challenge before us.

The remarks in the Christian Century are valid. I hope that politics will serve the needs of the aged this year.

POLITICS MAY SERVE NEEDS OF THE AGED

Political expediency has greatly strengthened the possibility that something effective will be done to provide the aged with insurance against poverty caused by the costs of protracted illness when income is reduced or cut off. Politicians are sensitive in an election year, and when millions of voters above 65 are in trouble, or a substantial share of them are concerned about potential trouble, the political wheels begin to spin. The addition of the administration's "Medicare program for the aged" to the three other proposals already before Congress makes the parties unanimous in their recognition of the needs of the aged. It also makes unanimous the admission that helping meet that need is the business of Government. The American Medical Association, in league with private insurance companies, opposes the administration plan, as it does the Forand bill and other proposals. The AMA position is not surprising. Many members of the highest paid profession, whose own medical bills are generally easy to bear by reason of reciprocal professional "courtesy," personally bear the burden of giving unpaid care to persons whose needs surpass their resources. What they lack is sufficient education in social studies, sufficient understanding of human nature or of means by which people, working together, can meet all their needs with dignity and foresight. The AMA reflects the narrowness of outlook induced by the protracted and intensive scientific training of many doctors. The country's deep respect for the medical profession and for individual doctors would be strengthened if something could be done to broaden the understanding by doctors of people in modern society. We believe that Senator LYNDON B. JOHNSON is right in his prediction that "once a need is recognized, it is usually possible to find a solution." The needs of doctors and of the aged are not the same needs, but both must find a solution. This year the aged may find their solution, or part of it, through politics. The doctors of Britain were finally swept by political means into a system many of them disliked. We hope American doctors will make their own decisions so the same thing will not happen here.

Granting Representation in the Electoral College to the District of Columbia

SPEECH

OF

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. HALPERN. Mr. Speaker, the adoption by the House and now the Senate of Senate Joint Resolution 39, proposing a constitutional amendment that would permit residents of the District of Columbia to vote in national elections is a most commendable step forward. I believe that the entire Nation welcomes

this measure that would provide for three votes in the electoral college for the District of Columbia.

Those who have long been observers of the national political process will at last become participants when the amendment is ratified by the required 38 States.

Pleased as we all are with the adoption of the amendment by both Houses of Congress, it is somewhat disappointing that the second so-called District provision in the original Senate version of the resolution was not included in the final measure. This would have provided the District with two House Delegates in Congress to represent the views of the more than 750,000 residents of the Nation's Capital. I surely hope that the Congress will consider this feature next year.

Another vital measure that should be brought before Congress for consideration is the so-called home-rule bill. We have broken through the barrier and opened a way for democracy to flow into the District. But, it is only a beginning, since the privilege of the vote has still to be extended to include the election of local government officials and representatives in Congress.

The fact that the District is a "Federal city" in which all the citizens of the country have an interest is not, in my opinion, a sufficient reason for denying to its inhabitants control over their local problems, matters in which the people neither of New York nor California could possibly have any concern.

Those of us who have supported the constitutional amendment cannot assume that our task is finished. Self-government has always been the bulwark of our Federal system and any supporter of States rights should ardently favor the same prerogatives of local rule for the citizens of the District.

The home-rule bill discharge petition before the House requires just a few more signatures to bring the measure to the floor for debate. Action this session by the House can send a bill to the President for enactment into law. I urge that the bill be cleared and that we maintain our momentum to bring to the residents of the District the privileges of democracy.

Welcome by the New York City Chinese Community

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. MULTER. Mr. Speaker, on the recent congressional trek to New York City, the weekend of May 16, 1960, it was the pleasure of the Members of Congress their families and friends, to visit once again New York's Chinatown, where they were made most welcome by the Chinese community.

I am pleased to set forth the remarks made on that occasion by Mon Bak Young, president of the Chinese Consolidated Benevolent Association, speaking for our hosts:

Honorable Members of Congress, distinguished guests, ladies and gentlemen, it is indeed a great pleasure for me, on behalf of the Chinese Consolidated Benevolent Association, to extend to you our heartfelt welcome. We wish you, each one of you, to enjoy yourselves during your visit to Chinatown. The very fact that you take time out to visit us with such a tight schedule in your New York tour, has impressed us greatly. I want to assure you that everyone in the Chinese community here in New York City feels honored by your presence.

The concept of individual dignity, and a moral obligation to extend it throughout the world, is inherent in every basic American political document. President Lincoln, speaking of the Declaration of Independence, said it meant "liberty not alone to the people of this country, but hope to all the world, for all future time." It is, therefore, natural for us to turn our thought at this moment to the relations between the United States and China. For the past 10 years, international communism has imposed a tyrannical regime upon the Chinese people in the mainland; it has denied every basic right and freedom to the Chinese people. We are, for this reason, unequivocally opposed to the Chinese Communist regime in China, and we are in wholehearted support of any policy and means which is designed to bring about its downfall. We hope that the United States will continue to withhold its policy of nonrecognition toward Red China and to bar its entry into the United Nations. We also firmly believe that it is in the interest of the United States to continue providing unstinted moral and material aid to the Republic of China in order to stop the Communist expansion in the Far East. Only by doing so, can we be true to the principles that we stand for.

We, Americans of Chinese descent, are proud of our contribution to the advancement of our Nation, but as an emigrant group, we have problems which particularly concern us. One of such problems deals with immigration laws. A common difficulty facing many foreign nationals in the United States is how to adjust their immigration status to that of a permanent resident. We earnestly hope that Congress would be able in the near future to pass a bill that would provide for the adjustment of status to permanent residents of many Chinese persons whose entry into the United States was based on doubtful claims and facts. In enacting such legislation, there has been precedent in the past whereby special legislation was introduced to permit adjustment of immigration status of other nationalities who entered the United States by the same means.

Aside from our interest in legislation for adjustment of immigration status, we are also concerned with anti-Communist Chinese refugees in Hong Kong. Recently, the House of Representatives has passed a House Joint Resolution 397 which affords immigration privileges to a limited number of refugees from Communist-dominated or occupied territories, within the mandate of the United Nations High Commissioner. Since anti-Communist Chinese refugees in Hong Kong are not under the Mandate of the United Nations High Commissioner for Refugees, they certainly would be completely excluded from the benefits of this particular legislation. We can't help feeling seriously disturbed because of the discriminatory provision in the present House Joint Resolution 397. We strongly urge the liberalization of that bill by deleting the clause of "within the mandate of the United Nations High Commissioner for Refugees."

In closing, may I once again welcome you to Chinatown and wish you a happy visit to New York City and to our community.

Jim Mitchell: Looking for a New Job

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. WIDNALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the June 1960 issue of Fortune magazine, which is devoted to Secretary of Labor, the Honorable James P. Mitchell.

Secretary Mitchell has been in the Eisenhower Cabinet since 1953 and has served as the President's top labor adviser since that time. His record is one of which the American people can be proud.

As a fellow New Jerseyite I am pleased that the editors of Fortune magazine saw fit to devote a portion of their June issue to his accomplishments.

The article follows:

JIM MITCHELL: LOOKING FOR A NEW JOB—HE IS NOT CHASING THE VICE-PRESIDENTIAL NOMINATION, BUT HIS STRONG PERFORMANCE AS LABOR SECRETARY MAY HELP HIM GET IT

Labor Secretary James Paul Mitchell views all the current speculation about his vice-presidential prospects with mixed emotions. A tall, hunch-shouldered businessman from Elizabeth, N.J., Mitchell wants the Vice Presidency but "has a deep feeling of revulsion at being the nearest handy Catholic." He believes that he should be considered for the job on his record as Secretary rather than on the basis of his religion.

His record has, in fact, been a strong one. He has served 6½ years in one of the most difficult Cabinet positions, and if his performance has frequently been controversial, it has seldom been weak or timid. Mitchell has proved to be a first-rate administrator and a shrewd political infighter. He has not only expanded the power of the Department of Labor, but has also established personal hegemony over the Federal Mediation and Conciliation Service and several other independent Federal agencies. He has fought repeatedly with the Secretary of Commerce and other Cabinet members to preserve and extend his area of influence. He has differed with the President on some issues—e.g., right-to-work laws. (Mitchell opposes them, while Eisenhower has simply taken the position that they are a matter for the States to decide.) Nevertheless, the President has leaned heavily on him, and Mitchell has emerged not only as a mainstay in the Cabinet but as a possibility for the Republican vice-presidential nomination.

Mitchell has not said that he is running for vice president. He believes NIXON should be entirely free to choose his own running mate. But he is candid about his

own availability: "Anybody who says unconditionally 'no' to the vice presidency is crazy and not being honest with himself."

Mitchell has never agreed with those Republicans who felt that he should be nominated in an effort to offset KENNEDY's great appeal to Catholic voters. Mitchell believes precisely the opposite, in fact: "If KENNEDY is at the top of the Democratic ticket, the Republicans will be ill advised to have a Catholic. If there is a Catholic vote, and I suspect there is one, it will go for KENNEDY and not for a vice presidential candidate."

In any event, he winces at the view of himself as simply a "Catholic candidate." Actually, Secretary Mitchell believes that the addition of his name to a NIXON ticket would have broader significance. "It might," he says with amusement, "give some of my friends in the labor movement a touch of schizophrenia," an enigmatic remark that becomes clearer when his record is analyzed.

The very thought that Jim Mitchell might pop up on the national ticket is enough to send shivers down the spines of some conservative Republicans. For Mitchell has always been a "modern Republican," and ever since he took office he has warred with the old Taft wing of the party. Furthermore, any Secretary of Labor is charged with administering certain laws that many conservatives intensely dislike—the wage-and-hour law, for example. In this situation they expected from the Eisenhower administration a man who would minimize, rather than maximize, the role of the Labor Department. Mitchell has maximized it.

An ambitious, self-made man who in his time has driven a truck and managed his own small grocery, Mitchell rose to eminence as a business executive. An excellent negotiator, his mind is quick and analytical. He presents his case softly, almost diffidently. He has an engaging wit and warmth about him. One severe critic confesses that, on a personal level, he finds Mitchell "a big warmhearted Irishman * * * no nicer guy to get shipwrecked on a desert island with."

NO BACK DOOR TO THE WHITE HOUSE

Yet under Mitchell's easygoing manner there is a basic toughness. Thus from his first day in office, Mitchell made it plain that he did not intend to let conservatives (or anyone else) in the administration take over any functions of the Labor Secretary. He politely but coolly turned down a suggestion by the Commerce Secretary Sinclair Weeks that the two of them jointly draft the administration's recommendations for revision of the Taft-Hartley Act. ("I didn't agree," Mitchell has explained, "that the Secretary of Labor represents labor and the Secretary of Commerce represents commerce, and that the determination of labor policy was a matter for collective bargaining between them.") Instead, Mitchell holed up for 3 days in a Washington hotel room and wrote his own list of recommended changes. With a single exception, the President accepted Mitchell's list. This was the first big victory in Mitchell's fight to stake out a broad area of independence and authority.

He won a second triumph when the principle was established that there would be "no Steelmans" in this administration. President Truman had maintained John Steelman, a union contact man, policymaker, and troubleshooter, on the White House staff. Steelman channeled information and advice—e.g., about strikes, labor legislation—to the President. The existence of this dual track of influence naturally circumscribed the importance of the Secretary of Labor. The new administration had no Steelman at the time Mitchell was appointed, and he soon made it clear to management and labor that there would be no shortcut or backdoor to the White House. Mitchell alone would be the man to see about labor problems of national significance.

INFLUENCE BY APPOINTMENT

During the Louisville & Nashville Railroad strike in 1955, for example, Kenneth C. Royall, a former War Department boss of President Eisenhower, was retained by the railroad. Royall told Mitchell that he planned to visit the President to talk about the strike. Mitchell warned Royall that he would get no help from the President, that the administration was avoiding intervention in labor disputes, and that if he insisted on going to the White House to present management's case Mitchell would feel obliged to bring over a group of railroad labor leaders to tell the President their side of the story. Royall backed down.

Mitchell's influence has, in fact, been extended outside the Department of Labor, and into four other Federal agencies that deal with labor matters. These are the National Labor Relations Board, the Federal Mediation and Conciliation Service, the National Mediation Board (which helps to settle disputes on the railroads and airlines), and the Railroad Retirement Board (which administers pensions and unemployment compensation for railworkers). Shortly after he took office, Mitchell invited the heads of these agencies to meet regularly with him to discuss their problems. This was a remarkable request, since Congress had intended the agencies to be wholly independent of the executive branch. As it happened, Whitley P. McCoy, then director of the Federal Mediation and Conciliation Service, balked at Mitchell's request. By November 1954, McCoy had been forced out and replaced as director by a close friend and former coworker of Mitchell's, Joseph F. Finnegan.

Since then, in general, Mitchell has exerted a strong influence on appointments to important labor jobs in Washington. He was instrumental in placing John Fanning and Chairman Boyd Leedom on the NLRB. He also fought a long and ultimately successful battle to make Stuart Rothman general counsel of the board. He handpicked Howard W. Habermeyer to head the Railroad Retirement Board. Meanwhile, he has blocked NLRB appointments of several men identified with the conservative wing of the party; e.g., Michael Bernstein, minority counsel of the Senate Labor Committee, who was sponsored by Senator GOLDWATER. Board member Philip Ray Rodgers, a protege of Senator Taft, was widely thought to be in line for the chairman's job several years ago, but Mitchell blocked him and got the White House to elevate Leedom instead.

Mitchell has stretched the functions of his own department, too. In enforcing the Fair Labor Standards Act, the Walsh-Healy Act, and the Davis-Bacon Act, he has construed his powers broadly. Recently, for example, Mitchell issued a set of provisional regulations covering the employment of domestic migratory workers. The provisions were assailed by Secretary of Agriculture Benson, some farm groups, and swarms of farm-State Congressmen. Mitchell was charged with having overreached his authority. But out of the dispute came a ruling by the Attorney General that broadly upheld Mitchell's right to act in this field.

It is scarcely surprising that the Labor Department's budget has nearly doubled since Mitchell took over—from $28 million in fiscal 1954 to an estimated $53 million in the present fiscal year, the highest ever.

HOW MUCH IS MODERATE?

Mitchell's success in transforming and enlarging the role of the Secretary of Labor has been aided by the fact that the President has no more than a lukewarm interest in labor matters. Eisenhower wanted—and got—a Secretary who would keep labor problems out of the Presidential lap. In return, he gave Mitchell wide scope. But, in addition, Mitchell has an intuitive grasp of the organizational complexities of the executive branch of Government. One former Commerce official who frequently opposed Mitchell puts it tersely: "He know how to get things done in Washington."

Mitchell's tactical skill was demonstrated most recently in his success in shifting the administration's position on increasing the minimum wage. This is an issue on which Mitchell has taken a number of lickings, but the last round must be credited as a clear victory for him.

In 1955, when the issue first faced the administration, Mitchell tried to persuade the President to support an increase in the minimum from 75 cents to $1 an hour. This was in the face of a strong labor push for $1.25. Inside the administration, however, Arthur Burns, then Chariman of the Council of Economic Advisers, Weeks, and others opposed Mitchell, and the final administration position was for an increase to only 90 cents. Mitchell was thus placed in the uncomfortable position of having to testify for 90 cents even though his personal preference for $1 was widely known. When Congress did boost the minimum to $1 over the administration's objections, Mitchell helped persuade the President not to veto the measure.

The issue did not assume importance again until last year. Then, with the AFL–CIO still plumping for a $1.25 minimum, Mitchell took the stand to declare any increase premature, and to warn that it might create unemployment. Since then an election year has rolled around, and Mitchell has been able to reverse the administration's stand. This time he laid his groundwork carefully. When his Department prepared its latest report on the Fair Labor Standards Act, Mitchell drafted a transmittal letter to Congress in which he stated something that does not appear explicitly in the report itself: that a moderate increase in the minimum would have no adverse effects. He then took the precaution of clearing this transmittal letter at the White House, even though technically he was not obligated to do so. The letter was finally approved at a meeting attended by Mitchell, Commerce Secretary Frederick Mueller, Raymond Saulnier, head of the Council of Economic Advisers, Budget Director Maurice Stans, and Gerald Morgan, Wilton Persons, and David Kendall of the President's staff. The letter did not commit the administration to anything, but through it Mitchell prepared the way for a policy shift.

Next, as it became clear that Congress was likely to vote some increase in the minimum this year, Mitchell played his trump: Vice President NIXON. Mitchell urged NIXON to use his influence in favor of an increase—which both of them thought politically necessary. The Vice President, in turn, persuaded Commerce Secretary Mueller to modify his antagonism to the idea. When Mueller testified on the Hill, he reluctantly approved the general notion of a moderate increase. The capstone of the new policy was laid in place on April 21 when Mitchell himself appeared before the House Labor Committee. Picking up the loose phrase, "moderate increase," Mitchell made it specific. The administration, he indicated, would not oppose an increase of 10 to 15 cents. Mitchell may have been stretching the limit of what his fellow Cabinet members consider moderate, but there

is no doubt that he has moved the administration a long way on this issue.

This was not the first time that Mitchell and NIXON have teamed up. During last year's steel strike Mitchell reached out to bring NIXON into the negotiations in their final stage—and NIXON was a major force in getting the final settlement. Their names were linked in the attendant publicity. In 1958 Mitchell supported NIXON'S unsuccessful move to put the administration on record as favoring a tax cut as an antirecession measure. In controversies like the present one over health insurance for the aged, Mitchell has been part of what might almost be termed a "NIXON liberal" faction in the Cabinet, along with Secretary Flemming, Secretary Seaton, and Attorney General Rogers.

TROUBLE ON THE HILL

Mitchell has, of course, suffered several defeats during his term of office. In 1954, after he declared that he "opposed categorically" State right-to-work laws, the President pointedly remarked that Mitchell "had not represented necessarily the administration views." Eisenhower vetoed depressed-area legislation that Mitchell had wanted badly, and rebuffed him when Mitchell came out in favor of extending minimum-wage coverage to retail employees.

But Mitchell's largest problems have been with Congress. Here he has had to face the fact of Democratic control of the Senate and House Labor Committees. He early made an enemy of GRAHAM BARDEN, formidable chairman of the House Labor Committee, who has repeatedly opposed Mitchell on labor legislation. One result of this antagonism was the emasculation of the 1958 welfare and pension fund disclosure law. The bill originally gave Mitchell discretionary authority to investigate reports and to police its provisions. BARDEN, opposed to any extension of authority to Mitchell, pulled most of these teeth out of the bill. "What resulted," says Mitchell ruefully, "is a monstrosity. It's a waste of money. We can't investigate or even require a uniform report form. The trustees of these funds could send in their report on the back of a piece of wallpaper and conform with the law."

Predictably, Mitchell has had little help from the ranking Republican on the Senate Labor Committee, BARRY GOLDWATER. On the House Labor Committee, Mitchell has had some assistance from Republicans CARROLL KEARNS and PETER FRELINGHUYSEN, but they are not very influential, and their help has been more than offset by the hostility of CHARLES HALLECK, the Republican floor leader in the House (who would also like to be NIXON'S running mate this year). In 1959, HALLECK and his Senator counterpart, EVERETT DIRKSEN, visited the President, talked cold political turkey with him, and got him to televise a speech in which the President came out for labor-reform legislation that went much further than Mitchell wanted in regulating the internal affairs of unions.

Mitchell's difficulties are intensified by the fact that, never having been a working politician, he has no independent base in his own political party. Beyond that, he is beset by problems that arise from the fundamental ambiguity of his role: speaking for a Republican administration that is friendly to business, he must deal with a labor movement that is largely Democratic. It is often forgoten that Congress has entrusted the Secretary of Labor with promoting "the welfare of the wage earners of the United States." It is natural that in fulfilling this obligation Mitchell has made enemies, not only within the administration, and in Congress, but in the business community too. The American Retail Federation, for instance, is vitriolic in its criticism of Mitchell's role in minimum-wage battles. Officials of the NAM and the chamber of commerce speak, in private, as if they considered Mitchell a captive of the labor movement. Meanwhile, as a matter of personal conviction, Mitchell has often felt obliged to take positions that put him out of favor with organized labor. The 1954 Taft-Hartley amendments, of which Mitchell was the chief author, were damned by the CIO as "worse than Taft-Hartley." Even before the McClellan committee hearings had dramatized the need for labor reform, Mitchell used his own bureaucratic authority to tighten substantially the financial-reporting requirements of the Taft-Hartley Act. During the debate on Landrum-Griffin, he infuriated many unionists by calling for restrictions on so-called "blackmail picketing." He has not appointed unionists to important Department of Labor posts.

LABOR NEUTRALITY?

Yet Mitchell has managed to maintain warm ties with many top labor officials, in large measure because, as one union man put it, "He understands our problems. He speaks our language." Consequently, the administration today is getting along more comfortably with the labor movement than many ever thought possible. George Meany has on occasion made a point of toning down staff criticisms of the Department of Labor. Jacob Potofsky of the Clothing Workers, David Dubinsky of the Ladies' Garment Workers, George Leighty of the Railroad Telegraphers are among the many labor leaders who regard Mitchell with respect. Since the steel settlement, Mr. McDonald of the Steelworkers has had nothing but praise for Mitchel (and NIXON).

The Secretary cultivates personal friendships with union leaders. Yet in itself this will probably not help his vice presidential chances, for the odds are heavy that labor will continue its traditional commitment to a Democratic ticket—even with Mitchell as NIXON'S running mate. The unions will certainly not endorse a Republican ticket. However, if the Democrats nominated LYNDON JOHNSON, the unions would face a serious dilemma. They dislike and mistrust JOHNSON as much as they generally admire and like Mitchell. The juxtaposition of JOHNSON on the Democratic ticket and Mitchell on the Republican could, indeed, induce political schizophrenia in many top unionists, and possibly persuade them to sit out the national campaign, a decision that would cost the Democrats a lot of campaign money and manpower.

In the meantime, while he is keeping an eye on the vice presidential situation, Mitchell has other irons in the fire. He was a $50,000-a-year industrial-relations executive for Bloomingdale's department store in New York before going to Washington in 1953. He has been offered twice that amount to return to private employment, but has turned it down. He has also turned down any suggestion that he continue as Secretary of Labor in a NIXON administration. There has been talk that he might run for the governorship of New Jersey in 1961. But Mitchell is not likely to plunge into that race unless he can be promised in advance, that he will not face primary opposition and that he will have an ample campaign war chest. This is a stiff price to exact from his party, and it may well be too high, considering the factionalism among New Jersey Republicans.

However, if the GOP wins in November and Mitchell is not at that time the new Vice President, he would still be in line for high administration responsibility. What that may be it is too early to tell. But it is safe to predict that the Republicans, however the conservatives among them may feel, will be unable to ignore him.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

SENATORS WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: Senate Office Building, Washington, D. C.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Massing of Colors Ceremony Under Auspices of the Military Order of World Wars

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech made by me on June 11 at the Peaks of Otter, Va., in connection with the ceremonies opening the James River Bridge on the Blue Ridge Parkway.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The ceremony today, opening the bridge over the James River, completes another link in the great Blue Ridge Parkway connecting the Senandoah and the Great Smoky Mountains National Parks. This truly may be called a royal road of our mountain empire in Virginia.

It will soon be completed and the parkway will be 469 miles in length—the longest continuous scenic highway in the world.

If, from this pleasant place, you will let your eye follow the panorama, you will be reminded that half the population of the United States is fortunate enough to be within overnight driving distance from some point on this wonderful drive.

Think of the natural scenery there is to see, the pleasant recreational things there are to do, and the historic sites there are to visit. They are all around us here; they abound throughout Virginia's 41,000 square miles ranging from the mountains to the sea.

It is no wonder that newspapers within the month have reported that Virginia has more visitors than any other State in the Union. And for them to use, we are proud to present our billion-dollar State highway system of more than 52,000 miles.

The State department of highways recently announced that nearly 39 million visitors entered Virginia last year by automobile. Perhaps the total number of visitors approached 45 million. By the most conservative estimate Virginia's visitors are spending "in excess of $600 million a year."

Our attractions for people outside of Virginia are among our greatest assets. And this asset is enhanced by our accessibility. Cross-country highway Route 60 terminates in Virginia, and two other major highway routes—1 and 11—traverse the State north and south.

And this is not all. Nature is our partner. Our temperatures are moderate. Our rainfall is good. Our topography is favorable. We are gifted with the shores of the sea, the rolling country of the Piedmont, and the mountains with their valleys.

Our history is vivid and traceable. Our scenery and natural assets lend themselves to preservation and use. Our progress is sound and steady. Our transportation and facilities are good and safe. And, perhaps, our greatest asset is the hospitality of our people themselves.

The National Park Service has given magnanimous recognition to our scenery, our recreational possibilities and our history in the form of this parkway, the Shenandoah and the Cumberland Gap National Parks, the Colonial National Historical Park, and five national battlefield parks.

The State itself has established a system of nine State parks offering recreational facilities characteristic of every section of the State. Virginia pioneered in marking her highways with attractive signs telling the story of points of interest for the benefit of passing motorists.

And I venture no State in the Union has more to tell, or does it more concisely. We have the cradle of the Republic in Jamestown, Williamsburg, and Yorktown. We have the homes of Presidents Washington, Jefferson, Madison, Monroe, Harrison, Tyler, Taylor, and Wilson, along with those of Mason, Henry, Lee, and countless more of the Nation's great.

We have the battlefields of the Revolution and the War Between the States. We have one of the capitals of the Confederacy. We have the ports and military sites of World Wars I and II. We have the Tomb of the Unknowns. We have historic churches, colleges, and mansions.

We have some of the wonders of the world, such as the great stalagmites and stalactites of our nine caverns, our Natural Bridge, our Natural Tunnel, our Natural Chimneys, and our Mountain Lake.

We have two great national forests. We have beautiful gardens, wild flowers, and flowering trees. We have waterfalls and beautiful springs. We have the ocean, and our bays and rivers.

Streams come into existence in nearly all areas of the State. We have inland lakes—some natural, and some made—in nearly every section. With our woods and waters, hunting and fishing is unsurpassed.

There are more than 100 good golf courses in the State. Hunt races and horse shows are numerous. We have annual festivals at Winchester, Norfolk, Claytor Lake, Charlottesville, Richmond, and in other places. There is wild pony penning at Chincoteague, jousting at Natural Chimneys, and the dog mart at Fredericksburg.

We have the Barter Theater at Abingdon, and the arts and crafts festival at Waterford. There is the Common Glory at Williamsburg. There is the Virginia Museum of Fine Arts, with its mobile units. Virginia is, indeed, a place for the Nation to enjoy.

I think the Nation is doing it more and more. I believe we are seeing only the beginning. Some $26 million was spent in the State last year on construction of about 150 motels. All of us can be for expansion of an industry which makes people happier and healthier and more appreciative of their country and the principles for which it stands.

Equal Rights for All Citizens

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. BARR. Mr. Speaker, today I am submitting for the RECORD an editorial from the Indianapolis Times. This editorial deals with the question of "Equal Rights for all Citizens." It often seems to me that this Nation is so involved in questions of defense and international maneuvering that it ignores a basic problem on our own doorsteps.

There are two paragraphs in this editorial that are especially meaningful to me. The first is:

In the field of civil rights lies the basic difference between American democracy and Soviet communism. The rise of Russian dictatorship is history's greatest challenge to our free form of government.

The second paragraph states that:

Faithful protection of civil rights is worth more in favorable world sentiment, than billions in foreign aid. In the final analysis it may be worth more than squadrons of missiles.

I should like for the RECORD to show that I agree with these sentiments completely. I do not intend to neglect the defenses of this Nation or to slight our problems of diplomacy. But all our efforts to build up a powerful defense and all our efforts to improve our diplomatic position in the world can well be meaningless until we give to every American citizen the rights that are guaranteed to him under our Constitution and under our laws.

The editorial follows:

[From the Indianapolis Times, June 2, 1960]

EQUAL RIGHTS FOR ALL CITIZENS

The United States is the first great Government on earth ever dedicated to the proposition that the individual citizen, however humble, has rights which his Government may not deny and must defend.

The Founding Fathers were interested primarily in protecting themselves against the tyranny of a degenerate British king.

But tyranny is a constant menace in any state, whether it be the tyranny of a king, a dictator, an entrenched bureaucracy, or a selfish majority.

To protect against this tyranny the privileges and immunities of American citizens are written into the first 10 amendments to the Constitution, aptly termed the "Bill of Rights," and into further amendments, including the 14th and 15th.

It is these amendments which guard freedom of religion, free speech, free press, the right to assemble peaceably and to petition the Government for redress of grievances. They protect also against arbitrary searches of homes and seizures of property, provide that a citizen can't be forced to testify against himself and guarantee trial by jury.

The 14th amendment forbids any abridgments on the privileges of U.S. citizenship. The 15th specifically protects the right to vote, forbidding it to be denied "on account of race, color or previous condition of servitude."

Through long custom, Americans take these rights for granted, tending to forget that, over a large area of the world, they are denied and held to scorn.

In the field of civil rights lies the basic difference between American democracy and Soviet communism. The rise of Russian

dictatorship is history's greatest challenge to our free form of Government.

Ours is a Government of law, rather than the whims or prejudices of men. In the faithful observance of the law lies the positive answer to communism.

This observance is of primary importance to the future since the tolerated violation of one law sets the precedent for defiance of any law which may be irksome, hence threatens the gradual disintegration of our system with all its protection of rights of citizens.

But, in addition to that, the newly freed nations are inspired in large measure by our Declaration of Independence, our Constitution and the words of our American democratic philosophers. They watch anxiously to note whether the United States means what it says.

Faithful protection of civil rights is worth more in favorable world sentiment, than billions in foreign aid. In the final analysis it may be morth more than squadrons of missiles.

The voter should require sane leadership, as opposed to demagogic promises. But we must move steadily toward enforcement and acceptance of civil rights as guaranteed by the fundamental law of our land—the Constitution.

In judging among the candidates for office, in the election this November, the voter must place great weight on understanding of, and dedication to, the cause of equal rights for all citizens.

Poll for Democratic Candidate for President Conducted in State of West Virginia

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I recently received from Mr. Earl M. Curry, Jr., of Pineville, W. Va., together with the results of a poll conducted by Mr. Curry. Mr. Curry polled the members of the Democratic executive committees in the seven counties of the Fifth Congressional District of West Virginia, and a return of approximately 30 percent indicates that Senator LYNDON B. JOHNSON led among those persons who responded to Mr. Curry's questionnaire.

There being no objection, the letter and poll results were ordered to be printed in the RECORD, as follows:

PINEVILLE FURNITURE CO.,
Pineville, W. Va.

ROBERT C. BYRD,
U.S. Senate,
Senate Office Building,
Washington, D.C.

DEAR SENATOR BYRD: I am enclosing a copy of the poll I took in the fifth district. I sent this questionnaire to the members of the Democratic executive committees in the seven counties of the district. The 1958 West Virginia Blue Book was my source of addresses.

I had approximately a 30-percent answer to my questionnaire. If there is any other information on this poll that I can give you I will be happy to do so.

Sincerely yours,

EARL M. CURRY, Jr.

In a poll taken of the members of the county Democratic executive committees of the seven counties in the Fifth Congressional District the results were as follows:

[Percent]

	Of those voting		
	1st	2d	3d
Stevenson	19	19	18
Symington	14	19	8
Kennedy	19	18	21
Humphrey	3	30	21
Johnson	45	14	10

These percentages represent the choice of those polled for the Democratic candidate for President, in the order of their preference.

STATE OF WEST VIRGINIA,
County of Wyoming ss:

I, Earl M. Curry, Jr., do solemnly swear the foregoing statements are true to the best of my knowledge and ability.

EARL M. CURRY, Jr.

Subscribed and sworn to before me this 9th day of April 1960.

VIRGINIA BUTCHER,
Notary Public.

My commission expires February 17, 1963.

Economic Recovery Does Not Require the Stimulus of Increased Defense Spending

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, the other day, in the course of consideration of the tax-extension bill, it was alleged that it required the Korean war to bring the economy out of the depression into which it had slipped during 1949. I replied at the time, using annual data.

Upon my return to my office I happened to pick up an article entitled "Underwriting Prosperity" by Harold I. Lunde, an associate professor of economics at Macalester College, who reviews the economic situation between 1948–49 and 1949–50, comparing the peaks and troughs of 1948, 1949, and 1950 on the basis of quarterly data. Professor Lunde establishes, on the basis of an analysis of the data on a quarterly basis, that there was a $17 billion gain, or recovery, before Korea. His analysis is as follows:

Economic changes in 1948–49 (in billions of dollars)

Gross National Product	−9
Consumption	+3
Private investment	−14
Houses	+1
Factories and Tools	−5
Inventories	−10
Foreign Investment	−1
Federal Government	0
State and Local	+3

High: 1948 4th quarter GNP equals 266.
Low: 1949 4th quarter GNP equals 257.

This was a modest 3½ percent recession. GNP fell $9 billion from a peak of $266 billion. The recession lasted 1 year from top to bottom. Unemployment reached 4.6 million or 7 percent of the labor force.

Business spending for factories, tools and inventories fell $15 billion. Net foreign investment decreased by another billion. This gross decline of $16 billion was offset by a $3 billion rise in consumption, a $1 billion increase in housing, and a $3 billion gain in State and local government spending. Federal spending did not change. The gains add up to $7 billion. Thus the decline in GNP was held to only $9 billion.

1949–50 recovery before Korea

[In billions of dollars]

Gross national product	+17
Consumption	+6
Private investment	+17
Houses	+3
Factories and tools	+3
Inventories	+11
Foreign investment	−1
Federal Government	−5
State and local	0

Low: 1949, 4th quarter GNP=257.
High: 1950, 2d quarter GNP=274.

GNP increased $17 billion in 6 months after the bottom of the recession was reached. This recovery, in only half the time taken by the decline, was almost twice the size of the recession.

Government spending did not bring the recovery. Federal expenditures fell $5 billion while State and local spending remained unchanged. Foreign investment declined another billion dollars. This total decline of $6 billion was overpowered by a $17 billion growth in private investment and a $6 billion gain in consumption.

Mr. Speaker, this reinforces my view that economic recovery did not, and does not, require the stimulus of increased defense spending.

Preservation of the Wilderness

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. DOUGLAS. Mr. President, three recent letters to the editor of the Washington Post and Times Herald have commented significantly on the pending wilderness bill (S. 1123) the comittee print three version of which is now being considered by the Committee on Interior and Insular Affairs. One of these letters criticized the bill as undesirable by those who may wish to build dams in areas of wilderness. A reply to this justified the wilderness bill. A later comment by the noted land-use authority, Benton MacKaye, honorary president of the Wilderness Society, pointed out the Americanism of preserving wilderness. All three letters were occasioned by an editorial in support of the wilderness bill that appeared in the Washington Post and Times Herald on May 2, 1960.

Mr. President, I ask unanimous consent that this editorial, entitled "Wilderness Detour," and the letter to the editor appearing in this paper on May 9, 1960, by Secretary-Manager William E. Welsh of the National Reclamation Association, be printed in the Appendix of the RECORD, along with the letter in reply to Mr. Welsh that appeared in the May 14, 1960, issue of the Washington Post and Times Herald by Howard Zahniser, executive secretary and editor of the Wilderness Society, and also the letter to the editor by Benton MacKaye that appeared in the same paper on May 26, 1960, with the title, "Saving the Wild."

There being no objection, the editorial and letters were ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 2, 1960]

WILDERNESS DETOUR

Once again, the Senate Interior Committee is due to act on the wilderness bill, and once again opponents of this basic conservation measure are seeking to confuse, divide, and scuttle. When the committee acts, it will have before it not only a model bill with the broadest possible support, but also an amendment in the nature of a substitute introduced by Senators O'MAHONEY and ALLOTT.

Whatever the motives of the two Senators, their substitute has been gleefully seized upon by opponents of all wilderness legislation. The National Reclamation Association, which fears that wilderness preservation might interfere with dam construction, declares that the substitute is "far preferable to any other wilderness legislation proposed thus far."

Mr. O'MAHONEY's behavior is curious and illogical. Last year, he detected bureaucratic perils in the wilderness bill and announced his opposition. A meeting was then held in his office last January 27 at which the Senator agreed to amendments which met his objections and gave his blessings to the bill. Now he has suddenly introduced a bill fraught with the very bureaucratic complexities he has denounced.

The wilderness areas are vaguely defined in Mr. O'MAHONEY's bill and the U.S. Geological Survey is given a virtual veto power over selection of areas worthy of preservation. These are only some of the defects. The committee ought to repulse Mr. O'MAHONEY's mischievous substitute and report out the bill that offers the best hope of preserving for all time some portions of our unspoiled wild.

[From the Washington Post, May 9, 1960]

WILDERNESS DETOUR

In your May 2 editorial "Wilderness Detour" you referred to the National Reclamation Association.

Approximately two-thirds of the members of the association are irrigation farmers. These people have as great, if not a greater reason for being interested in conservation than any other group of citizens. They must have a well-sustained streamflow runoff for the irrigation of crops during the hot summer months in that arid and semiarid region. They cannot survive without irrigation water during that period. Good conservation practices on the watersheds could mean the difference between success and failure for them.

These people live close to the area which would be included in the proposed wilderness systems. They have a thorough understanding of the problem. They believe in conservation as defined by two of the greatest conservationists this Nation has yet known: former President Theodore Roosevelt and our first Chief Forester Gifford Pinchot. These men gave a broad practical meaning to conservation. To them conservation meant the use of the natural resources for the greatest good of the greatest number for the longest time.

Wilderness, as proposed in the legislation before the Congress would mean the very opposite. In wilderness areas there would be no roads, no campsites, no use of the natural resources. It would mean setting aside vast areas of our public lands for the benefit of only a select few. Its enjoyment would be limited to those with a strong physique and ample finances.

We believe that the natural resources which are to be found in these great public land areas, most of which are in the West, were placed there by the Divine Creator for the benefit of all mankind. We believe the Forest Service gives us a good illustration of how these areas should be utilized. The protection of the watershed for the production of that most important of all natural resources—water—should be the primary consideration but all other available resources within a region should be used in such manner as not to do damage to the watershed. Yes, there should be use—in fact, multiple use of all these resources—but there must be use without abuse.

The Forest Service areas, with its good roads, and numerous campsites, are always available for enjoyment by the average American family. They are readily accessible, either by the old jalopy or the modern station wagon.

Another point that is often overlooked is the fact that, because of the rough and rugged terrain of much of the mountainous regions of the West, there will always be vast areas that must forever remain wilderness in spite of all that man can do. Former Senator William E. Borah, when he first viewed from across Red Fish Lake the majestic and incomparable Saw Tooth Mountains, is quoted as saying, "Man need not attempt to create a park here. God has already created a park far beyond the ability of man to either add or detract."

Yes, we believe in true conservtaion. We believe in conservation as defined by our two greatest conservationists, Theodore Roosevelt and Gifford Pinchot—conservation as it has been practiced by the Forest Service for more than half a century. We believe that true conservation means the use of the natural resources for the greatest good of the greatest number for the longest time.

WILLIAM E. WELSH,
Secretary-Manager,
National Reclamation Association.
WASHINGTON.

[From the Washington Post, May 14, 1960]

WILDERNESS DETOUR

William E. Welch's May 9 letter in behalf of the National Reclamation Association in opposition to wilderness preservation is an excellent candid statement from his point of view, but it corroborates rather than refutes your May 2 editorial, "Wilderness Detour" in support of the wilderness bill, to which it refers.

Your editorial, I note, identifies Mr. Welch's organization as opposed to wilderness preservation and accordingly cites his support of Senator O'MAHONEY's so-called substitute with Senator ALLOTT's proviso as evidence that this O'Mahoney-Allott proposal is not a wilderness-preservation measure at all but part of what you described as efforts to confuse, divide, and scuttle. Mr. Welch's May 9 letter documents your contention very well.

Mr. Welch in behalf of the National Reclamation Association has been a consistent, candid, and respected opponent of the wilderness bill, for he has stated clearly that he does not want wilderness areas protected from dams and reservoirs and therefore he opposes this legislation. His honorable opposition is an excellent proof of the need for legislation if we are to preserve any areas of wilderness, for we believe there should be a few areas that remain free of such installations.

Those who advocate wilderness legislation do not, however, oppose reclamation. They recognize the interests of the irrigation farmers who are Mr. Welch's clients but maintain that these interests can be served through programs that can be so planned as to provide also for saving some of the land in wilderness.

All the areas presently affected by the wilderness bill are now in wilderness status in the National Park System, the national forests, or wildlife refuges, or ranges. Any areas added in the future would first be subject to a stringent procedure that includes public notice, hearings, and congressional scrutiny.

Altogether, at the best, the area of wilderness that can be saved under the wilderness bill program is only a little more than 2 percent. Its advocates believe that in the remaining 97 or 98 percent of the land there are adequate sites for the dams and water-control and storage structures to serve the irrigators. We believe that reclamationists who are in so many ways the beneficiaries of the Federal Government can afford to allow the preservation as wilderness of at least a 50th of our land.

HOWARD ZAHNISER,
Executive Secretary,
The Wilderness Society.

[From the Washington Post, May 26, 1960]

SAVING THE WILD

A recent letter by Howard Zahniser, executive secretary of the Wilderness Society, takes stock of a stock criticism of the wilderness bill now pending before Congress. The complaint referred to is that, under the bill, too much land would be set aside for wilderness. This is a very good point, because it focuses attention sharply on a basic question of land use; namely, what proportion of land space ought to be devoted, by a patriotically proud Nation, to plain love of country, as against plain living making?

American wilderness is but another name for America. I refer of course to the realistic physical America, with its rocks and rills and templed hills and all the rest that gives real substance to any real spirit claimed by the 100-percent American. All that remains of this original America is what is contained in the wilderness areas.

Mr. Zahniser in his letter states that the areas of wilderness that can be saved under the wilderness bill program would cover a little more than 2 percent of the Nation's total. This would leave at least 97 percent for living making. This much would seem to be ample for a Nation priding itself on its genius in this well-known art. Yet some people claim it is not enough, and that 2 percent is too much for love of country. These folks no doubt make no pretense of being "100 percenters."

Question—could they, by some strain of the mathematical imagination, claim even to be "2 percenters?"

BENTON MACKAYE,
Honorary President of the Wilderness Society.
WASHINGTON.

Defense Appropriations and the Bomarc Program

EXTENSION OF REMARKS
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. KING of Utah. Mr. Speaker, as the conference committee of the House and the Senate meet today to resolve the differences between the House bill and Senate bill on the defense appropriation for fiscal 1961, I call upon the House Members participating in that conference to accept the action of the other body on the procurement of Bomarc missiles.

I do so because the Senate bill reflects the latest and best clarification of the importance of the Bomarc program in the maintenance of a strong continental defense system.

When the other body approved in full the Air Force request for Bomarc funds, it enjoyed the benefits of, and was acting upon, information which was not available at the time the House passed its defense appropriation bill. At the time the House acted on this appropriation, the Bomarcs had not entirely proved themselves to be effective weapons. Even so, the Air Force felt that its Bomarc request represented its best judgment on the importance of the Bomarc missile in the defense of this Nation and our neighbor to the north, Canada. The judgment of the Air Force has since been confirmed by several completely successful performances which the Bomarcs have made in test flights against simulated enemy aircraft, and in the recent Senate action restoring the cut by the House made in Bomarc funds.

In my judgment the Senate action represents the practice of sound economy, because the Bomarc program, as projected by the Air Force, would be less costly than the alternative which the House approved. When the House cut the Bomarc request, it authorized expenditures for the procurement of additional F–106 jet fighters to do the defense job which the Air Force has intended that the Bomarcs do. At a greater cost, the F–106's cannot do the job which the Bomarcs would do, simply because the F–106's cannot be constructed and integrated into a continental defense system as quickly as the Bomarcs can.

If the conferees of the House and the other body reach agreement today on the defense appropriation, their report may reach the House floor tomorrow. I urge not only that the House conferees endorse the action of the other body on the Bomarc request, but also that the House itself concur in this action for these reasons: First, as I have already observed, the Senate action represents the best judgment not only of its Members, but of our military experts on the proper and necessary role of the Bomarcs in our defense program. Second, that the Bomarcs will give us a greater overall defense capability at less cost than would the alternative of using jet fighters which, at the same time, cannot be procured as quickly as Bomarcs. And last, that the approval of the Bomarc request will permit the Air Force to fulfill our obligation to our Canadian allies to provide the Bomarcs to fill the launching sites which the Canadian Government already has under construction.

Forest Products Lab Has 50th Birthday

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. WILEY. Mr. President, in the spirit of stewardship, we, as Americans, have the opportunity to enjoy and utilize, but also a responsibility to conserve the invaluable natural resources inherited in our great Nation.

Throughout our history, fortunately, far-sighted leadership has enabled us to conserve such resources.

About 50 years ago, for example, there was established in Madison, Wis., a forest products laboratory. The purpose of the project was to set up a research program for best utilization, management, and conservation of our forest lands.

During its brief, 50-year lifetime, the research laboratory, under Federal jurisdiction—but often cooperating with private industry—has accomplished a tremendously significant record.

Recently, the Wisconsin agriculturalist published an informative article, reviewing a score of the accomplishments by the laboratory.

Reflecting the outstanding work of the research center in utilization, management, conservation of our forests, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREST PRODUCTS LAB HAS 50TH BIRTHDAY—U.S. FOREST SERVICE BEGAN RESEARCH AT THE MADISON LABORATORY IN 1910

This is the golden anniversary year for the U.S. Forest Products Laboratory at Madison.

Fifty years ago when it started on the University of Wisconsin campus, it was the only wood research laboratory in the world. Its research workers had but crude tools to work with but they got their work off to a good start. The goal they set was to find new ways of making forest products to serve man.

The pattern began in the late 1800's, when the first stirring of professional forestry began in this country. In Europe, forestry had been practiced for three centuries, but with little research, none of which was of much value to this country.

In 1890 a little forest products research was started in cooperation with a number of universities. The Forestry Division of the Department of Agriculture began work on naval stores in the South and did some experimental pulping at Boston. But by 1898 the Forestry Division had only 12 employees.

FOREST SERVICE BORN

The old roughrider, Teddy Roosevelt, appointed Gifford Pinchot head of the Forestry Division in 1898. Later the division was changed to a bureau. In 1905 it became the Forest Service, still with Pinchot in charge.

Roosevelt and Pinchot were conservationists. "Forestry," said Roosevelt, "is the preservation of forests by wise use." He said this at a time when forests were being slashed down ruthlessly. Little was being done to use byproducts which were going to waste, or to insure future forest yields.

Throughout this period of forest exploitation Pinchot, with Roosevelt's backing, was hammering out the pattern of the U.S. Forest Service. As a part of it a branch of Forest Products was set up.

STRUGGLE TO GET STARTED

This was a time of probing for the whole Forest Service. The Forest Products branch was forced to find help wherever it could. The research efforts were scattered. There was no central wood research center where experiments could be conducted under standard conditions.

Feelers sent out in 1909 brought several generous offers. Finally the proposal of the University of Wisconsin, under President Charles R. Van Hise, was accepted. Van Hise offered a new building complete with heat, light, and power. Research workers began their move to Madison before the year was over. The building was finished in the spring of 1910 and opened its doors on June 4.

The Forest Products Laboratory soon outgrew its original building. In 1930 Congress appropriated $750,000 for a new five-story building. The University of Wisconsin furnished 10 acres of land west of the campus for this building, which was built as part of the depression public works program. The building was finished in 1932.

Research work at the Forest Products Laboratory has covered a wide range—from how to make fenceposts last longer to how rocket fuels made from wood will react in outer space. A few of the important research milestones are listed below.

RESEARCH ACHIEVEMENTS

Semichemical pulping is used by 47 pulping plants today. This process accounts for 2.3 million tons of pulp made into products worth $300 million.

The cold soda pulping process, recently developed, was responsible for the use of 200,000 cords of hardwood in 1959 for which there had been no market. This wood was converted into 208,000 tons of paper worth $25 million.

Prefabricated houses depend heavily on research done at the Forest Products Laboratory. Over 75 percent of the prefabricated houses built today use basic construction developed at the Laboratory.

Many farm buildings, churches, schools, and other buildings use laminated wood arches developed at the Laboratory. Plywood, too, has been improved by basic research in laminated wood.

Lumber kilns for drying lumber are standard in the wood industry. Over 5,000 kilns in use today depend on facts uncovered by Forest Service scientists at the Laboratory. The gross value of the lumber these kilns dry is $300 million a year.

Packaging has had a big boost from research work. The annual packaging cost in this country is $8 billion. Every industry, as well as every individual consumer, depends heavily on modern packaging techniques. Packaging is partly responsible for our high standard of living.

In the future we can see this Nation's population growing faster than the supply of raw materials. The Forest Products Laboratory is seeking ways to use wood that is now going to waste to help stretch our forest resources.

Accounting for Congressional Expenses

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mrs. DWYER. Mr. Speaker, it is imperative, I believe, that the House take action prior to adjournment next month on legislation to establish a workable and effective system for the public accounting by Members of Congress of their expenditures of public funds.

Only in this way can we help erase the suspicion and cynicism among the people bred by reports of loose handling and inaccurate accounting of public moneys by Members of Congress. Only in this way can we help to restore the confidence of the people in the integrity of their elected representatives—a confidence that is essential to the proper functioning of free, representative government.

In order to encourage the earliest possible action by the House, I have introduced a comprehensive bill which I believe would establish the necessary procedures in the legislative accounting system of the House to assure full, frequent, and public understanding and control of House expenses.

Mr. Speaker, I know of no Member of Congress who has publicly objected to legislation of this kind or who has maintained that some kind of reform is unnecessary. On the contrary, there is general agreement that present accounting procedures are inadequate to protect the public interest. For these reasons, therefore, I urge the leadership of the House, on both sides, to make it possible for the House to act during this session on expense accounting legislation. Since the House Administration Committee is presently studying this matter, there seems to be no good reason why a bill cannot be reported in time for action this year.

The principal provisions of my bill, Mr. Speaker, are as follows:

No payment could be made from the contingent fund of the House except in accordance with regulations issued by the House Administration Committee and on vouchers approved by that committee.

All such vouchers approved for payment, together with supporting documentation, would be available for public inspection.

At least once every 6 months, the Comptroller General of the United States would audit all disbursements from the contingent fund and within 30 days after completion of the audit would report the results to the Speaker of the House and the House Administration Committee.

Within 30 days from their return from foreign travel, for the purpose of investigation, study, meetings, or conferences, each Member of the House and Senate would be required to file with the Senate Committee on Rules and Administration or the House Administration Committee a statement of expenses including: an accounting of foreign counterpart funds used for the Member's expenses, the number and identity of all persons in the party, and information concerning expenses, if any, paid for husbands or wives of Members from Government or counterpart funds and services, if any, performed by such persons for the Government.

At the beginning of each session of Congress, all such expense statements together with a detailed statement of the manner in which the contingent fund of the House has been expended during the preceding year would be printed as a House document.

Certain provisions of present law, including the "finality clause" which hold that payments approved by the House Administration Committee are conclusive on all departments and officers of the Government, would be repealed.

These Are My Favorite Things—Heart Fund Contest in Alaska

REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. BARTLETT. Mr. President, some time ago radio KBYR of Anchorage, Alaska, sponsored a contest in connection with the heart fund drive. A goodly number of prizes were offered to the contestants writing the best essays or poems, 100 words or less, on the theme "These Are My Favorite Things." This theme was adapted from the title of a song made popular by Miss Mary Martin, whose appearance in Alaska on behalf of the Alaska Crippled Children's Association endeared her to the people of the 49th State. Mr. President, the general manager of KBYR, Mr. E. "Doc" Pournelle, has made available to me a few of the entries in the contest. I ask unanimous consent that several of these entries, including the first prize winning entry by Lloyd Slagle of Anchorage and the second prize winner by Elizabeth Tower of Anchorage, be printed in the Appendix of the RECORD.

There being no objection, the entries were ordered to be printed in the RECORD, as follows:

MY FAVORITE THINGS
(By Lloyd Slagle)

The morning sun on a fishing stream,
Hot apple pie with thick, whipped cream,
A baby's sweet smile reserved just for kings,
These are a few of my favorite things.
Winter's first blanket of clean, fallen snow,
A letter from home when spirits are low,
The first flocks of geese on homeward-bound wings,
These are a few of my favorite things.
The unequaled essence of campfire smoke,
Being able to laugh when you're hungry and broke,
Of all the joys each new day brings,
These are a few of my favorite things.

MY FAVORITE THINGS
(By Elizabeth A. Tower)

To fill my lungs with air that's fresh,
To stretch with joy my bones and flesh;
To join with friends beside a fire,
To feel the warmth its flames inspire;
To see revealed as ice-fogs rise,
The world in sugary disguise;
To watch the sunset color change,
On distant snowy mountain range;
To have ideas both new and free,
To make creations come to be;
To give of self and love the giving,
To glimpse a purpose in my living;
My joy in these I here renew,
Where smog and custom hide not view.

THESE ARE MY FAVORITE THINGS
(By Mrs. U. E. Schulz)

I would top my list of favorite things with our great new State of Alaska with its fabulous natural beauty, the genuine friendliness of its people and their desire to help others.

A cow moose with her calf nibbling on a young birch tree at the edge of a clearing, the afternoon sun changing the snowy white mountains to a glorious array of pink, orange, and red; the dancing delicately tinted aurora in the northern sky on a clear winter night are favorites with me.

(By Ickuk Anaktuvuk)

This is my contribution to the Heart Fund. Blueberries and tomatoes and frozen sheefish, whale oil and muktuk and exotic dishes. Filter tip ciggs, and chrome-plated lighter. These are a few of my things favorite. When the wind wails and the power fails I turn on my transistor and hearing old Doc's sound like his mouth full of rocks. Then I head for liquor store.

Tokyo Riots Laid to Dope

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal which I received from Mr. Barnee Breeskin, Barnee Breeskin Enterprises, Washington, D.C., with which he forwards a column by Mr. Lee Mortimer from the New York Mirror of Saturday, June 18, 1960, entitled, "Tokyo Riots Laid to Dope":

BARNEE BREESKIN ENTERPRISES,
Washington, D.C., June 21, 1960.

Representative DANIEL FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: I thought you would like to read last Saturday's Daily Mirror, in which Lee Mortimer puts his finger on a major problem that is being lost in the situation all over the world. Please read the words carefully about the type of insidious project of dope infiltration that doubtless was brought to Tokyo by Communist money and could probably be at the root of much of the Cuban situation.

Knowing how fearless and forthright you are, I wonder if you will give some thought and project this idea for close scrutiny. If you think well of it, I would like the insertion to be put in the CONGRESSIONAL RECORD.

Sincerely,

BARNEE.

TOKYO RIOTS LAID TO DOPE

(By Lee Mortimer)

You can blame dope for the almost unbelievable frenzy of thousands of Red-led students whose rioting forced cancellation of President Eisenhower's visit to Japan.

For weeks before the President's scheduled arrival, the students were hopped up with cocaine, marihuana, and hahish—provided freely behind the scenes by Communist plotters.

I saw the advance planning for the demonstrations in Tokyo only a few weeks ago. Students not old enough to vote tramped through streets demanding that Americans leave Korea.

It did not require an expert to determine that they had been keyed into a state of fury by large and unadulterated doses of dope, in all its insidious forms.

The saddest part of it all is that until Korean and Chinese Reds—working closely with the Tokyo underworld and international mobsters—got going, Japan never had a major narcotics problem.

Now, thousands have been transformed into dangerous junkies—fed by dope-pushers working out of coffeeshops, espresso clubs, beatnik jazz joints, and ginza and Shinjuku beer halls. They are indeed poor substitutes for the delicate and historic tea and geisha houses which other younger generations knew.

What does all this point to? A revival by Reds of the conspiracy since time immemorial by would-be conquerors to weaken a people and a nation with opium.

How much of it has poured into Japan in the past decade?

The United Nations Commission on Narcotics Drugs was informed as recently as April 29, 1960, that an estimated $278 million in dope was smuggled into Japan from Communist China in the past 10 years.

The Communists and international dope-syndicate bosses have found it profitable to work hand in glove to finance the "big dope show" in Japan.

From the fields where the poppy grows, dope is sent by Red Chinese to Hong Kong and then loaded aboard junks and other boats for shipping to the Land of the Rising Sun.

After being processed in Hong Kong, heroin is turned over to gangsters who, through intermediaries get the stuff through to Tokyo.

They use seamen, crewmen aboard planes and even armed services personnel—recruited by bar girls in Hong Kong, Yokohama and Seoul—to carry the deadly cargo of dope to its destinations.

Red North Korea is another major source of supply for Japan. Koreans posses a unique diplomatic status in Japan which enables them to move freely in and out of the big Red Korean colony that lies between Tokyo and Yokohama—not too far from Handa Airport where Ike would have landed had he gone to Japan.

South Korea informed the United Nations that of 700 Red North Korean agents captured in its territory, 40 percent carried narcotics.

The global illicit narcotics traffic picture is indeed a dismal one.

But, it is aggravated by the fact that the United States is now the target of a heroin traffic originating in Red China and other Far Eastern areas. And dope is being smuggled via Japan to our west coast ports.

Thus it is that the Red plotters—who doped thousands of the students who rioted in Tokyo against Ike's visit—are also aiming their dope offensive at America * * * with the connivance of international gangsters.

Tributes to Television Station WGN–TV

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22, 1960

Mr. DOUGLAS. Mr. President, one of the most important radio and television stations in the Midwest is WGN and WGN–TV (channel 9). It has served the communities within reach of Chicago with many programs of high quality, both on public questions and in the entertainment field.

It gave me real personal pleasure, and was a real tribute to the station's able general manager, Mr. Ward N. Quaal, when WGN–TV recently received two national awards for excellence. Its "Great Music" hour shared the Peabody Award for musical entertainment. At the same time, its news department, under Mr. Tom Foy, received the Sigma Delta Chi Award for distinguished reporting, because of the way it handled the news in regard to an airplane crash.

Notwithstanding the fact that the owner of the station, the Chicago Tribune, and I are known to have differed sharply on many political issues, I am glad to ask unanimous consent to have printed in the Appendix of the RECORD various newspaper articles describing these awards and the text of the Sigma Delta Chi Award.

There being no objection, the articles and the award were ordered to be printed in the RECORD, as follows:

CITATION FOR THE WGN–TV NEWS DEPARTMENT, CHICAGO, ILL.

For distinguished service in the field of television reporting during 1959, the Sigma Delta Chi award is made to the WGN–TV News Department, Chicago, Ill.

In its coverage of an air crash near Midway Airport, WGN–TV displayed an ability, not only to get the story in the face of obstacles, but to get it accurately, completely, effectively and uniquely.

WGN–TV obviously got to the crash scene quickly and recorded a comprehensive film story under difficult, predawn conditions. A vivid, direct assessment of loss of life, injuries and property damage, an eyewitness account and a unique follow-up interview with injured victims in hospitals were outstanding. Film editing was good both from the standpoint of telling a complete story and furnishing an interesting mixture of air shots, closeups and varying range shots of the aircraft, crowds and damaged buildings.

All in all, the coverage was full, complete, well-rounded and technically excellent.

[From the Chicago Daily Tribune, Apr. 20, 1960]

SYMPHONY WINS TOP TV AWARD

(By Larry Wolters)

WGN–TV's "Great Music From Chicago" received the coveted George Foster Peabody Award Tuesday. The "Play of the Week," created by WNTA, Newark, which is carried by WGN–TV Sunday nights, also won a Peabody award.

The winners, along with others, were announced at a luncheon meeting of the radio and TV executives society in New York City by Bennett Cerf, Peabody board chairman. The awards were presented by Dean John E. Drewry, of the University of Georgia's Henry W. Grady School of Journalism.

"Great Music From Chicago" shared the awards under the category TV entertainment, musical, with the "Bell Telephone Hour" presented on NBC.

The awards were set up in 1940 by the Georgia school to recognize the most distinguished and meritorious service to broadcasting to memorialize the late Mr. Peabody, New York philanthropist.

The citation to WGN–TV read: "The George Foster Peabody award is hereby presented to WGN–TV for its distinguished series, "Great Music From Chicago," featuring the Chicago Symphony Orchestra. This prestige program, presented live and in color, with many of the world's outstanding conductors taking turns on the podium, represents an unmatched effort to bring the best in music to the public and contributes vastly toward improving the image of the television art."

Ward L. Quaal, vice president and general manager of WGN, Inc., accepted the award.

Quaal noted that this is the first time a Chicago station has won Peabody awards 2 years in a row. Last year "The Blue Fairy" won the award for the best children's program.

[From the Chicago Tribune, Apr. 18, 1960]

NEWS SOCIETY CITES WGN–TV FOR REPORTING

WGN–TV was cited Sunday for its television reporting by Sigma Delta Chi, journalism fraternity. The fraternity also named Saul Pett, Associated Press reporter, as winner of this year's Sigma Delta Chi award for distinguished general reporting. Sigma Delta Chi also announced 13 other top awards for work in press, radio, television, and journalistic research performed in 1959. The medallions and plaques will be awarded during the annual banquet ceremony at the National Press Club in Washington, May 18.

[From the Chicago Sun-Times, Apr. 25, 1960]

IT'S THE MOLLOY—PROUD RECORD BEING BUILT BY CHANNEL 9

(By Paul Molloy)

Whenever I speak before a group, the question period invariably produces this beef: "Why don't Chicago broadcasters perk up and do something?"

Well now, just a minute. It may be true that much of Chicago's radio-TV output is patchy and frivolous. But all is not arid. I just happen to have in my pocket, here, some interesting reports on the current scence. It would be unseemly to deny them rousing comment:

Within a 48-hour period last week, Channel 9 picked off a brace of national honors that should remind the country at large that Chicago's video desert still has a refreshing oasis or two. The station snared a prestigious George Foster Peabody Award for its "Great Music From Chicago" series.

(In a notable coincidence, "Great Music" was succeeded at the end of its run by "Play of the Week," which also plucked a Peabody last week.)

Additionally, channel 9's news department won a Sigma Delta Chi award for distinguished TV reporting. It's significant when such a nod from the journalistic fraternity goes to an independent station lacking the facilities of network affiliation.

FILM—AND INGENUITY

Over the long pull, channel 9 has reason for pride. Having no access to the ambitious programs delivered by ABC, NBC, and CBS, it must depend solely on syndicated film and its own ingenuity at the local level. It must make do with what it has within its own shop against the Captain Kangaroos, Dinah Shores and "Gunsmoke" of net work competition.

Nevertheless, it has the only women's program in Chicago—Fran Allison's daily forenoon hour. It has the only regular live church origination—Sunday's "Chicagoland Church Hour." It has the only live children's programs of substance—"Treetop House" and "Stop and Go." It has the only local variety format—the Wally Phillips Show. (The fact that this one badly needs first aid isn't important at this point. The fact that the attempt is made is important.)

And in the area of animation, the station has the only cartoons of quality currently on display in Chicago—"Garfield Goose" and "Huckleberry Hound."

Lastly, channel 9 has the only live baseball coverage in town, and it's superlative. On Sunday, local fans watched the Cubs play the Giants. On Tuesday and Wednesday, they will see two Cub duels with the Dodgers. On Saturday afternoon they'll have the Sox-Tigers tussle, followed after dinner by the Cubs-Cards clash.

Channel 9 now delivers home and road games, in the afternoon and in the evening, and in color and black and white. No other baseball city in the Nation can make this statement.

[From the West Belmont Leader, Dec. 23, 1959]

WE LIKE RADIO AND TV

With all of the vicious attacks being carried on against our radio and TV brethren, we feel that it's about time someone came to their defense.

It's our firm belief that both mediums are doing an overall excellent job of entertainment, which is what most of us want out of radio and TV. There are some bad apples, of course, but for every diskjockey taking payola there are newspaper columnists we know who make them look like pikers.

We think that Chicago is blessed with some of the finest radio and TV talent in the country and we know that unbiased house-to-house surveys (not those nutty ratings) will bear us out.

For our part, we think that the finest local job is being done at WGN radio and TV. We wake up in the morning to the cheery patter of Eddie Hubbard and are lulled to sleep at night by the dulcet tones of Franklyn MacCormack. During the day we try to catch as much of Wally Phillips as we can, for in our book he is the funniest man on the air. And if we're wending our way home from downtown during the rush hour, we listen to the traffic advice of Flying Officer Leonard Baldy, corny jokes and all.

As far as local TV coverage is concerned, WGN-TV so far overshadows the others, that no one is second. Their sports coverage with Jack Brickhouse and Vince Lloyd is professional, which is a word that all sports lovers know the meaning of. Their local programing gets right into the communities, such as their upcoming simulcast of the Christmas morning services at St. Andrew's Church, 5447 Addison, and many other community service programs.

There is a naturalness and sincerity about WGN announcing that is felt by the public. Vince Lloyd, Norm Kraeft and Herb Lyon, the conductor of the "Tower Ticker," in the Chicago Tribune, whom we seem to run into more often than some of the others, are all three just as friendly and warm off the air as they are on the air. Which seems to be typical of the entire "Tribune family."

About the only suggestion we have to make to WGN is to get Herb Lyon's "Ticker" program back on TV real pronto at a time when more people can view it. This was brought home to us forcefully last Monday when we watched Herb do a fine MC job at the weekly AGVA talent show at Chez Paree. Herb was at his best, which is pretty good. Herb is one of the "nice guys" of the newspaper profession, and we know the public appreciates his sincerity.

Maybe Herb's "ratings" weren't so high, but it's been our contention that "ratings" need the investigation, not the TV industry. For every one person that watches the "rated" shows we know 10 who have been entertained by Herb Lyons and Wally Phillips. Let's see them back soon.

[From the Chicago Sun-Times, April 20, 1960]

"GREAT MUSIC" WINS PEABODY AWARD

Channel 9's Great Music from Chicago was named cowinner of the Peabody Award for TV musical entertainment Tuesday. Sharing the honor is NBC's Telephone Hour.

The American Broadcasting Co. won the Peabody award for television news for its presentation of Soviet Prime Minister Nikita Khrushchev's visit to the United States.

Other awards include the nonmusical television entertainment award to WNTA-TV, Newark, N.J., for the Play of the Week and to David Susskind for "The Moon and Sixpence," NBC, and the television education award to CBS for "The Population Explosion," and to WGBH-TV, Boston, for "Decisions."

Winners were announced by publisher Bennett Cerf, Peabody board chairman. Awards were presented by Dean John E. Drewry of the University of Georgia's Henry W. Grady School of Journalism, which administers the awards with the Peabody board.

The awards were set up in 1940 by the Board of Regents of the University System of Georgia to recognize public service by radio and television in the memory of George Foster Peabody, a native of Columbus, Ga., who became a successful New York banker and philanthropist.

Other winners:

Television contribution to international understanding: Ed Sullivan Show, CBS, and Small World, CBS.

Local television public services: WDSU-TV, New Orleans.

Television special awards: Dr. Frank Stanton, CBS, and "The Lost Class of '59," CBS.

Radio news: The World Tonight, CBS.

Radio public service: Family Living, '59, NBC.

Local radio public service: WCCO, Minneapolis.

Social Security Act Amendments

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mrs. DWYER. Mr. Speaker, I support the pending legislation because I believe it makes an important contribution toward updating and improving our social security system and permitting that system to be as useful and helpful as possible to the elderly, the retired, the disabled and the dependent.

The economic and social circumstances which affect the lives of our people are constantly changing. It is essential that Congress keep up with these changes, understand the way in which they affect the people concerned, and act accordingly so that social security laws and regulations reflect these changes and are adapted to the real needs of real people.

To a great extent, the present bill does this:

By removing the age 50 eligibility requirement of the disability insurance program, we shall bring badly needed help to an estimated 250,000 insured workers and their dependents who—despite their disability—have not been allowed to qualify for the benefits they need and deserve.

By providing a 12-month period during which benefits are continued for all disabled workers who attempt to return to work, we shall strengthen the rehabilitation features of the disability program and encourage, rather than discourage, workers to overcome their handicaps and resume their places as constructive and productive forces in our national life.

By eliminating the 6-month waiting period for disabled workers who have returned to work and then become disabled again, we shall ease these workers over a particularly trying time when they need help the most.

By liberalizing the insured status requirement, about 600,000 persons will be eligible for minimum social security benefits immediately, and ultimately about 1.4 million will be eligible who would not otherwise have qualified. This liberalization will help especially the older workers who come under the program in the later years of their working lives.

A number of amendments will remove inequities in the present law which have worked to the disadvantage of widows, especially those over 75, and the children and other survivors of insured workers.

The bill will also extend coverage, and protection, to about 300,000 additional people who do not now participate in the Social Security System, including self-employed doctors and domestic workers, thereby making it possible for them to provide necessary survivorship and disability protection for themselves and their families.

In a related field, the bill would provide the authorization for increased appropriations in the important maternal and child welfare programs, including services for crippled children.

The legislation also would improve the existing Federal-State program of employment security by, among other things, building up the fund from which advances to States are made when their reserves have been depleted in times of heavy unemployment. This will further strengthen the whole unemployment compensation program.

In the vital field of medical care, the legislation is designed to encourage States to make improvements in their medical payment programs for old age assistance recipients.

Of all the changes and improvements made by this bill, unquestionably the

most important and controversial is the proposed new program of medical services for the aged. The committee has recommended a voluntary program, similar in many respects to the kind of program envisaged in legislation I introduced earlier this year. Ten million persons over 65 with relatively low incomes would qualify for assistance in the event they incur extensive medical expenses. This program would be voluntary, with Federal and State Governments sharing the cost under an equalization formula in which the Federal share would range from 50 to 65 percent. The medical services which would be included in the program are especially designed for older persons. An estimated 1½ million people over 65 each year require the kind of medical services specified in the bill.

The committee's recommendation of such a program, Mr. Speaker, marks a major step ahead in helping older people meet the often catastrophic impact of serious illness. The problem is universally acknowledged to be one of the most serious which our country faces. The controversy exists only in relation to the best means to meet the need.

Proponents of the plan to make medical care for the elderly an integral part of the social security system will not be satisfied by the committee recommendation. Yet, the House must either accept or reject this program, at this time, as it is. Whatever may be one's views about the Forand bill, the present proposal is a constructive and forward-looking one. For this reason, I support it.

One Out of Five in United States Lacks Bare Necessities

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. WILLIAMS of New Jersey. Mr. President, an administration official recently told a conference of social workers that one of every five Americans does not have sufficient income to buy a minimum of nutritional food, adequate clothing, and decent shelter.

His estimates are, perhaps, lower than those of others who have surveyed the American scene during an era often described as one of peace and prosperity. Nevertheless, his words assume particular importance because of the position he holds.

Mr. President, an article in the Newark (N.J.) Evening News of June 7, gives a brief account of the speech to which I refer.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE OUT OF FIVE IN UNITED STATES LACKS BARE NECESSITIES

ATLANTIC CITY.—One of every five Americans does not have sufficient income to buy a minimum of nutritional food, adequate clothing, and decent shelter, the 87th annual forum of the National Conference on Social Welfare was told yesterday.

William L. Mitchell, Commissioner of Social Security in the Department of Health, Education and Welfare, said that the families of more than one of every four U.S. children live below bare maintenance levels and that today's poor "tend to be concentrated in certain areas and regions and among specified segments of the population."

The speaker told some 5,000 social work leaders that the remedy for the plight of these people is not to be found solely in expanded social welfare programs.

"Social welfare programs have no monopoly on the responsibility for dealing with poverty," Mitchell declared. "We should forcefully and convincingly refute any community or political tendency to assume that they have.

"Measures far beyond the scope of social welfare are needed to bolster the economy in these depressed areas. The situation calls for the coordinated use of many disciplines and many programs.

"However, until we are joined by these other programs, social welfare, I feel, must continue not only to bear a disproportionate share of the burden, but must also serve as the scapegoat for a conscience-stricken public," he said.

Alaska Shipping

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. RIVERS of Alaska. Mr. Speaker, my purpose is to submit for the consideration of my colleagues a much needed clarification of the extension of remarks of Hon. THOMAS M. PELLY of Seattle, Wash., published in the Appendix of the RECORD on Tuesday, June 21, under the title of "The Alaska Shipping Crisis." In speaking of the proposal contained in S. 2669 to extend for 2 years existing provisions of law which exempt from Coast Guard inspection and manning requirements certain vessels operated by a merchants' cooperative association between Seattle, Wash., and Alaska, Mr. PELLY creates the impression that the exempted ships operate throughout the Alaska trade and are ruining the principal common carrier in the Alaska trade, to wit: his constituents, the Alaska Steamship Co. of Seattle, Wash.

In fact, these small vessels are operated to accomplish only two round trips weekly through the inland waters of the Pacific coast from Seattle to Alaska and serve only the communities of the southeastern panhandle of Alaska, wherein live from 15 percent to 20 percent of the people of Alaska. As regards the southeastern portion of the Alaska trade, the Alaska Steamship Co. is without competition from any other common carrier except a minor amount of air freight delivered by airplane. As to these small boats operated by the merchants' association, such competition as they can afford is limited within their small capacity to a few principal ports in southeastern Alaska. The most important function of these small vessels is to deliver cargo to many small towns and villages which are not given any service by Alaska Steam, or only infrequent and intermittent service, thus relieving Alaska Steam of many calls which would be uneconomical for its big freighters.

The bulk of the Alaska trade is to the westward, including the railbelt, and covers about 80 percent of the people of Alaska, and is served by Alaska Steam and two barge lines. This major portion of the trade is not affected in the least by the small vessel operations in question. I can, therefore, say positively that these small boat operations to southeastern Alaska have had very little to do with the fact that Alaska Steam has increased its freight rates 26 percent throughout the Alaska trade during the last 2½ years.

As further clarification, I wish to point out that the first editorial from the Anchorage Daily Times included by Mr. PELLY in his extension of remarks on the subject of a possible widespread curtailment of service to Alaska by the Alaska Steamship Co. has proved to be a false alarm. Under date of June 10, 1960, there was transmitted to me a press release denying the rumor of such curtailment of service, reading as follows:

Alaska Steamship Co. has never considered abandonment of service as reported out of Washington, D.C., by the Anchorage Times. It is true that we face serious problems: competitive conditions, rising operating costs, possible loss of mail revenue, and difficulties in trying to make a reasonable return. However, the thought of eliminating service to all ports but Seward and Whittier has never crossed our minds. Depending on our ability to cope with the problems faced, it may become necessary to consider some curtailment of service. That time has not yet come.

Resolutions of South Dakota American Legion Convention

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. MUNDT. Mr. President, during the past week the South Dakota Department of the American Legion held its annual convention in Sioux Falls. It was my privilege to be in attendance for a number of the sessions of the convention, including last Sunday's program at which time I had the honor of introducing the Vice President, Mr. NIXON, as the afternoon speaker.

This particular convention was notable in a number of respects, and one which I wish to mention is the fact that in the selection of the South Dakota department commander for the next year, the American Legion selected the son of a man who earlier served as State commander. The new commander is William Lenker of Sioux Falls. Bill Lenker's father, Dr. Carl B. Lenker of Winner, held this esteemed post of leadership in 1926. This is the second time in national Legion history that a father and

later a son both served as a State commander.

The first was the former Governor of Indiana, Robert E. Gates, who was elected in 1932 as Indiana department commander. His son was elected in 1958.

The American Legion Convention in South Dakota brought forth a number of resolutions. I ask unanimous consent that the resolutions may be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTION

Whereas recruiting costs as estimated for the military services for fiscal year 1959 reached a total of $61,992,100, of which amount the Army spent $20,419,100, the Navy $18,067,000, the Marine Corps $9,876,000, and the Air Force $13,630,000;

Whereas in carrying out its recruiting activities the Army utilized 2,867 persons operating 961 recruiting stations, the Air Force used 2,630 military and 113 civilians in its recruiting activities and operated 871 stations, the Navy operated 975 stations in 1957, and the Marine Corps operated 465 recruiting stations;

Whereas the budget for the fiscal year 1959 for the Selective Service System to operate its more than 4,000 local boards throughout the country was $29,333,848, part of which is used for activities not directly connected with manpower procurement;

Whereas unification of recruiting for active and reserve components of the Armed Forces by the Selective Service System would prove beneficial and economical in that one manpower procurement agency would furnish manpower for the Armed Forces in the same manner as the Civil Service Commission provides civilian manpower for all governmental agencies;

Whereas the more than 4,000 local boards of the Selective Service System are conveniently located throughout the country to better serve the young men and women who may desire to enlist in the Armed Forces of the United States;

Whereas local board clerks at the time of employment are instructed in recruiting matters and the advantages offered by each branch of the Armed Forces; in recognition of their assistance to recruiters, certificates of appreciation have been awarded by all of the branches of service throughout the Nation and its possessions;

Whereas local board clerks have personal knowledge of nearly all registrants' backgrounds and for that reason would be best qualified to furnish the respective Armed Forces with the kind of information they require on prospective enlistees;

Whereas most of the manpower for Reserve and National Guard components is provided by indirect methods through the Selective Service System; and

Whereas the Congress has provided laws for the unification of the Armed Forces and has created unified Armed Services Committees: Now, therefore, be it

Resolved by the American Legion, Department of South Dakota, meeting in Sioux Falls, S. Dak., this 17th day of June, 1960, That it be recommended to the Congress of the United States that the recruiting activities of all branches of the Armed Forces be consolidated and that the Selective Service System be authorized to develop to the satisfaction of the Department of Defense a manpower procurement plan that will supply required manpower for all services of the Department of Defense.

RESOLUTION

Whereas there was a news item in the U.S. News & World Report publication under date of June 6, 1960, that some New York City jobber was selling surplus 48- and 49-star U.S. flags to the inhabitants of Haiti, and that the folks there were making dresses of them and also using them as they would just any cloth, even making scrub rags of them, and

Whereas the American Legion and its members have always been deeply concerned over the treatment accorded our national colors and continuously urges proper display and honor to our national flag everywhere, indoors and outdoors, in our schools, in our churches, in various organizations, in offices and business places, at public gatherings, at home and abroad, and

Whereas the American Legion and its members strongly opposes willful mistreatment, improper display, or desecration of our national flag: Therefore be it

Resolved, That the American Legion, Department of South Dakota, in convention assembled in Sioux Falls this 17th day of June, 1960, urges the Congress of the United States to enact legislation making any willful desecration of our national colors an offense against the Government of the United States and a person found guilty of such an offense to be liable to a very heavy fine and imprisonment.

RESOLUTION

Be it resolved, That the American Legion, Department of South Dakota, in 1960 State convention assembled, vigorously opposes any repeal, modification, or weakening of the so-called "National Defense Student Loan Program Oath and Affidavit" now required to be filed by student loan borrowers from the Federal Government with the U.S. Commissioner of Education in conformity with section 1001(f) of the National Defense Act of 1958; and, which oath in substance requires allegiance to the United States and support of the Constitution and laws of the United States against all enemies, and which affidavit in substance provides undersigned does not believe in, is not a member of, and not a supporter of any organization which believes in or teaches the overthrow of the U.S. Government by force or illegal methods.

RESOLUTION

Whereas readjustment to civilian life and economic problems made it difficult for many veterans of World War II and the Korean conflict to maintain their policies of national service life insurance upon being separated from service; and

Whereas with advancing age and growing family responsibilities, such veterans desperately need insurance protection at a rate they can afford; and

Whereas the right of World War II veterans to purchase national service life insurance was abruptly discontinued on April 25, 1951, and Korean veterans were given only 120 days after separation in which to apply for insurance; and

Whereas it would be simple justice to make national service life insurance available to those veterans of World War II and the Korean conflict who for one reason or another were not in a position to take advantage of previous opportunities: Now, therefore, it is hereby

Resolved by the American Legion, Department of South Dakota, in convention assembled in Sioux Falls this 17th day of June 1960, That the Congress of the United States be urged to enact legislation in the current session of the Congress, such legislation to give the right to World War II and the Korean conflict veterans to contract with the Veterans' Administration for new policies of national service life insurance, under substantially the following conditions:

1. Only those veterans in good health (except for service-incurred conditions) would be eligible for new insurance, with an overall limit of $10,000 coverage.

2. The right to apply for such insurance should be limited to 1 year from the date of approval of the act.

3. The veterans concerned should pay the administrative cost, such cost to be determined by the Veterans' Administration and added to the regular premium rate for new insurance issued: Be it further

Resolved, That H.R. 11045 now before the Congress with the Long amendment in effect accomplishes what is requested in this resolution and that we favor passage of H.R. 11045 with Senator LONG's amendment thereto.

RESOLUTION

Whereas the act of Congress of the United States of America which provides for direct loans for veterans in areas where housing credit is otherwise not generally available is about to expire; and

Whereas said law is vitally needed in the areas where other loans are not readily available; and

Whereas over the period of years during which these loans have been made said loan program has been exceedingly successful and has resulted in great benefit to the veterans involved, and has actually been a financial success to the U.S. Government: Now, therefore, be it

Resolved by the American Legion, Department of South Dakota, in convention duly assembled in Sioux Falls this 17th day of June 1960, That every effort be made by the South Dakota Representatives in Congress to the end that legislation be enacted at this session of Congress to provide for an extension of said direct veterans loan program in areas where housing credit is otherwise not generally available, until February 1, 1965, and in conformity with bills now pending before the Congress of the United States.

RESOLUTION

Whereas Public Law No. 346, 78th Congress, provided for an effective employment counseling and job placement service for veterans of all wars, to the end that they shall have the maximum of job opportunity in the field of gainful employment, and

Whereas this service has materially enhanced the economic welfare of veterans, and has contributed substantially to their favorable position in the labor force, and

Whereas there is a continuing need for this service to assist veterans in making proper job readjustment when they become unemployed or find it necessary to change jobs—as is evidenced by the thousands of such veterans who utilize the facilities of the services throughout the country each month: Therefore be it

Resolved, That the American Legion, Department of South Dakota, in annual convention assembled in Sioux Falls, S. Dak., June 18, 1960, goes on record as urging the National Congress to appropriate adequate funds, annually, for the effective administration of the employment security program, including the Veterans Employment Service and the public employment service systems.

RESOLUTION

Whereas the American Legion, Department of South Dakota, in convention assembled at Sioux Falls this 17th day of June 1960, does hereby commend the President of the United States, Dwight D. Eisenhower, in his courageous, steadfast, and uncom-

promising stand at the recent security conference, the failure of which was caused by the prearranged design of Premier Khrushchev of the Soviet Union, and

Whereas the American Legion, Department of South Dakota, commends President Eisenhower in his determination and desire to visit Japan and we regret that such visit and his desires were thwarted by the action of a small organized minority group controlled and dictated to and manipulated by Moscow: Now, therefore, be it

Resolved, That the Department of South Dakota of the American Legion compliment and encourage the President in his stand, in his action and in his views and urges him and his successors in office to maintain the strong stand of no appeasement to any would-be aggressor: Be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States forthwith.

Explosion in Caribbean Could Take Place Soon

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. FLOOD. Mr. Speaker, developments in Cuba and in the Caribbean area are becoming more ominous with each passing day. In line with this progressively worsening international situation, I include a letter of transmittal which I received from Mr. Anthony Harrigan, associate editor, the News and Courier, Charleston, S.C., with which he forwards an article that he has written which appeared in the News and Courier on June 12, 1960, entitled, "Explosion in Caribbean Could Take Place Soon":

THE NEWS AND COURIER,
Charleston, S.C., June 14, 1960.

Representative DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: I am taking the liberty of sending you an article I have written entitled "Explosion in Caribbean May Take Place Soon." I hope you will find time to glance at it. According to my sources, by the way, the strike against Castro that free Cubans are planning will be staged in Nicaragua.

Let me say again that I read with admiration your many fine statements on the danger in the Caribbean that menaces the Panama Canal. You are performing a truly great service to the country.

Cordially,

ANTHONY HARRIGAN,
Associate Editor.

[From the Charleston (S.C.) News & Courier, June 12, 1960]

EXPLOSION IN CARIBBEAN COULD TAKE PLACE SOON

(By Anthony Harrigan)

Friends of free Cuba may have only 44 days left in which to prevent complete communization of that country.

July 26 is the day on which, it has been predicted, Nikita Khrushchev will land in Cuba to bolster the Red-front government of Fidel Castro. If Khrushchev does reach Cuba and presumably he will do so unless an anti-Castro revolt has started, his visit may end the last good chance to keep the island out of the Red orbit. A Khrushchev visit is likely to mean a Russo-Cuban military pact. This, in turn, would mean sufficient weapons for the Castro forces to crush democratic opponents.

Whether anti-Castro groups, with or without the blessing and aid of the U.S. Government, will attempt a revolt in these 44 days, only time will tell.

All Latin America is watching events in Cuba. What started out as a political upset which the U.S. public little understood, now has become an important battle in the Communist war for the western hemisphere.

If Castro obtains guns and supplies from Khrushchev and subdues all his foes, he undoubtedly will turn his attention to all lands bordering the Caribbean Sea. None of the Central American countries has armed forces capable of dealing with the heavily armed Cubans. Several of the countries have poorly protected coasts on which Castro could land invasion forces.

This is no pipe dream. The Government of Guatemala recently shut down the Cuban Embassy because it was plotting precisely this kind of activity. In each of the Central American countries are leftist groups which would welcome Cuban volunteers armed with Communist weapons. Communist agitators, who maintain headquarters in Mexico City, are poised to invade weak republics between that country and Panama. Not to be ignored is the possibility of a combined Castro invasion and nationalist uprising in Panama, aimed at seizing control of the canal.

The just announced appointment of Lt. Gen. Robert F. Sink, U.S. Army, one of the Army's ablest generals, as head of the Caribbean Command, with headquarters in the Canal Zone, may be taken as evidence that the U.S. Government recognizes the danger in that area.

There is no doubt that big events will take place in the Caribbean before long, events that will affect the United States. Either Castro and the Communists move ahead with their drive against Central America, or anti-Castro liberation groups make an all-out effort to drive the Cuban dictator from power.

One thing is certain: history won't stand still in the Caribbean in the weeks and months ahead. The destinies of nations, the ambitions of the world Communist conspiracy, and the patriotic zeal of anti-Castro Cubans, as well as the interests of the United States, are involved in the Cuban situation. A political explosion with worldwide significance could take place at any time.

St. Paul: City of Noble Prospects

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. HUMPHREY. Mr. President, I am pleased to discover in the current issue of the Catholic Digest, an excellent article about the capital city of Minnesota, St. Paul.

The article by Joseph B. Connors and Maggi Vaughan is entitled "St. Paul: City of Noble Prospects."

I know that all the residents of other cities and States who have had the privilege of visiting our charming and historic State capital and knowing both the city and its friendly people firsthand will enjoy revisiting the city in this fine article. Those who have not themselves visited St. Paul will, I know, be anxious to see St. Paul at their first opportunity after reading the article's excellent description of past and present St. Paul.

Mr. President, I ask unanimous consent that the article entitled "St. Paul: City of Noble Prospects" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ST. PAUL: CITY OF NOBLE PROSPECTS

(By Joseph B. Connors and Maggi Vaughan)

One good way to ignite a lively discussion in St. Paul, Minn., is to say that you think it is a good thing the city's old feud with her next door neighbor, Minneapolis, is dead.

In a representative gathering of St. Paulites, you may be variously informed that (1) you are 100 percent right; (2) you are right in saying that the feud is dead but wrong in thinking its demise a good thing; (3) the feud isn't dead, but should be; (4) it isn't dead, and must not be permitted to die; (5) it never really existed at all, but was a myth manufactured in New York, or possibly in Chicago.

Even a knowledgeable observer has a hard time judging the present status of the ancient rivalry. For rivalry it undoubtedly was. The imported-myth theory won't wash, though it probably is true that many vivid embellishments of the story arose elsewhere. For example, that rumor a few years back about H. V. Morton's Mediterranean travel book, "In the Steps of St. Paul." According to legend, two Minneapolis bookstores refused to stock it.

No myth, though, was the story of the hassle over the 1890 Census. At that time the cities were still close enough in population for the matter to be worth contention. (Totals today: St. Paul, 343,000; Minneapolis, 557,000.) A U.S. deputy marshal from St. Paul charged Minneapolis enumerators with crooking the books to increase their figure. A recount showed that the charge was true: the Minneapolis pollsters had invented more than 18,000 residents.

Unfortunately, the recount also showed that St. Paul pollsters had listed 245 elusive residents for the Union depot and other curious entries for a total of about 9,500 imaginary inhabitants.

A sorry episode, to be sure. But that, after all, was in an age when, during a minor smallpox epidemic, Twin Cities newspapers zealously pelted each other with comparative infection and death rates.

Nothing like that goes on today. In fact, except for certain obviously competitive areas of business and sports—and among a small corps of diehard sentimentalists in each city—really serious antagonism probably did not long survive the 19th century. Thirty-five years ago a Minneapolis writer said, "In all the years I've been going to St. Paul, it never has dawned on me that it was an adventure into an enemy's camp." The cities have drawn together geographically, socially, and economically.

Many reasonable citizens on both sides say that the two should have been one long ago. For a while it looked as if the populations might actually be fused, not by sweet logic but by a common yearning for big league baseball. But the planners could not agree on a centrally located park for a Twin Cities team. They went their own disgruntled ways and built new parks miles apart.

If they had managed to agree, outsiders would probably have been amazed to see two traditionally rival baseball crowds become a united family over night. In the old days, fierce duels between the Saints and the

Millers at Lexington Park in St. Paul or Little Nicollet Park in Minneapolis were likely to erupt into gladiatorial combats among players, with a whirl of flailing arms, fielders' gloves, spiked shoes, and diamond dust. Rival fans were notoriously combustible, too. But even then, many a Minneapolis fan would still make frequent streetcar journeys to watch the Saints against other American Association teams in their superior park.

Once, a Saint fan at a St. Paul-Kansas City game made the joyful discovery that the person seated directly below him at Lexington was a Minneapolitan with whom he had exchanged assorted jibes and threats at Nicollet Park the previous Saturday. Clapping a popcorn-scented hand on the invader's shoulder, he was starting to resume hostilities when the other fellow interposed, "Wait a minute, Mac. I'm for Minneapolis against St. Paul, but I'm always for St. Paul against these guys."

St. Paul has been described as the last Eastern city a cross-country traveler encounters (with Minneapolis the first Western city). Many visitors feel a touch of New England in St. Paul: in her restraint, her sense of the past, her affection for amiably eccentric streets and shady nooks, her closely knit neighborhoods where everybody appears to know everybody else.

Even the most spirited Minneapolis booster will probably grant that St. Paul, though smaller, has more of the look of a metropolis than Minneapolis. The capital city, built across hills and bluffs and up intersecting ravines, has one of the most majestic profiles in the Nation.

A St. Paul resident who wants his out-of-town guests to savor the full beauty of that profile may casually take them for a ride across the high bridge to Cherokee Heights, and then say, "Now look back." Better yet, he may manage to circle about through Cherokee Park to bring his guests out unexpectedly on the edge of the lofty bluff, with the full sweep of his city across the river.

"It feels just like Cinerama," an appreciative little boy said. It does, indeed. Cinerama cameras have focused on few sights more uplifting to the spirit than those two great domes on the skyline. They belong to the Cathedral of St. Paul, "bosomed high in tufted trees," and the State Capitol.

Her unique topography makes St. Paul a city of endless attraction for the person who goes adventuring afoot. And few American cities of comparable size will give a motorist with an hour to spare a more picturesque variety of urban scenery.

There is Summit Avenue, for instance, one of the most charming streets in the Midwest. It stretches westward from the Loop to meet again the winding Mississippi.

The huge copper-domed cathedral looks down on Summit where the street leaves the Loop. Its dedication in 1915 was the consummation of the life work of the first archbishop of St. Paul, the great John Ireland. This world-famous prelate had come to St. Paul as an immigrant lad in 1852. His entire career was given to his city, yet his influence reached far beyond it. More dynamically than any other American churchman, he enunciated and embodied Pope Leo XIII's policy that the church must not isolate itself from the general life of the time.

A few steps away from the cathedral is the home of empire builder James J. Hill. The house is now occupied by the St. Paul Diocesan Teachers College. Hill, the president of the Great Northern Railway, was not a Catholic, but he gave Archbishop Ireland $500,000 to build the St. Paul seminary.

Houses along the older part of Summit Avenue offer a fascinating array of 19th-century architectural styles. Some date from the 1860's. You see buidlings that look like Tudor manor houses, late Georgian townhouses, Greek temples, Victorian public libraries. (A few of them, one observer has suggested, look as if John Wilkes Booth might be hiding in the basement.) All are steeped in the mellow beauty that old stone, brick, and wood absorb from beautiful surroundings. A youngster named F. Scott Fitzgerald, who lived in the neighborhood, used to look long at these mansions and wonder what dramas went on daily within them.

Near the west end of Summit Avenue stand the College of St. Thomas and St. Thomas Military Academy. St. Thomas, which began its life as St. Thomas Aquinas Seminary, celebrates its diamond jubilee this year. It is one of a cluster of excellent colleges in St. Paul. The College of St. Catherine is the largest Catholic women's college in the United States. It is also one of two Catholic colleges to establish a chapter of Phi Beta Kappa. Other outstanding educational institutions are Hamline University (the first college in Minnesota), Macalester College, and Concordia College.

Most of the colleges are either in or near a loosely defined area called the Midway district—midway, that is, between the St. Paul and Minneapolis Loops. Outsiders sometimes describe the Twin Cities inaccurately as separated by the Mississippi. True, the river does flow between them for a long, photogenic stretch.

At one time, speeding motorists of either city purued by the law would make a dash for the Lake St. Bridge, like fugitives in British spy movies trying to make it to Switzerland. The cops were likely to call off the chase in the middle of the span.

Throughout the northern part of the Midway district, however, the boundary is as invisible as the equator. A St. Paulite living in a new apartment in a community along an oddly angled edge of his city was informed by a guest, a student of plat maps, that viewed scientifically his kitchen and dining nook were in Minneapolis. At first he thought this amusing, but since then about 15 acquaintances (mainly from the kitchen side of the border) have been separately inspired to remark brightly that they hear he has to go over to Minneapolis to get a good meal. He has decided to move deeper into St. Paul to get peace of mind.

Residents of Midway once had hopes that the Capitol might be built there, on the present site of the Town and Country golf course. Archbishop Ireland liked the plan because it would have furthered union of the Twin Cities. He no doubt would have built the cathedral in Midway if the plan had succeeded.

Some of the old irritations between the cities undoubtedly arose from St. Paul's feeling that the younger settlement, Minneapolis, was a brash Johnny-come-lately. A tiny community called Mendota, which lies between the cities (as the river flows) has a certain right to feel that way about both the Twins. But little Mendota, drowsing on the river bank today like an old voyageur dreaming of wilderness trails, was out of the running too early to be resentful.

Mendota, originally St. Peter, is across the river from Fort Snelling. The fort was established in 1819 at the conflux of the Mississippi and Minnesota Rivers. St. Peter was the natural focal point of the fur trade. Here young Henry H. Sibley, representing the American Fur Co., had his headquarters.

Father Lucien Galtier, a young French priest with a face like an image on a Roman coin, came to St. Peter in 1840. He was a missioner to about 180 Catholics in the vicinity—mostly French or mixed-blood voyageurs or refugees from Lord Selkirk's Red River colony. A group of squatters, pushed off the military reservation, settled downriver at what is now the St. Paul business district. In 1841 Father Galtier built a log chapel at the new settlement. He called it St. Paul's. It gave the city its name.

All traces of the log chapel have disappeared but back at Mendota you can still go to mass at one of the pioneer churches of the Northwest, the Church of St. Peter. It was built by Father Augustine Ravoux in 1853. Father Ravoux, a lovable blend of Father De Smet and the Curé of Ars, was vicar general of the St. Paul diocese for 40 years.

From old St. Peter's you can see a long way along the river valley. When Father Ravoux was pastor, Bishop Joseph Cretin would summon his vicar general down to St. Paul for consultation by hanging a flag out his window.

St. Paul, designated territorial capital in 1849, grew rapidly, mainly because it had the best steamboat landing in the region. It was the head of navigation for the Mississippi. During the great homesteading days of the fifties and sixties, upper Mississippi traffic far outstripped that of the lower Mississippi. In 1858, the year in which she became State capital, St. Paul registered 1,090 boats at her wharves. At the same time, the long, noisy caravans of Red River carts traveled back and forth between St. Paul and Pembina.

At St. Paul, the cultured East and the wild frontier were held, for a colorful hour, in a strange balance. Aristocratic young ladies in white satin and flounced muslin picked their way through muddy streets, and were borne off to brilliant balls at Fort Snelling. In 1854 you could attend the theater in St. Paul, read the St. Paul Pioneer, visit the hospital established by the Sisters of St. Joseph of Carondelet, or browse in a bookstore. But during these early years, St. Paul remained right in the middle of a bloody feud between Sioux and Chippewa Indians. As late as 1861, a Sioux Indian offered a Chippewa scalp for sale in St. Paul streets. A New Yorker bought it for $3.

From the day Father Galtier hewed logs for his chapel, churches have had a profound influence in the development of the city. St. Paul's reputation as one of our friendliest cities (how one graphs friendliness is a poser, but a survey once placed St. Paul at the top) is partly the result of the harmony that exists among men of many faiths. The city has more than 320 churches and synagogues: one church for every 1,000 persons.

St. Paul is usually called a "Catholic city," and the Catholic population, though by no means a majority, is large. In January, 1959, it totaled 137,473. The present ordinary of the St. Paul archdiocese, Archbishop William O. Brady, was formerly Bishop of Sioux Falls. He succeeded the late Archbishop John Gregory Murray in 1956. But he was already an old friend of the community, for he had once been rector of the St. Paul seminary. Archbishop Brady has organized one of the most important building programs ever undertaken in the archdiocese: a great expansion program for Catholic high schools. His Opus Sancti Petri vocations program is unique in the Nation.

St. Paul is still one of the Nation's main transportation centers. It is the third largest trucking center in the United States. The Mississippi, which dominated early history, handles over 3 million tons of cargo annually. Nine railroad trunk lines come into the city. Less than a mile from downtown, Holman Field serves both private planes and industry. The St. Paul-Minneapolis International Airport is 8½ miles from the Loop. A metropolitan commission directs the airport.

Industrially, St. Paul, is a diversified manufacturing center. Products include automobiles, clothing, heavy hoisting equipment, plastics, and electric computers. (Some of the instruments for the satellite Tiros I were made in St. Paul by Remington

Rand Univac.) It is the fourth largest printing and publishing center in the country.

The city is understandably proud of the many small local enterprises that have grown into national and international institutions. Most notable of these is the Minnesota Mining & Manufacturing Co., originally famous for scotch tape, now turning out hundreds of products, many in electronics. (Another example, in a quite different field, of the little local institution that grew and grew is the Catholic Digest, founded in 1936 by Father Louis A. Gales, with Father Paul Bussard as editor; they are now president and publisher, respectively. The first print order was for 13,000 copies; circulation now is near a million.)

An apartment-building boom may raise St. Paul's population to 415,000 by 1980. City planners are hard at work with maps and zoning codes. They are determined that the future St. Paul will have all its present winsomeness, or perhaps a little more.

In civic improvement, St. Paul is always at her best when something gets her dander up. Some of her finest hours have been born of indignation. There was a time when the St. Paul system of allowing notorious criminals to find harbor in the city as long as they behaved locally was a reproach to a law-abiding population. The system broke down and the lid blew off simultaneously during the Dillinger days; and St. Paul cleaned house swiftly, thoroughly, and for keeps.

Her most famous festival, the winter carnival, arose from her habit of getting the dander up. In 1885 an eastern journalist described St. Paul as "another Siberia, unfit for human habitation." He said the city was "as near the North Pole as one can get without skates." St. Paul answered by starting a gay midwinter festival and building a magnificent ice palace. The first carnival was held in January 1886.

Whatever vision of the future St. Paul citizens may have, it can't surpass the prospect suggested a century ago by the man who became Lincoln's Secretary of State, William H. Seward. During the campaign of 1860, he made a speech in St. Paul at a Republican Party rally. It was an optimistic time for the local Republican club, the Wide Awakes, for Minnesota Republicans were riding to conquest. The statesman was suitably enthusiastic. He predicted that St. Paul would someday become the Capital of the United States.

St. Paul today has no immediate plans for such a development. But Mr. Seward was a man of long views; a colossal slab of frosty real estate he later picked up for $7 million has become our 49th State ("Seward's Folly," skeptics called Alaska). And the time is young, as prophets reckon.

If the opportunity ever does arise, St. Paul will face a peculiar dilemma. It would hardly be possible for her to be National Capital and State capital at the same time. And if she were to step into the starring role forecast for her, would she have to let that upstart neighbor of hers become the capital of Minnesota?

Truth on America's Strength

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Ralph McGill. I have read his keen analysis with great interest and cannot help but feel his evaluation of the subject matter involved is most accurate and informative:

TRUTH ON AMERICA'S STRENGTH—IT'S HARD TO RUN DOWN, BUT KENNEDY TALK IS VIEWED AS MAKING A CONTRIBUTION

(By Ralph McGill)

There is an old story about the fellow who was quite late getting to a country church picnic. When he went to help himself to fried chicken he found only one platter left and on it nothing but wings—a dozen of them.

"I never saw a chicken like that," he said, "but I'll bet it was hard to run down and catch."

The story comes to mind in considering Senator KENNEDY's recent major foreign policy speech. The Senator's view of the Vice President's diet for the American people was something like that platter of wings—the real truth about America's national posture is hard to run down. The Vice President earlier had said that America is the strongest nation militarily and economically, has the best educational system and the finest scientists in the world.

"To feed that kind of diet to the American people during the coming months—to confine our national posture to one of talking louder and louder while carrying a smaller and smaller stick—is to trade the long-range needs of the Nation for the short-term appearance of security," countered the Democratic contender.

The debate, begun by Governor Rockefeller, is joined.

We are a great military power. But we have had a number of top generals resign because they did not believe necessary defensive strength was being maintained. It is no secret that even now our best military minds frankly say that we can outpunch the Russians only because of the Strategic Air Command. They give us 2 to 3 years of this edge.

Our economic production is the best. But it is under increasing strain and our rate of productive increase is comparatively less. Not to say so confuses the picture.

It is conceded that the cold war between tyranny and representative government will be won in the world's classrooms, libraries and university laboratories. We would not wish to imitate the Soviet system, but no American expert who has been to Russia has failed to see what a great secret weapon the Kremlin has in one aspect of its regimented system. The Russians are determined that not even the slightest talent which may serve the objectives of Marxism shall go undeveloped and unused. Our system is not so efficient in behalf of democratic objectives. Their system produces a man lacking in humanities. But we would be fools to fail to see they are creating a huge and dangerous new technocratic power.

As for great scientists, we have our share of them. It is not possible to compare the relative assets. In space they are far ahead. Senator KENNEDY is on sound ground to say we ought not to so gloss over the situation as to rid the American people of any need for serious attention to the tasks at hand and to soothe them into thinking the Nation has no real need to be concerned.

Senator KENNEDY also moved boldly into a field where the Republicans have feared to tread. The Red Chinese will have an atomic bomb within 5 years or so, he said. (If the Soviets choose to give them a stockpile they can have them tomorrow.) Therefore, while we cannot and should not recognize Peiping diplomatically, we should invite them to sit in on the Geneva disarmament proceedings. There can be no disarmament without Chinese participation. Only the woolly-minded will deny the harsh reality of this statement.

He was accurate, too, to say that "so long as Khrushchev is convinced the balance of power is shifting his way, no amount of smiles or toughness, neither Camp David talks nor kitchen debates can compel him to enter fruitful negotiations."

Governor Rockefeller and Senator KENNEDY have provided the essentials of debate.

Report to the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. SPESSARD L. HOLLAND
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. HOLLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report by Henry H. Buckman, president of the National Rivers and Harbors Congress, given on May 26, 1960 at its 47th national convention in Washington, D.C.

In making this request, I should like to pay tribute to Mr. Buckman and to his leadership in the development of our country's waterways. He is senior national director of this organization, having served with it over 30 years. He drafted the procedure for examining the classifying projects which has been used by its national projects committee since creation of this committee in 1934.

During the past year, in which Mr. Buckman has served as president, he has made precedent by being the first president who was not a member of either the Senate or House of Representatives since the congress was founded in October 1901 at Johns Hopkins University in Baltimore, Md.

An outstanding consulting engineer, whose reputation is nationwide, Mr. Buckman has given inspired leadership in this field of public service. I think the people of the State of Florida are to be congratulated upon his reelection on May 27 by the board of directors, and upon having one of Florida's citizens continue to serve as the active, directing head of an organization of such great usefulness to the State and Nation.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT TO THE NATIONAL RIVERS AND HARBORS CONGRESS IN CONVENTION BY ITS PRESIDENT, WASHINGTON, D.C., MAY 26, 1960

Pursuant to the powers and duties vested in its president by the National Rivers and Harbors Congress, and in accordance with custom followed for more than half a century, this report is submitted to the 47th annual convention of your organization convened in Washington, D.C.

MEMBERSHIP AND FINANCE

During the year which has elapsed since our 46th convention, both membership and receipts from dues have shown an encouraging increase. However, there is little room for complacence on this account. Our duties and responsibilities to the public increase each year. The value of the dollar grows less If we are to expand our useful activities and

more effectively pursue our broader objectives, we must have still larger membership and greater revenue. While we have been able recently to add $5,000 to our reserve fund, bringing the total to $20,000, we have not yet been able to expand our annual budget. I commend this matter to you for consideration and action by each of you.

ACTIVITIES

During the past 12 months, your officers, directors, and committees have been actively and effectively interested in appropriately sponsoring legislation for Federal appropriations for water resources public works in all States of the Union. They have vigorously supported the program of the authorizing omnibus river and harbor bill. They have participated in discussion with the Bureau of the Budget in a continuing effort to assist in developing a wise fiscal policy with respect to the Federal interest in the field of water resources. Your projects committee, when requested to do so by local interests, have afforded appropriate and expeditious procedural assistance to a number of division I projects when time was of the essence.

With the generous assistance of the Office of Chief of Engineers, and the Bureau of Reclamation, the entire list of division I projects has been recataloged in accordance with the present physical, departmental, and legislative status of each. This will provide the beginning of a perpetual inventory from which all concerned may obtain through our Washington office up-to-date information on any of these projects. The system will also aid in facilitating our continuing representations to the Bureau of the Budget and to the committees of Congress.

At this point it is appropriate to estimate the total calculable accomplishment of your organization with respect to projects alone. This is, of course, only a product of our overall endeavor to assist the Federal and State governments in forming and in the timely pursuing of an enlightened and foresighted policy with respect to water. I bring this to your attention now as indicative of the magnitude of our cumulative success over the years.

During the 24 years since the time when the projects committee was created by your directors, that body has recommended, and you have ratified in convention, the classification of 524 projects in division I; that is to say, they have been pronounced sound, needful, and sufficiently advanced in status, and their construction justified by the public interest they will serve. Of these 524 projects, 400, or 76 percent, have now been authorized by Congress; 308, or 60 percent, have been completed or are now under construction. The aggregate benefit-yielding wealth thus added to the assets of the Nation is computed to exceed $6 billion. The National Rivers and Harbors Congress may fairly claim an important share in this accomplishment which has recaptured this amount of taxes and plowed it back into the national economy, fruitfully planting it for the public benefit.

THE MONTHLY REPORTER

Late in 1959 the format of our Monthly Reporter was changed and its policy redesigned. The previous format, consisting of a single multigraphed sheet, was changed to the four-page, two-color, printed and illustrated publication with which you are now familiar. The primary mission of this publication, which is a strictly factual and nonpartisan journal, is to educate the public, by illustrated examples, as to the immense importance of water resources public works to our economy and to our defense potential. The Reporter goes regularly to all our members and to all Members of the Congress of the United States, and to selected individuals in the executive branch. In order that it may be completely independent, it carries no advertisements. The Office of the Chief of Engineers and the Bureau of Reclamation have been most helpful in furnishing all data and other assistance which they may appropriately supply. This cooperation is gratefully acknowledged.

THE CORPS OF ENGINEERS OF THE ARMY

The Corps of Engineers of the Army have performed efficiency and with traditional fidelity the civil functions assigned to them by Congress. They have continued to merit the high esteem which they have enjoyed throughout their history.

THE BUREAU OF RECLAMATION

Within the limits of the appropriations afforded to it by Congress, the Bureau of Reclamation has done splendid work in its designated field. This agency has made notable progress of a high order in planning and construction, including work in the Missouri River Basin.

IMPORTANT TRENDS AFFECTING THE NATION'S INTEREST IN WATER

Every interest of the body politic is basically related to water. The year under review has seen the further development of both helpful and harmful trends affecting these relationships. Some of the latter are of such importance as to merit your prompt attention and very careful consideration.

RATE LEGISLATION

The past year has witnessed intensified efforts on the part of the rail carrier managements to eliminate their competition, including the competition afforded by the inland water carriers. This movement poses a threat to the survival of the water carriers as a group. The fact that the rail managements are able to wage this campaign under the aegis of law is a matter of grave concern.

Everyone who is informed in the field of transportation is aware that the rail carriers are struggling with a declining economy for the permanent improvement of which there is little hope in their existing equipment and consequent methods of operation. It is equally clear that, in some economical form, a rail carriage system is essential to the welfare and security of the United States. The railroads do need help, but they also need restraint. Their essentiality warrants both. It is to be hoped that the needed restraint will be generated within management, rather than by government. Government ownership might well serve only to exchange one dilemma for another.

But help for the rail carriers cannot be much longer allowed to comprise impairment of our transportation system as a whole. This is to put in jeopardy both our prosperity and our defense.

Two fundamental considerations cannot be indefinitely ignored. These are (1) that it is essential to the well being and security of the Nation that all forms of transportation continue to be developed in proportion to their several inherent economies, and hence (2) that none of these forms may be sustained at the expense of another form having equal or greater inherent economy.

It is a reasonable assumption that the wisdom of Congress will resolve the paradox of legislation appropriating billions of dollars for the development of inland water and highway transportation and legislation which operates to destroy the economics these appropriations are designed to serve.

The railroads would gain much for themselves and would make a tremendous contribution to the Nation if they would abandon their traditional pursuit of artificial aid through legislation, and devote their efforts to an advanced technology which might well hold a purely economical solution of their problem.

THE INTERSTATE COMMERCE COMMISSION

During the year, the Interstate Commerce Commission has exercised power implicit in recent legislation to permit the rail carriers to reduce certain rates selectively. While these actions on the part of the Commission are seriously inimical to certain water and highway carriers, it is only fair to say that the legislation in question does comprise what may be reasonably interpreted as a directive to be followed in the consideration of applications for changes in rates, leaving the Commission little discretion. If, for this reason, it is difficult to sustain a complaint against the Commission because of these particular actions, there remains the seemingly fairy godmother attitude of the agency toward the railroads since the time of World War I. The fault probably lies less with the Commission than with its form.

The National Rivers and Harbors Congress has long advocated a change in the makeup of this agency which would require the appointment of one Commissioner each for rail, water (inland and coastwise), highway, pipeline and air carriers, and two for the general public interest. This type of organization has worked well in the case of municipal government. It would probably operate to prevent development in the Commission of bias with respect to any one form of transportation. It is hoped that Congress will give consideration to legislation which will accomplish this. The agency in question is an essential regulatory body, but it needs overhauling.

THE BUREAU OF THE BUDGET

The Bureau of the Budget has continued to function as an essential agency in the executive. The Bureau performs valuable service in coordinating the requests for funds made by the several departments. It also assists the President in forming and implementing his financial policy.

Despite these useful functions, the Bureau, with the tacit consent of Congress, has gradually assumed the function of a filter whereby many requests for funds made by departmental heads and deemed advisable by them but disallowed by the Bureau, or which the Bureau has prevented being made, are filtered out and do not reach the attention of Congress.

There can be no question as to the power of the President to forbid requests being made by his Cabinet members, or to disapprove such when made. But in exercising this power the Bureau can perform what is in effect a legislative function, since its actions can limit the information upon which Congress may act. This is a problem of long standing and one not easily solved. But it is suggested that some joint exploration by the legislative and executive branches might be fruitful.

WATER RESOURCES PLATFORM PLANK

We have presented the following water resources platform plank to the national committees of the two major political parties and have urged its inclusion in the paltforms of both.

"The prudent, timely, adequate, and continuing provision for the use, control, and conservation of our water resources becomes increasingly essential as our population continues to grow at an accelerated rate. Erosion, irrigation, reclamation, flood control, pollution abatement, river and harbor development for maritime and inland navigation, and water supply for human consumption and industrial use require the energetic pursuit of an enlightened policy if the gradual throttling of our national economy is to be prevented. Our defense potential rests to an important extent upon the expansion of our internal lines of transport by the development of our inland navigation channels. The wartime necessity for a protected inland barge route from the midcontinent areas to the Atlantic seaboard has been demonstrated, and the interconnection of the barge channels of these two regions across northern Florida as authorized by Congress and which would complete the Intracoastal Waterway from Trenton, N.J., to the Mexican border, should be promptly accomplished. The pollution of our streams and under-

ground water sources must be controlled and minimized in order that suitable domestic and industrial supplies shall continue to be adequate. Flood control, which serves both to conserve our water resources and to prevent the destructive effect of excessive precipitation, must continue to be a principal objective in our water resources program."

INLAND WATER TRANSPORTATION IN THE NATIONAL DEFENSE

In the event of war, the modern submarine promises to drive surface craft from the seas. It now appears that we must be prepared to move an enormous tonnage (particularly petroleum) by internal lines—far more than can possibly be moved by our existing rail, highway, and pipeline facilities. Our inland navigation channels, especially the Atlantic and Gulf Intracoastal Waterways, must be connected and improved as promptly as practicable in order that cargoes may be moved by protected inland routes between the midcontinent and the Atlantic seaboard.

Respectfully submitted.

HENRY H. BUCKMAN,
President.

Remember Freedom's Source

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1960

Mr. HALPERN. Mr. Speaker, recently, in the Queens County Times, a weekly newspaper in my district, there appeared a stirring, thoughtful editorial on the meaning of freedom and its spiritual source, God. This stimulating, perceptive essay goes to the core of free government which is its indispensable relationship to God from whom we derive not only our birthright of freedom but the moral strengths that enable us "to harmonize freedom and justice, through the exercise of self-discipline."

In referring to the liberties we enjoy, the editorial states, "Comparatively few men who have walked the face of the earth have enjoyed any considerable degree of freedom, probably not more than 5 percent. Yet, very few Americans have a genuine appreciation of freedom, or clearly understand its source. Thus," it continues, "many are standing by unmoved while the protective structure of freedom is dissipated."

"Freedom can live only when coupled with justice," it asserts, and our power to make the judgments necessary for this to prevail is derived from God. It is in this context, it declares, that our task for the future is to mobilize our great strengths, under God, in the preservation of our freedom.

Mr. Speaker, I am privileged to place before Congress this excellent, succinct summation of the meaning and base of American free government, and under unanimous consent I insert the editorial from the Queens County Times to be printed in the RECORD at the conclusion of my remarks:

[From the Queens County Times, May 26, 1960]

REMEMBER FREEDOM'S SOURCE

Freedom is every man's God-given birthright. Governments do not have any freedom to give. Governments may restrain or limit or take away freedom—or protect it. Protecting freedom is the basic function of government in the liberal tradition. Comparatively few men who have walked the face of the earth have enjoyed any considerable degree of freedom, probably not more than 5 percent. Yet, very few Americans have a genuine appreciation of freedom, or clearly understand its source. Thus many are standing by unmoved while the protective structure of freedom is dissipated.

Freedom can live only when coupled with justice. Otherwise, the strong take away the freedom of the weak. Justice lives only where men recognize the authority of God. The strong have no other restraint. God alone transcends the principles of both freedom and justice, and it is only when man fears God that he is able to harmonize freedom and justice, through the exercise of self-discipline.

GOD IS INDISPENSABLE

The well-being of every society of mankind over any long period has always been in direct relationship to its respect for God. In no area of society can man ignore God and succeed for long. We like to look on the classic painting of General George Washington, kneeling in prayer at Valley Forge. We likewise can draw from history the scene at Independence Hall, Philadelphia, when the men who wrote the Constitution prayed to Almighty God for guidance. We are impressed by the fact that each session of Congress today is opened with a prayer.

Preceding Washington and our war for freedom, there was the landing of the Mayflower at Plymouth. The ship swung into the bay on Saturday, and there before the Pilgrim's eyes was the shore of their new world. But they didn't go ashore. They remained on board over Sunday and conducted their worship services. Then, before they set out for shore, they drew up the Mayflower Compact. It began: "In the name of God, Amen." Even after 340 years, this is a thrilling moment just to remember.

A GODLY NATION

God was mentioned in every one of the Colonial charters. A church building was one of the very first structures in every new settlement as our sturdy families moved westward across America. Our social standards, our political laws and our religious laws took into consideration the Bible. Our Government has made a conscious effort to preserve through all these years our God-given freedom.

The Nation has expanded much, however. Many immigrants have been admitted. The world has become much smaller with speed of transportation and communications. International relations have become much more complicated, and maintaining freedom has become increasingly difficult. It must become the central task of every American citizen—or else we may lose freedom. Great and powerful forces are at work to destroy it. Unless we mobilize the citizen-strength of America and utilize all our resources, our Nation could fall and the world could be plunged into another Dark Age.

American Civil Liberties Union Chapter Created in New Jersey

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Wednesday, June 22, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Elizabeth (N.J.) Daily Journal gave an editorial tribute on June 9 to the American Civil Liberties Union Chapter created in New Jersey during the 40th anniversary year of the ACLU. The editorial gives well-deserved praise to an organization which has continually demonstrated its willingness to work for the protection of the rights of all citizens of this Nation.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW JERSEY CHAPTER, ACLU

New Jersey has become the 28th State to have its own chapter in the American Civil Liberties Union. The ACLU frequently has taken a hand in matters in New Jersey in which it believed that practices contrary to its policy were being implemented. The purpose now is "increased defense of civil liberties" in this State.

This year is the 40th anniversary of the founding of the ACLU amidst the torment and suspicions riding the wake of World War I, the Nation's first major involvement in international politics. A group of perceptive citizens feared that the first 10 constitutional amendments, the American Bill of Rights, were being ignored and violated on sundry occasions.

Not everybody likes or even approves of the union, which is testimony to its persistence and its fealty to those principles to which it was committed 40 years ago. That steadfast attitude obviously has provoked many battles in behalf of many individuals and many causes. These often were not popular at the moment, a situation that invoked wrath upon the ACLU.

To claim that time always has proved the ACLU in the right would be wasteful argument. Nothing attains that degree of perfection, but this organization must be credited for its courage and zeal, as well as its dexterity in combat.

Personal Tragedy for Eisenhower

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. KARTH. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include another article written by Mr. Ralph McGill:

PERSONAL TRAGEDY FOR EISENHOWER—COMMUNIST MOB TACTICS BLOCK EFFORTS FOR PEACE THROUGH NEGOTIATION

(By Ralph McGill)

The perhaps inevitable rumors follow in the wake of the Japanese disaster: Ike will resign shortly after his return home to deprive the Communists of their use of him as a symbol of obstruction to peace. This further will relieve the Republican Party of the need to defend his leadership.

It is a false rumor, utterly without basis of fact.

But that it is reported does point up one of the most lamentable personal tragedies of our time. Until the Four-Power failure at Paris a few weeks ago, President Eisenhower was a worldwide symbol of peace. Not even the Communists were able to attack him. The leader of world communism Nikita Khrushchev, publicly declared Mr. Eisenhower to be a man of good will and one

sincerely dedicated to the search for peace through negotiation.

The sudden collapse of the summit meeting, in which the Russian-downed U–2 reconnaissance plane was employed as the instrument of destruction, precipitated an almost insanely bitter personal attack on the President.

In Japan the Communists again made him the symbol of hate and aggression. Here of late the stupidity of decision and plain bad luck have enabled communism to take advantage of situations not before available. The handling of the U–2 incident was one. In Japan the Kishi government, strongly loyal to the United States, made itself vulnerable to attack by the non-Communist left by forcing through the U.S. treaty with the Socialist Party locked out of Parliament.

The Communists were quick to take advantage of the situation. Every resistance movement in Europe in the Second World War soon found itself largely led and directed by Communists. They were used to carrying on an underground operation. They were valuable allies. At war's end the Communists were in strong positions in most of the governments hastily established in the wake of the German surrender. France and Italy were rescued only by a considerable local effort and by the helpful economic effect of the Marshall plan.

So it was in Japan. The Socialists included a few Communists. There was a Marxist student group. There were other organizations committed to an antimilitary position because of Japan's suffering from war, especially the two atomic attacks.

The Communists were able to provide leadership, street mob organization and tactics, and the propaganda incentives. They were also able to produce the shock troops of street fighting.

For communism it was an unforeseen opportunity. The President, target of Mr. Khrushchev's insults at Paris, could be made their target. It is likely that Red China and Russia both had agents at Tokyo.

There is no blinking the fact that what happened was a severe defeat for U.S. prestige and, since we lead the West, for our allies. It will encourage the tactics of street mobs in other nations. It will incite Communist groups to new activity.

It now is possible our bases in Japan may, in time be lost. Withdrawal of American influence and forces from Japan would leave that country quick prey to communism. The Pacific would become a hostile sea.

All of this is a development productive of much foreboding. It means more trouble for us, an increase in tensions and, unhappily, a stepping up of inflationary forces as we move to increase our military strength.

But melancholy as this is, one cannot avoid a feeling of deep regret for the personal tragedy it is. One of the world's finest, most decent and well-intentioned men has just 6 months away from the conclusion of 8 years of the Presidency, had his hopes wrecked and his position as a world leader and negotiator destroyed.

Ceremony Opening the James River Bridge, Blue Ridge Parkway

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by Mr. Hugh Gordon Miller at Christ St. Luke's Episcopal Church, Norfolk, Va., on the occasion of the Massing of Colors ceremony under the auspices of the Military Order of World Wars, June 12, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HUGH GORDON MILLER, ESQ., AT CHRIST ST. LUKE'S EPISCOPAL CHURCH, NORFOLK, VA., AT MASSING OF COLORS CEREMONY UNDER AUSPICES OF THE MILITARY ORDER OF WORLD WARS, SUNDAY, JUNE 12, 1960, AT 4 P.M.

Ladies and gentlemen, and fellow Americans, I shall open my remarks by saying of the Stars and Stripes—the major flag that floats so proudly above all these other standards and colors—what a great southern poet wrote about that glorious emblem and said that:

"When freedom from her mountain height
Unfurled her standard to the air,
She tore the azure robe of night
And set the stars of glory there."

I recently found in an old book an address I made at a convention held in the old Chamberlain Hotel at Old Point Comfort, nearly 60 years ago, which I began by quoting that verse of that great poem. With your permission and the permission of Bishop Brown, I shall take the same text today.

A few days ago Mr. David Lawrence in his column in the New York Tribune said:

"Time was when the Nation found itself in peril, and nothing else mattered. No sacrifice—even of life itself—was too great to make for the honor of our country.

"But things seem to be different now. The President of the United States is insulted and yet some writers continue to furnish aid and comfort to the press of the Soviet Union by denouncing Mr. Eisenhower and holding him culpable for errors he couldn't possibly have avoided and still protect the safety of the American people against surprise attack. He meant, of course, another Pearl Harbor. Then that great editor, from his years of 'summit' view of the great from the Capitol asked this question, which for this section of the country we are answering here today:

"Is this country changing? Is patriotism just an obsolete notion, nurtured only by those of us who have witnessed manifestations of national spirit and pride over a long span of years? Are some of us old fashioned because we cannot accept the modern cynicism which insist that a President of the United States shall be pilloried by political leaders and by some segments of the press of his own country as Moscow papers reprint every bit of captious and carping criticism?"

Before attempting to answer that question, I must pause now, however, to thank you most sincerely for paying me the very great honor of inviting me to take part on this truly great occasion and to express in part the answer to that burning question. I feel very deeply in responding to your invitation, because of the fact that I have been so long an active resident in the North, though like most native Virginians, my heart is always with you.

I realize, if I may presume, for a moment, to be personal, that this establishment by you here in Virginia, in such a situation, of this sacred custom, of the annual massing of colors is being held in this great historic old Christ Church, moved out into your expanding and progressive city and merged with the more modern St. Luke's congregation—a congregation which was so long and wonderfully ministered to by the dear friend of so many of us—Arthur Selden Lloyd—who afterwards, as a bishop, was an honored guest in our home on the New Jersey shore where he would, like other great churchmen, come in the summertime to preach in the beautiful little church of St. Peter's in "Galilee by the sea."

And may I add that all of us here are honored because this celebration is inaugurated here and presented by such an organization as the Military Order of World Wars, whose veterans, many of them here today, have done such heroic service in defending us and all the rest of the free world of today.

We are gathered here to announce by this impressive ceremony the establishing by you of the massing of the colors, invoking in that connection the blessing of the Almighty here in His holy temple.

We are doing so on the basis of loyalty to our common country and flag, regardless of sect, station in life, color, or religious denomination.

In that connection, we quote for the record from a recent New York paper the statement of Joseph C. Anderson, chairman of the Catholic War Veterans:

"The prominent display of flags to salute our President upon his return from the summit conference is a laudable symbol of the way Americans unite into one great and indestructible nation in time of crisis. We stand firmly behind President Eisenhower in his courageous determination to secure peace without humiliation, and we deplore the unruly tactics of Mr. Khrushchev as the representative of communism."

We applaud Martin B. McKneally, the national commander of the American Legion for canceling a scheduled trip to Russia, declaring that "where the President of the United States is not welcome, no American citizen should go." It is evident that all they want is American money to use to help bury us with.

We quote also the words of Dr. Jones, president of the National Conference of Christians and Jews:

"This symbolic expression of American unity at a time like this is an inspiration to all freedom-loving peoples throughout the world.

"With the unfurling of our wonderful Old Glory today, we are telling Soviet dictators and the peoples throughout the world, that the American people stand behind our President in his efforts to safeguard the free world."

Since you concluded to invite the historian of the last 50 years of the New York Southern Society and a member of the Society of American Historians—instead of a minister of the gospel—to deliver this address—I know that you will permit me to quote the words of that great Virginian, Patrick Henry, who declared, in the old church in Richmond when he was calling his countrymen to arms for the American Revolution: "The only lamp I have to guide my footsteps is the lamp of experience."

I hope, therefore, that you will permit me—as a local historian—to invoke the good old ministerial custom of reaching down in the old barrel of sermons and digging up a quotation from that old speech of mine, delivered at old Point Comfort, nearly 60 years ago.

"We have heard often, to be sure, of how the various ensigns of the Original Thirteen Colonies, like 'An Appeal to Heaven' on the flag of Massachusetts, and 'Down With the Tyrants' on the ensign of the Old Dominion which developed into the Stars and Stripes, in 1777, when it was declared by the American Congress 'That the flag of the thirteen United States should be thirteen stripes, alternating red and white, and that the Union be thirteen stars representing the new constellation.

"But, thank God, if the sons of New England and the North in the centuries yet to come, and the children of this section of the country in the generations yet unborn, are what they ought to be, what their birth-

right guarantees and the great God of the universe destines that they shall be, the story of the Star Spangled Banner will never grow too old to tell again, or too old to keep us from singing—

"The Star-Spangled Banner,
O' long may she wave
O'er the land of the free
And the home of the brave.' "

Even at this great naval base, I am not able in the time here allotted me, to follow the victorious course of that banner through the struggles of the Revolution, on land and over sea: or in the wars that have followed since; but suffice it to say, that ever since that first naval engagement in which our flag appeared, when, after the flagstaff was shot away, John Paul Jones was asked by the captain of the British ship "if he had struck his colors." He replied: That he "had not yet begun to fight", until gallant old General Joe Wheeler refused to fall back with the banner at Santiago. The story has ever been the same.

We may add at this point that, from Chateau-Thierry to Hiroshima, and the Korean war, the story has ever been the same. And, to add further, that we are ready to carry on again in the same old way, if it becomes necessary, as the timely massing here of these colors gives notice to the world, and especially to the Communist world.

In that speech at Old Point Comfort—showing how history repeats itself—your present speaker went on to say, and I again quote from the RECORD:

"With the renewal of the old relationships of long ago between the sections and that better understanding between all the people—which has been brought about under the policies and the administration of our late great and glorious President (I was referring of course, to the great President McKinley)—continuing to dominate over and guide the destinies of the greatest Nation that ever existed under the sun, I take your invitation here as a tribute to those who are the only emperors, after all, that this country has ever known or will ever know; as a tribute to those uncrowned kings who at last must grapple with all the problems and confront and master all the dangers that beset this Republic; as a tribute to those who, on this American continent, stand in the path in which not only the Filipinos, the Cubans, the Puerto Ricans, the Mexicans, the Africans, and the Central Americans. But the world's liberties must in part be guarded, for, as someone has said:

"Blot out the beacon that lights the portals of this Republic and the world is adrift again; but establish the light of its beacon over the troubled waters and one by one the nations of the earth will drop anchor and be at rest in the harbor of universal liberty.

"As a tribute to that America of which Theodore Roosevelt, the head of the Nation, is (or was then) the personification—and that without regard to section or to party—will in this 20th century, at the country's call, be found standing ever by the Government and standing by the flag."

But, my fellow countrymen, we are not here today to deal merely with general principles, and I must refer to certain distressing facts of international life. A major American industrialist, Mr. Cyrus Eaton, seems to have become the mouthpiece of the very devil himself, using the prosperity he has enjoyed for so many years under our free enterprise system, in a studied campaign to destroy us and all the free world, if he can. We should get the advice on this of Mr. Hoover of the FBI, the real historian and the best authority of the subject of the Communist conspiracy in the United States. He has many times warned us of this termite menace boring from within.

Mr. Cyrus Eaton—and men like Paul Robeson, who claims Russia as his "second country"—should be forcibly invited to join their fellow Communists and live with them, and enjoy if they can their way of life. If possible, their citizenship should be taken away from them as far as this country is concerned.

On the other hand, we are proud to realize that regardless of politics, the great and evergrowing greater leader of the majority party in the U.S. Senate—who hails from Texas—the great Senator from Georgia, who until recently was chairman of the Foreign Affairs Committee of the Senate (if I recall aright, now chairman of its military affairs), and the distinguished young southern chairman of the Military Committee of the House of Representatives, along with practically every other responsible person from every other section of the country, are standing wholeheartedly back of our President and approving his gentlemanly behavior during the trying provocations confronting him and which continue to be heaped upon him, and the peril which confronts this Nation, ignoring abuse from abroad or disregarding politically inspired suggestions at home.

His report on the torpedoed summit conference was an unanswerable masterpiece. Mr. K. is finding out that—

"Truth crushed to earth will rise again
For the eternal years of God are hers,
While error wounded, writhes in pain
And dies amid its worshipers."

Our great President is but following the motto of another great President, who hailed from the North—Theodore Roosevelt—by talking softly while carrying a big stick.

By the massing of our colors here today, we give fair warning, as Theodore Roosevelt did 60 years ago, that our President or any future President will use that stick if and when it becomes necessary in the cause of freedom and justice.

Let us recall, and heed the words of the majority leader in the Senate who has advised that "one thing we must not forget is that we are all united against communism—and under our Constitution, the only effective instrument for unity is the President of the United States."

Let us realize, my fellow countrymen, that this Nation and the rest of the free world is not merely confronted by the symbolic old bear that walks like a man of czarist days. That old animal was ferocious but he fought in the open. When we saw the pictures, a few days ago, and repeated more violently since, of a raging maniac drunk with power, ranting for all the world like Hitler used to rant, with threats and denunciations of all the free world, and especially of our great God-serving, gentlemanly mannered President and the United States of America, in particular—we began to realize that the free world was menaced by a modern embodiment of Genghis Khan, one who never has withdrawn his announcement to the world that he and his Communist-followers, intend to bury us, and to take dominion over all the world. To do so in the same manner he and his followers have taken dominion over Hungary, Poland, Czechoslovakia, and the rest of their captive satellites.

That old devil discloses that he surely knows a lot about hell. For instance, Mr. K., in one of his tirades said that he believes that President Eisenhower wants peace, but "the road to hell is paved with good intentions and he will really get there."

Mr. K., the raving mouthpiece of Satan, will surely arrive there, but he will wait a long, long time for the arrival of our Mr. Ike, a follower of the Almighty God.

The pupil, and final imitator, of the Stalin he deceitfully displaced has, in repudiating God Almighty, become the boasting Communist mouthpiece of the devil himself, whom he decides to follow.

For the first time in American history the representative of the devil himself attempts to openly influence a presidential election in the United States, and has the assistance in our midst of men like Cyrus Eaton. We note, however, that Poland, itself under the heel of massed Russian armies, is Russia's only defender in the United Nations, in the face of a disapproving world.

And so we renew here today our allegiance to the Stars and Stripes and the Republic for which it stands. Men with views and actions relating to that flag—like Cyrus Eaton or Paul Robeson, whom I have mentioned as examples of disloyal Communist fellow travelers in our midst—would not be entitled to take part in this massing of our colors, because they could not do so without lying when taking that loyalty pledge and oath of allegiance.

And now that the overrated U–2 incident and related matters are backfiring with a crash on the enemy, and are being appropriately handled by the United Nations, we can once again proclaim with calmness, hope, and confidence that any President of the United States, whoever he may be, now or in the future, regardless of section or party, will continue to honor these colors and, guarding us all against that promised "burial" day, by way of another and atomic Pearl Harbor, say with us:

"She's up there—Old Glory—where the lightnings are sped
She dazzles the Nation with ripples of red;
And she'll wave for us living or droop o'er us dead—
The flag of our country—forever."

And now, like many others here, a son of a Confederate soldier, I salute once again with pride my old native community, and join with you in exclaiming, God bless America and our indestructible union of sovereign States, and say God bless and protect the President of the United States as on this holy day he, like the apostles of old, starts out on a dangerous mission to further Christian ideals and principles in the cause of peace on earth and good will to men.

Our Unsound Social Security Setup

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. MASON. Mr. Speaker, in the Committee report accompanying H.R. 12580, three of us included our joint statement with respect to the actuarial unsoundness of the present program.

This statement pointed out the actual trusteeship vested in the Congress over the contributions or taxes, and the benefits of the old age, survivor, and disability provision of the social security law.

It is my purpose to provide the Congress and the American people with some of the pertinent information of what is actually happening under existing law, and what is presently proposed that we do about safeguarding these benefits under the pending bill. To this end, I shall not in this statement

make any remarks respecting either the unemployment or the grant-in-aid provisions of H.R. 12580—either those for child welfare services, or those for medical care for the aged.

We have, over the years, done everything anyone could think of to lead the American people to believe that Uncle Sam has established a gigantic and actuarially solvent insurance system on which they can rely for protection against disability, death and retirement.

Back in 1939, first the Ways and Means Committee, and then the Congress assumed a special obligation to the American people when we adapted insurance terminology to the title VIII payroll taxes we had levied, and the title II benefits we had provided under the Social Security Act which we adopted in 1935.

We renamed the benefits which had been designated old age and lump sum benefits. We added dependents benefits. We called these various benefits Old Age and Survivors Insurance benefits in the 1939 law. We renamed the taxes and called them "Federal Insurance Contributions." We renamed a contingent fund that the taxes went into. We called it the "Federal Old Age and Survivors Insurance Trust Fund."

When we added disability benefits in 1946, we followed the same procedure. We earmarked an added one-fourth of 1 percent of social security payroll taxes, imposed on employers and the same amount imposed on employees, and three-eighths of 1 percent imposed on self-employed, as belonging to a new account, which we set up in the Treasury and labeled the "Disability Insurance Trust Fund."

We likewise established trustees of these accounts we had designated as "insurance trust funds." These trustees are, first, the Secretary of the Treasury, second, the Secretary of Labor, and, third, the Secretary of Health, Education, and Welfare. We likewise have named the Commissioner of Social Security as the Secretary of these trustees.

We have required these trustees to file an annual report to the Congress on both the short- and long-range aspects of these funds we have designated as insurance trust funds.

While Congress has done all this reassuring labeling of "insurance," "trust fund," "trustees," and the like, the Congress has not in any respect abrogated its responsibility to the American people. The Congress itself has the continuing responsibility of prescribing benefits and benefit conditions, the social security wage base and tax rates, and all the other conditions determining the soundness of the system we have officially designated as insurance.

To be certain that the Congress has full and entire control of the entire program, we have specifically reserved the right in section 1104 of the Social Security Act—

to alter, amend, or repeal any provision of this act.

With this entire control of the provisions we have labeled "Old Age Survivors and Disability Insurance" goes the entire responsibility of seeing that it lives up to the "insurance" label we have fixed to it.

This is our inescapable responsibility to the American people. It is a responsibility involving directly or indirectly the economic security of 180 million Americans and generations yet unborn. It is a solemn trusteeship which by nature should be, like patriotism, above political considerations.

Mr. Speaker, I, like the great mass of my colleagues, feel deeply the aspersion that is cast upon us by a mere recital of the dates on which we have acted in performing our trusteeship. Count back the years when we have acted to modify the Social Security Act—1958, 1956, 1954, 1952, 1950, 1948, 1946—each an election year. And here we are again proposing to liberalize the benefits in 1960.

I am particularly reminded of the great similarity of today's insurance proposals with our action in 1952—when there was also a major political contest. It is particularly distressing that our critics can point out that we are again proposing to increase our benefit commitments without increasing the social security taxes. We again are acting on the theory that prior estimates have overstated benefit costs and that with some increase in trust fund interest, we can increase expenditures without increasing the presently scheduled taxes.

But in 1952 we had more basis for our action than we have today for the presently proposed liberalization.

Mr. Speaker, in the 3 years before 1952 the OASI trust fund had grown $4.8 billion to a total of $15.5 billion—and grew nearly $2 billion in 1952.

In the 3 years preceding 1960 the trust fund has shrunk some $2.3 billion to $20.1 billion—and last year's shrinkage was over $1.7 billion.

Back in 1958 when the tax base was broadened and the tax rate schedule stepped up, the Ways and Means Committee made a statement in its report that is highly pertinent today. This is the statement:

This year for the first time in the 18 years since benefits were first paid, the income to the old age and survivors insurance fund is slightly less than the expenditures from the fund. If no changes are made, outgo will continue to exceed income in each year until 1965. Your committee believes that a situation where outcome exceeds income for 7 or 8 years is one that should not be permitted to continue. We believe that public confidence in the system—so necessary if it is to provide real security for the people—may be impaired if the trust fund continues to decline.

The committee at that time thought it was correcting the situation by its tax increases—but again its estimates proved low. The trust fund was to be nearly $21 billion at the beginning of this year. It turned out to be $20.1 billion. The recent OASI report estimates that at the end of 1962 the trust fund will be $7 million lower.

But that report estimated OASI taxes for 1960, 1961, and 1962 at $33,958 million while the present report estimates taxes for this period with the proposed additional coverage at $33,221 million—$737 million lower. This would mean that for the period we face not a $7 million, but a three-quarter of a billion dollar deficit without liberalizing benefits.

It seems to me that we are facing at least a billion dollar deficit for the period 1960–62 inclusive, if we liberalize benefits. I do not see how we can rely on the estimate in the bill that with the liberalized benefits the benefit cost will be hundreds of millions less than we were advised would be the cost of present benefits by the trustees report filed in March of this year. Even so, the committee report is that under the bill the deficit will be $554 million—over a half billion dollars further in the red.

Mr. Speaker, this steady and rapid decline in the trust fund for a six or more year period is proper cause for much soul searching among us responsible for the system. I can but again quote from what our committee said in 1958:

We believe that public confidence in the system—so necessary if it is to provide real security for the people—may be impaired if the trust fund continues to decline.

And I likewise wonder, if we enact the proposed liberalizations without adding higher taxes, and make this decline even more precipitous, if public confidence in the Congress may not also be impaired?

If time permitted, I should like to point out how the proposed vast liberalization of the disability system is likewise leading us down this same road—the committee's own report admits that the bill likewise heads these benefits toward a certain red ink future.

In my long service on the Ways and Means Committee, this is the first time I have seen huge unfinanced social security liberalizations knowingly voted out for the consideration of the Congress.

If I had the power to do so, I should like to amend the bill to strike out the word "insurance" wherever it appears and insert the word "politics." Then, at least, we would be honest in what we were voting on.

Metropolitan Area Problems

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, June 22, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the problems facing our metropolitan areas have been described at some length before congressional committees, at conferences of planners and Government officials, and on other occasions. Gradually we have come to understand the size of the overall situation, which has been described as the major domestic problem of our time.

We have also heard some discussion about the responsibility for dealing with

this problem or with parts of it. Shall the Federal Government take it on, or should State and local government deal with it? There is, of course, no point in arguing over responsibility. Already, every level of government is deeply involved. Our problem at the present is to discover workable methods of assigning portions of total responsibility and, while we're doing it, to inform the public as thoroughly as possible about the problem and proposals to deal with it.

A Federal Department of Urban Affairs, if it is ever created, would certainly not have all the resources needed to deal adequately with the crisis of the metropolis. It could work very effectively, however, with other Federal agencies and with government at every level to achieve an allout mobilization of interest and effort in dealing with all the crises caused by urban change.

Mr. President, an editorial in the Bergen Evening Record, Hackensack, N.J., of June 18, 1960, emphasizes the reasons for citizen interest in the difficulties facing our Nation in the cities and suburbs of metropolitan areas. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AS SOON AS YOU GET THROUGH CRINGING

In one of the Rockefeller Brothers Fund studies it was concluded that sprawl, that ugly crisis with the ugly name, is simply the major domestic problem of our time. The characterization is accurate. But to understand why and how it is accurate you'll have to consult a citizen who is an experienced observer of sprawl and also is the only expert who in the long run will do anything about sprawl.

That citizen is you.

If you flinch when you hear the noun "sprawl" or its coarse synonym "the crisis of the metropolis," don't let your conscience be too hard on you. In a sense that's beginning to trouble more and more serious students of the symptoms, it may be that everyone has flinched away from the central truth about the major domestic problem.

That may sound glib and unjust. It isn't. Perhaps never have so many concerned and competent people attempted to deal with a single issue excepting the issue of war. During the last few days the New Jersey Association of Chosen Freeholders has been dealing, at a convention whose keynote was the rebirth of county government, with hundreds of aspects of the problem. "Budgetary issues excepted," one 1960 study concluded, "no problems ranked higher on legislative calendars than those of urban change." In this year's session of the legislature more than 150 bills dealing with county government were introduced; on only two other subjects were more changes proposed to deal with the flood of change in an exploding society: municipal government and the administration of the State. The universities and foundations have moved up their research task forces. The Federal Government has been implored to intervene. As when the Dutch engineers were brought to show us how to use the meadowlands of the Hackensack, we have summoned the skills of the world to help.

And things do keep happening, from highway building to urban renewal and hospital aid under Federal auspices to the skilled improvisations in public health and public safety devised by the Bergen County Freeholders, from the metropolitan planning of Fresno and Denver and Dade County to the New Jersey plan for railroad preservation and improvement.

But what's happening is not enough, and if we didn't know from the clatter of housing development and the sullen stillness in the heart of the old cities that it's not enough we could deduce this from the census statistics.

Something has to be done. But who'll do it? By this time it must be clear that the Federal Government must take a hand in the major domestic problem of our time. Senator WILLIAMS, Democrat of New Jersey, has proposed coordination, under a Secretary of Urban Affairs, of Federal agencies having anything to do with urban and suburban problems. But we can't ship this one to Washington for solution. Home rule can't do it: the map shows town lines and counties and 50 States, but the aerial camera and the census show great metropolitan complexes that wipe out those cartographer symbols—and that contain nearly two-thirds of the Nation's population. This is a job for all kinds of government, for industry, management, labor, education, the church. And it is a job, as Richard H. Leach said in the magazine America not long ago, that cannot be done once and for all: "Removing urban blight and casting metropolitan America in a mold that will satisfy future generations is a long, perhaps interminable project."

It cannot start, perhaps indeed it should not start, until people themselves have seen the need, said for themselves what it is, and demanded that the start be made.

It is everybody's job and no one's—no one's but yours.

Urgent Need for National Fuels Policy

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include copy of my newsletter released on Monday of this week:

K-E-E-N-O-T-E-S

(By Representative ELIZABETH KEE)

One of the big disappointments of the present session of Congress has been the failure to face up to the urgent need for a national fuels policy.

The future security and welfare of this great Nation depends upon the availability at all times—in times of peace as well as in times of emergency—of a dependable supply of fuel to feed an ever-growing industrial plant. Yet, in spite of this stark reality with which no one can seriously disagree, Congress has dragged its feet because, apparently, of a distortion by some groups of the purposes of a study which has been proposed to prepare such a policy.

It simply does not make sense for the United States to squander its vital fuel resources as we have done in past years. We allow low-cost residual fuel oil to be imported into this country and dumped along the east coast at a price that is always just a little below the cost of coal.

We permit gas to be imported into this country and then dumped at below cost prices in slack seasons to fire steam boilers—a most wasteful and uneconomic use of a good fuel. Both of these things result in decreased markets for coal.

Almost all other major industrial Nations have a unified fuels policy. They do not permit a shameful waste of a valuable resource. They have studied their needs and the supply of fuels. They have come up with a cordinated program that uses the fuel supply in the most efficient, economic manner possible.

I am among those Members of Congress who are sponsoring a bill calling for the creation of a joint committee of Congress to thoroughly investigate all factors affecting America's fuel needs, giving full consideration to the national welfare, the defense needs of the Nation and the economic well being of all domestic industries, and to come up with specific recommendations to Congress.

This simple, plain proposal has been opposed on the ground that it will lead to Government control of how the end-use product will be used. Unfortunately, this argument, based entirely upon a misrepresentation of the purposes and meaning of the resolution, has succeeded in blocking consideration or even congressional debate on this vital issue.

It now appears we will not be able to obtain approval of the resolution this year. But I can assure you that when the 87th Congress convenes next year a proposal for the study of a national fuels policy will be one of the first measures introduced.

DEVELOPMENTS IN JAPAN GREAT TRADEGY

The cancellation of the President's trip to Japan because of the inability of the Japanese to control street rioters could be the forerunner of serious trouble in this heretofore stable ally country of the Orient.

It appears that the present Japanese Government has lost control of the situation. Obviously, the President would have been in grave personal danger had he made his scheduled trip to Japan.

This development is doubly tragic. Not only is it a severe diplomatic blow to this country and to the West in general, but it places democracy in Japan in jeopardy. Should the worst happen and a Communist-inclined government take over in Japan, we will have suffered a major defeat.

Japan's resurgence since the war has been miraculous. A genuine democratic government has been successfully installed. The nation has made great economic progress. Japan has been a stanch ally in the fight for freedom which we can ill afford to lose. In fact, the loss of Japan would unhinge our entire defensive system in the Far East.

We in this country simply must not lose patience with Japan as a result of this unfortunate development. We need to encourage and strengthen the forces there which believe in freedom.

Everett Jones Wins Trip to Washington

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. LIPSCOMB. Mr. Speaker, it is my privilege this week to act as a host to Mr. Everett Jones, a freshman student at Los Angeles City College, who has been awarded a trip to the Nation's Capital for winning the City College All-School Speech Contest. The contest and the trip are sponsored by several

local Kiwanis clubs in Los Angeles, including the Los Feliz Club, of which I am a member.

I wish to add my personal congratulations to Everett on his outstanding achievement. In winning the award, with a speech entitled, "Freedom and You," he competed against 1,200 fellow students.

Everett arrived in Washington last Sunday afternoon and has been very busy visiting various points of interest and seeing the Government in action. I wish him a most enjoyable and educational week, and every success for the future.

Under leave to extend my remarks, I submit for inclusion at this point in the RECORD a news article which describes in more detail Everett's winning of this award:

CITY COLLEGE STUDENT WINS TRIP TO WASHINGTON, D.C.

Everett Jones, 20-year-old freshman at Los Angeles City College, leaves Los Angeles International Airport by jet airliner June 19 for a week-long all-expense-paid trip to the Nation's Capital. Jones won this citizenship award sponsored by local Kiwanis clubs by outspeaking 1,200 fellow Los Angeles City College students in an all-school speech contest just completed.

In his prize-winning speech titled "Freedom and You," he urged American citizens to appreciate their freedom and their rights; to be alert to the dangers threatening freedom; and to be willing to pay the price in time, energy, effort, and sacrifice to preserve freedom.

The young speaker intends to soak up additional knowledge and appreciation of his country's heritage in and around Washington, D.C.'s, historic highlights. GLENARD P. LIPSCOMB, Congressman from the 24th Congressional District and member of Los Feliz Kiwanis, one of the sponsoring Kiwanis clubs, is arranging special tours to honor Everett and to add special interest and value to his investigation of government in action.

In addition to Los Feliz Kiwanis, the East Hollywood and Los Angeles Kiwanis clubs and the Circle K Club of Los Angeles City College are sponsoring the trip. Representatives of these organizations will be on hand when contest-winner Jones leaves Los Angeles International Airport at 8:50 a.m. June 19 and when he returns at 7:55 p.m. June 26.

The 4-week competition in which Jones participated saw 1,200 Los Angeles City College students speaking on the general theme, "Freedom Is Up to You." The final round of the contest was judged by Dr. Wesley Lewis, professor of speech, UCLA; Dr. James Stansell, head of Los Angeles State College Speech Department; and Mr. John Dobbin, representing the life insurance industry. A similiar contest is conducted each semester by the speech department of Los Angeles City College.

The Scottish Highlanders of the State University of Iowa Leave on European Tour

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. SCHWENGEL. Mr. Speaker, today the 73 members of the world famous Scottish Highlanders, all-girl bagpipe band from the State University of Iowa, sail aboard the Queen Elizabeth for England, as the first oversea stop on a 54-day tour abroad.

The Highlanders will perform in London on June 30 and July 6. Then they will travel to Scotland and perform in Edinburgh, Elgin, Aberdeen, Falkirk, and Dumferline during the period of July 7 through July 17. Their tour will take them to Paris on July 18, after which they will travel to Amsterdam, Cologne, Mainz, Frankfort, Rome, and Berne before returning to Paris on August 4. On this same day they will sail from Cherbourg and arrive back in the United States August 9.

As one of the first stops on this year's tour, the Highlanders spent 2 days last week in Washington, D.C. They presented a public performance at Sylvan Theater last Thursday night. On Friday, they were welcomed to the White House and left a memento for President and Mrs. Eisenhower. After a tour of the Capitol and a visit to the Senate, where they were officially recognized from the floor by Iowa's Senator HICKENLOOPER, they were met by Vice President NIXON and members of the Iowa congressional delegation.

The Highlanders captivate audiences wherever they go. They are excellent good-will ambassadors, not only for the Hawkeye State, but for the entire United States. They are first-rate examples of the alert, good-looking, wholesome, and intelligent American college girls who attract attention and praise everywhere. They contribute to the image of America where outright friendliness is one of our greatest attributes.

This group is the largest bagpipe band in the world. Since its formation in 1937 the hundreds of student members of this group have traveled over 80,000 miles and appeared before 5 million persons, not including television appearances.

The Scottish Highlanders have appeared in 32 States, visited both U.S. coasts, performed twice in the Rose Bowl, and have twice—1952 and 1956—toured Europe, including England, Scotland, France, Germany, Holland, and Switzerland.

This unique bagpipe band was formed in 1937 as an all-male military—ROTC—unit. The change from men to coeds came in 1943 when the wartime shortage of men on the Iowa campus threatened the existence of the band. Director Adamson invited the coeds to continue the organization "until the boys come back," but the feminine membership has proved so popular that the girls continue to wear the kilts. No academic credit is given for participation in the Highlanders.

In addition to playing traditional Scottish tunes, the Highlanders are noted for their colorful marching maneuvers, intricate Scottish dances, and a cappella chorus, directed by Judy Croft of Norwalk, Iowa, who also doubles as a piper. In the "Drum Dance," a novelty number originated by the Highlanders, Nancy Henderson, senior in elementary education from St. Joe, Ark., dances the Highland Fling atop a bass drum held aloft on the shoulders of six of her fellow Highlanders.

Making the tour this year are the director of the Highlanders, William Adamson; Mrs. Adamson and their children, Heather and John; Mr. Adamson's secretary, Nadine Thornton; Phyllis Fleming; the drum major, Margaret Ladd, and the following members of the band. Their hometowns are in Iowa unless otherwise indicated.

Miriam L. Avey, Marshalltown; Emilie Blume, Sioux City; Barbara Broholm, Wilmette, Ill.; Beveraly Jo Bruce, Newton; Gale Chandler, Rockford, Ill.; Sharon J. Conger, Riceville; Judy Ann Croft, Norwalk; Virginia Mary Dunn, Columbus Junction; Eleanor Firzlaff, Dubuque; Elizabeth Ann Frew, Dearborn, Mich.; Ruth Carol Guildner, Oxford; Joselyn Hartwig, Clarence; Allene M. Hays, Grinnell; Nancy Sue Henderson, Ottumwa; Nancy Hopp, Glenwood; Jeanne Hughes, Lenox; Jane Ann Jinkinson, Sheldon; Donnia Kempenaar, Oskaloosa; Judy Kelmesrud, Thompson; Margaret Ladd, Iowa City; JoAnn Lesch, Osage; Malinda Jane Baker, Cresco; Ardith Broka, Parkersburg; Barbara Brown, Waterloo; Mary Camille Case, Grinnell; Judith Ann Clark, Cedar Falls; Harriett Dianne Cook, Oskaloosa; Kay Jane Croft, Norwalk; Marcia Kaye Fennema, Mount Ayr; Caroyln Ann Foote, Belle Plaine; Judith Ann Gardner, Waterloo; Martha Harris, Bloomfield; Carol Ann Hathaway, Muscatine; Gail Hemenway, Cedar Falls; Phoebe L. Hewlett, Pomeroy; Brenda Hughes, Iowa City; Mary Kathleen Hughes, Lenox; Janet Kainz, Elkader; Nancy Ann Kennedy, West Liberty; Nancy Kramer, Remsen; Jeannette Laughlin, Harlan; Margaret MacDonald, Chicago, Ill.; Janet Mast, Waterloo; Beth McDermott, Muscatine; Diana Merrill, Ida Grove; Mary Milnes, Burlington; Mary Morrison, Carroll; Carol Nelson, McNabb, Ill.; Sybil Norton, Spencer; Jeane Peckumn, Jamaica; Susan Powers, Melbourne; Suzanne Kay Raymond, Des Moines; Nancy Lee Ross, Marion; Alice Silletto, Des Moines; Mary Ellen Stalcup, Storm Lake; Mary Wlater, Lakeview; Carol Ann Wetzell, Sterling, Ill.; Mary Young, Washington; Sue Mast, Waterloo; Joan Carol McNeil, Sterling, Ill.; Lorranie Miller, Syracuse 6, N.Y.; Myra Jo Mixson, Cedar Rapids; Barbara Munro, Bettendorf; Nancy Nelson, Clinton; Mary Ossian, Shenandoah; Sandy Phillips, Cedar Rapids; Barbara Ratcliffe, Burlington; Rita Rosenberger, Altoona; Brenda Shirley, Perry; Patricia Smith, Elmhurst, Ill.; Patricia Steenrod, Iowa Falls; Kathleen Warren, Leon; Janet Wetzell, Sterling, Ill.

On Understanding Events in Japan

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, we in Colorado are proud to have a newspaper that attempts to give

adequate perspective to difficult issues in these troubled times. I commend to the members for their serious consideration the following editorial in the Denver Post of June 17, 1960:

THE MEANING OF EVENTS IN JAPAN

President Eisenhower's courageous, goodwill mission to the Far East cannot be considered a total failure, even though Japan has been closed to him.

At 69, after a heart attack, a stroke, and serious abdominal surgery, a distinguished American has shown his willingness to undergo discomfort, strain, and great personal danger in order to make a final contribution to world understanding and peace.

This must surely have been clear to the hundreds of thousands who cheered the president in the Philippines. And it can hardly have escaped the notice of Asia's millions.

The visit to Japan was canceled, not because of the president's fear, but because the Kishi administration decided it could not control the mob.

Mr. Eisenhower's determination to go to Japan, despite the danger, will remain a symbol of our national desire for understanding and good will.

Nonetheless, the events in Japan this week present a serious challenge to American prestige and a threat to our entire position in Asia.

Japan has a pivotal place in the arc of defense bases that stretches like a great sickle from South Korea around southeast and central Asia to Turkey.

No other nation in the region has as much industrial might, as high a standard of living, as great a potential for successful democracy and as much strategic significance.

Yet, after 15 postwar years of large-scale American aid and cooperation, Japan is wavering as an ally.

The president of the United States is unable to land there. The pro-American Kishi government is under attack.

The mob may yet prevent the carrying through of a defense treaty that is highly favorable to Japanese interests.

The indications are strong that the mob speaks only for a minority and that it is being led and manipulated by the Communists.

But the antitreaty movement appears to be deeply rooted in the Japanese facts of life.

Japan is the only nation in the world to have experienced the horror of atomic bombardment.

Japan has been indoctrinated by American teachers to eschew the paths of militarism.

Japan has been warned by the Soviet Union that bases on her territory will be attacked if they are used for U–2 spy missions.

Japan lies in the frightening shadow of a dangerous, aggressive growing Communist power on the Chinese mainland.

Japan knows that the Kishi government rammed the defense treaty through the Diet in an irregular and undemocratic manner.

Even if the new treaty with the United States is ratified, these factors will subject the alliance to persistent strains and tensions.

Under the present circumstances, the treaty can only be of enduring value, if the Kishi government can dispel the suspicion that the agreement does not have majority support among the Japanese people.

The way to do this—and score a counterblow at the Communist propagandists at the same time—is through free elections.

Let the whole Japanese people—not just the Communist-led Tokyo mob—have its say on the treaty. If the treaty wins, the mob will be discredited and the alliance will be on a firmer footing.

The troubles in Japan come at a time when the whole defensive arc in Asia has been rocked by blows, problems, and pressures.

In South Korea, an unstable and uncertain government has replaced the dictatorial regime of Syngman Rhee.

On Taiwan, the aging Chiang Kai-shek watches the mainland grow in power, while the shells land on Quemoy and Matsu.

In southeast Asia, guerilla forces menace weak governments, and to the west Red troops are massed on the borders of India.

In Turkey, a repressive government has been overthrown and a new one struggles to maintain order and stability.

Our role in Asia, in this situation, is in clear need of careful reexamination through the broadest and most forthright kind of public discussion.

Our Asian policy deserves serious attention in the campaign months that lie ahead.

If we are temporarily blocked from developing a deeper understanding with Japan, we can at least pursue a deeper understanding of our own position.

Father Clancy Receives Americanism Award

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. RIEHLMAN. Mr. Speaker, Father Herbert J. Clancy, S.J., of the history department of Le Moyne College, Syracuse, N.Y., was awarded the annual "John and Mary Schmelz Americanism Award" for patriotism by the Eastwood Post 1276 of the American Legion, Department of New York, on May 29, 1960.

The citation read in part:

For outstanding work in alerting citizens of the United States to the dangers of communism; for dedicated service toward maintaining a free America.

Mr. Speaker, as long as this country is blessed with men of Father Clancy's caliber, the freedom of America will never be in doubt. I am proud and privileged to call Father Clancy a friend. He is an outstanding man of God, leader, scholar, teacher and author. I know I join my colleagues in extending our heartfelt congratulations to him.

I take pleasure in including in the RECORD an article about Father Clancy, which appeared in the Dolphin, official newspaper of Le Moyne College, on April 12, 1960:

VERSATILE JESUIT ACCLAIMED AS LEADER OF CIVIC AFFAIRS

Civic participation seems to be the password in the life of Father Herbert J. Clancy, S.J., of the Le Moyne College History Department. Having long been engaged in humanitarian and political work, Father Clancy is presently active in several service organizations.

As a member of the board of the Red Cross in Onondaga County, Father Clancy meets once a month with the other directors to plan blood drives and determine whether the supply on hand would be sufficient to cope with a disaster. General Gruenther, former NATO chief, commended this board for their devotion in the preparation for the unexpected.

Father Clancy possesses a personal certificate from the Governor in recognition of his work on the board of the New York State Commission Against Discrimination. By direct appointment this organization attempts to see that Negroes are given a square deal with regard to employment, housing, and freedom to enjoy public places of amusement.

Along the same lines, Father Clancy is also a member of the board of directors of the National Urban League for the Advancement of Colored People.

The board of directors of the Foreign Policy Association and the United Nations Association have Father Clancy as a member. Their purpose is to make the U.S. foreign aid program meaningful.

Father Clancy says: "American dollars at best are temporary stop-gap measures. The underdeveloped countries want American know-how; they want the self-respect that comes with being able to help themselves."

Not content with the above four board memberships, Father Clancy is a director of the board of the Polish Arts Society of Syracuse. It is interesting to note that this organization was instrumental in bringing rare paintings and tapestries from the World Fair of 1939 to Syracuse. These works of art now rest in the Le Moyne College library.

Father Clancy's spare time is devoted to the writing of his new book, "The History of the Democratic Party," which is now in its fourth year of preparation. His previous book, "The Presidential Election of 1880" has received excellent reviews in "American Historical Review", "Catholic Historical Review", "World Affairs", and "America."

Glovemakers Union Opposes Campaign by Toothpaste Manufacturer To Give Away Gifts of Imported Gloves

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. STRATTON. Mr. Speaker, I have frequently taken the floor of this House to point out the serious challenge to the jobs and economic livelihood of the employees of the glovemaking industry of Fulton County, N.Y., whose representative I have the honor to be, presented by growing imports of gloves from cheap wage areas abroad. In fact, since coming to Washington 2 years ago I have introduced several pieces of legislation designed to meet this situation.

It is most disturbing to learn now that one of our leading manufacturers, in an effort to promote the sale of his own American-made product, is offering to give away three pairs of imported gloves. Not only does this campaign promote the use of a product which is in competition with a product produced and manufactured by American workers, but the mere fact that these gloves could be given away for a mere box top and $1 more underlines the tremendous gap in prices between domestic products and foreign products which is the real source of the damage that has been occurring to American workers.

A campaign has recently been launched by the Amalgamated Unions of Fulton

County to protest this action, and under leave to extend my remarks, I include a newspaper article from the Gloversville Leader-Herald of recent date describing these actions:

UNIONS BLAST TOOTHPASTE GIFT GLOVES

The local Amalgamated Unions have launched a campaign of protest against the Lever Bros. Co. of New York City in regard to a promotional program whereby the company will provide toothpaste customers with three pairs of imported gloves.

Mayor Eugene S. Grover along with the unions sent a letter of protest to the company and hundreds of members of the unions have sent cards to the company protesting the promotional campaign.

Officials of Locals 1712, United Tannery and Leather Workers, 1714, Consolidated Glove Cutters and Shavers, and 743, Knit Woolen Workers, in their letters noted they were not condemning the toothpaste the customer had to purchase in order to secure the gloves.

IMPORTED GLOVES OFFERED

The Lever Co. has offered the public three pairs of stretch string gloves imported from Italy if they send the box top from the toothpaste along with $1.

The unions in their letters said they thought the company was using poor taste in asking the American public to buy an American made product and to get the people to do this, give away an imported product and further deprive gloveworkers, businessmen, and employers of maintaining employment in Fulton County.

Mayor Grover in his letter said: "You may not be aware of the economic effect such a promotion will have on the welfare of the American manufacturer and workingman."

"Fabric gloves which account for a substantial percentage of the total manufacture within Fulton County, are directly in competition with those you propose to use as premiums. The wage rate in Italy is only a fraction of that in this country.

"Knowing the tremendous response Lever Bros. get to their promotions we would estimate that at least 100,000 dozen pairs of gloves would be required. We have estimated that such an order could displace an alarming percentage of the wages paid by the fine glove industry in Fulton County to say nothing of the profit lost to retailers in the United States, the effect of which would ramify to many segments of the economy.

EFFECT ON COUNTY

Although we hardly expect you to change the character of the promotion we do want you to know the extent of the plight in which Fulton County manufacturers and workingmen will find themselves and the indirect effect it will have upon the economy of the city of Gloversville and the county of Fulton, including tax payments and valuations.

"Should you be curious to know the exact effect of the loss to domestic producers caused by the distribution of foreign hand covering we would be only too happy to supply authentic and up-to-date statistics."

The Glove Cities Area Joint Board of the Amalgamated Clothing Workers of America has also asked the public to send protests to the company.

A Declaration of Principles

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. MULTER. Mr. Speaker, it was my privilege, on June 4, 1960, to address the 51st annual convention of B'nai Zion, held at Kutschers Country Club, Monticello, N.Y.

B'nai Zion is a national fraternal organization which has grown in stature through the years until today it is recognized as the outstanding organization of its kind in this country, with a membership that reaches from one end of the country to the other.

During the course of its deliberations the convention adopted the following declaration of principles which I believe deserve the widest publicity. The text of the declaration follows:

DECLARATION OF PRINCIPLES

Dedicated to the furtherance of the ideals of Americanism, zionism, and fraternalism, Bnai Zion, in the more than 5 decades of its existence, has adhered steadfastly to the principles laid down by its founders.

In the firm conviction that zionism is consistent with American ideals of social justice and equality of opportunity for all, Bnai Zion reaffirms its support of and affiliation with the World Zionist movement and identifies itself actively with the following goals:

1. Furtherance of mutual understanding and ties of friendship between the United States and Israel.
2. Strengthening of the bonds of fellowship between the Jews of our own country and our brethren in Israel and other lands.
3. Economic aid to the people of Israel.
4. Aid to immigration and absorption of refugees into the state of Israel.
5. The survival of the American Jewish community and the promotion of the Hebrew language and culture.

In reaffirming our adherence to the Zionist ideal we proclaim our position as a nonpolitical body, neither affiliated or identified with any of the political parties in Israel or elsewhere. We welcome into our ranks members of all shades of opinion united under the banner of Americanism and zionism.

We strongly believe in the principle of fraternalism in American Jewish life and will continue our efforts toward the advancement of the human and social welfare of the individuals and families that constitute our membership.

Nixon Text on Farm Ills

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. SPRINGER. Mr. Speaker, I attach herewith an excerpt from the Washington Post of June 21, which contains that portion of Vice President RICHARD M. NIXON'S address at Minot, N. Dak., dealing with his farm proposals.

In this speech, the Vice President took note of the fact that the American farmer needs real and active help in 1960. The Vice President also faced up to the fact that the real problem in American agriculture is the surplus on hand.

I think we all realize that a part of the answer to this problem is taking out of production acreage which provides for a portion of the surplus. However, far better do we understand the need to further expand our markets to increase consumption of our agricultural products in markets abroad. The underdeveloped countries are the greatest area for the consumption of American surplus products. As one of the authors of Public Law 480, it appears to me to be clearly the path of wisdom. In this last 6 years, more than $9 billion in surplus food has been distributed to hungry people in other lands, people who could not afford to pay for food in the commercial marketplace. One-third of the world's population still remains hungry. Expansion of this human market will not only benefit our farmers, but it will increase good will for America abroad, a valuable contribution to our foreign policy. And I am sure we all realize the need to strengthen our foreign relations today more vitally than at any other time in history, in any and every way we can.

This method of disposal of our surplus additionally benefits in the amounts exchanged in foreign countries for which we receive currencies of those countries. This not only promotes further agricultural market development of definite income return to the American farmer, but it, too, is an important cog in our relations with the free nations of the world. It permits the economic development of such friendly nations through loans to private U.S. and foreign businesses in the currencies of those countries. To so help such countries to expand their own economies and better their standards of living will go a long way in our fight for world freedom and world peace, a long way in erasing the insidious Communist propaganda that seeks to picture the United States as an avaricious power seeking only its own self-aggrandizement.

When we help our farmers, we help ourselves, we strengthen the veritable backbone of our Nation, we bring the nations of the free world closer to our orbit in the cause of lasting peace. Let us not risk damage to this multifaceted program by any curtailment of it. Let us, instead, expand the program within Public Law 480, to our everlasting credit.

The Vice President has hit on the real solution to the American surplus agriculture problem—in everexpanding markets abroad with people who can consume this surplus. Continuation and expansion of this idea will get approval not only at home but also with friendly peoples all over the world.

The excerpt follows:

NIXON TEXT ON FARM ILLS

(MINOT, N. Dak., June 20—The following is that portion of Vice President RICHARD M. NIXON'S address here today dealing with his farm proposals:)

The solution of the farm problem does not lie in simply doing more of what we have been doing, since our present programs have aggravated rather than solved the problem.

We should reject any program which would put the farmer in a Government straitjacket in which what he plants, how much he can sell, and the price he receives is determined by bureaucrats in Washington.

While the parity price program on which we have placed such great reliance in the past has proved useful in stabilizing farm prices, we must recognize that a parity formula at its best treats the symptoms and not the cause of the farm problem.

URGES INFLATION FIGHT

A method must be developed whereby the farmers themselves have a greater oppor-

tunity to choose the kind of farm program they want.

Let us turn now to some of the specific proposals which I have asked the Republican Platform Committee to consider. I want to emphasize at the outset that these proposals are not intended to be all-inclusive. For example, I shall not discuss the problem of parity at this time since it is currently before the Congress. But, the proposals I shall make are ones designed to deal with the causes and not just the symptoms of the farm problem.

To help the farmer to get out of the cost-price squeeze, we must wage an effective fight against inflation. In a period of inflation, with surpluses overhanging the market, the prices of the products the farmer grows are the last to go up and they never catch up with the prices of the things he buys.

There should be a sharply expanded program of research in the marketing of farm products, designed to reduce the gap between what the farmer receives for his crops and what the consumer pays for his food.

To bring supply more directly into relation with demand, we must recognize the necessity for taking acreage which produces crops in surplus out of production. In administering this program, we must take every possible precaution to avoid creating ghost towns in the traditionally agricultural areas.

WOULD EXPAND MARKETS

The rural development program, which has been so successful, should be expanded so that marginal farmers can supplement their income and not be forced to move from the rural communities in which they live.

Our major aim and our major effort must be, however, not to reduce production but to expand the markets for farm products and to increase consumption. There are three proposals in this area that I think are among those worthy of consideration.

First, Governor Rockefeller, in his recent appearance in North Dakota, proposed that a year's supply of food for the Nation be set aside against the eventuality of an atomic attack. This is a sound and constructive proposal, and I would only add that because a 1- or a 2-year reserve would represent an enormous permanent storage burden in its present form, a research program should be undertaken to find economically feasible ways to convert surplus gains into storable form.

Second, I believe the amount of effort we are presently devoting to research for expanding the commercial uses of farm products is inadequate.

It is an established practice in business to allot funds for basic research which bear a proper relationship to the overall magnitude of the problem to be dealt with. It doesn't make sense to spend only $16 million a year on finding new uses for agriculture products when we are spending $5 billion a year in financing and storing surplus farm products.

There is a third area which provides by far the best opportunity for making our food surpluses a national asset rather than a liability as they tend to be today. I refer to the use of our foods in the humane, as distinguished from the commercial, market abroad.

It has been estimated that a third of the world's population, approximately a billion people, go to bed hungry every night. Everybody agrees that it doesn't make sense to have huge surpluses at home and millions of hungry people abroad. How can we bring our surplus food and hungry people together?

NINE BILLION-DOLLAR DISTRIBUTION

The United States has been doing a great deal in this field. In the past 6 years, under Public Law 480, over $9 billion of surplus food has been distributed to people in other countries who could not afford to purchase this food in the commercial market.

There are two potential objections to the program. Since it is unilateral in character, we do not get the credit that we might from our generosity because of the criticism in some countries that the sole purpose of the program is to further selfish U.S. objectives in the cold war.

Second, we have good friends and allies, the Canadians, Australians, French, and Argentinians who produce the same foods that we have in surplus. This means that whenever our surpluses are distributed without adequate regard to the effect on the normal commercial markets, the effect is potentially disastrous as far as these countries are concerned and in the long run would be detrimental to our own interests as well.

Immediately prior to the summit conference, the President, in discussions with his staff in which I participated, developed a proposal which meets these objections and which can lead to a major breakthrough in getting surplus food to hungry people abroad. He was considering presentation of this proposal for the first time at the summit conference in Paris.

The first step would have been to call a conference of all the surplus-producing nations, including the Soviet Union. These nations would then work out a joint proposal for a multilateral program under which the food surpluses of all nations which desired to participate would have been turned over to United Nations' agencies for distribution to the hungry people of member nations.

The recipients of the United Nations food would be those unfortunate people who still are unable to supply themselves with an adequate diet either by their own agriculture efforts or by exchange of goods. The distribution would be handled in such a manner as not to disturb commercial markets.

Since Mr. Khrushchev's actions in Paris have ruled out the U.S.S.R.'s participation in such a program at this time, the only course of action left open to us is to explore with other surplus-producing nations their attitude toward joining us in such a program.

Let me emphasize that I do not suggest that this proposal is a cure-all for the farm problem or for the world's problems. It does, however, have these obvious merits: It will not be harmful to our friends and allies since they will participate in the program. It will not be subject to the criticism directed against unilateral United States aid since it will be administered through the United Nations.

Letter From the American Farm Bureau Federation

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. CONTE. Mr. Speaker, I think that the following letter is concise and well reasoned and it gives strong substance to the major objections to this measure:

AMERICAN FARM BUREAU FEDERATION,
Washington, D.C., June 20, 1960.

The Honorable SILVIO O. CONTE,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN CONTE: We recognize that you are very busy during these closing days of the 86th Congress; however, we hope you will take time to read the attached statement regarding the Poage bill, H.R. 12261.

There can be little question about the need for corrective legislation to deal effectively with the wheat problem. However, the Poage bill moves in a direction that will further aggravate the situation.

The provisions of this legislation are unsound. It not only fails to solve the wheat problem but also threatens to create new problems for the producers of feed grains, livestock, dairy and poultry products.

We urge (1) that you vote against the rule for consideration of this measure; (2) should the House vote to consider this bill, we recommend the elimination of all provisions except subtitle B.

No plan will solve the basic problem or serve the longrun interests of farmers, including wheat and feed grain farmers, unless it encourages market expansion, reduces incentives for the production of unneeded supplies, minimizes economic hardships on wheatgrowers, and avoid shifting the burden of adjustment to other farmers.

Sincerely yours,

CHARLES B. SHUMAN,
President.

Farm Surplus Reduction Act of 1960

SPEECH

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12261) to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes.

Mr. COOLEY. Mr. Chairman, we are in a rather unusual situation, because if we adopt the pending amendment that is the end of it; we are then, in effect, adopting the Senate bill which we have never seen. We have not even heard it read. No member of the Committee on Agriculture has spoken in behalf of the pending substitute except the gentleman from Idaho [Mr. DIXON].

Conspicuous by his absence from this debate is the distinguished minority leader of our committee, the gentleman from Iowa. At the last minute he comes in and says: "Yes, if you want to have a bill you must adopt the substitute and take the Senate bill." Just how stupid can we be to sit here and adopt a Senate bill that has not even been read?

Mr. HOEVEN. Mr. Chairman, will the gentleman yield?

Mr. COOLEY. Yes, but be quick, for I have very little time.

Mr. HOEVEN. The Senate bill has been in the Committee on Agriculture for several days, but the gentleman never held hearings on it.

Mr. COOLEY. Did not the gentleman say in the Rules Committee he was not for the Senate bill?

Mr. HOEVEN. I did not. I said I was ready to accept the Senate bill.

Mr. COOLEY. The Senate bill?

Mr. HOEVEN. The Senate bill; yes.

Mr. COOLEY. I understood the gentleman opposed the Senate bill. But he does not have and the administration does not have a bill to offer here. How can we be so naive in voting on one of the greatest problems we have today, wheat, and vote for a bill we have never seen?

If we pass the House bill I will call up the Senate bill and move to strike out everything after the enacting clause and substitute the House bill. Then the whole thing goes to conference. We shall work out our differences and bring back a bill that will be acceptable, I am sure, to both Houses of Congress.

We should defeat the amendment offered by the gentleman from Utah.

Statement by Hon. Thomas J. Dodd, of Connecticut

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. DADDARIO. Mr. Speaker, on Saturday, June 18, 1960, the Democratic State convention was held in Hartford, Conn. Because the U.S. Senate was in session, Senator THOMAS J. DODD was unable to be present and had his remarks read by his son, Thomas J. Dodd, Jr. I have known young Tom Dodd for many years, and was proud to see how ably he read his father's message. He is a boy of great promise and capacity. The remarks he read will be of interest to the Members of the House:

STATEMENT OF SENATOR THOMAS J. DODD TO BE READ TO DEMOCRATIC STATE CONVENTION AT HARTFORD, CONN., SATURDAY, JUNE 18, 1960

I deeply regret that I cannot attend our State convention because of the heavy schedule on the floor of the Senate for Friday and Saturday. Much as I would like to be with you, I think I can best serve by making whatever contribution I can to the enactment of a program that will be good for our country and the building of a record that our candidates can run on this fall with pride.

This is a critical hour in the life of this Congress and in the realm of international affairs. The Japanese Security Treaty, which looms so large in the news of the hour, may be brought to the floor of the Senate at any time. And such vital questions as flood control, adequate pay for Federal employees, medical research, aid to education, and my committee work on the foreign aid and military assistance bill—all are on the agenda for Senate action this weekend. Under these circumstances, I cannot leave Washington.

I am particularly sorry to miss this opportunity to personally tell the convention of the magnificent work done in Congress by FRANK KOWALSKI. He has been an able, dedicated, effective Member of Congress who has served the Nation admirably and reflected great credit upon Connecticut.

During the campaign of 1958, people of our party and of our State soon came to recognize that we had nominated for Congressman at Large an unusually fine public servant. All of the promise which he demonstrated during his energetic campaign has been completely fulfilled by his action of the past year and a half. We do our party a great service when we renominate FRANK KOWALSKI and I am confident that the people of our State will give him the overwhelming vote of confidence that his record in Congress and his lifetime of service to our country deserve.

Each of the other Members of our congressional delegation, who will soon be renominated by our district conventions, has done an excellent job in Washington. The good impression which our House delegation has made has been remarkable. I have heard nothing but good about our Representatives.

I know that Speaker RAYBURN and House Majority Leader MCCORMACK are counting on the leadership of all six of our Connecticut Representatives in the crucial session beginning in 1961 when a new Democratic President, working with a Democratic Congress, will attempt to give the Nation the greatest program of progressive legislation in the history of our country.

In the past 2 years the Democratic-controlled Congress has tried, and in some measure succeeded in, enacting a broad program of good legislation. But the will of the Congress has been frustrated, thwarted, and hindered by an administration which has dragged its feet in every great area of challenge. I believe that the American people have come to realize that the decade of the 1960's must be a decade of action or our country, and the great causes it represents, will perish.

Each of us has a part to play in this crucial election contest. One of the principal national objectives of the Republican Party this year is to recapture the six congressional seats they lost in Connecticut in 1958. We can expect them to put on a tremendous campaign, a campaign which will utilize all the money and resources which are always available to the Republican Party.

It is therefore of vital importance that the Democratic Party of our State make a tremendous effort on behalf of the reelection of each of our Congressmen. In our understandable enthusiasm for the presidential contest, we must never forget for a moment that the capacity of a Democratic President to carry out the platform of our party will depend upon the size of the majority he will have in the next Congress.

The Democratic Party of Connecticut has come a very long distance since 1952. We have gained victories that few thought possible in the dark hours following our defeat of that year. We now have before us the opportunity to complete our victory by preserving our gains in the Congress and in our State legislature and by making a vital contribution to the election of a Democratic President.

I look forward to working with each of you in the winning of a great victory for our party and for the people of America.

The Editors Speak?

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the June 17 issue of the Lansing Journal, an independent weekly newspaper published in my district, is, I believe, a commentary on a subject of great concern to all Americans, and I am including it in the RECORD for the consideration of the Members of Congress:

THE EDITORS SPEAK?

If some have their way, the predicted Federal budget surplus of $4.2 billion will disappear, and in all probability another deficit will take its place. They would spend money in virtually limitless amounts on new or increased welfare state and similar legislation.

They won't, however, have the support of the Nation's grassroots editors. The American Press recently polled a substantial number of weekly newspaper editors on a list of current controversial subjects. One question asked how they'd prefer the bulk of the budget surplus to be used. The answers: To reduce national debt, 80 percent; to increase defense expenditures, 11 percent; to lower taxes, 18 percent; for greater social welfare programs, 6 percent; for Federal aid to education, 2 percent.

These editors have seen the gradual development of the welfare state in this country, and realize its destructiveness—not only to our wealth, but to our self-reliance, independence, and freedoms. And the great majority want no more of it.

Nixon Enters the Farm Debate

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. SPRINGER. Mr. Speaker, I append herewith an editorial from the New York Herald Tribune and another from the Washington Post and Times Herald commending the Vice President on his timely remarks at Minot, N. Dak., regarding a farm program, and especially his ideas on Public Law 480 and an expanded export of American surplus agricultural products.

Both newspapers take note of the Vice President's belief that export is the major solution of agricultural surpluses. Participation by other friendly nations would bring an international flavor to the job of helping underdeveloped countries feed hungry people.

The export program suggested by Mr. NIXON could have a tremendous impact favorably on our foreign policy.

The editorials follow:

[From the New York Herald Tribune, June 22, 1960]

NIXON ENTERS THE FARM DEBATE

In his speech in North Dakota on Monday, the Vice President formally entered the campaign debate on the problem of American agriculture, which is surely one of the most serious domestic problems we face. The farm question is so complex that no solution or set of solutions easily comprehended by the public can be formulated. All that can be formulated are aims.

Broadly speaking, there are two principal aims. The first is to assure the farmers of this country a decent living without the vexations and very expensive structure of controls and subsidies every one now shoulders.

The second is to put to worthwhile use the enormous agricultural surpluses we have accumulated in storage bins and to bring

farming into a balance which will prevent the building up of such surpluses in the future.

We have now had 30 years of elaborate agricultural planning, but there has been no allowance for the extraordinary rise in productivity owing to advances in technology. A farmer today can, at the least, grow twice as much corn as he could in 1930, and while during World War II and the postwar period the world could absorb all he could produce, conditions are very much changed today.

Unfortunately, the price supports which were designed to encourage production then have not changed. They are still with us. So, instead of being encouraged to produce for the market, the farmer is encouraged to produce for storage, and the consumer is paying, in effect, a large and useless tax on his food.

Mr. NIXON made a suggestion in regard to the surplus which he says the President had intended to present at the abortive summit meeting last month. That is to expand our Public Law 480 food program, by which we sell surplus crops to foreign countries for local currencies and in turn invest the money locally, into a system of international distribution through the United Nations.

The Soviet Union would not be invited to participate because of the international atmosphere. However, other countries—Argentina, Canada, France, Australia—would join in consultation because they grow the crops we have in surplus and blind dumping on our part could damage their markets. Some of them have large surpluses, too.

This is a good, responsible idea. There is a danger, once the surplus was dissipated, that the beneficiaries would continue to regard us as an important source of their food. Yet it is unlikely that any reasonable government could afford to put itself in a position of such perilous dependence. The point is that we should think about surplus disposal on this kind of scale. Not only does the surplus cost $5 billion a year, it also depresses our farmers' own markets, and hence their incomes, by its very existence.

In any case, Mr. NIXON is surely right when he says we must not fight the farm policy battle in the same old entrenched positions. Let us not have candidates making absurd promises in the hope of picking up farm votes which do not exist, as such, in any great number today. Nor can the voter who is not a farmer afford to dismiss the whole business as talk he never need listen to.

[From the Washington Post, June 22, 1960]

SURPLUS FOOD AND HUNGER

The idea of a world food pool administered by the United Nations is a logical extension of the President's food-for-peace program. The United States has already gone a long way in converting its agricultural surpluses into an international asset, with $9 billion worth of farm products distributed abroad under Public Law 480 in the last 6 years. Much more could be done, however, if all the surplus-food-producing countries would join in an undertaking for sending commodities they do not need to the billion persons in many lands who are now undernourished.

It is unfortunate that President Eisenhower did not have an opportunity to present this suggestion at the ill-fated summit conference, as he had planned to do. Vice President NIXON has now tossed it into the political arena as a plank on which he will seek the Republican nomination and the Presidency. But it ought not to be a partisan matter. The suggestion is important enough both to American agriculture and to the hungry people of the world that it could well win endorsement from both parties.

Mr. NIXON has also shrewdly borrowed from Governor Rockefeller the suggestion that part of the country's agricultural surplus be set aside as an emergency food reserve. The Governor had urged that large quantities of wheat and other staples be stored close to centers of population so as to be available "to feed our people in the post-attack period in event of a nuclear attack on this country." Far too little thought has been given to an emergency food reserve of this kind. To be sure, most of the surplus wheat is already in the hands of the Government, but it has not been stored with the object of emergency use when transportation might be very limited.

The Vice President is right in saying that these two items, plus a guarded nod at the soil bank, a boost for the rural development program and a bid for more research into industrial use of farm commodities, do not constitute a complete farm program. But they are constructive elements that ought to have a place in any long-range policy that the next Congress may adopt. The country ought not to get into the habit of viewing its agricultural surpluses as a liability. They can be so regarded only because, when allowed to accumulate indefinitely, they tend to depress prices and to deny farmers a share in the country's general prosperity. Properly utilized, however, they can become a great asset to the free world.

The Vice President also struck a salutary note in urging the two parties not to "dig in and fight the battle over farm policy in the entrenched positions which we have occupied over the past 5 years." Certainly a new outlook is needed, and it ought to be related so far as possible to channeling more surplus food into areas that are struggling against hunger.

Religion Is Steadfast

EXTENSION OF REMARKS

OF

HON. MILTON W. GLENN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. GLENN. Mr. Speaker, in these difficult times for all the peoples of the world, it is good to see and recognize the steadfastness of religion, and that people everywhere are turning to God for strength and understanding in their lives.

As an example, last Sunday, June 19, 1960, the Central Methodist Church of Linwood, N.J., celebrated its 100th anniversary.

It is interesting to read the history and note the growth of this typical American small church as recited in last Sunday's program as follows:

This area was settled by Friends in the late 1600's who worshiped one first day on this side of Great Egg Harbor and the next week on the Beesley's Point side. It was called the Egg Harbor Meeting and by about 1720 had built a meetinghouse in the midst of what is now Friends-Central Cemetery. At the time of the French and Indian war a dispute arose as to whether Friends were justified in fighting for their country. Those who affirmed that it was right for Friends to fight for their country were read out of meeting, and went to Bargaintown, by that time the largest community in these parts and organized a new meeting known as Blackman's, named for the man who donated the ground. In 1814 Bishop Francis Asbury organized the weak and wavering group into a Methodist Church and in 1822 Zion Methodist Meeting House was built. As the population grew Methodists along Shore Road continued to worship at Zion, and in the old brick schoolhouse which stood at the corner of Zion and Tilton Roads in Bakersville (now Northfield).

Capt. John Walker Tilton, while absent on a sea voyage, wrote to Jesse Adams that he thought the people of Leedsville (now Linwood) and Bakersville should have a centrally located church of their own. As a result of this letter, and "pursuant to a public notice, a meeting was held at the Leedsville schoolhouse on the evening of the 21st of January, 1860, to consider the propriety of erecting a meetinghouse on the shore."

The Leedsville schoolhouse was located at what is now Van Sant Avenue and Maple Avenue. The Reverend Jonas Chew, pastor of Zion Methodist Circuit, was appointed chairman and Jesse Adams, secretary. The majority present voted to build such a meeting house. Mr. Francis Somers offered to donate land sufficient to erect a meeting house and wagon sheds. The Reverend Chew, Captain Walker and Israel S. Adams were appointed to receive subscriptions. By February 4 Mr. Adams had secured $800 in cash with $195 more pledged. Captain Tilton reported $650. Mr. Somers' offer of land was accepted. On February 20 at a meeting at the old brick schoolhouse in Bakersville the following trustees were elected: Captain Tilton, Israel S. Adams, Jesse Adams, Dr. Samuel C. Edmunds, Lewis S. Franbes, Samuel R. Risley and Andrew Frambes. The name selected was Central Methodist Episcopal Church of the Barbaintown Circuit.

On February 23 the land was surveyed and a deed given. The lumber was brought by ship to what is now Hackney's Landing on the Northfield-Margate Road and brought to the site by teams of horses and wagons. The cornerstone was laid on Sunday, June 19, 1860, and the completed building dedicated on January 10, 1861, with the Reverend A. K. Street delivering the sermon.

The work of God's Kingdom prospered, and in the year 1873 the New Jersey Annual Conference, meeting in Bridgeton, divided the circuit into two appointments, Zion and Asbury, and Central and a new church called Mariners' Bethel. Those were the days of mass revivals, of class meetings of such a rich and glowing nature that every Methodist could testify concerning God's grace in his life and could offer public prayer. In 1910 the 50th anniversary was observed with the Reverend Sanford Nichols, district superintendent, preaching. A few members participated who had been present 50 years before at the cornerstone laying. In the year 1916 there was an outstanding revival during the pastorate of the Reverend Carlton R. Van Hook which has had a lasting influence on our congregation. In 1923 stained glass windows were installed and the church completely renovated. It was at this time that the two paintings in the front of the sanctuary were given us by the artist. In 1924 the church grounds were extended to Marvin Avenue. Central Hall was built in 1926 at a cost of $23,500, largely through the efforts of Mr. Walter B. Van Sant. Mrs. Edgar A. Miller gave $10,000 towards the building in memory of her father, Mr. Israel G. Adams. The annual conference in 1931 separated Central Church from Bethel. Also in that year came the installation of a pipe organ and the remodeling of the front of the sanctuary. The old Amen Corner and curved altar rail were replaced by the present choir lofts, platform and altar rail. In the year 1939, under the pastorate of the Reverend Franklin T. Buck, Central Church purchased the fine residence at 15 Shore Road to serve as the parsonage. In 1950 extensive improvements costing some $12,000 were made to the church building in connection with its 90th anniversary at which time Bishop Fred Pierce Corson, resident bishop of the Philadelphia area of the Methodist Church, preached the sermon.

In recent years we have had a rapidly increasing ministry as the population has grown. By actual count in June 1948, we had 179 active members; now, in June 1960, we have 859 members. The large Sunday morning church attendance worships at three services with one evening service. To provide more adequately for the Christian training of our children and youth we erected a new children's Sunday school building at a cost of $165,000, which was consecrated by Bishop Corson on August 24, 1958. There are plans for a new church building and a youth's and adult's building with a chapel, each to be erected as adequate funds are available. This is the third year we have had the benefit of the services of the Reverend Howard D. Stratton whose home visits have meant much to our people. During the ministry of the incumbent pastor, the Reverend Sheppard Joslin, three young men have entered the Christian ministry: The Reverend Robert B. Steelman, pastor of Leesburg and Dorchester Methodist Churches; the Reverend Daniel R. Stone, pastor of Lower Bank, Green Bank and Weekstown Methodist Churches; and the Reverend David B. Joslin, director of youth activities at the Methodist Church, Summit. During Mr. Joslin's pastorate here he has officiated at 438 baptisms, received 814 new members, conducted 414 funerals, and married 318 couples.

Mr. Speaker, I am proud of this church, of this congregation, and of my very dear friend to whom I owe so much in spiritual guidance, the Reverend Sheppard Joslin, the pastor and the Reverend Howard D. Stratton, the visiting pastor.

Remarks of Hon. Thomas J. Dodd, of Connecticut, at Wheeler High School Commencement Exercises

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1960

Mr. DADDARIO. Mr. Speaker, graduation day is an important day in the lives of all our young people. Those students who graduated from Wheeler High School, North Stonington, Conn., have special reason to remember their commencement exercises because of the fine expressions made by Senator THOMAS J. DODD, of Connecticut. I feel that Senator DODD's thoughts are important and instructive:

REMARKS OF SENATOR THOMAS J. DODD AT WHEELER HIGH SCHOOL COMMENCEMENT EXERCISES, NORTH STONINGTON, CONN., FRIDAY, JUNE 17, 1960

I am deeply grateful that you have invited me to speak at these graduation exercises. I know the significance of this moment in the lives of the graduating class and of their families and I appreciate the privilege of being asked to come here and share it with you.

For about 10 years I have been spending as much of my time in North Stonington as my public duties permit. I was, of course, born in eastern Connecticut and have spent a large part of my life here. Those of us who have been lucky enough to live in this part of our State and in this wonderful town of North Stonington have much to be thankful for.

We have lived in an area filled with natural beauty and in an atmosphere close to the realities of life, an environment of close family ties and sound traditions, an environment of neighborliness, of honest work, of pleasant homes and good people.

And so the first thing I want to say to the members of this graduating class is that you have begun your lives with the priceless advantage of a good heritage.

This day marks off a great dividing point in the life of each of you. I am sure that you are very much like I was during my school days. Through the years of your childhood, your imagination must have been filled with thoughts on the nature of your life after this day, what you would do, what you would be, what kind of a future you would make for yourself. Now you are about to step into that future.

Up to now you have been largely on the receiving end of all the care and indulgence that your family and your community could bestow. Now you must begin to give something. From this day forward, as you enjoy more and more freedom, and wider and wider opportunities, you must assume deeper and deeper responsibilities.

I would like to discuss today some of the obligations and the opportunities that await you.

First is the tremendous obligation to your families. It has taken years of sacrifice, worry, self-denial, and care on the part of your parents to bring you safely to this day.

I well understand the mixture of joy and sadness in the hearts of your parents as they sit here this evening. I have seen four of my own children graduate from high school and I know what this moment means. It signifies the end of those childhood years so precious to parents. It means that the family circle is soon to be broken as you go away to school or to work or to marriage.

And so as you start to make your own way, remember the devotion and sacrifice and care that have brought you to this point and given you this opportunity. The future happiness of your parents is all wrapped up in you. This is a time to quietly dedicate yourselves to act in the years ahead in a manner that will justify the hopes, the sacrifices, and the expectations of your parents. They ask very little of you. Be faithful to the values learned in your home, be upright, be honorable, be hard working, be conscientious in whatever you undertake and that will be enough.

Another obligation waiting to be met is your debt to your community. The greater part of the activities of any American community is dedicated to the welfare of its young people. I refer not only to such matters as schools, recreational facilities, public health activities, and traffic safety. Almost all of our activities on the local level are really aimed at building the kind of community in which youngsters can grow up in health, safety, and happiness.

It is now the time for you to begin to assume your fair share of the burdens of running a free government at the local level. you must prepare yourselves to take the place of those who spend a good part of what could otherwise be their leisure hours working for the benefit of your town. You must prepare yourself now to take your place in the ranks of these fine civic associations, parent-teachers groups, and church organizations that make our towns pleasant, decent places to live.

You don't have to be a Member of Congress or a delegate to the United Nations or a Cabinet member to make an important contribution to your times. In the final analysis, our free society will stand or fall on the strength of democracy at the local level. Those who carry on the task of making our system work at the community level, those who work in modest ways to make our towns better places in which to live, those who give of their time and effort to dozens of worthy causes are rendering greater service than they know.

This leads me to the discussion of another obligation, the great debt which each of us owes to his country.

You will carry throughout your life an obligation to show a very special kind of loyalty to your country. In this sophisticated age it seems somewhat out of place to speak of patriotism.

In some quarters patriotism is scorned today. It has gone out of fashion. And there is even a fuzzy notion current that patriotism stands in the way of the development of an international order of peace and justice.

When I speak of patriotism I do not mean merely Fourth of July oratory or flag waving, or the hollow veneration of mere symbols.

If this were all there were to it, then patriotism would indeed be a rather empty thing. Our loyalty is not to the symbols, but to the ideals and traditions of our country and to the causes it represents.

Love of country is one of the deepest and most abiding of human instincts. Strange indeed is the man or woman who does not feel a special love for his homeland. As often as not, it is the most humble, the most abused, and the most misgoverned who will, in an hour of crisis, display the fiercest and most selfless loyalty to their country.

So it can be said that the instinct of patriotism is almost universal.

Americans have a special reason for a special kind of loyalty that goes far beyond the love of things that are familiar. I do not say this merely because we have been given more advantages and privileges than people of other lands.

I say it because our country, its institutions, its traditions, its strength today compose the sustaining force which preserves government based on freedom and respect for human decency.

Whatever may be the faults and weaknesses of our people as individuals, and they are many; whatever may be the mistakes and weaknesses of our Government, and they have been many, the United States of America as a nation has historically acted with honor, with courage, with charity, with justice and with idealism.

Perhaps we are too close to the scene to appreciate the significance of the role of our country and of our generation. A distinguished foreign visitor to Washington said recently:

"Washington has become the fountainhead of freedom. We may well say that the road of freedom, of democracy, of self-determination of peoples, and the respect for human personality leads us today to and from Washington and it is to a large degree in the United States that the hopes for the survival of human freedoms rest."

No nation has ever carried such an awesome burden as this. I sometimes think that our entire history has prepared us for and guided us toward this crucial role that we now play.

Surely a sense of national mission and destiny has moved our country from its earliest days. The opening paragraph of the Federalist papers, pleading for the adoption of our Constitution, said:

"It seems to have been reserved to the people of this country, by their conduct and example, to decide whether societies of men are capable of establishing good government. Failure on their part would be the general misfortune of mankind."

All of the forces that have shaped our history, all of the good fortune, all the noble aspirations, all the blessings of material strength, have combined to give us the means and the obligation to preserve the temple of Western civilization from the barbarism of first nazism and now communism.

Why do I say all this? I say it because our country and its ancient ideals are more in

need of the loyalty, the devotion, the understanding and the unselfish help of its young men and women than ever before. Never has a nation been so in need of a generation that recognizes its destiny, represents its ideals and embraces it traditions.

And so I hope that you will carry in the years ahead and throughout your lives a sense of duty and obligation to your country. Don't be ashamed of patriotism. Don't join those misguided college students who are today objecting to pledging allegiance to their country when they apply to their Government for loans to finance their college education.

If you are called upon to serve in the Armed Forces of your country, do so not reluctantly or cynically but willingly and devotedly, with pride in the knowledge that you are carrying out a great and necessary duty in order that our country might remain free and might preserve freedom in the world.

Be prepared to support your Government and not be supported by it. Be prepared to give up your time and your peace of mind and to take part in the political life of your Nation by actively supporting candidates and parties and issues that you feel are in the national interest. And when your turn comes to assume the role of teacher and parent, I hope that you will impart to those under your care that love of country which has been imparted to you.

The final obligation that I would like to discuss is your obligation to yourself, your duty to do full justice to your talents, your training and your hopes.

Each of us has the obligation to make the most of whatever talents and abilities God has given us. If we fail to do so, we not only let ourselves down but we fail in the contribution that we ought to make to others and to those who will come after us.

This is a very decisive time in your lives. The decisions you make now about your future will go a long way toward determining just what that future will be.

Every right decision you make now opens broad vistas of opportunity. Every wrong decision closes off your horizons and closes the door on opportunity.

So this is the time to think things through.

If you do not yet know what you want your life work to be, make it your first object to find out. Don't drift along letting events shape your life until the opportunity for you to do what you really want to do has passed you by.

And if you know what your vocation is, if you know deep down what you really want to do in life, then start to take the steps that will lead you to it. In the words of Abraham Lincoln, "Determine that the thing can and shall be done, and then we shall find the way."

This is a time in your life when the freedom that we enjoy in America means more than perhaps it does at any other time. You are free to pick out your career. You are free to go wherever you have to go and to do whatever you have to do to develop a competence in that field.

The last written words of Franklin D. Roosevelt were, "The only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith." Don't allow your doubts or fears to hold you back from doing what you want to do and what you feel it is in you to do.

If you want to go to college but don't have the money to do so, get a scholarship if you can, and if not you can borrow that money at very easy terms under a Government loan program and pay it off several years from now when you are started in your career.

If you can't find the work you want around here, take advantage of your freedom to go where you can find it.

The future belongs to the man or woman who is prepared for it. If you do not plan to go on to higher education, then develop a technical mastery and a special competence in whatever field you do go into.

Give yourself a chance.

The opportunities that await you and the thousands of other young men and women who are graduating from high school this year are greater by far than at any time in history. The young people of today ought to feel a greater sense of excitement and adventure as they enter adult life than any young people have felt since the discovery of the New World in the 15th century.

When I was a boy, the thought of traveling to the moon was the sheerest fantasy. But I have lived to sit on a committee of the U.S. Senate which is today making plans and appropriating money for Project Mercury, a program concerned with the first travel of a human being into outerspace.

The incredible achievements of the past few years in the nuclear submarine mean that within a very short time all the secrets and mysteries of life underneath the seas, which have been the object of man's imagination since prehistoric times, will be solved.

The continuing discoveries in science and medicine mean that you will live in an age in which bodily pain and disease will be largely eliminated, and in which life will be immeasurably lengthened. Twenty years have been added to the average life expectancy since I was a young man. We may expect a similar advance in the decades ahead.

As for labor, you will live in a world in which the burdensome and boring toil of life is done more and more by machines and less and less by human labor. You will work less hours, enjoy more leisure and receive a higher material reward than at any time in history.

A hundred years ago it was not uncommon for a person to live and die in the town of his birth without ever venturing beyond its immediate neighborhood. In your lives you will find that travels to the capitals of the world will be a commonplace occurrence for almost everyone. It will be easier to go from here to Paris or Rio or Honolulu than it used to be to travel from Norwich to Hartford 50 years ago. It is almost that easy today.

Our economists confidently predict that the standard of living enjoyed by the average American will double in the next 20 years. You will some day live in houses elegant beyond your imagining as youngsters. You will enjoy conveniences that you have not believed possible.

All of these developments can make the pursuit of happiness more of a reality for your generation than it has been for any other that has ever lived.

But in themselves, these material advances will not bring happiness to you. As you grow older you will realize that the only thing that brings real satisfaction is worthwhile personal achievement and the only thing that brings real joy is dedication to the welfare of others.

It takes some people a lifetime to understand this, and then their understanding comes only through disillusionment, through despair, through the failure of material things to give them satisfaction. You can save yourself a lot of grief and add immeasurable meaning and significance and accomplishment to your lives if you will accept this truth now.

And this need for personal achievement and for devotion to the welfare of others leads me to another great opportunity awaiting your generation. And that is this:

You are entering the national life of your country at a time when it is locked in mortal combat with a deadly enemy, world communism. Communism today hovers like a great black cloud over the happiness and freedom of two-thirds of the people of the world and the other third it has already enslaved. It has fallen to our country to throw back this tyranny.

I believe that in your time America will bring to fulfillment its great mission, its historic mission of resisting tyranny and extending freedom throughout the earth. You can help in this struggle. You have the opportunity to help our people fulfill the Biblical injunction inscribed on the Liberty Bell so long ago, "Proclaim liberty throughout all the land unto all the inhabitants thereof."

Thus the greatest opportunity for service given to any generation is offered to yours. If you fail, a new era of impenetrable darkness will come over the world.

If you succeed, a new age of freedom, of justice, of human achievement will be ushered in. And at last man will defeat his age-old enemies—poverty, disease, war, aggression, injustice. Even natural disasters will come under the control of man.

This is the future that we can have and that, with God's help, we shall have.

Whenever I return to North Stonington from Washington and have an opportunity to spend some time with the people here, I gain renewed confidence that America will meet its challenge successfully. Our people are good. They are strong. They are able. They are just. They have high purposes.

If we remain true to those purposes, if we set our goals high enough, if we get political leadership equal to our tasks, we will win this struggle and we will gain an era of human advancement for all the people of the world such as has never been known or imagined.

I envy your journey ahead. Good luck to each of you.

Vice President Richard Nixon's St. Louis Speech Before the Junior Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the Appendix of the RECORD a splendid speech that Vice President RICHARD NIXON delivered in St. Louis, Tuesday, June 21, 1960, at the 40th anniversary national convention of the junior chamber of commerce.

There is much meat in this speech for all Americans whether they are Democrats, Republicans or independents. The Vice President received an outstanding round of applause when he appeared to deliver the speech which was overshadowed by the ovation he received at the conclusion of the speech. I believe that anyone reading this speech would agree that the ovation was well deserved.

The speech follows:

REMARKS OF THE VICE PRESIDENT OF THE UNITED STATES, AT THE 40TH ANNIVERSARY NATIONAL CONVENTION OF THE JUNIOR CHAMBER OF COMMERCE, ST. LOUIS, MO., JUNE 21, 1960

We are now engaged in what will become, before this year is out, a major national debate over the subject of economic growth. This is as it should be because this is an issue which points up sharply the difference between two opposing philosophies of government in this country. It is an issue which transcends party lines.

The question is not one of ends but of means. Everybody is for growth. The issue is how can we best achieve it. More specifically, what should the role of government be in stimulating economic activity and growth?

Why are we especially concerned at this moment about our growth? To begin with it is a concept which commands the attention of the greater part of mankind in this second half of the 20th century.

For ourselves it is a question of building a better and greater America with widening opportunity for all of our citizens.

For the peoples of Asia, Africa, and South America, it is a question of emerging from a way of life based on human and animal muscle power to the technological maturity we of North America and Europe already enjoy.

For the Communist states it represents a challenge to catch up with and pass America. This is the goal, the final achievement which Mr. Khrushchev asserts will be the ultimate proof of the superiority of his Communist faith.

We in this country must recognize the serious nature of this challenge. We must never forget for a moment that the Soviets mean business. We must never underestimate their fanatical purpose.

On the other hand, it is no service to America or the free societies to overestimate Communist achievements. The critics of our present economic policies say that the Soviets are achieving their objectives of overtaking us. They claim that we are falling behind and in the foreseeable future will become second to the Soviet Union in economic strength.

They back this up by citing statistics to the effect that the Soviet economy is growing at a rate of 8 percent a year as compared with our own long-term economic growth which has been running about 3 percent a year and now appears to be accelerating toward 4 percent.

The critics argue that if we would just adopt their pet economic philosophy we too would grow like the Soviets. They invite us to join them in playing what is rapidly becoming the most fashionable political parlor game of our time—a game we might well call "growthmanship."

Before playing the game, let us look at the facts. There are, I believe three major fallacies in these statistical comparisons between the Soviet economy and our own.

The first fallacy is the vast difference in the maturity of our two economies. The Soviets, in the first place, have had to cope with an enormous postwar program of reconstructing the damage inflicted on them by Hitler's armies. But even more importantly, their economy is still primitive in comparison with our own. They are still concentrating primarily on building steel mills and the beginnings of a transportation system. These we already have. We are building major new industries around transistorized circuits and synthetic fibers and rearranged molecules.

Comparing their rate of growth with our own is, in a sense, like comparing the rate of growth of a child's body with an adult's brain. The very dimensions are incompatible.

The second fallacy is the fundamental difference between our society and theirs. We are a free people, free to produce and consume what we like and possess what we can afford. An enormous portion of our national capital is represented in the American home. Most of our millions of homes are, in effect, miniature factories, heavily equipped with capital equipment such as refrigerators, television sets, and cars. None of this is revealed as capital plant in comparing growth rates.

It sometimes is argued that this personal capital equipment represents no national asset but a collective self-indulgence of shameful proportions. The epithet most commonly flung out by the growthmanship school is "tail fins."

Without either defending or quarreling with my neighbors' taste, I urge these anti-production economists to be more explicit. What sort of society are they proposing?

Do they want a Federal agency empowered to regulate the design of automobiles? Or are they proposing tax rates which will make the manufacture of new cars academic?

The third fallacy is suggested by the behavior of the absolute gap between our economies. Just before World War II the total production of goods and services in the U.S.S.R. was less than half that in the United States. To be exact, it was 44 percent. Twenty years later, in 1959, the total production of goods and services in the Soviet Union is still just about 44 percent of the United States. In terms of currency, the U.S. lead is substantially larger than the entire value of Soviet production. Mr. Khrushchev boasts that he will catch and pass us economically in 7 or 10 years. By any projection that can be applied, there is no possibility that the Soviet economy will overtake our own at any time in this century.

Mr. Khrushchev has described the competition between our two systems as a horse race. In referring to the American economic system, he said recently, "There was a horse but now it is old and worn out, limping along at half speed. On the other hand, our Communist horse is young and strong, running much faster and certain to catch up and pass the Americans."

Is he right? The answer is no, provided we stay on our horse and don't make the mistake of trying to get on his.

That is why in considering growth the question of means becomes all important. What and how much should the Government do to insure a maximum rate of expansion for our economy?

The growthmanship school argues that the Government should plan and manipulate the economy to arrive at an arbitrary, fixed percentage rate of growth. They believe that any kind of Government activity directed toward this objective is good. Generally, they have greater faith in Government action than in private enterprise as a creative force in insuring economic progress.

For example, they believe the Government should peg interest rates at artificially low levels to assure growth. They admit this would be inflationary but they say "Inflation is a small price to pay for progress." We say that this policy in the long run would wreck the economy, not expand it.

They believe that Government spending regardless of its purpose spells growth and, therefore, is good in and of itself. We say that the way to achieve maximum growth in this country is not by increasing the size and cost of Government but by expanding the opportunities for investment and creative productivity for millions of free American citizens.

We believe that the way in which Government can best promote real growth is by building a sound economic framework in which the private economy can operate at maximum levels.

We must never forget that growth is only one objective of national policy, though admittedly a vitally important one. Among our other objectives are freedom and security. We must not and need not sacrifice either freedom on one hand or security on the other simply to achieve growth.

Under the philosophy of government to which we subscribe, these objectives are not incompatible. What best promotes freedom best promotes growth. What best promotes growth best promotes security.

What then should the role of Government be in promoting growth?

To begin with, Government should avoid, as much as possible, interference with the decisions that are made in the private sector of our economy.

The Government must pursue a sound fiscal policy, so that values remain stable and the upward pressure is toward true growth and not inflation.

Government must act vigorously against those abuses of economic power by management or labor which restrict competition or put roadblocks in the way of increased efficiency and productivity.

Our tax structure must be designed to stimulate rather than frustrate new and creative enterprise. Reform of the obsolete and jerry-built features of our Federal tax system must be a first order of business for a new administration once we have provided adequately for our needs in the national security area.

Government must pursue economic policies abroad which are compatible with domestic philosophy. We believe in freedom, in creative enterprise, and in competition. Our foreign policies should be framed to cultivate a climate favorable to these principles throughout the world.

Finally, government has a responsibility to prevent and correct wide swings in our levels of economic activity by intelligent application of fiscal policies and by sensible provisions against the personal tragedy and national misfortune of widespread unemployment.

These are the things government should do to promote a proper climate for creative private activity.

There are other appropriate areas of government economic activity in what we might call the public sector of our economy. While we put our primary faith in creative private enterprise as the major dynamic force in assuring growth of our economy, we recognize that where private enterprise can't or won't do the job, government activity is not only justified but essential. By government activity, I have in mind not only the Federal Government, but State and local governments as well.

It is foolish to assume, as some of those of the growthmanship school seem to, that government activity is in itself good. But it is just as wrong to assume that government activity is in itself bad.

Many elements of our national establishment are beyond the capacity of private enterprise. These must be kept apace with our overall growth, or the economy would soon develop a lopsided shape.

If we are to grow at a maximum rate, we must recognize the continuing need for investment in the public sector—in our public education establishment, in our national transportation system, in the renewal of our rundown urban areas, in the development of our natural and human resources, in providing imaginative, new leadership for the exciting scientific and technological revolution which will dramatically change the whole character of life in America and the world in our lifetime.

Timidity in these areas would be as detrimental to the national interest as timidity in private investment.

The important test to apply always to investment in the public sector is—will the benefit exceed the cost? Because it is just as easy to waste the public money as it is to squander private and personal funds.

Above all, whether we are considering investment in the public or private sector, let us be guided by these principles:

America must never settle for second best in any field.

We are a young country with our greatest years ahead of us—not behind us.

We will not hesitate to resort to government action where it provides the best road to progress.

But we will always remember that the primary source of progress in America has been and will continue to be the dynamic, creative productivity of private rather than government enterprise.

Too Many Foreign Policy Experts

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. BARRY. Mr. Speaker, there appeared Friday in the Herald Statesman of Yonkers, N.Y., an excellent editorial which cuts through the confused babble of comment on the President's recent Far East tour and points up the general misinterpretation of the results.

The editorial comments that it has compelled the Communists once more to show that they have a frantic fear of the principle apostle of international peace, President Eisenhower, and will do everything possible to prevent him from visiting other nations. What greater proof could there be of his persuasive effect and the importance the Communists place on the President's tours? The Communists will use every means at their command to prevent more nations of the world from being exposed to the powerful pro-Westernizing effect of the Eisenhower charm.

More of this kind of clear thinking would be welcome instead of the recurrent talk of failure:

[From the Yonkers (N.Y.) Herald Statesman, June 17, 1960]

TOO MANY FOREIGN POLICY EXPERTS

If the American people have confused notions about our foreign policy, that confusion has been caused by a proliferation of experts who just are not experts at all.

The news that the Japanese Government had asked President Eisenhower to postpone, or cancel, his impending trip to Tokyo was only minutes old before the air was filled with wordy characterizations of the situations as evidence of the failure of American diplomacy.

Leading Members of the opposition in Congress suddenly decided that the President never should have planned to go to Japan—that, as one of them put it, "he should have known" his plan might be nullified by Communist and national-leftist riots in Tokyo.

All of this, it seems to us, constitutes gross misunderstanding or misrepresentation of the facts—and a very poor evaluation of what will be the probable effects of the Tokyo situation on free world opinion.

To be sure, the President and his advisers knew he might face hostile demonstrations in Japan—just as they knew that, even if the U–2 incident never had occurred, he would have to expect Khrushchev to be truculently offensive at Paris. But the President's course and purpose seem, to us, to have been perfectly plain in each case: he would go ahead in a way he thought right and necessary and thus put on the Communists the responsibility, before the eyes of all the world, for power-mad, reckless, violent interference with every proposal and hope for peace in the world.

Who won a diplomatic victory for decency and justice and peace-seeking intent at Paris and left that city with the heightened respect of all free men? By his courage and dignity, the President of the United States, not the missile-rattling bull-in-a-china-shop head of the Soviet autocracy.

Who must, in the clear vision of reasonable people, be regarded as having again forced the Communists to show their insensately violent hands in Tokyo?

Who has compelled them, once more, to show that they not only do not want peace but have an actually frantic fear of the principal apostle of international peace? The man, of course, whose personal prestige and influence they only too obviously regard as a dire threat to the success of their schemes for world domination.

It would have been a "failure of American diplomacy" only if the President had been able to go to Tokyo as a man whose travels were of no disturbing concern to Moscow or Peiping.

Valedictory Address of John Lightner Burnham at Milton Academy Graduation Exercises

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mrs. BOLTON. Mr. Speaker, one so seldom finds a dossier of Nikita Khrushchev that I am inserting herewith the valedictory speech of John Burnham of Kent, Conn., a young student at Milton Academy, Milton, Mass. It seemed rather a strange subject for the purpose, but it gives such a picture of this man's career as young people see him, that I felt it would be useful to many in the House:

VALEDICTORY ADDRESS OF JOHN LIGHTNER BURNHAM AT MILTON ACADEMY GRADUATION EXERCISES

This is the success story of a man born in Russia in 1894: Nikita Khrushchev.

Khrushchev was not successful until 1932 when Joseph Stalin needed someone who would carry out his policies in the Ukraine. Obtuse, ruthless, and cruel, Khrushchev was just the man he was looking for to crush the resistance of the 40 million Ukrainians fighting against the Communist regime. This was to be done by starvation.

So Nikita Khrushchev, the heretofore dictator of the popular party, was sent into the Ukraine, which at this time had enough food to feed its population for 2 years and 4 months. Ninety percent of this food was deliberately exported from the Ukraine and its people left to die. Thus, Khrushchev carried out Stalin's plan for the starvation and death of 7 million people, the population of New York City.

Khrushchev's next step up the Soviet ladder of success was through the incident known as the Vinnitsa massacre. Stalin had decided that this man was to be kept in the Ukraine as dictator of the Communist Party in that region even though the regime there did not welcome Khrushchev's nomination. But the opposition of the 67 men in the Ukrainian Government was to no avail. They simply disappeared or, as the Russians put it, were "physically liquidated."

During World War II, Khrushchev operated behind the Nazi lines in the Ukraine to stir up the nationalism of the people so that the Nazis would become incensed against the Ukrainians and massacre them. In this policy, he succeeded all too well.

Khrushchev had three distinguishing operations after World War II, from the period of 1944 to 1946. One was the elimination of the Ukrainian Catholic Church. Before 1945, there were 4,400 Catholic churches in the Ukraine. As of now, there are none. The person responsible for this—Nikita Khrushchev. Secondly, Stalin decided that the Ukraine, which was a constant thorn in his flesh, was to be again physically liquidated. The man in charge of the operation—Nikita Khrushchev.

When Khrushchev came to final power in 1953, he made a speech to the Presidium in Moscow, about the liberalization of the Russian policy. A small group of people took this speech seriously. This was a group of some thousands of inmates in a concentration camp in Kingr in the U.S.S.R. They struck for better conditions. Five hundred of these women were attacked and massacred by orders from Nikita Khrushchev. Such was his liberalization of the Russian regime.

These are the facts of Khrushchev's climb to success. I would like to end by mentioning the story of an internationally known movie and theatrical figure, a man named Dovzhenko, a native of the Ukraine. In 1933 Dovzhenko was warned by Stalin that he must make his movies for Russia or die. He was known as a friend of Khrushchev's. After Khrushchev came to power, Dovzhenko was permitted to return to the Ukraine to make some of his last movies. As soon as these movies showed any touch of Ukrainian nationalism, thus a weakening of the Russian regime, Khrushchev had him sent back to Moscow. This personal friend of the present Russian dictator died of a mysterious disease—Russian style—in 1956.

An interesting quality of Khrushchev's success is that it can last only while he remains at the top of the dangerous Russian power circles. As soon as he topples, he will be a forgotten man, remembered in history only as a coldblooded, ruthless brute responsible for the extermination of millions of his fellows.

Farm Surplus Reduction Act of 1960

SPEECH
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12261) to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. MARSHALL].

Mr. MARSHALL. Mr. Chairman, in my work on the Committee on Appropriations for the Department of Agriculture, I have been intrigued with a few things in connection with our agriculture. The first thing is the tremendous cost of carrying the surplus stocks of the Commodity Credit Corporation. I am going to base my opinion in voting on this bill on one thing and one thing only because, with all due regard to my friends on the Committee on Agriculture, and they are a fine group of people on both sides of the aisle, the bills that are proposed and what we are talking about today in my estimation will not solve the farm problem. But when we come to the

matter of costs of the program, I do not believe the taxpayers of this country can afford to put up with a bill that has been proposed in the other body for this reason. It is going to add more stocks to the Commodity Credity Corporation. It is going to cost more dollars. The cost of the Commodity Credit Corporation and the support prices have not, in a large measure, gone to the farmers. The losses have been incurred after Commodity Credit has taken possession of the stocks. Storage, transportation, handling, maritime shipping and so forth, costs make up the lion's share of the loss.

The most economical way to vote on this bill is to vote against the Senate proposal offered as an amendment by the gentleman from Utah [Mr. DIXON].

New Game—Who's Who in Russia?

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD an article entitled, "New Game—Who's Who in Russia?" which appeared in the June 19, 1960, Los Angeles Times.

The author of the article is the very able Times Washington Bureau chief, Mr. Robert T. Hartmann, who writes against a backdrop of many years of political reporting, including traveling to the U.S.S.R. last year to cover Vice President NIXON's trip.

Mr. Hartmann presents a very informative picture of the various individuals in the upper echelons of the Soviet Communist Party and the Government of the U.S.S.R., which I believe will be of interest to all Members of Congress.

The article follows:

NEW GAME—WHO'S WHO IN RUSSIA?

(By Robert Hartmann)

WASHINGTON, June 18.—A great guessing game has been going on throughout the Western World—and probably in Russia, sotto voce—ever since Nikita Khrushchev savagely ground his gears in Paris to reverse the direction of East-West diplomacy.

Is Khrushchev on the skids? Was he a virtual hostage of Marshal Malinovsky at the summit?

Is he reading scripts written for him by the faceless men of the Kremlin, one of whom may soon replace him? Are the old Stalinists back in the driver's seat?

For all Americans, and for all but perhaps 50 top Communists who really run everything in the Soviet Union today, trying to figure out "who's on top" in the party presidium is somewhat like being spectators at a chess match without the faintest notion of the rules of the game.

WHO'S WINNING?

As one of the foremost U.S. authorities on Soviet affairs told me: "How can we tell which side is winning the argument at a meeting we don't even know was held, or who was there, or which side anyone was on? Here—take this list of 21 presidium members, shut your eyes and stick a pin in it, and your answer will be just as good as mine."

The peephole into internal Soviet power politics through which American policymakers peer isn't quite that opaque, of course. But nowhere is the Iron Curtain more heavily armor-plated than around the doings of the handful of Communist heirarchy of whom Khrushchev is the current frontman and apparent master. No U–2 has ever penetrated their secrets.

MIGHT MAKE PLAY

On July 13, the full membership of the party central committee will meet to hear Khrushchev report on his stewardship. While there is little or no comparison between this convention and the one that will be underway in Los Angeles at the same time, it is misleading to think of it as merely a rubberstamp. If there really exists any potentially successful power grouping in the Presidium which is fed up with Khrushchev, this is the stage on which they might well make their play to depose him. But all the evidence (especially since the Communists have rewritten history to confirm their claim that the Russians really did win the Pacific war against Japan) is that Mr. Khrushchev will get thunderous acclaim for his global diversion from domestic difficulties.

Khrushchev himself set off these rumors with what may have been (but perhaps was not) a Freudian slip in his angry accusation of President Eisenhower at Paris about the U–2. Such an incident, he said, "deeply involves the internal politics"—some translated it policies—"of the Soviet Union." Back behind the Iron Curtain, he later denied saying any such thing.

THEORY DISCONTINUED

Since the summit collapse—which was immediately preceded by a series of shifts in the Soviet hierarchy—I have talked with a number of the best-informed students of the USSR and their consensus is that Khrushchev's behavior was influenced by internal pressures of some sort, but that there is yet no evidence that this position at home is in jeopardy.

The theory that Marshal Malinovsky went to Paris as Khrushchev's keeper is generally discounted as a face-saving explanation invented on the spot by Western officials and reporters who were dumbfounded by his unexpected abuse of President Eisenhower.

Sober analysis of subsequent events tends to support the contrary view that Khrushchev brought both Gromyko and Malinovsky along as live symbols of the carrot and the stick—negotiation or naked force—and perhaps also as witnesses to the correctness of his communications with the capitalist enemy. The military, however, is believed still firmly under party control (as it has been since Khrushchev replaced Marshal Zhukov wih Malinovsky) despite considerable dissatisfaction over demobilization and reorganization among the professional officer corps.

However, the more anyone knows about the Soviet Union the more modest and qualified are his views. The authentic experts admit that outsiders really know less than nothing about the day-to-day machinations of Communist Party politics, and very little about the individuals involved. But if you want to join the guessing game, get yourself a blindfold, a pin and clip the table of leading Soviet bigwigs which accompanies this article.

The table of Russia's leaders and their role referred to in the text follows:

Russia's leaders and their roles

Name and age	Party position			Government position		
	Central Committee of the Communist Party of the U.S.S.R.		Politburo of the Russian Soviet Federated Socialist Republic	Council of Ministers of the U.S.S.R.	Presidium of the Supreme Soviet, U.S.S.R.	Council of Ministers of the Russian S.F.S.R.
	Presidium	Secretariat				
Khrushchev, Nikita Sergeevich (66)	X	X (1st Secretary)	X	X (Chairman)	X	
Aristov, Averki Borisovich (57)	X		X			
Brezhnev, Leonid Ilich (53)	X	X (?)			X (Chairman) Protocol Chief of State.	
Furtseva, Yekaterina Alekseevna (Mrs. N. P. Firyubin) (50)	X			X (Minister of Culture).	X	
Ignatov, Nikolai Grigorevich (50)	X	X	X	X (Deputy Chairman).		
Kosygin, Alekski Nikolaevich (56)	X			X (1st Deputy Chairman).		
Kozlov, Frol Romanovich (52)	X	X	X			
Knusinen, Otto Vilgelmovich (79)	X	X				
Mikoyan, Anastas Ivanovich (65)	X			X (Senior 1st Deputy Chairman).		
Mukhitdinov, Nuritdin Akramovich (43)	X	X				
Podgorny, Nikolai Viktorovich (57)	X				X	
Polyansky, Dmitri Stepanovich (43)	X		X			X (Chairman).
Shvernik, Nikolai Mikhailovich (72)	X	X			X	
Suslov, Mikhail Andreevich (58)	X		X			
Voroshilov, Kliment Yefremovich (79)	X				X	

Table compiled by Times Washington Bureau.

PARLOR PASTIME

In playing this parlor pastime, it must always be remembered that the Communist Party is superior to the Soviet Government. Thus, membership in the presidium of the central committee of the party may be a bigger job than a government ministry, and a party secretaryship is most influential of all

Most interesting of the new names (new, that is, to American newspaper readers) are those of Leonid I. Brezhnev and Mikhail Suslov. Somewhat better known, because of their visits to this country last year, are Anastas I. Mikoyan and Frol R. Kozlov.

Brezhnew, 53, last month replaced aging Kliment Voroshilov as the titular "president" of the Soviet Union, a figurehead job that heretofore has been given to old Bolsheviks in their twilight years. Voroshilov's reported request to retire for reasons of health is probably true—he looked pretty bewildered and shaken up last summer as he listened to Vice President NIXON take on Khrushchev in their famed "kitchen debate."

SWITCH JOBS?

But Brezhnev's assignment at the peak of a true Red Communist career is not regarded as a kick upstairs, but rather as an effort to upgrade the job and put him more on public display as a possible Khrushchev successor—it is conceivable they might simply switch jobs.

Brezhnev has spent his whole career in party work since becoming a member in 1931. Like Khrushchev, he made a name for himself in the Ukraine, where he also served as a political commissar in the Red army during World War II. As a party troubleshooter he became first secretary of the Communist organization in Zaporozhe, Dnepropetrovsk, Moldavia, and had risen to candidate member of the top party presidium under Stalin, but was dropped after Stalin's death and put back into his lieutenant general's uniform as chief of political administration of the Red navy and as deputy chief for the ministry of defense.

From the sketchy record available, Brezhnev had had increasingly important assignments under Khrushchev, restoring Communist discipline among the restive "new lands" settlers in the Kazakh "Republic," where since 1954 both party and government functionaries have been thoroughly purged; heading the Soviet delegation to the North Korean "workers party congress" in 1956 and directing Moscow negotiations with the Communist satellite governments of North Korea, East Germany and Czechoslovakia.

MAN OF ACTION

Obviously a man of action despite his quiet and personable demeanor and conservative dress, Brezhnev has held the key job on the party secretariat which Khrushchev once used as a stepping stone to power, the assignment of personnel—what we call patronage. He is rather short and stocky, of swarthy complexion but Russian nationality, and impresses outsiders with an air of competency. In announcing the switch, the Kremlin did not state whether Brezhnev would retain his place on the powerful six-man secretariat of the party, but he continues to administer some of the same responsibilities, which include close oversight of the Soviet armed forces, and perhaps some police powers. He is clearly a man to watch.

There also has been considerable speculation about Suslov, who has the rather desiccated appearance of a monk or medieval scholar, and is in fact one of the top Marxist theoreticians and ideologists. Seldom in the limelight (though his was one of the only six portraits I saw on display in Siberia last year—most have been taken down since Khrushchev denounced the "cult of personality"), the dour 58-year-old Suslov was a Stalin favorite who survived and first made the party presidium in 1955.

UPCOMING "EGGHEAD"

As an upcoming Communist "egghead" in the forties, Suslov directed the mass deportations from Lithuania during the war and afterward was made head of the agitation and propaganda department (Agit-Prop) and succeeded Zhdanov as director of the Cominform.

From this powerful post Suslov took charge of the campaign to read Yugoslavia's Tito out of the party and to purge Titoism whereever it appeared; he showed up in all the Eastern European satellites in Stalin's later years and returned to Budapest in 1956 during the bloody suppression of the Hungarian revolt.

JUST PROMOTED

Suslov obviously has stature of his own, but he has also weathered the post-Stalin shakeups because he is not regarded as personally ambitious.

Kozlov, just promoted to the party secretariat, has been regarded as Khruschev's heir-apparent since Khrushchev confided this to former New York Governor Harriman and other visitors, and dispatched him to open the Soviet fair in New York as the equal of Vice President NIXON. A heavily handsome man of 52, he represents the new generation of Soviet politicians, and could lose himself easily at any U.S. business convention handshaking, backslapping and heartily enjoying a crowd.

But Kozlov's rise in this rough league shows his inner toughness. He went to work in a state factory at the age of 15—remembering little of the revolution—joined the Komsomol and became assistant foreman.

SOVIET SMOOTHY

Kozlov won a place as a candidate member on the top party presidium in February, 1957. By June he was a full member, in December chairman of the Russian Soviet Socialist Republic's Council of Ministers, and the following March first deputy chairman of the Council of Ministers of the Soviet Union—a fair promotion record for 13 months, all of it thanks to Khrushchev.

Kozlov is a technician rather than a theoretician and a politician first of all. Like his earthy mentor, Khrushchev, he shows an affinity for crowd-pleasing but he is much more dapper and polished in his style—a sort of Soviet smoothy. However, I have seen his eyes narrow above a fixed smile and he has an excellent record of getting things done. He appears more affable to westerners than most of his colleagues but he is a thoroughly furnished "Soviet man" at heart.

The other members of the party secretariat have obvious disabilities as potential Khrushchev successors. None is a European Russian, and despite all the nonsense about equality of man some Soviet citizens are more equal than others. Being an Armenian, who speaks Russian with an accent, has kept old Bolshevik Mikoyan free of Kremlin rivalries, and the same applies to two of the secretaries, Otto Kuusinen, a Finnish quisling, and Nuritdin Mukhitdinov, who is probably an Uzbek.

Kuusinen is 79, an old revolutionary journalist who aided Lenin by leading a short-lived Communist revolt in southern Finland in 1918 and a founding father of the Comintern. He moved to Moscow when the Finns outlawed their Communist Party in 1930 and returned when Soviet troops invaded Finland in 1939 to head a puppet regime.

FROM RANKS

Mukhitdinov, 43, is one of the presidium's youngest members and something of a mystery man. His secretaryship shows the importance attached to the Moslem world and the national minorities within the U.S.S.R., but not too much is known about him.

He was born in Tashkent, the Uzbek capital, attended a trade and economics institute there and served in the Red army during World War II—already in political work in his early twenties. He rose through Communist Party ranks in the Uzbek S.S.R., becoming secretary of its party central committee in 1950, and in 1954 chairman of the council of ministers, the top government job in the Uzbek "republic." Then he was dumped from this job and reinstated again when Bulganin and Khrushchev visited Tashkent on their way home from South Asia in 1955.

Soon Mukhitdinov became a candidate member of the Moscow party presidium as well, and a full member in December 1957, after accompanying Mikoyan to Red China in 1956. He helped cement Soviet ties with Nasser's Government in Egypt and is thought to be the specialist on Asia and the Middle East among the inner circle, but his minority status would be a handicap in getting the No. 1 spot.

Among the lesser luminaries on the party presidium, certainly the most intriguing is the lone woman member, Yekaterina A. Furtseva. A handsome, pleasant-spoken women of 50 who used to be the top propagandist of the Moscow City Soviet, she recently was made minister of culture and smilingly plied her cultural missionary trade all through the U–2 and summit crises.

HUSBANDS ANONYMOUS

Mrs. Furtseva follows the Communist custom of using her own name rather than that of her husband, N. P. Firyubin, who is about as ananymous as most Soviet officials' wives.

She is regarded as a protege of Khrushchev's, in the classic rather than the ribald Hollywood sense, and her rise has been rapid ever since 1954 when she accompanied him to Peiping as a member of the Soviet delegation to Red China's fifth anniversary celebration. Subsequently she went to Yugoslavia and to England with Bulganin and Khrushchev, and has the distinction of being the first Soviet woman to stand with the real Kremlin bigwigs atop Lenin's and Stalin's tomb for the May Day review in Red Square.

Some western handicappers of the Communist hierarchy have tagged 43-year-old Dmitri S. Polyansky as the second-generation successor—after Kozlov.

Except that he hails from the Crimea, and became a party member at the relatively early age of 21 or 22, not much is known of Polyansky's career in the pre-Khrushchev period. Since then, however, he has held several key party jobs and for the past 2 years has been titular head of the Russian Soviet Federated Socialist Republic which comprises more than half the 210 million people of the U.S.S.R.

Also elevated to the party presidium from the No. 1 post in one of the Soviet Union's major "republics" last May 4 was the Communist chief of the Ukraine, Nicolai Podgorny, 57.

His public record is also somewhat sparse, but the Ukraine has always given the Communists trouble and their ablest and most ruthless leaders, such as Khrushchev, are often assigned there to prove or break themselves. Podgorny evidently made good.

MIKOYAN'S UNDERSTUDY

Stepping into Kozlov's top government job as first deputy chairman or first Deputy Premier of the U.S.S.R. (they have two—Mikoyan being the senior) was Alexei N. Kosygin, 56, a financial and production planning expert who has been rated an understudy of Mikoyan and lately has been head of the Gosplan heavy industry program.

Early reports of the recent regrouping had Averki B. Aristov dumped from the presidium, but the best U.S. authorities now believe he was merely taken off the powerful secretariat of the party high command.

PARTY TROUBLESHOOTER

Nikolai G. Ignatov, 59, has a long record of party troubleshooting since he helped suppress the Turkestan independence movement as an OGPU (secret police) functionary in the twenties. He came to the party from the Red army, in which he enlisted during the revolution; he made the presidium in 1957.

When wearing his government hat, Ignatov is now a deputy chairman of the Council of Ministers of the U.S.S.R. and is thought to be in charge of agricultural production—one of Khrushchev's pet themes and sorest headaches. He, also, is on the politburo of the Russian SFSR.

Like Voroshilov, 72-year-old N. Mikhail Shvernik is a former president of the U.S.S.R., dropped after Stalin's death but soon restored to the presidium as an old Bolshevik. He is somewhat less of a popular figurehead than Voroshilov, more of a Marxist elder statesman and relic of revolutionary rectitude.

Among the seven candidate members of the presidium, a status which can mean one is moving either up or down, the name to watch is that of 46-year-old Kirill T. Mazurov, boss of the Belorussian Party and another younger generation comer from the Komsomol ranks.

Barrier Against Famine

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I wish to call to the attention of my colleagues the editorial below set forth from the St. Louis Post-Dispatch of May 8, 1960, titled "Barrier Against Famine":

BARRIER AGAINST FAMINE

The agreement under which the United States will exchange 17 million tons of surplus grain for Indian rupees valued at $1,300 million is more than the biggest sale of its kind in history. It represents the fulfillment of expectations raised by President Eisenhower's visit to India last December, and it stands as an example of a policy this country can and should pursue.

The grain, a fifth of it rice and the remainder wheat, will be delivered over 4 years and will enable India to build the 5 million-ton grain reserve needed as a cushion against famine during the third 5-year plan. The transaction will permit the United States to dispose of a portion of its costly grain surplus as well as to aid another country in accordance with its foreign aid policy.

A few figures show what this will mean to India, which now imports about 3 million tons of grain a year to supplement the 75 million produced by its farmers. Weather conditions cause huge shortages in some years. With the assurance of 17 million additional tons India will be able to keep domestic food prices stable and will have a breathing spell during which to build domestic agriculture. Indians hope to be independent of grain imports by 1966.

The rupee payments will be spread over a long period. Normally in such cases the United States lends back the funds to the purchasing country for development. In this instance some of the rupees will be used to finance U.S. diplomatic posts and to promote educational projects. The grain reserve has been a pet project of S. K. Patil, Indian Minister of Food and Agriculture and one of his country's most powerful politicians. President Eisenhower is to be commended for making the vital project a reality.

Suggestion From Peace Study Group

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, June 22, 1960

Mr. WILEY. Mr. President, in an age in which Communist troublemaking has kept the world either in the cold war, or teetering on the edge of a hot one, all of us are naturally deeply concerned with the need for finding ways and means to dissolve the overhanging clouds of danger and establish peace and order on the globe. To accomplish this will require not only astute leadership but a broad understanding by our people of our obligations and responsibilities. Fundamentally, we need to recognize that if we are to withstand the Communist efforts to conquer the world, if peace and order are ultimately to be established, if the vast resources and manpower now going into armaments are eventually turned to production of products for human use for peace, then the United States—with free world leadership thrust upon it by the events of the times—must provide much of the enlightened programing and leadership that will enable us and our peace-seeking neighbors to accomplish these objectives.

As a nation, we can mobilize the necessary resources only if there is broad understanding of the need among the people of our Nation.

Today, I was pleased to receive from the members of the Study Group on World Peace sponsored by the Commission on Christian Social Relations, Bethany Methodist Church, Madison, Wis., a series of suggestions on the complexities of promoting peace.

Reflecting the constructive way in which individuals and responsibly minded organizations are attempting to better understand and provide suggestions for coping with the difficult international problems threatening peace, I ask unanimous consent to have the series of suggestions—reflecting the concensus of the study group—printed in the Appendix of the RECORD.

There being no objection, the suggestions were ordered to be printed in the RECORD, as follows:

MADISON, WIS., *June 13, 1960.*

Hon. ALEXANDER WILEY,
Senate Office Building, Washington, D.C.

DEAR SENATOR WILEY: As a member of the Senate Foreign Relations Committee, our study group, after discussion of our responsibilities toward world peace, thought you might be interested in our conclusions and suggestions.

1. Our study group would like to support the work of the Subcommittee on Disarmament and encourage expansion of and implementation of their consideration in this very important field of concern.

2. We support renewal of nuclear weapons test ban.

3. We support disarmament with inspection and controls, preferably under the United Nations.

4. We suggest the reexamination of our refusal to admit to the U.N. and to recognize the Government of mainland China. In view of the fact that this is the accepted government of the people of China, we would like negotiations begun with Red China toward that end.

5. We support more emphasis on foreign economic aid and less emphasis on military aid. In conjunction with this, we prefer greater use of the U.N. and affiliate agencies such as the World Development Loan Fund.

6. We believe our representatives to other countries should be better qualified with better understanding of culture and languages of the countries to which they are sent.

7. We suggest an attempt to increase trade with Communist countries to ease tensions.

8. We approve the interchange of persons and encourage wider use of this method of communication with Communist countries.

9. We support the continuous reexamination of our policies in the eyes of other countries.

10. We suggest a policy involving more humility and less self-righteousness in policy statements.

Also, we thought the following items might be brought up in the Senate soon and would like to give our views on them:

1. We encourage the program suggested for Youth Ambassadors abroad.

2. We suggest a coordinated program among Government agencies to work with management and labor for making the transition as orderly as possible, to an economy less dependent on military expenditures, thus removing fears that steps toward disarmament will result in depression.

3. We urge that the public be given more information in areas as the effects of nuclear testing on health, and the declassification of unnecessarily restricted information.

4. We suggest more study on the effective use of surplus food for distribution in Communist countries and in underdeveloped nations.

5. We suggest seminars and conferences for social scientists and scientists of Soviet bloc and the West. We also commend the State Department for persisting in negotiation and agreement for expanded exchange of persons with Russia. We urge lifting restrictions on the travel of Russians in the United States.

* * * * *

Twenty one members of Study Group on World Peace sponsored by Commission on Christian Social Relations, Bethany Methodist Church, Madison, Wis.:

Mr. and Mrs. Ray Newberry, Mrs. George Calden, Mrs. Fred Huebner, Mr. Russell Hinkins, Mr. Ted Page, Mrs. James Lund, Mrs. Robert Van Meter, Mrs. Clarence Nielsen, Mrs. Eugene Parfitt, Mrs. Charles Reid, Mrs. Stanley Sparr, Mr. Herbert Bird, Mrs. George W. Wilson, Mr. Marvin Beatty, Mrs. Wendell Greer, Mrs. Hubert Ellison, Mr. John Dahlk, Miss JoAnn Dahlk, Mrs. William Shetter, and Mrs. Roy Mita, cochairmen.

U.S. Signal Corps

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. DAVIS of Georgia. Mr. Speaker, June 21 marks the 100th anniversary of the U.S. Signal Corps. Throughout its long and illustrious history, the Signal

Corps has made many outstanding contributions in the field of communications. It has been no less an outstanding contributor to the refinement of our missile and satellite programs. The Signal Corps, in peace and war, has served the American people well through the research and development of numerous electronic innovations designed to advance the cause of understanding through communications and to serve the cause of peace through national preparedness.

In a recent edition of Dixie Business magazine, which is published in my District, Mr. Hubert F. Lee, Jr., editor, paid a brief tribute to the Signal Corps and several of its commanders, past and present. Pursuant to unanimous consent, I insert this magazine article herewith:

CENTENNIAL

"Student achievement is good prophecy for adult achievement." Ben S. Gilmer made this statement at the Georgia State Chamber of Commerce dinner in introducing Frederick R. Kappel as a man whose career began from the ground up—digging postholes.

This could apply also to the Army Signal Corps, which marks it's "Hundred Years of Firsts" on June 21, 1960.

Maj. Gen. Ralph T. Nelson, the 18th chief signal officer, a "southerner by marriage," who spent 12 years of his career in Georgia, including C.G., from 1955 until 1957, of the Signal Corps Training Center at Fort Gordon, thrilled members of the Atlanta Chapter of the Armed Forces Communications and Electronics Association with his talk on "Signal Corps Firsts" last fall. The Signal Corps firsts include the weather service, Alaska communication system, military airplane, Army dirigible (we served in the old 32d Balloon Co. at Army Balloon School, Camp Jackson, Camp Knox in the days of Billy Mitchell), American radar, Project Score, communications satellite—which beamed President Eisenhower's 1958 Christmas peace message to earth from outer space—and participation in the development of Tiros I, America's weather satellite circling the earth transmitting photos of the earth's cloud cover for the National Aeronautics and Space Administration.

A.T. & T. Co., headed by Mr. Kappel, the world's biggest with 1,750,000 stockholders, was a pioneer in the satellite program of the Government. Ben Gilmer heads Southern Bell Telephone & Telegraph, the South's biggest and best-managed enterprise.

Former chief signal officers George I. Beck and J. D. O'Connell, both major generals (retired), addressed the A.F.C. & E. Association's Atlanta chapter. General Nelson, I recall, came over from Fort Gordon with Brig. Gen. Earle E. Cook, now deputy chief signal officer, when General O'Connell told of the Signal Corps' important role in its power-for-peace program.

Candidate

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. BOWLES. Mr. Speaker, the voters of New York's 17th Congressional District are in for an exciting demonstration again this year of the Democratic Party's priceless asset of attracting new, young, and dynamic leadership. This time our party's nominee is an able and articulate young lawyer, Bill vanden Heuvel. That perceptive surveyor of the New York scene, the New Yorker magazine, has done a biographical sketch of Bill. I submit it for the RECORD as additional proof that the future of the Democratic Party is in good hands:

CANDIDATE

We've discovered, in the line of duty, that 20 minutes of brisk questioning and attentive listening sometimes tells you more about a man than years of social acquaintance. Such proved to be the agreeable case in the agreeable case of Mr. William J. vanden Heuvel, who is to be the Democratic candidate for Representative from the 17th Congressional District next fall—a tall, engaging, brown-eyed young lawyer whom we'd encountered at many a function around town, including his own wedding reception, in 1958. At that time, we hadn't any idea that he was an old Thailand hand, a pig slaughterer, and the son of a boarding-house keeper and a laborer in a birdseed factory. This kaleidoscopic background came to light during a chat we had with him at his law office, in the Seagram Building. We found him in a large, airy room bedecked with busts of Lincoln and Albert Schweitzer; pieces of African sculpture; a photograph of himself, his wife, and their 6-month-old daughter, Katrina; and a photograph of the late General William J. Donovan, inscribed "To Bill, without whom it would have been impossible."

"I always wanted to be a lawyer," Mr. vanden Heuvel said. "I began clerking for the Donovan law firm in the summer of 1951, when I was at Cornell Law School, and I joined the firm as an associate the following year, when I graduated. That fall, I went into the Air Force as a lieutenant in the Judge Advocate General's Department, and in 1953, when General Donovan became our Ambassador to Thailand, the Air Force assigned me to temporary duty with the general, and he took me along as his personal assistant. I was only 23, and it was an extraordinary opportunity for me. He was really not just Ambassador to Thailand but also our representative in Southeast Asia, and I had the privilege of sitting in with him at conferences with Nehru, Syngman Rhee, the generalissimo, and so forth. The first thing we worked on was the evacuation of Chinese Nationlist troops that had escaped into Burma—getting them safe conducts to Formosa. Over 4,000 of them were flown out. In 1954, the general and I returned to the States and, the Air Force having released me from active duty, I rejoined his firm"

We invited Mr. vanden Heuvel to backtrack, autobiographically. "I was born in Rochester, where my mother, whose first husband was killed in the First World War, was running a boardinghouse," he said. "She came here from Belgium in 1920, with my two half brothers. My father was a Dutch immigrant. His family worked on fishing ships in Zeeland. He was 1 of 18 children, from the same marriage. Most of them are still in Holland. He came to Rochester in 1923, got a room in my mother's boardinghouse, and married her. He worked on the trucks of R. T. French & Co., which makes mustard, spices, and birdseed, and then ran the birdseed machines until his lungs couldn't take it any more. It's dusty, dirty work. He never made more than $4,000 a year, but he was very appreciative of what this country had done for him. During the Second World War, he had his children—I have an older sister—sing 'God Bless America' with him every night before we went to bed. We were a very close family. My mother, who is 5 feet tall, was determined that education would be the door by which I achieved whatever I was going to achieve. Neither of my half brothers had been able to finish high school. There wasn't enough money; they had to go to work. One is a postal clerk in Rochester, and the other runs a lumbermill in New Hampshire. Mother gave up the boardinghouse in 1940 but worked as a cleaning woman until she became 70, last year—not because she still needed the money but because she believed work is the constructive essence of life. I recently bought her a house in Nutley."

Vanden Heuvel fils, who is 13 inches taller than his mother, went to public school in Rochester; worked summers—and afternoons and evenings during the school year—from the age of 12 on as an apprentice with the Mellaphone Co., which makes machine tools; and at 15 won a scholarship to Deep Springs Junior College in California. "The college was founded in 1917 by the late L. L. Nunn, a hydroelectric engineer, to give scholarships to young men who had shown an interest in public service and leadership," he said. "It had about 20 students when I was there. It's on a ranch in a desert valley, and it owns 500 head of cattle. I felt terribly homesick as soon as I got there." On his first day at the college, which required its students to work on the ranch, he was called on to slaughter a pig. "You scald a pig after you slaughter it," he said, "and I slipped in the scalding vat and burned one of my legs. It took an hour to get me to the nearest hospital, in the town of Bishop. I was put in a four-man room, and the three patients who were in it with me died while I was there. That got me over the hump of my homesickness."

We asked how big a faculty was necessary for an undergraduate body of 20, and Mr. vanden Heuvel said four or five. "They were college professors on sabbaticals," he said. "Conant was a visiting lecturer. Simon Whitney, the economist, was the director. We studied economics, chemistry, philosophy, political science, languages, and music. I'd never heard of Beethoven till I went to that school. Now I play the piano a little, sing Schubert lieder, and enjoy going to the opera." Deep Springs is associated with the Telluride Association, an endowed educational fund named after Telluride, Colo., where Mr. Nunn began his work in hydroelectric transmission, and this association gave vanden Heuvel a scholarship to the Cornell Law School. The Donovan period followed. In 1958, he left the Donovan firm to become special counsel to Governor Harriman in Albany. "I worked on various pros and cons of legislation, including the revision of the rule against perpetuities," he said. "This is so complicated that I don't think I'll go into it."

We thanked him and asked for a word on his current congressional race. "The 17th is a gerrymandered district, traditionally Republican," he replied. "It is the most sophisticated congressional district in the country and has the greatest concentration of power. It contains Harriman, Rockefeller, and Dewey, and has, potentially, 200,000 votes. In January, I was asked by the reform leaders of the Democratic Party to be their candidate. I'd been campaign manager for the 1956 candidate, Anthony B. Akers, and I knew the odds were against me. At first I refused. Then the party regulars, urged by the reform leaders, also asked me, and I accepted, on condition that I'd be a unanimous candidate. The odds are still against me." He smiled. "My opponent is an attractive young lawyer, John V. Lindsay," he continued, referring to a man 8 years his senior. "I met him in 1956, on a plane going to Hungary, where I helped organize relief operations for the International Rescue Committee. I haven't seen him since. I have no intention of running a vindictive political

race. We're both young, vigorous representatives of our parties, and it's a wonderful chance to debate the issues. I meet with my campaign advisers at breakfast, then try to get 6 or 7 hours of uninterrupted legal work—I generally lunch at my desk—and go to my political office, on East 57th Street, around 3:30 in the afternoon to confer with my workers. I speak several times a week, before any organizations that will hear me, and I exercise by playing squash. I do research on various issues that are important. I raise money for the campaign, organize my volunteers, and prepare campaign literature, and I have just started door-to-door canvassing. Oh, boy, it's the hardest work known to man, but it's enjoyable to articulate beliefs and convictions in such a way that you can rally other people to you."

One of the volunteers this exemplary young man has organized is his wife. "She's great," he said. "She's wonderful. She's marvelous with people. She's going to start canvassing tonight."

Joseph S. Farland, a Native West Virginian, Is Praised in Editorial as "A Representative of U.S. Democracy" in His Important Position as Ambassador to the Dominican Republic

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 22, 1960

Mr. RANDOLPH. Mr. President, a fellow West Virginian who was born in my native county, the Honorable Joseph S. Farland, who has accomplished a splendid record as Ambassador Extraordinary and Plenipotentiary of the United States of America to the Dominican Republic, has been nominated by the President to be Ambassador of the United States to Panama.

Mr. Farland, who was graduated in law in 1938 at West Virginia University, practiced that profession at Morgantown, W. Va., until 1942 when he became a special agent for the Federal Bureau of Investigation. In 1944 he was appointed an ensign in the Naval Reserve, attended the School of Military Government at Princeton University and the School of Civil Affairs at Stanford University and then became military governor of Yosu, Korea, and naval liaison officer with the U.S. military government in Korea.

Upon returning to civilian status in 1946 and for 10 years thereafter, Mr. Farland served as general counsel and president of Christopher Coal Co., Christopher Fuel Corp., and Farland Fuel Corp., all of Morgantown. He was also active as a banking director and executive in that city.

From 1956 to 1957, he was consultant to the Special Assistant for Mutual Security Affairs, Department of State. In 1957 he was appointed Ambassador of the United States to the Dominican Republic and as personal representative of the President.

It is noteworthy that the Spanish language newspaper, Diario Las Americas, of Miami, Fla., published in its June 19, 1960, issue a fully merited and significant editorial relating to "Joseph S. Farland, a Representative of U.S. Democracy."

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the English translation of the text of that editorial.

There being no objection, the translation of the editorial was ordered printed in the RECORD, as follows:

JOSEPH S. FARLAND, A REPRESENTATIVE OF U.S. DEMOCRACY

The American Nation is authentically democratic and projects in the world through its diplomatic envoys, who bear on their shoulders the grave responsibility of doing good to the country they represent or doing harm to it—in some cases unknowingly—depending on the conduct they impose upon themselves in the discharge of their daily work.

It is timely to name here Joseph S. Farland as an envoy who despite not being a career diplomat has ably interpreted the sentiments of the United States by representing his country with dignity, with respect and, in one word, with patriotism when he had to act before the dictatorial government of the Dominican Republic.

In the oppressed spirit of the Dominican people Farland left a gratifying democratic impression which gives prestige to the United States. For the Dominican people, the mentioned Ambassador was a proud representative of the great American democracy, and not one more vassal of the regime. And it is good to emphasize on this because there are diplomats from different countries of the world, including the United States, who have behaved and still behave in a shameful way with respect to the Latin American dictatorships.

Ambassador Joseph S. Farland, without violating the rules of modern international law and even without violating the rules of diplomacy, was vertical in his position as representative of a democracy before a dictatorship. He showed strength of character regarding his ideological principles, and ability to convey to the hearts of the Dominican people the message of solidarity from the people of the United States.

Time for Decision?

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. DENT. Mr. Speaker, the article headed "A Time for Decision" by Roger M. Blough gives one a chance to note again the growing awareness in this country amongst all the peoples of the dangers we face in our trade-aid programs.

Without commenting further other than to say that Mr. Blough points out the results of our present foreign trade-aid policies, I suggest that he draws an erroneous conclusion as to the cure.

He appears to recommend a lowering of American standards by cutting or holding wage levels, measuring production on the same payroll dollar by automated production with less employees, further burdening the ordinary citizen with so-called broad-based taxes by cutting corporate profit taxes.

I am seriously worried that we seem to have failed to understand that this type of thinking and programing by the present administration is responsible for the static, chronic production-worker unemployment we have with us now.

The answer may not be in higher tariffs, but it certainly cannot be in lower wages and concessions to Americans to invest abroad and ship back finished goods to the United States.

I would recommend to Mr. Blough and to Members of Congress the June 18 issue of the Financial Post, Toronto, Canada, and its treatment of the subject of tariffs on car imports both in the lead story and the supplement on page 25.

The Blough speech follows:

A TIME FOR DECISION
(By Roger M. Blough)

What a transformation is going on around the world. Ore boats and blast furnaces in the land of the sacred cow. Steel plants rising in the land of the fig tree and the camel. Strip mills humming on shores once filled with sampans. Strip mills, incidentally, that can compete with the best we have in Pittsburgh or Chicago. The changes taking place around the world since the last great war are revolutionary on a scale that dwarfs all previous conceptions of the word "revolution."

Where do we stand in respect to this economic challenge in this changed and changing world? One way to check our position is to compare our steel capacity with that of the rest of the world. Steel capacity is a fairly reliable indicator of the relative industrial strength of nations. How do we stand?

Although the steel industry in the United States has added 56 million tons of ingot capacity since World War II and is still growing—many foreign countries have already expanded their steel capacity. Total world capacity has new reached almost 450 million net tons of steel.

Where the United States once had more than half of the world's steel capacity, we now have about one-third.

No longer will the United States have the preponderance of world steel production it enjoyed in the past.

Since the Second World War, at least 20 nations have more than trebled their production of steel, and some 17 countries have begun or are beginning modern steel production for the first time.

Many governments are learning the advantage of removing restrictions on the initiative of their own people and providing incentives to enterprise. This encouragement to enterprise is exemplified by such things as freedom for repatriation of foreign capital, more adequate depreciation, other tax inducements, relaxation of hampering controls and the like.

It would be extremely unwise for us in the United States to assume that these developing nations will not one day loom much larger on the industrial horizon. The great industrial strides in Europe since World War II are well known to you.

Japan has also done a most remarkable job industrially in the last 10 years. Its rate of industrial growth has far exceeded our own—a significant accomplishment. We thought we were quite advanced when we installed punched card programing of production in our new structural mill in Chicago. But Japan has an ultramodern steel plant being similarly equipped.

In India, motor trucks of high quality are being turned out rapidly and economically, with modern equipment. As to costs, employees in our country receive more for an hour's work than employees in India receive for a day's work.

Lower cost German-produced steel recently enabled a contractor to underbid all of his competitors on a bridge over the Panama Canal. Japanese steelmakers have underbid American producers on ship plates and sheet for the use of the U.S. Navy Department, and on locomotives for the Panama Canal. And last year foreign producers sold about one-third of all the nails and staples marketed in the United States, while their share of the barbed and twisted barbless wire market was more than 60 percent.

Now competing against lower labor costs is nothing new for us. The United States has always been able to compete with overseas producers. But we have been able to do so by accumulating capital and investing it at a faster pace in more modern tools and machinery—and our superior output of those tools more than offset their lower employment costs. It was the greater output per man hour, made possible in large part by better tools, that, in turn, made possible the payment of better wages in America.

Today, our major foreign competitors have tools as good—or sometimes better—than ours. And, although their raw materials in some instances may cost more, they still pay wages which are only one-third to one-seventh as much as we pay in the United States.

I am certainly not going to question the prediction that the sixties may be sizzling. In fact, I am sure they will be sizzling, especially competitively. I just hope we all realize that it's a part of our job to see that the sixties won't, for us, be fizzling competitively.

But sizzle or fizzle, I am convinced that the decade we have just begun will prove to be, for better or worse, a decade of major decisions for us. I think we are going to have to learn to live in and with a completely new kind of world of competition.

I am also convinced that if we want to keep on aiding a developing world, we must relearn one of mankind's oldest lessons—that charity begins at home. And charity, in the case of low-cost competitive production begins in the plants, in the mills and the other productive facilities and research centers of our land. It begins with the political and economic freedoms that have generated those productive facilities and the wealth they produce.

Now as I said, we as a nation are going to have to make decisions. And we will make lots of them. We can't avoid them. If we try to avoid them we shall find ourselves in somewhat the same predicament as the philosopher's donkey. If I remember correctly, he was placed exactly between two equal measures of oats—and because he couldn't decide which way to turn, he starved to death.

I am sure that all of you have heard many people define our present international predicament as an "unfavorable balance of payments." Now I am not going to try to discuss the intricate concepts of international finance. I will leave that to our bankers and our economists and admire the ease with which they do it. But I still hanker now and then for a little plain, cracker barrel talk. And so, at the risk of seeming simple to sophisticated minds, I am going to stick my economic neck out, in a manner of speaking, and talk about this matter of "unfavorable balance of payments." As I understand it, the only protection a nation has against a loss of its gold reserves is to be steadily receiving from its debtors as much as it pays out to its creditors. In other words, our income from foreign countries must equal or exceed our outgo to foreign countries, lest we have to ship out our gold to pay our debts and so dangerously deplete our gold reserves.

Our international payments exceeded our receipts by $3.4 billion in 1958 and by $3.7 billion in 1959. If we continue to lose gold, the experts say, the international value of the dollar will decline. This, they also say, would require a lowering of the gold content of the dollar, or a lowering of our legal reserve ratio. Whatever else would happen, that kind of result would mean a new and significant step toward more inflation.

If a government wants to persist in operating on an unbalanced budget, it can print the money to make up the difference in its own internal "unfavorable balance of payments." If it wants to subsidize farms and factories, it can do so by exacting the resultant higher cost from the pockets of taxpayers and consumers. If it wants to confer on any minority group the power to impose uneconomic wage costs and thus bring about increased prices for all to pay, it can do so. And, finally, if it wants to appear to be aiding any one special interest group, it does so at the expense of all other taxpayers.

We may imagine we can ignore the inflation brought about by a series of unbalanced budgets, or the depressing effect of a mounting tax burden that handicaps our industry, our transportation, and our agriculture. We may forget temporarily that labor can price itself out of jobs, just as readily as any businessman or farmer can price himself out of markets—forget, that is, until the day we begin to suffer the consequences.

And that day is here. For we have been outstandingly successful in pursuing economic policies which have made our country just about the highest-cost country in the world. In more and more areas of trade we simply are not competitive with the rest of the world—and the trend continues in the same direction.

If a balance of payments is to be achieved, it is business, in one way or another, that balances the "balance of payments." We can and must do our share. We can increase our research, make better products, improve our marketing and work harder at selling—both here and abroad. We can do our best to endure protracted strikes—if they are forced upon us—in order to keep our costs in line. We can work to better our relations with our fellow employees, and to improve our service to customers. I'm all for that effort 100 percent plus.

All of this will help to build our export markets and thus help to restore balance in our international payments. But American business cannot do this alone, and it cannot do it with one hand tied behind its back competitively. Bear in mind that these competing nations are our friends. They want to do business with us and we want to do business with them. That way we will both benefit, because we will both produce more than if we tried to go it alone. Therefore, the solution we work out must be geared to the long pull and must consistently look toward greater production and international trade all around.

One solution, sometimes offered in an attempt to neutralize the effects of oversea competition upon home producers, is to increase tariffs or decrease import quotas. This may offer temporary help in particular industries. But such help is, at best, a temporary expedient which does not go to the heart of the problem. And, at worst, it can seriously narrow our ability to compete. We are, in terms of many raw materials, a "have not" Nation. For example, we have to import all of our tin and natural rubber, most of our nickel, bauxite, and newsprint. Many of our industries would be severely handicapped without imports of such things as manganese. These imports, like the imports of our coffee, tea and sugar, must be paid for by exports, or we will, as I said, get out of balance.

I would like, therefore, to suggest—for what it may be worth—a way of looking at this unfavorable balance of payments problem. If we look at it as a matter of producing and selling—energetically and competitively—I think we will be making a good start toward understanding how to keep in balance.

We cannot continuously buy things produced abroad, as we want to, unless we can provide for the payments involved with a greater production, competitively self-sufficient both in America and offshore. Is it not proper, then, as a start toward making the decisions which will count in the next decade, to look first to see what is really handicapping us in international competition? If we find the political courage—and it will take courage—to do this impartially and confidently, I believe the American people will understand and support the action needed to enable us to compete more successfully with foreign production. After all, the sales contest we are in is simply a contest in making jobs—American jobs—for that is what sales are: sales are jobs. And what can be done to produce jobs?

If corporate taxes are higher than those of foreign competitors, and they are in many instances, and if our depreciation allowances for plants and tools are lower, as they usually are, would it not be wise to reconsider the matter?

Could we, by lowering taxes and treating depreciation realistically, enable American industry to compete better, to make and sell more things at home and abroad, to provide more employment and to produce more revenue for the Government at the same time? This is one of the crucial decisions our country must make.

If, by following what appears, at the time, to be the pursuit of political popularity, we promote the concentration of unreasonable powers in labor unions, does this not result in uneconomic wage settlements and do not these, in turn, result in pricing products out of markets and union members out of jobs? And should not these consequences be examined in the interest of the Nation and of union members themselves?

If, by lack of economic understanding, we suffer a continued attack upon the profits earned by business—if we fail to achieve a popular understanding that profits are the source of our industrial strength and that profit at work in the form of tools and factories is the most inviting sight that a man looking for a job, or a nation seeking industrial strength, can behold—will we not run the risk of undermining the material strength that is necessary to give support to any moral purpose?

These and many other like questions need answering. And none of the answers will be easily found—or, when found, universally accepted. Answers to tough questions never are easy.

But whether we like it or not, this is certainly a time for decision. The choices we make or fail to make in the next few years could determine, for many decades to come, whether this Nation shall decline to secondary influence in the world's affairs, or whether we shall go forward—as I believe we can—to greater achievement in a world that is at peace because our Nation is strong.

Education for the Unforeseen—Address of Dr. Virgil Hancher, President, State University of Iowa, at the University's Commencement, June 10, 1960

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. SCHWENGEL. Mr. Speaker, this is the month when the welkin rings with the oft-repeated platitudes of the high school and college commencement addresses. Because there is a time-honored pattern into which these exhortations usually fall, it was particularly refreshing to me to read about the address which Dr. Virgil Hancher, president of the State University of Iowa, made to his graduates on June 10, this year.

The press reports intrigued me so much that I asked for a complete copy of this address so that I could bring it to the attention of the Members through the pages of the CONGRESSIONAL RECORD.

Under leave to extend my remarks, I include the address, "Education for the Unforeseen," in the Appendix of the RECORD:

EDUCATION FOR THE UNFORESEEN

Members of the class of 1960

Through many past generations commencement day orators have customarily laid down blueprints by which young graduates could plan their lives and direct their future conduct. But I shall not attempt to follow past examples on this occasion.

It is not modesty alone which keeps me from providing you a blueprint. I refrain because I do not know, and I know of no one who really knows, the kind of world in which you will be living in the year 2000. And most of you will live into the 21st century.

Furthermore, I do not propose to tell you that you are the hope of the world. You may or you may not be the hope of the world. Time will tell. Neither should you take undue pride in the fact that you have not made as many mistakes as your parents and elders have made. Your immunity undoubtedly arises from the fact that you have not yet had time enough to make that many mistakes. Be patient. You may yet equal our record.

The reluctance of present day commencement orators to furnish blueprints of the future arises from a change that began a century and a half ago, but which was far advanced before it was clearly recognized. It was a change which fundamentally altered the task of education.

Alfred North Whitehead first called attention to it when he pointed out that for many centuries it was the task of education to prepare young men and women to live in the kind of society and the kind of world in which their parents and grandparents had lived. Except for occasional regional and national catastrophes, social and economic changes came with glacier-like slowness. The required adjustments normally affected a limited number of persons, and even those persons often had years in which to adapt to change. For example, the life of George Washington at Mount Vernon probably more closely resembled that of a rich Roman landowner in the late Republic or early Roman Empire than one in the latter half of the 20th century.

Sometime in the late 18th or early 19th century, a new element entered; social change began to accelerate until today it proceeds with lightning speed and ever-increasing tempo. The transition—from sailing vessels and stagecoaches to diesel trains, automobiles, and jet airplanes; from carrier pigeons and men on horseback to the telegraph, telephone, radio and TV; from hand labor to mechanized farming; from the craftsman's shop to the automated factory; from bows and arrows to intercontinental ballistic missiles; from the wood fire to nuclear energy; from the balloon to the space satellite—defines a revoltuion that has remade our society in all of its physical and in much of its social and economic aspects. Who among us can predict with assurance what the next 40 years will bring? Will this movement suddenly decelerate? Or will the changes which have taken place in the 40 years from 1920 to 1960 be equalled or exceeded by the changes which will occur in the 40 years from 1960 to 2000 A.D.?

Other changes of great significance have occurred. Throughout the 19th century our Nation grew in dimension and power under the firm conviction that we were a people of destiny and that the future was ours. We lived much to ourselves until World War I. Then, after a brief crusade to make the world safe for democracy, we largely withdrew from international affairs until our involvement in World War II.

We emerged from World War II with the atomic bomb and the mightiest military and industrial forces the world has ever seen. Our enemies were vanquished—or so we thought—and our leadership seemed unchallenged. But our complacency has had a short life. Today, only 15 years later, we are the objects of the ideological hatred of two vast peoples, who, by their numbers, are presently powerful and potentially even more powerful. Those peoples believe that they, and not we, ride the "wave of the future," that what we stand for must pass away. If they, or either of them, should decide to use force against us, the aggressor's attack will not come through an intermediate nation, as in World War I or World War II, but it will come directly upon us with no border nation to delay the assault and no warning from the aggressor to alert our defense or to prepare us for a counterattack.

Within the short space of 15 years, there has come a vast change in our posture in international affairs. We have passed from a nation without rivalry in military power and potential to one whose primacy is a matter of conjecture and debate—and whose security is a matter of grave concern to able and patriotic men. So quickly has this change come about that we find it difficult to grasp its reality. Perhaps that is why we seek refuge and forgetfulness in TV westerns, in hobbies, in motion and activity, in recreation and in sports. But we do all these things with the unhappy air of one who fears to look over his shoulder lest he find, in the inimitable language of Satchel Paige, "that something may be gaining on him." We hope to awaken, as from an unhappy dream, and find that what we fear is not true. There is an air of expectancy—half of doom and half of hope—that hangs over whatever we do. We seem to have come to the end of one era without being able to discern the outlines of the next. We recognize the symptoms of the dissolution of an age; but we do not clearly perceive the signs of reconstruction—the foundations of the age which is to come. We know that we stand but a hair's breadth from widespread, if not universal, annihilation; but we also feel within ourselves the potential to build, for the first time in the long and troubled history of mankind, a world of such wealth and leisure and culture and good will and happiness as to make even the utopians concede that their dreams can come true.

It is clear, therefore, that you who graduate today will need an adaptability to changing conditions never required of your counterparts in past generations.

But you will need other qualities as well. For the greater part of our history—from the earliest colonial settlements until the outbreak of World War II—the conditions with which our people were concerned were primarily internal. They involved the conquest and settlement of a continental domain, the absorption of vast bodies of immigrants and their conversion into that unique and recognizable thing called The American, the exploitation and operation of resources, the organization and operation of giant industrial enterprises, the inauguration of a massive educational enterprise, the elevation of a domestic standard of living, and the development of a mass consumption economy quite unique in the history of the world.

All of this took place without too much awareness, or without too much need to be aware, of what went on in the world outside our borders. The problems involved in these developments were uniquely our own. They appealed to our peculiar American genius. It was possible to resolve them by our own means and our own resources.

However, our present-day problems arise in a different context. I have spoken of the emergence of the U.S.S.R. and the People's Republic of China. Since World War II we have seen the emergence of India and Pakistan and the Arab nations of western Asia and northern Africa. Now we are witnessing the emergence of the African states south of the Sahara. Nationalism is on the march and no one can foretell its destination.

The United Nations organization was born at the end of World War II with 50 member states. Last fall 82 nations participated in the 14th General Assembly. This is a 60-percent increase in 14 years. How many member nations will there be in the year 2000? It may be 100. It may be more. As things stand now, each state, however new or old, however large or small (and most of the new ones will be small ones) will have one vote in the General Assembly. Each new state will be jealous of its political independence, many will be unfriendly toward the white nations of Western Europe and the Americas; most will be underdeveloped economically, most of them will have relatively few educated people, and most of them will be unacquainted with the processes of Western democracy. Of the 82 member states in the United Nations, it is estimated that 22 are economically developed and 60 are in various stages of economic underdevelopment. That ratio will grow more unfavorable in the years immediately ahead, as new, underdeveloped countires achieve political independence and are added to the member states in the U.N. The tensions arising in such a world cannot be cleared away with the wave of a magician's wand.

This is a strangely difficult and unmalleable world for Americans to face and deal with. Yet we are in it. We are part of it. We cannot escape from it. Modern transportation and communication have so shrunk the world that we cannot isolate ourselves behind two oceans as once we could. The situation is no longer one confined solely to our internal problems; it is not one that we can dominate or control.

How shall we free-wheeling Americans adjust to this world—a world which does not think as we think, and one which we are powerless to alter or improve except in cooperation with other nations who may or may not give their consent? For so long we have been masters of our fate, for so long we have been the creators of our own destiny,

that we shall need new qualities of patience and stamina, of endurance and resourcefulness to accommodate ourselves to things not wholly within our own power to change. For a century and more we have believed that the future was ours. So certain were we of this belief that only recently have we admitted to ourselves that the U.S.S.R. might not crumble and fall apart. And this nostalgic hope, with which for so long we regarded the U.S.S.R. lingers on and colors and perhaps distorts our attitude toward Red China. Slowly and with great mental pain and anguish we are recognizing that this, too, may be a vain hope. How then can we—who 15 years ago were the strongest economic, political and military power in the world—face the possibility that in the year 2000 A.D. first place may be taken by Red China, with the U.S.S.R. second, the United States of Europe third, and the United States of America fourth? Do we have the courage and the stamina and the ingenuity to keep ourselves in first place; or if first place be beyond our reach, can we adjust to a lesser position without mental and moral catastrophe? Have we the skill and ability to cooperate with nations which we cannot control, and to work—when patience is exhausted and tempers frayed—for the maintenance of a peaceful and constructive world order?

I am not now attempting to draw a blueprint of what the future holds. I am merely pointing out that you are venturing into a world whose dimensions and nature will be vastly different from the one into which your parents and grandparents ventured forth. Your education, therefore, is education for the unforeseen. Here you have laid the foundations of that education. Here you have learned—or should have learned—to recognize a fact; to distinguish truth from falsehood; to make wise judgments and wise choices; to take effective action; to feel at home in a society of which you are a part; and to possess the imagination and insights necessary to see the general direction in which that society is moving. Above all you have learned, or should have learned, how to continue learning.

Whatever your dreams for this day may have been—and I hope that they were happy ones—it should not prove to be the day on which your education ended. You may not choose to continue in any formal program of education. But you must continue learning. If you fail in this, you will become obsolete. You will become obsolete as quickly as the automobile that you hope to turn in for a new one in the next year or two. If you stop learning, "you have had it". Your future will be bleak indeed. The young doctor, or lawyer, or dentist, or professor, or business administrator, or engineer, or pharmacist, who believes that he can rest on the knowledge that he learned in college, will soon become a danger to those whom he serves. Knowledge does not stand still. Someone has said that the two most exciting areas of discovery today are the Dead Sea scrolls and outer space. We seem to have reached that topsy-turvy world, described in "Alice Through the Looking Glass," where "it takes all the running you can do to stay in the same place. If you want to get somewhere else, you must run at least twice as fast as that."

But what an exciting world it is in which to be alive. And if the future is darkened by danger, it is also illuminated by hope.

Moreover, you are young. You have never known the orderly, peaceful world of your grandfathers. Therefore you have one priceless asset. You do not yet know what is impossible. It is no accident that many great mathematical and scientific advances have been made when their discovers were young. These young geniuses saw the world with fresh eyes. They accomplished things because they had not learned from their elders or from their own experience that those things could not be done.

The world is illumined by hope. By means of organized attacks upon our areas of ignorance, we are substituting plenty for want, health for disease, knowledge for superstition, safety for danger, security for fear. Perhaps by such means you can substitute truth for falsehood, integrity for chicanery, law and order for revolution and chaos. As I said a few moments ago: We feel within ourselves the potential to build, for the first time in the long and troubled history of mankind, a world of such wealth and leisure and culture and good will and happiness as to make even the utopians concede that their dreams can come true. This, too, may be part of the unforeseen.

But it will be achieved only with effort. It will not come merely with wishing. This university has tried to give you knowledge and skills. It has sought to teach you how to learn. Profit by that experience. Be prepared. Be ready for the unforeseen.

The Deadly Spray

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. WOLF. Mr. Speaker, for some time I have been tremendously interested in seeing a greater amount of research performed by agencies of the Federal Government before an agency embarks on a major pest eradication program. Sports Illustrated, on May 2, 1960, carried an excellent article, setting forth some very dramatic examples of damage to wildlife which has resulted from certain mass pest eradication programs. This article gives support to my contention that it is imperative that the side effects of poisons and sprays be determined before they are used on a widespread basis. The article follows:

THE DEADLY SPRAY

(By John O'Reilly)

In the war against his insect enemies, man has reached the point where his poisons not only kill birds and animals but threaten the human population as well.

In the last 3 years the U.S. Department of Agriculture, warring against the fire ant, has sprayed more than 1,750,000 acres in the Southeast with chemical pesticides far more poisonous than DDT.

In the last few weeks the U.S. Fish and Wildlife Service has reported finding 59 species of animals, including game birds, dead on the ground in sprayed areas. These animals all contained residues of dieldrin or heptachlor, the two chemicals used.

In the same period the Food and Drug Administration declared a zero tolerance for heptachlor in foodstuffs for human consumption.

Thus man's chemical warfare against his insect enemies has at last reached the point where it threatens the well-being of man himself. The multimillion-dollar campaign waged by the Department of Agriculture against the imported fire ant has brought the whole question of the mass use of pesticides into violent focus. Yet the spray program for fire ant control is only one of several in which scientific investigators have found alarming results. Here are some of the others:

Heavy losses of game and nongame fish were discovered 4 months after DDT was sprayed on a large tract of forest in the watershed of Montana's Yellowstone River. On less than 300 yards of stream 600 dead or dying whitefish, brown trout and suckers were counted, and Prof. Richard J. Graham found fish dying 90 miles below the treated watershed. The fish were found to contain DDT.

On the east coast of Florida 2,000 acres of tidal marsh, traversed by 354,000 linear feet of ditches, were sprayed by airplane with dieldrin to control sand flies. The fish kill was nearly complete, estimates running to between 20 and 30 tons, or about 1,750,000 fish, representing some 30 species.

Robins and other highly desirable birds were wiped out in a number of communities in the Midwest, where spraying with DDT has been conducted for control of the Dutch elm disease. On the campus of Michigan State University Dr. George J. Wallace found original nesting robins were killed and others moving in to replace them also fell prey to the poison.

Damage to birds and mammals was reported by T. G. Scott, Y. L. Willis and J. A. Ellis from applications of dieldrin for control of Japanese beetles in Illinois.

Research conducted by the U.S. Fish and Wildlife Service has shown that as little as one-two hundred thousands of an ounce of dieldrin per day in the food of pheasants resulted in eggs of low hatchability and chicks subject to abnormally high death rates.

Some streams already have been polluted with pesticides, and DDT has been found at the mouths of even the largest rivers, including the Mississippi and the Columbia.

All the foregoing were the results of a program which, according to the pesticide committee of the International Association of Fish, Game and Conservation Commissioners, in 1958 accomplished the following: "Chemical controls were applied to more than 100 million acres of land in the United States, with additional millions more in Canada and Mexico. Mixed with dusts, oils, water, and other solvents, emulsifiers and carriers, the volume totaled between 2 and 3 billion pounds and cost the consumer over $500 million. Currently, one-sixth to one-fifth of our croplands and millions of acres of forest and range lands are treated annually with pesticides in quantities of a few ounces to 25 or more pounds per acre." As for the future, the report added: "Entomologists expect a fourfold increase in the use of insecticides during the next 10 or 15 years."

On March 28 Justice William O. Douglas in effect proposed that the entire problem of mass spraying of toxic chemicals be reviewed by the Supreme Court of the United States. He stressed the importance of the issue in an indignant protest when the Supreme Court refused to consider the legality of a Department of Agriculture program to spray DDT from airplanes on more than 3 million acres of land in 10 States.

Justice Douglas' action climaxed a 4-year battle by 13 residents of Long Island, N.Y., including Dr. Robert Cushman Murphy, the ornithologist, and Archibald B. Roosevelt, son of President Theodore Roosevelt, to curb pesticide spraying in their area. They had sought an injunction in 1956 against the Department of Agriculture's spraying of DDT to eradicate the gypsy moth, on the grounds that it would poison vegetables, animals, and human beings. While the case was moving through the courts the Department moved through the air and the spraying was done. The Government then said it had no intention of repeating the spraying. The Second Circuit Court of Appeals held, therefore, that the question was moot, or a dead issue, and

the Supreme Court refused to review this decision.

A THREAT TO HUMAN HEALTH

After discussing some of the testimony in the case, Justice Douglas wrote, "The public interest in this controversy is not confined to a community in New York. Respondents' spraying program is aimed at millions of acres of land throughout the Eastern United States. Moreover, the use of DDT in residential areas and on dairy farms is thought by many to present a serious threat to human health, as evidenced by the record in this case as well as by alarms sounded by others on the problem. The need for adequate findings on the effect of DDT is of vital concern not only to wildlife conservationists and owners of domestic animals but to all who drink milk or eat food from sprayed gardens.

"I express no views on the merits of this particular controvery. Nor do I now take a position on the issue of mootness. But I do believe that the questions tendered are extremely significant and justify review by this court."

It is not only the scope of the spraying program but the changing nature of the compounds used that has led to such mounting concern. Since World War II, when DDT was put on the market, the deadliness of pesticides has increased markedly. Insects were found to develop immunity to DDT, and so the demand arose for stronger compounds with a wider killing effect. A long list of new organic pesticides was therefore developed, including the chlorinated hydrocarbons. Now more than 200 pesticides are sold in various formulas under thousands of trade names.

Dr. Clarence Cottam, director of the Welder Wildlife Foundation, Sinton, Tex. (Sports Illustrated, Jan. 21, 1957), and former Assistant Director of the U.S. Fish and Wildlife Service, is one of the leaders in the campaign against the wholesale and indiscriminate spraying of these toxic materials.

"The magnitude of this problem is tremendous," Dr. Cottam says. "It suggests to me that ultimately legislative action by Congress may be necessary to give more effective protection to man and his resources against overzealous operators. Knowledge needs to be available concerning the probable or possible indirect, as well as the direct, effect of the projected operational program."

The new chlorinated hydrocarbons have many curious properties. As a group they are highly toxic, but some are more poisonous than others and their effects are different upon different organisms. Upon being ingested some of them change form. In the body tissues of animals, for example, heptachlor metabolizes to heptachlor epoxide, which has proved to be more poisonous than the original compound. These chlorinated pesticides are also surprisingly stable and remain in the environment long after they have been deposited. Dieldrin and heptachlor remain lethal to invading fire ants from 3 to 5 years and possibly longer.

In the case of the imported fire ant program, appropriations for eradication were voted by Congress, and it then became the obligation of the Department of Agriculture to carry out the program through its Pest Control Division. Officials administering the program have held that if they were permitted to carry on an all-out campaign the ant could be eliminated and any areas suffering damage to wildlife would be repopulated naturally. It is a matter of historic irony, however, that the entire furor over the fire ant has been concerned with an insect which, on further investigation, has turned out to be something less of a menace than it was originally made out to be.

Not so the poisons. One of the warnings sent out to local residents in advance of the spraying, for instance, says: "Cover gardens and wash vegetables before eating them; cover small fishponds; take fish out of pools and wash pools before replacing the fish; don't put laundry out; keep milk cows off treated pastures for 30 days, and beef cattle 15 days; cover beehives or move them away; keep children off ground for a few days; don't let pets or poultry drink from puddles."

Gradually the imported fire ant seemed to lose some of its viciousness. There were denials that it ate crops.

Health officials said it was not a menace to human beings. Dr. Kirby Hays, an entomologist who was sent to Argentina by the State of Alabama to study the ant on its home grounds, reported that the people of Argentina considered the insect beneficial because it attacked a number of destructive insects. Last week the National Wildlife Federation asked Congress outright to stop or drastically modify the fire-ant control programs, pointing out that "the fire ant is a nuisance, but nothing more." The value of its control, said Louis C. Clapper, acting conservation director, "is more than offset by long-term damage to wildlife, fish, domestic livestock, and poultry and beneficial soil organisms." The department itself cut down the recommended dosage of 2 pounds per acre to a quarter pound per acre, with a second spraying of the same amount 3 to 6 months later.

Meanwhile, biologists were following the trail of the sprayers. At the 25th North American Wildlife and Natural Resources Conference held last month in Dallas, Dr. James B. DeWitt, of the U.S. Fish and Wildlife Service, delineated the results of research he and his coworkers had conducted at the Patuxent Wildlife Research Center near Laurel, Md.

It was Dr. DeWitt who listed the 59 species of poisoned animals that had been obtained from areas sprayed for fire ants. The list included songbirds, quail, rails, ducks, rats, mice, raccoons, foxes, snakes, frogs, and fish. Dr. DeWitt also reported that earthworms, an important food of some birds, taken as much as 12 months after treatment of an area with the pesticide, contained from one to ten parts per million of heptachlor epoxide.

The cost of the fire-ant program has been great. During 3 years Congress has appropriated $7,200,000 for the spraying. With additional funds appropriated by State legislatures, the total cost has risen to between $10 and $12 million. Meanwhile, both the spraying and the controversy continue, although some States have reduced or withdrawn financial support of the program.

Most of those who are in violent opposition to such massive spray programs agree that pesticides have become an unavoidable part of the economy. However, they do make strong pleas for a revised approach to the problem. Instead of stronger poisons with wide killing ranges they urge less toxic but more specific chemicals and the use of spot methods of application rather than the wholesale dosing of big areas from airplanes. Above all, they plead for greater cooperation between biologists and those exercising control programs.

A bill to that effect, called the Chemical Pesticides Coordination Act, was introduced in Congress on March 31 by Representative LEONARD G. WOLF, of Iowa. This bill would require advance study of the effects upon fish and wildlife before any Federal program using chemical pesticides could be undertaken. It would require not only preliminary study by the U.S. Fish and Wildlife Service but also by the game and fish department of the State affected. The Fish and Wildlife Service would be directed to cooperate in developing methods that would achieve the necessary controls while minimizing damages to wildlife resources.

A VIEW OF BLACKEST PESSIMISM

Many of those taking an active part in the controversy feel that this is a good step, but that a much broader appraisal of the mass use of chemical poisons is needed. Dr. Wallace of Michigan State, viewing the drastic toll of robins and other birds after his investigations, expressed a view of blackest pessimism and indictment: "The current widespread and ever-expanding pesticide program poses the greatest threat that animal life in North America has ever faced—worse than deforestation, worse than market hunting and illegal shooting, worse than drainage, drought or oil pollution and possibly worse than all of the decimating factors combined." Dr. Cottam, more temperate but no less positive, argued for "selective and specific pesticides which we can use to control pests without significant detrimental effects to other public values or to other members of the biota which are of high economic, social or recreational importance. It has been done before." Dr. Cottam concluded, "The possibilities are there, and the promised rewards are worthy of our best efforts."

Address of Samuel Rose

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given by Samuel Rose, Chief Contact Officer of the Veterans' Administration at the National Convention of the Disabled Officers Association on June 23, 1960, at Kansas City, Mo.:

ADDRESS BY SAMUEL ROSE, DISABLED OFFICERS ASSOCIATION, JUNE 23, 1960, KANSAS CITY, MO.

I enjoyed my trip to Kansas City and here is the reason.

When I know the end of my journey is the National Convention of the Disabled Officers Association, I get extra pleasure. Two years ago my trip to your Boston convention gave me a great deal of enjoyment. So I came to Kansas City with a happy anticipation of the same kind of warm welcome from the officers and members of your fine organization. I have not been disappointed.

I am proud that our Administrator of Veterans' Affairs, Mr. Sumner G. Whittier, asked me to visit you as his personal representative. It is an honor to represent such an outstanding Administrator, and I shall try my best to see that you are informed about facts that may have some bearing on your welfare as retired officers, and on the well-being of those near and dear to you.

Captain Shaughnessy, sir, it is good to see you. I know you will agree with me that the surest way to keep an organization like this running smoothly along the main track—with no delays or detours—is to have a national adjutant who knows his business and who has the respect of our VA officials. And speaking of one particular national adjutant, they don't come any better than Lt. George D. Tilghman. Working with George is a real pleasure. I ought to know. George has been a dear friend of mine for a great many years. I won't say how many years it has been, because George and I like to think of ourselves as young men.

To all of your members—here at this convention, or wherever they may be throughout the United States—I would like to quote two brief sentences by our Administrator, Sumner G. Whittier. He said:

"Disabled veterans are preferred stockholders in America. You have priority in the hearts of all Americans."

You may frame those words and hang them on the wall in your national headquarters as a motto to be trusted. As long as the VA stays in business, as long as your fellow citizens have a heart and a conscience, you disabled officers who have shed your blood in the defense of our country can count on special consideration. You gave much. You are entitled to much. The people of our country are determined to repay the debt they owe to the veterans of this Nation.

I want to tell you about two current facts in veterans' affairs that put punch and power into the work of the VA in behalf of veterans.

We at VA now have the authority—straight from the President himself—to maintain an authorized capacity of 125,000 beds throughout our nationwide chain of 170 VA hospitals.

That is not all. That same grant of authority, from President Eisenhower to Veterans Administrator, Sumner G. Whittier, gives him the power to shift beds—or to shift hospitals from one type to another—in keeping with medical progress, and in keeping with current changes, and current needs, among our veteran population. "The power to shift beds." Exactly what does that mean? I'll tell you. Tuberculosis is on the decline. The VA no longer needs all the TB beds it required a few years ago. Some 2,800 beds, formerly used for the treatment of TB patients, are no longer necessary. Before the new authority from the President, those beds would have been lost from the system; they could not have been used. But because of this new authority, we have been able to convert them to other uses, where the demand is still so urgent. Yes, 2,800 beds, the equivalent of four entire VA hospitals, saved for veterans who need them, because of a Presidential signature on a sheet of paper.

There is another important fact I want to present to you. It is a number. The number is 6,371. That number is intimately connected with the better health, the greater well-being of every sick or disabled veteran, every veteran who may have the misfortune to become sick or disabled during the months or years ahead.

That figure, 6,371, stands for the total number of medical research projects currently underway in the Veterans' Administration. Explorations into the central mystery we group together under the name of heart disease. Studies of respiratory diseases. Of cancer. Of hardening of the arteries. Of the bone-wrenching pain of arthritis. Yes, and daring VA explorations into the jungle of darkness and despair of that greatest enemy of mankind—mental illness.

In our VA hosiptals, in our clinics and research laboratories, our physicians, our scientists, our technicians are seeking to help veterans to see the dawn of a better day. But even that is not the sum total of what we are doing in medical research. We are working night and day for the health and well-being of every man, woman, and child in America. Every gain our VA doctors make, every inch we progress forward, every ray of light we flash into the retreating darkness of disease, is shared with the entire American medical profession.

I could give you many more figures. I could acquaint you with charts and reports. But in those two figures I have just explained briefly for you—125,000 beds—6,371 medical research projects—rests the ultimate reassurance for sick and disabled veterans of today and tomorrow.

Perhaps, I am unduly proud of VA medicine. Perhaps, I am overenthusiastic. But I can look ahead to the day we may pick up the morning paper and read that cancer has been cured or heart disease is conquered or mental illness defeated. With the help of Congress, and with God's help, the VA medical program will have played a part—an important part in the story behind these electrifying headlines.

I wish I had the time to tell you in detail the story of all the benefits the VA is administering in these days of 1960 under the dynamic direction of Sumner G. Whittier. But rather than take so much of your time, rather than bury you under a mountain of statistics, I'll put it this way:

Veterans' benefits have produced more jobs, more homeowners, more life insurance policyholders, more gross national product, more income tax payments from solvent and self-reliant veterans—which embraces also disabled officers—than any other set of laws of a similar nature enacted in the entire history of the United States. Veterans' benefits wisely administered are an invaluable asset to national strength and security. Just look at that amazingly successful debenture, the GI bill of rights.

VA sent more than 10 million World War II and Korea veterans to school, on-the-job training or college. Consider this roster of greater strength for America: 205,000 trained as doctors, dentists, nurses and other occupations in the health field; 148,000 as lawyers; 111,000 as economists; 349,000 as teachers; 453,000 as engineers and 153,000 as scientists.

And the veterans fused their talents, skills and energies to civilian life. GI education has greatly increased the skills and productivity of our labor force so that today we all enjoy a higher standard of living and greater prosperity because of it. The $18 billion investment in this program was a sound one—to put it mildly.

VA guaranteed $49 billion worth of low interest loans to help buy 5,500,000 homes, 71,000 farms, 235,000 small businesses. The record established by veterans in meeting their GI loan obligations is unparalleled.

What a massive investment in national security.

You disabled officers have earned the heartfelt thanks of a grateful Nation by your leadership and sacrifice.

By honoring its obligations to veterans, the United States has enlarged its own capacity, has fortified its national power, has established its unique position of world leadership for freedom with peace.

The Veterans' Administration is proud of the role it has played in this amazing advance. Under the able guidance of Sumner G. Whittier, we shall carry on to the best of our abilities, as the American people would want us to.

That is our pledge to you of the Disabled Officers Association.

That is our pledge to nearly 23 million veterans.

That is our pledge to the people of America.

Thank you.

Afghan-Pan American Agreement

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. BOWLES. Mr. Speaker, the gentleman from New York [Mr. ROONEY], and others have strongly praised the efforts of Pan American World Airways in helping the Government of Afghanistan to modernize its air transportation system. I would like to endorse Mr. ROONEY'S views and to add my hope that the unique relationship that has been worked out in this instance between an American corporation and a foreign government may be considered as a model for similar agreements.

One of our greatest national assets is the drive and ability of many of our business leaders. It is essential that we develop new means by which this know-how and experience can be used to help new underdeveloped countries to build up their economies.

Under the Afghan-Pan American Agreement, the Government is able to take advantage of the experience of Pan American through a management contract and to offer further incentives through a minority stock interest.

In many cases American companies will invest their own capital abroad in plants which they own and control. In other cases the new ground pioneered by Pan American may help bring to bear American executive skills which otherwise would not be available.

H.R. 12261

SPEECH

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12261) to amend the Agricultural Adjustment Act of 1938, as amended, and the Agricultural Act of 1949, as amended, with respect to market adjustment and price support programs for wheat and feed grains, to provide a high-protein food distribution program, and for other purposes.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. WOLF].

Mr. WOLF. Mr. Chairman, I take this time in order to propound a question to the ranking Republican member on the committee. Previously, when the gentleman was speaking in the well of the House, I asked him to yield. He did not yield so I thought I would ask this question now. The question arises, if we support the amendment which has been introduced here, what happens to the feed-grain farmer?

Mr. HOEVEN. As I understand it, the amendment offered by the gentleman from Utah [Mr. DIXON] is a substitute for the entire bill, which, of course, if adopted would be a substitute for the bill and would eliminate the feed-grain section.

Mr. WOLF. The answer to me, as I see it, is if I want to do something for the feed-grain producers in the Middle West in the Corn Belt, I will have to vote against the amendment.

Mr. HOEVEN. Not necessarily, because I pointed out earlier during the debate that there was no reason in the world why the Committee on Agricul-

ture cannot promptly tomorrow pass out a bill which can be enacted into law.

Mr. WOLF. Does the gentleman from Iowa [Mr. HOEVEN] have such a bill ready to go that would have the support of his administration?

Mr. HOEVEN. I do not have a bill myself. I do have a payment-in-kind bill, which the gentleman knows, but I am handicapped on the Committee on Agriculture, as the gentleman very well knows, being on my side completely outnumbered. We do not have the votes to enact the legislation that we would like to present.

Mr. WOLF. Would it not be a good place, right here and now, to amend the amendment and include your payment-in-kind bill for the feed-grain producers.

Mr. HOEVEN. That is the gentleman's privilege, if he desires to do so. I am just pointing out that the substitute proposed by the gentleman from Utah would supplant the committee bill.

Mr. WOLF. My feeling is that if the gentleman from Iowa truly is concerned for the feed-grain producers, he would introduce it. As the ranking minority member of the committee, his arguments might be quite persuasive.

I thank the gentleman for his help.

You're Getting Stung on Compensation Taxes

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. WOLF. Mr. Speaker, the Iowa State Employment Security Commission is faced with a mounting problem of unemployment and an administrative deficit with which to meet this problem. In order to match up unemployed persons with available employment opportunities, a full staff is needed. At a time when the commission needs desperately a full staff, it has been required to give its employees a 2-day layoff withcut pay last week and this week.

The official publication of Associated General Contractors of Iowa, the Central Constructor, on May 19, 1960, pointed up very graphically the cumulative results of this administrative deficit which the Iowa agency has experienced. Other States may be experiencing similar difficulties. This situation deserves the thoughtful consideration of Members of Congress in the hope that some way can be found to avoid a recurrence of similar situations in future years. The article follows:

YOU'RE GETTING STUNG ON COMPENSATION TAXES

Manifest unfairness in the allocation of Federal funds to the State of Iowa could raise the contribution which contractors—and all other employers covered—are required to make to the fund from which unemployment claims are made in this State. The increase in contractors' costs—and those of other employers—will necessarily mean higher prices which the public must pay for goods and services.

It was reported in the press recently that employees of the Iowa Employment Security Commission will be required to take unpaid 5-day "vacations" before the end of the fiscal year because funds to meet that agency's payroll will not be available. That is bad enough but, of course, the overall effect upon the State is much worse.

MORE PAID THAN RETURNED

Iowa employers paid $3,472,000 in Federal unemployment tax for the administration of employment security in this State for the fiscal year ending June 30, 1959. The Federal Bureau of Employment Security returned only $2,792,000 to the State for the administration of the Iowa law during fiscal 1959.

That is, Iowa got back 80.4 cents of every dollar the State's employers paid into the Federal fund for administrative costs. Thirty States got back more than they paid in—two of them got more than $3 for every $1 paid by their employers. Iowa employers are helping the employers of those other States carry their load—and it could prove to be at very heavy cost to Iowa.

STAFF WAS REDUCED

The same situation prevails in the current fiscal year. The Iowa Employment Security Commission, in an effort to operate during fiscal 1960 within the restricted budget, cut its staff by 57 employees—making it impossible to provide the service to the employers who pay the tax and to the workers in this State which the Iowa law says it shall provide.

One of these services is returning unemployed persons to work. If the commission is obliged to reduce its staff still further, one of the consequences will be that it will not be able to find jobs for workers, the workers will draw more unemployment compensation for their longer periods of idleness, claims against the contractors' (and other employers') accounts will increase in volume, and the tax rate governing the employers' contribution to the fund must go up.

This is for lack of $43,000 which the commission still needs to carry on its functions for the rest of fiscal 1960. And this is despite the fact that Iowa employers will probably pay over $600,000 more to the Federal bureau than the State gets back to administer the Iowa law.

IT AFFECTS YOU

Iowa employers—including all contractors—should see to it that their Congressmen are informed of this situation. They may reply that no one is affected except employees of the Iowa Employment Security Commission (whose salaries can't be paid in full); that there is plenty of money to pay unemployment claims to workers who have been laid off—so no one else suffers.

This is not true. You suffer. The jobless will get their compensation, as they should. But to make that possible, you will have to pay higher contributions to the fund from which they are paid. Getting those jobless back to work as promptly as possible is the only thing that can hold down the employers' contribution. Iowa Congressmen should be on their toes enough to see that Iowa is not discriminated against in the distribution of tax funds for this purpose.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park. Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

Our Communist Enemy

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, June 23, 1960

Mr. BRIDGES. Mr. President, the action of the Communist-inspired mobs in Japan raises once more the question of whether the American people are fully aware of the real threat of world communism. Are we losing all over the world because of the actions of a minority group in various free nations?

We have spent over $70 billion since 1946 on various forms of foreign aid in order to "win friends and influence people" outside the Iron Curtain and I have voted for mutual security appropriations in support of the President's program.

Mr. George Stringfellow, of East Orange, N.J., delivered an address June 10 before the Kiwanis Club of Austin, Tex., which I believe raises some interesting points relating to this subject. Mr. Stringfellow points out that, in his opinion, "the fact that we are tense again" because of the collapse of the summit conference "is not a loss, but a gain." I ask unanimous consent that Mr. Stringfellow's speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NATURE OF OUR ENEMY

The principle of communism is not new. Some primitive societies practiced it. Marxism-Leninism communism is a little over a century old. "Scientific socialism," as it is called, stems from the writings of Karl Marx who, at the age of 24, became the editor of a leftwing newspaper in Cologne, Germany and launched a tirade against the government. The paper was suppressed. Marx then went to France for 7 years. He then went to England where he remained until his death—at the age of 65.

One of Marx' few friends was Friedrich Engels whom he met in 1842 when he was editor of the leftwing newspaper. They became intellectual comrades. Engels supported Marx financially.

Marx and Engels were atheists and, of course, revolutionists. Marx is known as the "originator" of communism and today his memory is highly respected by Communists everywhere. Engels is appropriately called the collaborator of Marx. Engels had an encyclopedic memory. His extensive knowledge of industrial techniques supplied Marx with important information. Engels also wrote, not only under his own name, but in some instances, under Marx' name. Together they conceived and formulated the Communist doctrine.

Engels lived for years with a woman out of wedlock. Upon her death, he lived with her sister. Years later he married her on her deathbed.

For years Marx was in ill health. He did not have a regular job. He depended upon pittances, especially from Engels. He lived from pawn shop to pawn shop.

It was in this sordid atmosphere that the philosophy of communism was born which today controls two out of five peoples of the world.

The Communist leaders, from Marx to Khrushchev, have proclaimed that capitalism and communism are incompatible, that sooner or later one or the other must be destroyed. Within the last year Khrushchev has boasted that he and his fellow travelers will bury us.

Communism, as we know it today, made little progress until it was recognized by the Government of the United States in 1933.

Presidents Wilson, Harding, Coolidge, and Hoover knew that one of the greatest assets the Communists could have would be for the U.S. Government to recognize the Communist government of Russia. They knew that this would give them freedom to infiltrate our newspapers, radio, moving pictures, schools, colleges, government, church, and labor organizations.

In a letter dated October 10, 1933, to Stalin's stooge, the president of the All Union Central Executive Committee of the U.S.S.R., President Roosevelt said: "I contemplate the desirability of an effort to end the present abnormal relationship between the 125 million people of the United States and the 160 million people of Russia. • • • If you are of a similar mind," said President Roosevelt, "I should be glad to receive any representatives you may designate to explore with me personally all questions outstanding between our countries."

Seven days later the president of the All Union Central Executive Committee of the U.S.S.R. replied stating that he agreed with President Roosevelt and appointed M. M. Litvinov, People's Commissar for Foreign Affairs, to represent him in the negotiations. Following several conferences at which the Russians were wined and dined at the White House and Hyde Park and shown every courtesy, President Roosevelt wrote Litvinov on November 16, 1933 in part as follows: "I am happy to inform you that as a result of our conversations the Government of the United States has decided to establish normal diplomatic relations with the Government of the Union of Soviet Socialist Republics and to exchange ambassadors.

Litvinov replied to the Roosevelt letter the same day saying: "I share the hope that the relations now established between our people may forever remain normal and friendly, and that our nations henceforth may cooperate for their mutual benefit and for the preservation of the peace of the world."

You will observe from the foregoing that we, not the Communists, initiated formal diplomatic relations with them.

The Soviets have not kept a single major agreement entered into with us since the establishment of diplomatic relations.

At the time the President gave official recognition to Soviet Russia, the Communist dictatorship, under Joseph Stalin, had not consolidated its hold over Russia. The freedom-loving Ukrainians were resisting collectivism and Khrushchev, Stalin's lieutenant, was conducting a systematic, manmade famine in which 7 million Ukrainians died. The Soviet Union was virtually bankrupt. There was worldwide distrust of the Bolsheviks. The United States recognition gave them respectability, and monetary credit. We gave or sold them much of our industrial know-how, and that which we did not give or sell them, their agents stole.

In 1945 and 1946, Great Britain and the United States became so anxious to maintain their wartime friendship with Stalin that they permitted Soviet Russia, still a second-rate primitive nation, to place its agents in the governments of all eastern European countries. In a short time the Communists had control of Poland, Estonia, Latvia, Lithuania, Czechoslovakia, Hungary, Rumania, Bulgaria, Albania, and Yugoslavia and were exterminating millions of people who might have resisted communism.

At the Yalta Conference in 1945, the United States permitted Russia to take over Chinese Manchuria. Then the Moscow-trained Communists were supplied with Russian arms. The United States cut off aid to our friend, Chiang Kai-shek, head of Nationalist China, and communism quickly established its control of much of Asia. This was one of the most remarkable actions in the history of the world.

In 1957 and 1958, Cuba fell under the Communists' control—after the United States had withdrawn armed support to the Cuban Government and otherwise aided Castro and his Communist cohorts. The State Department gave official recognition to Castro's military dictatorship before his bearded bully boys had reached Havana in force.

Scarcely any well informed person in America has any doubt now that Cuba is being built into a Communist bridgehead, just 90 miles from Florida. The disturbing factor about the Cuban development is that some important segments of our molders of public opinion helped to turn Cuba over to Castro and his Moscow-controlled agents. Just as our Government helped to turn China over to the Communists 10 years earlier. We do not appear to learn anything from our experience with the Communists.

Respected American publications, in 1957 and 1958, built up Castro as a romantic rebel—a Robin Hood, leading his fight for social justice in Cuba. While their aid to world communism was unwitting, it nonetheless damaged our security. Their widely published complimentary article on Castro went out of their way to dispel any idea that Castro's movement had a Communist complexion—although Castro's record to the contrary was readily available.

Beneath all of the events having to do with the U–2 plane lost in Russia on May 1, are root errors of what appears to be the desire of some persons of appeasing Russia over the last 20-odd years. Since we accepted the untenable military position in Berlin, we have sometimes listened to those having the policy of appeasement, concession, acquiescent, insults, and humiliations that Britain followed so disastrously toward Hitler.

Pressure for this policy has come largely from the liberals and the political leftists.

Khrushchev, like Stalin, has successfully broken every promise and treaty the moment it suited his end to do so. He feigned troop withdrawal from Hungary to give him time to bring in more tanks to machinegun patriots in the streets. Yet we have been urged to negotiate with this monster as if he were a man of good faith, good will, high

character, peace loving, and as if his word or his signature were worth something.

In view of the actual threat we face, the fact that we are tense again is not a loss, but a gain.

We have, I hope, been saved from a worthless agreement at the summit conference, which might have caused us to live in a fool's paradise while Russia built up for a devastating surprise attack.

We should never have agreed to the summit conference. No matter how we may try to disguise the facts, we agreed to that conference under the Khrushchev threat to kick us out of Berlin. We should have told him that we are there in accordance with our occupational rights and there was nothing to discuss.

Let us hope that we are at least through with summit conference dreams. Our appeasement has encouraged Khrushchev to recklessness.

Let us at last launch a real propaganda counteroffensive of our own. Let us expose the nonsensical claims of Communist economic growth instead of swallowing them whole. Let us have the courage to defend capitalism and explain the superiority of economic freedom.

Instead of trying to call off the cold war, which we can't, let us recognize at last that it is being relentlessly fought against us by an enemy determined on world conquest.

Let us realize that our only hope of peace and security is to accept the ideological challenge and seek not a truce but a victory. Then and only then will we be worthy of our heritage. Then, and only then, will we preserve our liberty.

Will T. McKinney

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 22, 1960

Mr. SMITH of Mississippi. Mr. Speaker, one of the Nation's outstanding leaders in the field of flood control and conservation, Mr. Will T. McKinney of Anguilla, Miss., died on Thursday, June 16. For many years Mr. McKinney had been chairman of the Delta Council Flood Control Committee and through that organization had worked closely with leaders in the flood control field throughout the country.

It was my pleasure to work closely with him in all of these activities. One of the great satisfactions I have obtained in my work in this field was to see the Congress approve this year plans for the first construction work on the Yazoo backwater project, work which had been Mr. McKinney's goal for many years.

Mr. McKinney was an active civic leader in many fields.

Under unanimous consent I include an editorial from the Delta Democrat-Times at Greenville, Miss., and from the Deer Creek Pilot of Rolling Fork, Miss.

[From the Delta Democrat-Times]

W. T. McKINNEY

The varied talents and energies of affable W. T. "Billy" McKinney, as tirelessly applied to his beloved Delta country and to Mississippi have been of incalculable value to this area. His death on Wednesday night is a great loss.

Active in many areas, Mr. McKinney was a merchant, a farmer and a banker. He served a year as president of the Delta Council and was vitally interested in agricultural research. He was one of the guiding lights in the formation of the Delta Research Foundation and headed its board of trustees from the time it organized until his death.

He was a devoted leader of a continuing campaign to keep the rivers and streams from flooding the rich lands of the lower Mississippi Valley and as chairman of the Delta Council Flood Control Committee, he made many trips with the Mississippi River Commission, urging funds for levees and revetment work along main line Mississippi River and its tributaries.

One of his lifelong efforts paid off recently when the Vicksburg engineer district advertised for bids on the first project in the backwater area of the lower delta, a project that will protect thousands of acres that are often flooded by high water on the Yazoo River.

Mr. McKinney was a dedicated leader with a brilliant mind and a soft-spoken manner of getting things accomplished.

[From Deer Creek Pilot]

HISTORY AND MR. WILL

(EDITOR'S NOTE—The following editorial was written last weekend in hopes that it would reach Mr. Will McKinney in time for him to know about it. We were too late, however, because Mr. Will died early this morning. We do feel, however, that somehow, somewhere, Mr. Will will know—and will know also, that history will record him as being one of the area's and the State's most outstanding and valuable citizens.)

A news story crossing our desk last week brought with it the thought that all too often the men and families who have contributed much to not only their neighbors and fellow citizens but the entire area as well, receive too little recognition for their efforts and accomplishments.

The news story in question was one concerning the important work being done on a Mississippi Economic Council committee by Mr. Will McKinney of Anguilla. And it seems to us that although nothing we can say editorially could ever spell out in just measure the thanks and appreciation this entire area—as well as the State—owes to such a man, the least we can do is try.

Of course, the public generally knows of those responsibilities and duties in the public interest accepted by Mr. Will—such as the presidency of such service organizations as the Delta Council and importance posts in the Mississippi Economic Council and on the State Banking Board. But while few may know of his untiring work in expanding the usefulness of buckshot soil and his persistent and active interest in drainage and backwater projects, few also are they who have not benefited both directly and indirectly from his efforts.

These are but the tangible—the concrete and material—things to which one may point in paying tribute to Mr. Will McKinney. However, we suspect that when history marks the record of not only Mr. Will but the entire McKinney family, it will be the intangible, the spiritual, and the emotional manner in which the name itself has been synonomous with the growth of this area almost from the very beginning which will write the most glowing passages.

From the days when Anguilla was known as McKinneyville—the days when, indeed, people used McKinney script as legal tender—there have been McKinneys such as Mr. Will to shoulder even more than their share of the load—to do voluntarily those thankless and unsung jobs always incidental to progress—at the same time setting a pattern of cultured grace in his personal comportment.

Having said all of this—and having recognized the exquisite genuineness of this man with the manners and charm of a Lord Chesterfield—we think that perhaps the most outstanding characteristic of Mr. Will is the breadth of character he displays in dealing with persons with whom he has at times vigorously disagreed—retaining always his soft-voiced friendliness toward the man no matter how firmly he opposed his views.

May we say "thanks," Mr. Will? Thanks on the behalf of the entire area—not only for the material things you have accomplished in the public's behalf, but, more important, for having been the man that you have.

Sheriff Robert S. Moore, of Desha County, Ark.

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 23, 1960

Mr. FULBRIGHT. Mr. President, Sheriff Robert S. Moore of Desha County, Ark., was recently elected president of the National Sheriffs Association at the annual meeting of the association in Denver. The association could not have made a better selection. Sheriff Moore has held many posts in law-enforcement groups in Arkansas, and is eminently qualified by training and experience for holding the top office in the National Sheriffs Association.

This is not only an honor for Sheriff Moore, but it is an honor for the entire State of Arkansas. I know that he will carry out his duties in a capable and efficient manner and I wish him every success during his tenure in office.

I ask unanimous consent that an editorial and a news article from the Arkansas Gazette concerning his selection be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Arkansas Gazette, June 17, 1960]

SHERIFF MOORE'S HONOR

Desha County's veteran sheriff, Robert S. Moore, has been elected president of the National Sheriffs Association, and with that announcement from Denver this week came the welcome word that the NSA would hold its annual convention at Little Rock in 1961.

Arkansans will hail both developments, the election of Sheriff Moore because it brings national recognition to one of the State's most respected peace officers, and the convention site selection because here again we shall have the opportunity to play host to a sizable group of out-of-State visitors—some 2,000 next June.

Sheriff Moore has held numerous posts and gained many honors within law enforcement groups in his home State. He has served as president of the Arkansas Sheriffs Association and the Arkansas Peace Officers Association. He is today executive secretary of the ASA. In these positions he became active in national peace officer work, and his election by delegates from 26 States at Denver climaxes 10 years service on the board of governors of the National Sheriffs Association.

The esteem Bob Moore enjoys among lawmen nationally and the selection of the

NSA's 1961 convention site must be inextricably bound up together.

[From the Arkansas Gazette, June 16, 1960]

DESHA SHERIFF ELECTED HEAD OF U.S. UNIT

COLORADO SPRINGS, COLO., June 15.—Robert S. Moore, sheriff of Desha County, Ark., today was elected president of the National Sheriffs Association at the 20th annual Informative Conference here.

The association also selected Little Rock as the site of the 1961 National Sheriff's Conference, an occasion which is expected to attract nearly 2,000 persons from all over the country. The Marion and Grady Manning Hotels were selected as headquarters for the June 11-14 event.

Moore, of Arkansas City, was 1 of 61 persons from Arkansas attending the conference here. They will return to Little Rock tomorrow.

OUACHITA GRADUATE

Moore, who has been a law enforcer in Desha County since 1933, is past president of the Arkansas Sheriffs Association and the Arkansas Peace Officers Association. He is executive secretary of the Arkansas Sheriffs Association.

He was born at Dumas, the son of Mrs. I. N. Moore and the late Senator Moore. He graduated from Dumas High School and Ouachita Baptist College. Moore was chief deputy in Desha County from 1933 to 1944, except for a stint in the Army during World War II, and was elected sheriff and collector in 1949.

He has been active in the National Sheriffs Association for more than 10 years and has been vice president and a member of the board of governors of that group. Moore is a deacon in Arkansas City Baptist Church and is a Mason and Shriner.

The Arkansas delegation to the conference was the largest of any from the 28 States represented except the host State.

It will be Little Rock's second time to host the conference. The event was held there in the early days of the association. It also is the second time an Arkansan has been head of the group. Gus Caple of Little Rock, former Pulaski County sheriff, was president several years ago.

The Gathering Storm in Highways

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks I am including an article on the total highway program and its principles by Bernard F. Hillenbrand, executive director of the National Association of County Officials:

THE GATHERING STORM IN HIGHWAYS

(By Bernard F. Hillenbrand, executive director, National Association of County Officials)

The fact that our roadbuilding program is under intense fire is a matter of grave concern to our county officials. For about 300 years county governments in the United States have been planning, building, and maintaining the lions share of the American highway system that now numbers 3.4 million miles. Our 3,047 counties employ about 250,000 people in road work and expenditures for roads and highways is a major part of the local budget in nearly every county. This long experience and massive involvement have generated some strong opinion in road matters on the part of our county officials. Briefly we would like to summarize these highway policies found in the American county platform of our National Association of County Officials.

1. It is not possible to finance an adequate amount of road construction at the local level without substantial assistance from State and Federal gasoline and motor vehicle user receipts. Contrary to popular belief the superurban expressways are the least expensive roads to build when measured in cost per vehicle-mile of travel. By contrast the roads which counties build without State or Federal assistance are the most expensive. A study by the Bureau of Public Roads reveals for example, that cost per vehicle-mile on sample interstate expressways is one-half cent; on primary roads three-fourths cent and on secondary roads 1½ cents. The more rural the road the greater the cost per vehicle-mile. At the county level about 75 percent of our revenues come from the property tax. Because one county competes with all others for new business and industry and for a host of other reasons, it is not possible to hike local property taxes high enough to support all the needed road construction in the county.

2. All the funds collected from the highway user by the States and Federal Government should be used for road purposes. Our policy goes a step further. We firmly believe that roads have both an economic and defense purpose and to the extent that they do we have advocated their being financed by general tax revenues. While most of the States are apparently not diverting user fees, the Federal Government diverts an estimated 39 percent of its user revenues to nonhighway purposes. Nondiversion at the Federal level would solve our highway finance problems.

3. We believe in a balanced national highway program that takes into consideration all highway needs. Nationally we have supported the 1956 Federal-Aid Highway Act. We want adequate funds for interstate, primary, secondary, and urban programs. We have fought strongly for the congressional intent of the 1956 act to expand annual appropriations for the Federal-aid primary, secondary, and urban systems by $25 million a year until they reach a level of $1 billion annually. In this session we are fighting for the $950 million that is needed to keep these so-called A-B-C roads on schedule. (The 755,278 miles of A-B-C roads carry more than 66 percent of the traffic generated by our 70 million vehicles.) Since we have major responsibility for them, we are particularly interested in seeing that adequate funds are made available for the 520,000 miles of Federal-aid secondary roads. To freeze Federal appropriations for these roads at their present level in face of an estimated increase to 100 million, the number of vehicles in the next 15 years, would be real folly.

4. We strongly oppose any effort to reduce or eliminate Federal-aid highway construction in urban areas. Our farmers want to bring their products into the heart of the urban areas and not just near them. People who live in urban areas want to get back and forth to the suburbs. People travel from the heart of one urban area to the heart of another. Our system of highways must be geared to meet these needs. Without trying to belittle the tremendous value of mass transit, we still are strongly of the opinion that the initial system of interstate highways envisioned in the 1956 act are needed not only for the movement of people but for the movement of goods. We have not heard of any mass transit system that will enable one of our farmers to pack his milk cans on a bus and roll into the center of his market area. A man who buys a refrigerator downtown cannot take it to his suburban home on a trolley.

5. Everywhere there is, and will be, increased pressure to get the maximum amount of roads per dollar spent, and our affiliated National Association of County Engineers are conducting extensive national research to find ways and means of reducing county road costs and increasing efficiency. We realize that many of our county methods and procedures were developed to meet the needs of the quiet past and are not adequate to present conditions. This research project, involving literally hundreds of county engineers and elected county commissioners, is turning out extremely useful reports that serve as a self-help guide or checklist to improved road administration. Realizing full well that some of the conclusions may be contrary to local custom and practice, our engineers and commissioners have, nevertheless, both unanimously endorsed the research and are standing in support of the conclusions.

6. We have learned to our sorrow that the key to good highways is planning. There is no substitute for a carefully laid out system of highways that takes into consideration existing and future land uses and the needs of the entire area. The problems here are tremendous. We have too few planners in general and too few highway planners in particular. We must plan in the most dramatic growth period of our entire history. Technological change is astonishing. The needs and desires of the people are influx. Highway planning in an urban area is a nightmare. To say it is difficult is not to say it is impossible. We have some of the tools in being or being developed. There is the county engineer's NACO research project that is being developed—there is the excellent work of the National Committee on Urban Transportation of which NACO is proud to be a sponsor—the report of the Sagamor Conference of the American Association of State Highway Officials is a general guide post. There are also 1½-percent planning funds although counties have not been allowed to participate in this program.

7. Counties have a new and decisive role in road construction in urban areas. Counties have been and will probably continue to be the key unit for rural government in most places. The State highway departments are required by law to have a secondary unit and through the years the teamwork between the State officials and the county officials on rural roads has contributed much to our present road system. It appears that this will not be enough in the future. Our counties are in a state of transformation in urban areas and are being called upon to provide a host of new-type services such as planning and zoning; industrial development; urban renewal, and public facility construction such as airports; pollution facilities; ports, and terminals. There is growing realization that the county offers a single agency of contact between the State and a welter of dozens of smaller political subdivisions in a typical urban area. This is also true of highway matters. The county represents all the people in the area, has the broadest tax base, political accountability and other advantages that would indicate a much wider role in all local government matters and particularly highways.

The States and Federal Government have most properly entered urban areas with Federal-aid highway construction. Here is the place where the greatest teamwork and mutual understanding and respect is needed. There must be a genuine partnership of Federal, State and all local government officials if the job is to be done.

It may very well be that on this one point of intergovernmental partnership will hang the future of the highway program as we enter 1961 and the showdown on Federal-aid highways.

Foreign Policy and the Election

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, June 23, 1960

Mr. WILEY. Mr. President, in an election year, our Nation faces the question of determining: What aspects of our foreign policy can be the subject of political debate—without interfering with, or casting unfavorable reflections upon the handling of overall U.S. policies in the eyes of the world.

We recognize, of course, that irresponsible action cannot only damage our prestige, but can aid and abet enemies working day and night to undermine our country at home and abroad.

If irresponsibly handled, this can also sow the seeds of division within our country—an objective which Mr. Khrushchev would like to see furthered.

For the most part, the American people, I believe, feel that essential policies should be examined and discussed, but that any differences should stop at the water's edge.

In this age, however, with enemy eyes and ears focusing upon our international affairs—the task of assuring that differences stop at the water's edge—without being utilized abroad for propaganda purposes against us—becomes more sensitive and difficult.

Recently, the Green Bay Press Gazette, of Green Bay, Wis., published an editorial attempting to constructively define the areas which can rightfully serve as battlegrounds for debate on foreign policy.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN POLICY AND THE ELECTION

Harry Truman's sharp criticism of Adlai Stevenson for the latter's attack on the Eisenhower administration's handling of the U–2 incident and the summit conference shows the wisdom of a man who has occupied the Office of President and who, because of that experience, is aquainted with the terrible decisions a President must make and the awful responsibilities that lie on his shoulders.

Mr. Truman's position is that when a U.S. President, of whatever political party, is dealing with foreign nations he should be supoprted by leaders of both parties at home even though some of those leaders may believe that he is not doing a good job, or that they could do a better one. In view of the severe criticism Mr. Truman underwent regarding his own foreign policy while he was President, and the recently confirmed fact that he holds a personal grudge against President Eisenhower, he deserves the respect of all Americans for the high-minded stand he has taken in this instance.

Yet the problem of what part foreign policy should play in our domestic political debates is not so simple that all we have to do is choose between the attitudes expressed by Adlai Stevenson and Harry Truman. Stevenson's approach, if carried to its extreme, would throw our foreign policy into a turmoil every 4 years if not more often, would make it impossible for leaders of other nations to predict our policies from 1 year to the next, and would offer unfriendly governments an unprecedented opportunity to meddle in American political affairs. On the other hand, Mr. Truman's approach, also if carried to its extreme, would eliminate foreign policy from our political campaigns altogether and therefore reduce them to sterility in this era when international affairs are so important to all of us.

Somewhere between these two extremes rises the right path for Americans of both parties to follow—the path of free but responsible foreign policy debate in our political campaigns. We think Stevenson has been groping to find this path but in his statements on the U–2 and the summit he lost his way. Actually it was not what he said that was so bad as his timing; by loosing his blast before President Eisenhower had even returned to these shores, and when the American people were still in a state of shock at seeing their President so brutally insulted at Paris, Stevenson gave the impression that he could not wait to take political advantage of what he believed to be a Republican foreign policy mistake.

Just as it would have been tragic to have declared a moratorium on criticism of the Roosevelt or Truman regimes regarding foreign policy, it is not in the best interests of our country to insist that Democratic leaders go easy with the present Republican administration when they are firmly convinced that it has failed, either by commission or omission, to give us the best possible foreign policy under prevailing circumstances. Paraphrasing Clemenceau, foreign policy is too important to be left to diplomats, or secretaries of state or, in the last analysis, even presidents. The manner in which we conduct our relations with other nations, both friend and foe, has become the most vital area of operation for our Federal Government; the people must play a part in these decisions for the simple reason that their very lives are at stake. The most important decision the American people will make this fall is whether a Republican or a Democratic administration will best represent our national interests in a world where we are under vicious attack by a ruthless enemy, and the people can make this decision wisely only if they are informed through the processes of discussion and debate. The great problem facing our political leaders today is how to carry on that debate in such a way as to educate and inform, and yet avoid methods and tactics that weaken rather than strengthen us.

Defense Weakness in Alaska

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. RIVERS of Alaska. Mr. Speaker, President Eisenhower's recent stop at Anchorage, Alaska, focused nationwide attention upon our 49th State, and perhaps impressed the President, as Commander in Chief, with the need of continuing at least the present limited scope of our national defense effort in Alaska. In line with my previous protests against the current Air Force plan to inactivate the 25-plane 449th Fighter Interceptor Squadron presently on duty at Ladd Air Force Base, Alaska, is the following editorial published in the Fairbanks Daily News-Miner on June 18, 1960, which editorial includes a reprint of a highly persuasive article from the New York Times. The editorial follows:

LEADING MILITARY EXPERT HITS LADD DEFENSE SLASH

How does the Air Force decision to cut down the defenses of Ladd Air Force Base by eliminating the 449th Fighter Interceptor Squadron look to the military experts?

One of America's foremost experts on military affairs—a man whose writings are read carefully and with great respect in every major nation of the world—considers the move a foolhardy one.

This man is Hanson W. Baldwin, military editor of the New York Times and author of a number of books on military affairs. His column on Alaska defenses—openly critical of the Air Force move in Alaska—was carried in the June 15 issue of the Times.

It is being reprinted here in full with the permission of the Times.

ALMOST DEFENSELESS: OUR 49TH STATE

(By Hanson W. Baldwin)

NEW YORK.—President Eisenhower's overnight stop in Alaska focused attention on a region that, in the President's words, "constitutes a bridge to the continent of Asia and all its people."

This traditional description of the strategic importance of Alaska was, however, vitiated by the military weakness of the 49th State. The President's visit to the Anchorage area may indeed have provided an opportunity to Alaskans to impress upon the Commander in Chief the virtual defenselessness of an area that is about one-fifth as large as the entire United States.

The President's own defense policies—particularly his level budget concept—and the increasing tendency of the Air Force toward a fortress America concept—or withdrawal of its principal installations into the continental 48 States—are in considerable measure responsible for Alaska's weakness.

This weakness has been reemphasized recently by an issue that has caused a storm in Alaska and elsewhere—the elimination and deactivation of one of the two fighter squadrons that had been assigned to the 49th State. The 449th fighter-interceptor squadron, operating 25 Northrop F–89 fighters, equipped with missiles armed with nuclear warheads, is to be deactivated within the next 6 weeks.

This squadron—the only one north of the Alaska range, was based on Ladd Air Force Base near Fairbanks. Its elimination leaves Alaska defended by 33 F–102 fighter-interceptors, normally, based at Elmendorf Air Force Base, near Anchorage, where the President spent the night.

ANTIAIRCRAFT BATTALIONS

In addition to these air defense forces—which are part of the 10th Air Division, answerable to the North American Air Defense Command, with headquarters at Colorado Springs—Alaska has two Nike-Hercules antiaircraft battalions—one near Fairbanks, one near Anchorage, and two Army battle groups. Its coastline is ringed with radar, and the scopes daily record the tracks of Soviet aircraft rising from fields just across the Bering Strait.

The value of the fighter-interceptor squadrons in Alaska was primarily for identification of unknown aircraft. There is so far absolutely no substitute for this visual identification of enemy aircraft, and there is no other U.S. territory where it is so badly needed as Alaska. In Alaska—due to the proximity of Soviet bases, and the overflights of many commercial lines, bush pilots and so on—the unknowns, recorded on the radar screens but not identified, are often within the coastline before they can be identified.

It is routine in Alaska to scramble fighter interceptors three or four times each month to identify unknown aircraft before they approach vital centers. Usually, if they are Russian, as they sometimes are, they turn away before the intercept is made.

There is no substitute for this visual method of identification and it is idle to assert that 33 aircraft can do the job as well as 59. Thirty-three aircraft—those that will remain in Alaska—will be able to keep perhaps six planes on constant ground alert.

The Air Force has indicated that the squadron at Anchorage will rotate some of its planes to the Fairbanks area and that Alaska would be defended from the continental United States. Any such arrangements obviously reduce materially the effectiveness of the defense. But this is propaganda, not fact.

The newest reduction in strength of our Armed Forces in Alaska was originally intended to be a modernization. The old F-89's at Fairbanks were to be replaced by modern F-101's. But the strict administration ceiling on defense spending and the Air Force tendency to try to concentrate offense and defense within the United States was the reason for the projected deactivation.

The reduction leaves Alaska and the rest of the United States weaker.

NO SOVIET RANGE

If the F-89's had been replaced by weapons—planes or missiles—with an offensive capability, this would have made great strategic sense. Not a single fighter in Alaska has the range to reach Soviet bases—just across the Bering Strait and in Kamchatka Peninsula—and to return. Lt. Gen. Frank A. Armstrong, Jr., Commander in Chief of the Alaskan Command, has long asked for some offensive capability in the form of a few intermediate range ballistic missiles or even light bombers, or longer range aircraft like the F-101.

The Thor or Jupiter missiles, already proved and in place in England and elsewhere, enplaced in some of the uninhabited wilds of Alaska, could do more to neutralize the Soviet bases across the Bering Strait and in Kamchatka and to defend not only Alaska, but the rest of the United States, than a multiplication of our purely defensive strength.

Moreover, missiles or long-range fighter-bombers or light bombers in Alaska would have a strategic diversionary effect upon Soviet plans; some of the atomic "lightning" would be attracted away from our shores by the Alaskan "lightning rod."

But the Air Force, in its strategic plans, is committed to an isolationist "Fortress America" concept, and Alaska, after the Panama Canal Zone, is the weakest command under the U.S. flag. The impending reduction in the 49th State's fighter-interceptor strength will leave both Alaska and the rest of the States weaker—not stronger.

No amount of the "gobbledygook" and doubletalk by which the cut was justified to a Senate Appropriations Subcommittee can change this fact.

Africa on the Move

EXTENSION OF REMARKS

OF

HON. EDMUND S. MUSKIE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, June 23, 1960

Mr. MUSKIE. Mr. President, on March 19, 20, and 21, Mrs. May Craig published three columns which were printed in various Maine newspapers.

In the first, she described a visit to Kruger Park in Johannesburg, Africa.

In the second, she recounts the attempts of the newspaper people from the United States to meet with South African Prime Minister H. F. Vorwoerd.

In the third, Mrs. Craig discusses political and economic integration in Rhodesia.

Mr. President, I ask unanimous consent to have these three articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

AFRICA ON THE MOVE—VISIT TO KRUGER PARK IS HUMBLING, JOYFUL EXPERIENCE

(By May Craig)

JOHANNESBURG.—No nation lives alone in the modern world so closely linked by speed of transport and communication. This apartheid racial policy here may make trouble for the United States in an odd way. Sticking strictly to European and non-European separation, the Union Government lumps "colored" (part white) and Indians and Chinese with blacks. Many Chinese coolies came here years ago, so did workers from India. These Chinese are not Communist Chinese, they are from the days before the Communists took China mainland. You might say they belong to the Nationalist, Chiang Kai-shek government-in-exile on Formosa regime, that is the Republic of China, our ally and a member of the United Nations Security Council.

To follow through on strict non-European segregation, the Government is going to move all the Chinese out of Pretoria, for instance, into "locations" outside, like the blacks. These Chinese are for the most part, now, merchants and solid citizens and this will cause no end of trouble for us, as well as the treatment of the Indian, about which Nehru is always complaining to us and the United Nations.

We asked what about prominent non-Europeans traveling here, and our vice counsul in Pretoria, Paul Eckel, who gave us an excellent and frank off-the-record briefing, said that Bill Gordon, an eminent Negro journalist of Atlanta, Ga., came, was escorated by American diplomatic personnel, was allowed to visit locations and almost any place he wanted, "behaved most discreetly," but this was because he was here as "an American citizen."

Wild animals are dying out almost all over the world. Here in the Union of South Africa, where they have such strange types as elephants, giraffes, hippopotamuses, rhinoceroses, lions, etc., there are several big game refuges where they are protected from extinction, though the natives do poach, to get meat and ivory. We went to the Kruger National Park nearly 300 miles from here—left Johannesburg at dawn, slept in a hostel near the gates and got up at 4:15 in the black starry dark of the next morning to be at the gates by dawn. There are huts in the park, some of them very comfortable, but not enough for our party.

The park includes 8,000 square miles of mountain forest, plains, grassland, rivers, dry creeks which swell to torrents in the sudden downpours. The park is a network of gravel roads, with firebreaks, because of lightning and the careless cigarette of the tourist. We rode three to a car, so each of us had a window, and a driver-guide. Ours, Jim O'Rourke, has been escorting hereabouts since 1921 and was a mine of sympathetic lore of the animals. Each of us watched out a window because the animals are hard to see, sometimes. In our car we did not see any lions, only one car did; they hunt mostly at night, and only in the day if they have not made a kill at night. We came across the huge smoking dung heaps left by elephants who must have crossed the road just before us, but we could not find any until almost time for us to leave the park when suddenly we came across five feeding on trees not far away. Many of us are camera fiends and got wonderful pictures; one of a baboon sitting scratching himself, on one of the park trail signboards. We went down to a river where the hippos were standing or kneeling on shallow-water sandbanks, just heads out, occasionally heaving up and opening their cavernous jaws. They come ashore at night to eat grass and leaves and then the lions try to pounce on them. The hippo makes for the water and the lion has to scramble madly for the bank because he does not like water. There are no rhinos in this park.

We saw many different kinds of deer, the lovely leaping impala, the kudu, the wildebeeste; the horribly ugly wart hog; the elegant jackal, the hideous hyena; innumerable monkeys chattering in the trees, a cobra slithering across the road in front of us. You never get out of the car except at certain spots where the guide takes you.

Then, after we had seen isolated small groups of the tall graceful giraffes, suddenly we came on a herd of them; several stalked haughtily across the road in front of our stopped car, some behind; they stared at us calmly with their large round brown eyes with long eyelash fringes. This being close to wild animals in their natural habitat is something that must be felt. It is a humbling and joyful experience, with the slight bitter taste of danger in the mouth. The zebras are the gaudy ones—a general pattern of stripes, but every one different, like human fingerprints. The elephants knock down big trees to get at the bark of the roots—that's one way you know they are near—trees newly down.

AFRICA ON THE MOVE—PRIME MINISTER MAKES AN ERROR

(By May Craig)

JOHANNESBURG.—So we turn northward today on this all-too-short visit to the great continent of Africa, rising from the mists of the past into a great new wave of the future. It is with surprise and some dismay that we leave without seeing Prime Minister H. F. Vorwoerd. We had trouble getting visas to visit the Union of South Africa and did not finally get them until just before we left the United States, though applications were requested several months in advance. Marcel Duriaux, our tour director, looks after all the visas. We sent him three dozen passport pictures and our passports and he does the rest, makes the program. I have never seen my voluminous ticket. He carries the passports and the health cards in a triple-locked leather grip, lest we lose them and cause no end of trouble. He was in constant touch with the Union Ambassador in Washington about our program but we did not see the Prime Minister, nor any high Government official. This is a measure of the resentment of the majority of the government in power, which presumably represents the majority of the white people, since it got a big majority of votes for the National Party. This is partly due, of course, to our racial integration policy. There was more bitterness because at the very moment of our visit the U.S. Senate was locked in a death struggle filibuster on civil rights.

We were not able to make firm engagement to see the Prime Minister before we left and we moved so fast, our program is so close packed, that we have to know approximately what we are going to do. Result: we did not plan to go to Capetown, the capital where Parliament meets 6 months of the year and where the Prime Minister is now. It is a thousand miles away. When we got to Johannesburg, we were met, late at night and weary, with a proposal that we get on a night train for Kruger Park, to see the game refuge the next day, take a night train

back to Pretoria, the administrative capital, go to Capetown for 3 hours, for a look see; and the Prime Minister so busy we could only have a half hour with him. We said we could not do this. We said we would give up the park for a real visit with the Prime Minister and other responsible officials. This was denied. So, we go without the official government position laid out for us, though we got it from many others.

This was a great error on the part of the Prime Minister. This group comes from all over the United States, from Maine to Alaska, from California and Oregon and the Midwest, South Carolina, New York, New Mexico, etc. We represent the community public of our newspapers, radio, and TV stations. We could have given his viewpoint to people all over the States.

Most countries are glad to have us come, make every effort to see us and set forth their side of the issues. King Mohammed V in Morocco, sick with a bad cold, canceled all his appointments except ours, for instance, and in Congo we saw not only the present government officials, but all the candidates for the coming election.

The Union of South Africa is breaking ties with the [British] Commonwealth against the wishes of the minority of whites. While we were here the minister of finance announced that the Queen's head will disappear from the Union coins next year and they adopt the decimal system, instead of pounds, shillings, pence, sovereigns, guineas. The new coins will bear the head of Jan van Rieback, the founder of the European settlement of South Africa. The Parliament also is debating whether to leave the Commonwealth and become a Republic. Opponents who are pessimistic about ability of a white union to survive, say it can last 10 years if they go it alone, 15 in the Commonwealth. The Queen was informed of the coinage design decision of the Cabinet in advance, as a courtesy.

Today's antigovernment newspaper here, the Daily Mail, carried a story about next month's referendum in Ghana to choose if it will become a republic. There is no doubt they will vote for a republic, elect Prime Minister Nkrumah president. He will have all the powers now vested in the Governor General appointed by the Queen as head of the Commonwealth, can appoint judges, command armed forces, can lend money, veto bills in Parliament, but cannot impose taxes without consent of Parliament. Full independence is set for July. This sort of thing ferments against the apartheid racial policy here and alarms the present government of whites. Also, Nkrumah wants all Africa to federate with "one man—one vote" for everybody. The Union of South Africa will never consent to that. It would seem better if the Mediterranean area of Arabs-Moslems of the north might federate, the central black Africans, and the south of the continent decide, perhaps in loose federation of black and white states. A whole continent has never federated. Even in North America we have Canada, the United States, and Mexico. There are 21 American Republics, including the United States.

Recognition that white South Africa cannot continue on the back of black labor shows up in a speech of Cabinet Minister P. M. K. Le Roux. "We must make our children realize today that everything is white man's work, too. We cannot allow others to do all our work." He is for a republic of whites here, with the blacks having their own lands and governments, which might stay in the Commonwealth.

AFRICA ON THE MOVE—BRITISH PROPOSE POLITICAL, ECONOMIC INTEGRATION

(By May Craig)

VICTORIA FALLS.—When the Englishman Cecil Rhodes explored this country he never thought there would be this ferment between the blacks and the whites. It is a vast, rich, troubled loose federation of the self-governing colony of Southern Rhodesia and the protectorates of Northern Rhodesia and Nyasaland. It is bigger than the whole British Isles, France, all Germany, and Holland. It has eight times as many blacks as the population of Maine. There are only 292,000 whites. Europeans came the latter part of the last century. Rhodes, in 1890, founded first white settlement that was permanent. There were wars with the blacks. By 1923 the British Government took over Northern Rhodesia from the various British companies which had been running them desultorily.

Nyasaland became a sphere of British influence through the antislavery and missionary zeal of David Livingstone and the slave trade was finally eradicated under the British. Federation came in September 1953, but it is loose. There have been riots by blacks in Nyasaland especially. The federation is not a sovereign independent state yet.

They have an enormous hydropowerplant on the Zambesi, at Kariba—you probably saw the TV and moving pictures of the flight of the wild animals from the big artificial lake created back of the 420-foot dam, when the frightened animals were so dramatically rescued. This power will be used for production of copper. We have copper in the United States and in Latin America, so there may be competition. There are six 4-man American trade missions in Central Africa now, and Ralph Lovell of Sanford, Maine, is a member of the one here. "I was with him at a sundowner (cocktail party) at Salisbury (the capital) last night" said Edward W. Mulcahy, our consul to the Federation, who is staying with us all during our visit. American Consul General Palmer is staying with the trade mission. I will not catch up with Mr. Lovell, with whom I talked in Washington before he left. I did see Mr. and Mrs. George Wood of Rockland in Johannesburg. There were several Maine people in Morocco, but I never found them: Francis C. Prescott of Guilford, Robert W. Chase of Christmas Cove, Bertrand F. Dube of Livermore Falls, all U.S. officials.

"Africanism," "Africa for the Africans," "nationalism, has been fermenting here since 1918 when a Scotch missionary was killed.

The British hold to the principle of integration of the races politically and economically with such measure of independence as they develop to handle. This is different from the strict apartheid advocated and enforced in the Union of South Africa, which seeks to keep the races forever separate, with independence for the black on their own lands as they become capable. But the whites here, hearing Nkrumah in Ghana crying "One man—one vote" see what would happen to them if that came about in independence for the Federation.

They are thinking about leaving the Federation and joining the Union of South Africa here in Southern Rhodesia, the most independent member of the Federation, which even has a minister in Washington by some queer diplomatic allowance. The Union might not take Southern Rhodesia, which would bring along all those 3 million blacks, coloreds, and other non-Europeans as well as the 211,000 whites. There are 72,000 Europeans in Northern Rhodesia and 8,600 in Nyasaland.

Also the Union might take Southern Rhodesia because the whites are British, which would swell the moderate United Party in the Union, against the Nationalist Party, largely of Holland descent, who are dead set against any integration of races and stand with the strictest segregation.

Our consul said he does not think there is much communism under the black ferment. When the riots occurred in 1959 they put through emergency laws, many prosecutions were instituted, many blacks jailed—not that they mind jail too much, they are better off than at home. The leaders who are jailed become elite and get prestige for being jailed for freedom. Some of the black leaders know their people are not ready yet for freedom and are trying to hold back the restless, younger, thoughtless masses, but are overrun. This is the danger. To meet the danger the whites have what is called preventive detention. They can throw a man into jail to prevent his making bad trouble. It is an odd thing that Nkrumah of Ghana, who was jailed for his nationalist efforts against the established British Government, is now exercising preventive detention to keep order in his now free Ghana.

The provincial commissioner for the southern Province of Northern Rhodesia, Mr. A. St. John Sugg, just like a colonial Britisher in a book, was cautious. "Our concept is partnership between black and white," he said, which is the official British position. He admitted that with the enormous majority of blacks, he did not know what the future would bring. "I hope government would be in the hands of responsible people," he said. "The intent of partnership would not be expropriation, driving out the Europeans."

Army Lifts Outlays for Civil Works

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. SANTANGELO. Mr. Speaker, military construction and civil works programs of the Army are playing an ever-increasing role in our economy. The funds being spent run into the billions and the construction of rivers and harbors, hydroelectric powerplants, harbor improvements and multiple purpose reservoirs are influencing the life of millions of our citizens and are playing an important part in the development of our Nation and the presentation of our natural resources.

An article by Allen M. Smythe, feature writer of the New York Herald Tribune, dated June 5, 1960, spelled out the outlays for civil works which the Army has been carrying on and the effect that such programs have upon our economy. I am certain that the readers will find this article by Mr. Smythe informative and interesting.

The article follows:

ARMY LIFTS OUTLAYS FOR CIVIL WORKS—RECORD MILLIONS EARMARKED FOR 1960

(By Allen M. Smythe)

A new high of $995 million will have been obligated for fiscal 1960 for the civil works programs of the Army. This amount for river and harbor work will cover hydroelectric powerplants, commercial inland waterways, flood control, harbor improvement, multiple purpose reservoirs, and even recreational, fish and wildlife areas.

More than $200 million of new construction contracts are now being issued for these public works projects in the last 60 days of this fiscal year. This being election year, Army fiscal officials expect a gradual and continuing increase in this contractual activity.

The Corps of Engineers, the largest spending unit of the U.S. Army, expects to have spent more than $2,700 million by the close of its present fiscal year on July 1, 1960.

A generous Congress appears inclined to appropriate more for the coming 1961 fiscal year.

TWO BILLION EIGHT HUNDRED MILLION DOLLARS IN 1961

Slightly exceeding the missile and other Army weapon spending agency, the Army Ordnance, the military engineers are scheduled to obligate $2,891,061,000 for fiscal 1960. Less than one-sixth of this will go for engineering equipment and research contracts.

Military construction contracts will total $1,507 million. Over one-half of this will be for airbases and missile centers for the Air Force. Depending on world conditions, these awards could decrease sharply over the next few years.

Expenditures for the Nation's waterways are expected to increase materially over the next few years. Flood-control projects already established have proved their effectiveness. Billions of dollars will be required to remove part of the remaining danger. Commercial inland waterway traffic has increased fourfold over the last decade. Expansion of capacity on the Ohio and Illinois Rivers will soon be necessary.

Lt. Gen. E. C. Itschner, Chief of Army Engineers, points out that 464 flood-control projects have cost less than $4 billion and have saved over two and a half times that amount in flood damage. To prevent one-third of the present annual flood damage of $700 million would cost an additional $5 billion.

The Army engineers are now constructing 14 new powerplants and enlarging 6 existing ones to add 4.6 million kilowatts to their present 32 projects of 6.1 million kilowatts. Plans are completed for projects with additional capacity of 6.3 million kilowatts.

Expenditures for hydroelectric powerplants on the Columbia River Basin will be $81 million this year. More than $106 million is now being spent on the Missouri River Basin, primarily for flood-control work.

More than $98 million is being spent this fiscal year on the Ohio, primarily for navigation. Traffic on some sections of this river is near capacity. Army engineers are well started on a program to build new dams and locks, widen the channel, and allow for the new large barges of 12-foot draft.

Gold Star Mothers Day

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, June 23, 1960

Mr. KEATING. Mr. President, by proclamation of Gov. Nelson A. Rockefeller, today is being marked as Gold Star Mothers Day in New York State. In various ceremonies around my State, suitable honor is being paid to the mothers of those who made the supreme sacrifice in their country's cause.

It so happens that I had the high honor, as a Member of the House of Representatives, to author the original gold star lapel button bill, which provided a fitting symbol for each Gold Star Mother. In this Congress I am sponsoring S. 1463, which would authorize the furnishing of these lapel buttons to widows, parents, and next of kin of persons who lost or lose their lives as the result of injuries or disease incurred or aggravated in our Armed Forces in time of war.

This proposal would amend the present law to make provision for those who survive veterans who not only lose their lives during a war, but whose death resulted from a war-incurred injury or disease. I see no logical reason for drawing a distinction between awarding these buttons to those whose loved ones actually died in wartime, and those whose loved ones died as a result of injuries received in time of war.

I am hopeful Congress will before long act on this bill to fill this void. Enactment of S. 1463 would honor in a small but significant way the survivors who have suffered an irreparable loss in the defense of the United States.

The cost of the bill would be small but its meaning tremendous. It is the symbolic significance of the lapel button, rather than its price, which is the important consideration. I am delighted that this proposal has the backing of the Gold Star Mothers organization and on the occasion of the observance of Gold Star Mothers Day, I again pledge my continuing efforts to gain final passage of this bill.

Because of my deep interest in this particular occasion and all it stands for. I ask unanimous consent that Governor Rockefeller's proclamation of Gold Star Mothers Day be printed in the Appendix of the RECORD.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION

The Gold Star Mothers of America have an abiding claim on our esteem and affection. On the field of battle their sons made the supreme sacrifice to defend the freedoms we enjoy today. For that alone we are eternally in their debt.

There are additional reasons for doing honor to our Gold Star Mothers. They have helped to maintain the ideals and aspirations for which their sons fought and died. Every year they devote thousands of hours as volunteers in veterans hospitals.

Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim June 23, 1960, as Gold Star Mother's Day in the State of New York, and I commend it to the attention of all people of the State.

Given under my hand and the privy seal of the State at the Capitol in the city of Albany this seventh day of June in the year of our Lord one thousand nine hundred and sixty.

NELSON A. ROCKEFELLER.

By the Governor:

WILLIAM J. RONAN,
Secretary to the Governor.

A New Shrine for America

EXTENSION OF REMARKS
OF
HON. W. R. HULL, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. HULL. Mr. Speaker, the centennial of the birth of a great Missourian and American, General of the Armies John J. Pershing, will be observed across the Nation on September 13, 1960, and on that date his boyhood home in Laclede, Mo., will be dedicated with fitting ceremony as a shrine by the Missouri State Park Board.

An excellent article concerning this observance, written by Joseph Jaeger, Jr., Missouri director of parks, appears in the June issue of the VFW magazine, the official publication of the Veterans of Foreign Wars.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include this article:

A NEW SHRINE FOR AMERICA

(By Joseph Jaeger, Jr., Missouri director of parks, member VFW Post 1003, Jefferson City, Mo.)

In Laclede, Mo., in the north central part of the State, stands a simple framehouse of the rural Gothic architecture still seen in some parts of the country.

The architecture of this house is not outstanding. It contains no art treasures and, if it were not for one fact, the home would blend into its surroundings without catching the visitor's eye.

Yet this house will be dedicated September 13, 1960, by the Missouri State Park Board as a shrine. Although not his birthplace, this old two-story house with the quaint gingerbread molding around the eaves, was the boyhood home of the great American military leader, Gen. John Joseph Pershing.

The Pershing boyhood home was acquired by the Missouri Park Board in 1952 from a veterans' organization. The veterans had purchased it from a private owner who had planned to raze the building. Missouri made immediate plans to preserve the boyhood home of her distinguished son, the man who led the American Expeditionary Forces so successfully in World War I.

The official dedication of the Pershing shrine at Laclede will be held exactly 100 years after the birth of the AEF leader. Missouri Gov. James T. Blair, Jr., will give the dedicatory address. The Department of the Army will cooperate in the program and a U.S. Army field band and color guard will be present.

When Missouri acquired the Pershing home in 1952 the building was in poor condition. The ancient weatherboarding was rotting and the roof leaked. Such modernities as lighting and plumbing which Pershing never knew in his boyhood had been installed. The wallpaper sagged and the plaster had gaping holes in it.

The first action of the park board in preparing the home as a shrine was complete restoration of the exterior. The rotting weatherboards were replaced and at that time workers noted the unique construction. Between the outer and inner walls of the old building brick had been laid when the house was built.

A new roof was added to the old house and when that was finished the exterior was given three coats of paint and trimmed as it was in the early 1860's when John F. Pershing and his family moved in.

Work on the interior was no simple task either. To keep the building within the 1860–70 period and still make use of the modern comforts of heating and lighting was the problem.

A carefully designed system of indirect lighting was installed to spotlight interiors without telltale electric cords or incandescent bulbs. To solve the heating problem, State park restorers added hot water coils in the ceiling of each room and then replastered over the units. A modern heat-

ing plant pipes hot water to the coils in each room and there are no visible heat vents which might be out of keeping with the 1860's.

Refurnishing General Pershing's boyhood home presented still other problems but they were not insurmountable, only time consuming. Agents of the Missouri Park Board fanned out through the State looking for furniture of the period of Pershing's youth—including dishes and tableware.

They were successful in most of their efforts to furnish the home with homemade wainut furniture such as rope-spring beds and cradles, plus the other necessary furnishings of Pershing's boyhood days.

Results of the painstaking research in the furniture of the period can be seen in the kitchen of the 1860 home. A box of old wooden toothpicks will be placed on a table. The cardboard box is yellowed and the old wooden toothpicks show their age. The label on the box shows the toothpicks were manufactured in 1864. Just such a box could have been used by the Pershing family when John J. was 4 or 5 years old.

The toothpicks were acquired by Leonard Haslag, State park board historian, when the furnishings of an old Missouri hotel were disposed of.

In order to make certain that the repainted woodwork in the old house matched the original, Haslag scraped the woodwork until he found the original paint. The scrapings were analyzed and the color was matched with modern paint.

Although not an exact match, wallpaper was no problem. With a swing in decorating back to early American, many companies now produce the flowered and geometric prints which were popular in the 1860's.

One final touch in refinishing the Pershing boyhood home was a modern sprinkler system. Although the building has survived its first 100 years, the Missouri Park Board felt it could take no chances. It made certain through the sprinkler system that fire would not sweep the old frame structure.

The Pershing boyhood home has 11 rooms, including four bedrooms. One of the bedrooms will be used as a museum to help interpret the military life and career of General Pershing. Several rooms will be used by the caretaker as living quarters. The rest of the rooms will be furnished as they were to enable the public to view the home as it was when Pershing was a lad.

John Joseph Pershing was born just a few months before the Civil War began. He grew up hearing about military life from returning veterans of that war. He fought in three different conflicts before he was called on for his supreme effort as commander of the AEF.

The man who was to become the hero of the AEF was born in a Burlington railroad section house just outside Laclede, Mo. The birthplace has long since disappeared.

Pershing's father was partner in a construction firm which had contracted to build a portion of the railroad. He later was employed as a section foreman.

When John J. was several years old, the Pershing family moved into Laclede to the house one block north of the town square where young Pershing spent his boyhood years. In Laclede, Pershing's father served as postmaster and later as secretary of the school board.

The Civil War ended when little John J. Pershing was only 5. He must have listened with the eager ears of a toddler to tales of fighting at Vicksburg, Atlanta, Gettysburg, and in such western places as Sand Creek and Glorieta. Perhaps he had no idea that he would someday lead American troops into battle but the thought of becoming a soldier must have been implanted at that time.

Schooling and hard work on farms occupied Pershing's early years. At the age of 17 he was appointed teacher at a Negro school. Later he taught at various schools, all the while saving money for a college education.

When sufficient money was accumulated from a grand salary of some $30 a year, he enrolled at the State Normal Training School at Kirksville, Mo. It was while he was a student at the Kirksville institution that he took a competitive examination for appointment to the U.S. Military Academy at West Point and won by a single point.

Pershing entered the Academy in 1882. His leadership qualities were recognized early. In his senior year he was named senior cadet captain and president of his class.

His first appointment was on the frontier where he saw action against the Apaches and the Sioux. Then he returned to teaching, this time military science, at the University of Nebraska and at West Point. He resigned to rejoin his old outfit the moment war with Spain was declared.

For the next 14 years, Pershing seldom saw the United States. His career in the fighting in Cuba was efficient and won him a commendation from his commanding officer who termed Pershing "the coolest man under fire I've ever seen."

After Cuba, Pershing was transferred to the Philippines where he won recognition for pacifying the Moros. In 1905, President Theodore Roosevelt rewarded Pershing's military and executive ability by nominating him brigadier general over 862 other officers. The nomination was confirmed.

In 1914, Pershing was placed in command of the Southwest Division along the Mexican border. While there, he received word of the death of his wife and three little daughters in a hotel fire in San Francisco where they were residing in his absence. His son, Warren, was the only survivor.

Visibly shaken by the tragedy, Pershing hewed rigidly to duty. In 1916 he led American troops across the border in a punitive expedition against Pancho Villa's forces which had raided Columbus, N. Mex., and killed American citizens. They failed to capture Villa but the Nation agreed that Pershing's leadership had been superb.

At the time, the Nation was seeking military leaders. It was obvious that sooner or later, America would be drawn into the great war. The world was looking to America for vigorous leadership, manpower and equipment.

In John J. Pershing, America and the world found the leadership needed for U.S. forces soon to be called to France. Pershing was appointed commander in chief of the American Expeditionary Force in 1917. He was given full authority by Secretary of War Newton D. Baker to train and lead an army of 2 million men.

After his appointment, General Pershing immediately went to England and France to lay the groundwork for the arrival of fresh American Armies. He was immediately beset by problems. The Allies, their armies tired and dispirited by 3 years in the trenches, wanted American troops to reinforce their own battle units.

Pershing insisted that Americans should fight under American command as much as possible. He won his battle and the world knows the rest.

American troops proved their valor and ability to the world at Chateau Thierry and in the Meuse-Argonne offensive which took the heart out of German resistance.

After the war, Pershing was given the unique title of "General of the Armies of the United States." He was honored by the governments of nearly every nation in the world. In 1921, he was made Chief of Staff of the U.S. Army. In 1922, he was asked to run for president but he refused. Retirement came in 1924.

Pershing then turned to the typewriter to tell his life story to the world. His memoirs won the Pulitzer Prize in history in 1932.

When World War II arrived Pershing was one of the first to volunteer. Franklin D. Roosevelt, then President, was quick to accept Pershing as a consultant.

The leader of the AEF lived to see American troops again victorious in world conflict. He spent his last years at Walter Reed Hospital in Washington and died there in 1948 at the age of 87.

More than 10,000 persons filed past his coffin in silent homage to the great American war leader. Some 300,000 persons lined the streets of Washington to view the funeral procession.

Among those who marced in the procession that storm day were General of the Army Dwight D. Eisenhower and General of the Army Omar Bradley. True to the soldierly tradition of General Pershing, neither Eisenhower nor Bradley changed their pace or military bearing during the 4-mile march through the rain.

Missouri and the Nation will long remember Gen. John J. Pershing. Thousands of citizens will visit his boyhood home at Laclede every year. When the last of the AEF have gone to their reward, their children and grandchildren can visit Pershing's boyhood home to remember the man who so magnificiently did the job he was called on to do in 1917–18.

Our Intercoastal Lines

EXTENSION OF REMARKS
OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, June 23, 1960

Mr. MAGNUSON. Mr. President, recently the Merchant Marine and Fisheries Subcommittee of the Senate Interstate and Foreign Commerce Committee held extensive hearings on problems confronting our coastwise and intercoastal lines.

Those problems and how to overcome them also have interested Stanley Mantrop, of the Journal of Commerce staff.

In the June 10, 1960, issue of the Journal of Commerce there appeared an article by Mr. Mantrop, based upon our committee hearings and his independent interviewing. I ask unanimous consent that the article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHIPPING OUTLOOK A GOOD START

(By Stanley Mantrop)

It's heartening, at long last, to see some real interest being shown in the health of the coastal and intercoastal shipping trades, and it is to be hoped that the hearings presently going on in Washington produce some concrete action on behalf of these once flourishing U.S. flag shipping trades.

For the first time in many a moon some real constructive ideas are being proposed for stemming the journey to oblivion for what few ships still ply the coastal and intercoastal trades. Whether or not it is too late to really bring the routes back to life, or even a semblance of their old lofty position, is difficult to say. However, the fact that some of the lines are still willing to invest millions in new ship construction, is evidence that the companies still have faith in the cargo future even if others have not.

One of these is American Hawaiian Steamship Co., a pioneer in the intercoastal trade which was forced in 1953 to suspend its service with its vessels operating at near capacity. The line concluded that war-built vessels of the break-bulk type were obsolete for the trade.

It is quite reasonable for companies such as American Hawaiian, which are interested in reviving the coastal and intercoastal trades, that they should be given some protection for their multimillion-dollar investments. The feeling is that the present system of selective rate cutting by the railways has injected a risk element into any proposed move to revitalize the coastal and intercoastal trades.

The industry contends that it is necessary that the Interstate Commerce Commission publicly reaffirms the proposition that a low-cost water carrier will not be forced out of business by a high-cost competing mode of transportation, but will be permitted to recover its full costs and a reasonable return.

There is no doubt but that the selective system of rate cutting which the ICC has permitted from time to time has been a big factor in the decline of the coastal and intercoastal shipping trades.

However, on the other hand, and in fairness to the railways, it must be pointed out that other forms of transportation, principally trucks, have also cut sharply into the incomes of the steamship lines.

One of the difficulties appears to evolve from the interpretation of the Transportation Act of 1958 which states that rates of one carrier shall not be held up to a particular level to protect the traffic of any other mode of transportation.

Following the passage of the act, the railroads have instituted several hundred rate changes on selective commodities to divert traffic from other carriers, and many of the reductions have been approved by the ICC.

A proposal by the American Merchant Marine Institute that the Federal Maritime Board set up a rate bureau to properly control rail-water competitive rates is one that is worthy of some serious consideration. Another is one which would make domestic water carriers eligible for a construction subsidy differential. There is no question that if the lines still left in the trade are willing to go ahead with building plans in the face of the present outlook they should be given every possible assistance.

The fact that the coastal and intercoastal ship total has dropped from over 400 vessels in 1939 to 70 at the present time is an indication that if help is to be forthcoming, it must come quickly.

There is no doubt but that coastal and intercoastal shipping can operate side by side with the railroads, but to do so it must have Government aid. And if the Government has still enough interest in the trades to conduct an inquiry into their health and future, it should move swiftly to implement some of the sound proposals being voiced by those who still believe the trades can be saved with a little help from all sides.

Did God Attend the Summit?

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include an article by the Reverend Clay Cooper, president of Vision, Inc., of Spokane, Wash.

Reverend Cooper, from his vast study of past and current international influences, points out a sound and purposeful attitude that Western Christian civilization may accept so as to be alert to the threats that surround us:

DID GOD ATTEND THE SUMMIT?

(By Clay Cooper, president, Vision, Inc., Spokane, Wash.)

May 16, 1960, had long been looked forward to as the world's red letter day. The Big Four heads of state would get together, iron out the wrinkles galling the irritated hide of mortal man, set up a basis for lasting peace—give or take a few hours, days or months—and coexistence of two antithetical ways of life would be a reality. But alas and alack, it was not to be. Three hours on the summit and all was over. The world reeled under the impact of a sledge-hammer disappointment. Gloom shrouded the world and out came the crying towels. Headlines screamed, "Summit Torpedoed." It was labeled, "The Debacle of the Century." Thick and fast flew similar epitaphs over the ether waves. Communism had showed its hand, its true self, and as a result the utopian hopes of the world were squashed as a man would step on a beetle. Anxiety spread across the world with the speed of light. The summit meeting was a failure.

But was it? Maybe it wasn't a failure after all. Perhaps it was a tremendous success. Greater than Yalta or Potsdam or Teheran—or all three put together. Even conceivably greater than Camp David. That the "spirit of Camp David," was more delusive than conclusive, is now quite evident to everybody.

Now, first of all, and perhaps most important of all, and issue should be made of the fact that uncounted thousands of earnest Christian people of many communions in many lands on both sides of the Iron Curtain had fervently prayed about the summit meeting. Not knowing for what they should specifically pray, many simply petitioned, "Thy will be done on earth." Who is going to stand up and say that His will was not done? That He did not hear these prayers? More is wrought by prayer than this world (or Mr. Khrushchev) dreams. It might not be far from the truth to affirm that except for these prayers, the Paris summit might have come to be acclaimed as a tremendous success while in reality remaining a blotch on history's page. The failure of the summit may yet be seen to have been its greatest success. Paradoxical? Talking in riddles?

What happened at the summit may be no cause at all for despondency, but jubilation. This supposition could be based on the fact, proven fact, that man proposes but God disposes. Who dares rule out God, from that 3-hour summit, as though He might have been on vacation, or at best a disinterested spectator on the sidelines. Who among us can say, with proof, that the will of the Almighty was not done as regards His hidden purposes, His eternal counsels and with reference to the long range universal good of being? Who can say, with authority, that what happened was a debacle, a travesty? That's how many a person must have regarded another 3-hour summit meeting a couple thousand years back when the forces of darkness and evil appeared to triumph gloriously when the Best of Men was nailed to a cross and held up to the derision of the world. The hellishness on that summit, Mount Golgatha, the satanic outburst, was just God letting evil raise its ugly head in order that the universe might have an unforgettable demonstration by the master of malignant art; that sin might appear for what it is, exceedingly sinful. Could it have been so at Paris? Certainly not to put any other man that breathes on a par with the Saviour, but if anyone was ever crucified and held up to universal ridicule, without actually being spiked to a cross, it was the President of the United States, Dwight David Eisenhower during his 3 hours on the summit in Paris.

Many a person is asking, "Where was God?" and that's what a lot of earnest people were asking at that other summit in the faraway, bygone day. And the truth of the matter is, he was right there. Right there "reconciling the world unto Himself," through the vicarious sufferings of His Son. What looked like, on the surface, the greatest conceivable tragedy, wasn't at all. God was there on that summit, Mount Calvary, in A.D. 30, and if He wasn't present at the summit meeting, A.D. 1960, there are more perplexing questions to be answered than if we concede He was there.

If God did not attend the summit, perhaps someone will step forward and tell us just who it was that enabled President Eisenhower to maintain poise and calm during the hours when insults and diatribe were heaped upon him. Such a spewing forth of innuendos, but for divine aid insuring self-control, could have precipitated catastrophic results for the entire world. And who do we think inspired Mr. Khrushchev to hold up for all the world to see, to spell out for all to hear, what is the true spirit of communism? What sane and sensible man, and he probably is one, would so completely pull the rug from under his own feet * * * all by himself? Certainly he had help from somewhere, a lot of it. Probably there isn't enough money in all the hated capitalistic world to have hired Mr. K. to burlesque the true character of the men and the system he represents, a system which threatens to enslave the world. If God wasn't at the summit, who was it that played out the rope with the noose at the end? The best laid schemes of men, all men, could not have so skillfully accomplished the wonders wrought for the enlightening of the world in so few hours. God must have been at the summit. Who can estimate the incalculable amount of good accomplished. Why, Mr. Khrushchev's few hours of diarrhetic harangue perhaps did more good throughout the world than thousands of hours of Voice of America broadcasting. It's likely the classic example of all time of a man opening his mouth and putting his own two feet into it. What an example of the fallibility of the strong man of the Kremlin—and of the Communist world. Lacking even the power to exercise self-control—self-restraint. By anybody's standard.

Dare we hold to the morbid idea, for one moment, that what affected so very drastically the good or ill of God's world—as represented by Messrs. Eisenhower, Macmillan, De Gaulle and Khrushchev—could possibly have escaped His notice?

Benjamin Franklin, at the constitutional convention in Philadelphia, said, "The longer I live, the more convincing proof I see that God governs in the affairs of men." Impelled by that conviction, he made a motion that called for daily prayer until divine aid was given in the formulation of what Gladstone called, "The greatest document ever struck off by human hand," the Constitution of the United States. Franklin reasoned that the God who watches over sparrows could not but be mightily interested in the founding of a nation. We can reasonably assume this is true to the international affairs of our time. It is hard to conceive God absent from the summit.

Some hold the view that to have held the summit in the first place was a great mistake. Mistake or no, we need to remind ourselves that without the occasion it presented, the world would be without the

vituperative exhibition of hate, intolerance, and ferocity which the world probably needed. This outburst could have been in the providence of God a necessity for the world. The image on all minds, drawn by Mr. Khrushchev, of communism seizing President Eisenhower by the heels and beating his head against a wall, as an infuriated man might take a cat by the tail and dash its brains out, should be indelibly stamped there. This is a prophecy of what would happen to all the rest who might refuse to knuckle down, should the Communist dream ever become a reality. The summit, therefore, was eminently successful in bringing this to our united attention by the chiefest of spokesmen. Having accomplished this, the summit could hardly be classified as a flop, a debacle. Even if it did not perform the well-intentioned original objectives, it was monumentally successful in others.

With all deference, Mr. K. might be asked, "Who takes who by the tail and beats his head against the wall?" This big talk is reminiscent of that of another Iron Curtain character stepping from the pages of sacred history. And speaking of an iron curtain he was wrapped up in one being covered from top to toe with an iron coat of mail. His name was Goliath. The countryside rattled with his braggadocio. "I will give your flesh to the birds," he shouted to his opponent. And he fully intended to. He carried a spear as big as a wagon tongue. The head on it weighed 25 pounds. The parallelisms are positively remarkable, for the intended victim was to have also been a "David." The ancient counterpart of Dwight David Eisenhower. Midst the barrage of slanders and insults, David, the shepherd, did not lose his head. Goliath did. Quietly and confidently he stood his ground. With trust in God to justify His own cause, a simple smooth stone, hurled from a sling was applied between the joints of the harness, right between his eyes. It was the only exposed part of the giant's iron-curtained anatomy, the only vulnerable spot. He fell stunned, his head was cut off with his own sword and confusion and consternation reigned in his realm. What looked like disaster for David and his people, proved quite the opposite. The meeting of two, at the summit, afforded an excellent opportunity to see just who would bite the dust—the godless braggart, wrapped in an iron curtain, or a confident man of faith.

Call it a failure, if you must, but from most any angle viewed the summit just as it was could turn out to be a God-send for the world—a hilarious success. An eye opener, a new lease on life for the nations, in that what happened there, accidental or otherwise, was certainly not according to the Communist rule book and timetable. According to Manuilsky (the same Dimitry Z. Manuilsky who presided over the U.N. Security Council in 1949), next year, at the latest, was the date for the world coup. In 1931 he lectured the Lenin School of Political Warfare. On that occasion he declared communism's calculated calendar, which at the summit Mr. Khrushchev must have mussed up like a bull does a china shop. He said, "War to the hilt between communism and capitalism is inevitable." (Coexistence being a term of expedience.) "Today, in 1931, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeiosie will have to be put to sleep." (Think how Mr. K. woke us up.) "So we shall begin by launching the most spectacular peace movement (who asked for the summit) on record. The capitalistic countries, stupid and decadent, will rejoice to cooperate to their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we will smash them with our clenched fist.' A la Goliath. A la Khrushchev.

Now, but for the crudeness of Mr. Khrushchev in alerting the world, the Communist's basic plan could have eluded us in this age of all sweetness and light. Nineteen hundred and sixty-one, next year, was the ultimate year for the finishing stroke, the smashing by the clenched fist on the heels of communism's unprecedented peace overtures. Who can say it was not God who induced Mr. K. to sabotage the schedule, and is so doing wake us up, in his vitrolic attack on President Eisenhower. If Mr. Khrushchev said or did anything to lull us to sleep in preparation for the coup de grace, nobody is aware of it. Let it be said again, all this could conceivably be interpreted as the goodness of God in alerting us. Unknown to himself, of course, the Soviet Chairman could have been the instrument of God to disturb our daydreams, and for this we can be thankful. If the coup de grace is administered ,at least we won't be walking in a daze down a primrose path on the arm of the executioner.

No, it is not unthinkable Mr. K. did the world a great service, unwittingly, giving America and other non-Communist nations another glorious chance to firm up their defenses and to discover and apply the right solution to the turbulency of the times. Many, who did not know before, at least know now that communism is not that solution, except as the guillotine is a toothache remedy.

But, where do we go from here? Where does all this lead? If God did attend the summit, and if Mr. Khrushchev was prodded by God to toss a monkey wrench into his own machinery, how shall it all be interpreted? What is the next move?

We can be sure whatever else the answer to the question might include, it cannot possibly exclude the timeless, world-embracing commission issued by Christ at the close of the final summit meet with his disciples on the Mount of Olives. Included are His orders to evangelize the world. He said, "All power is given unto me in heaven and in earth. Go ye therefore and teach all nations * * * to observe all things whatsoever I have commanded * * * and lo, I am with you always, even unto the end of the world." Teaching men of all nations to observe what Christ commanded, well, if this is not the answer to the complexities of the world, there just isn't any answer. Somewhere within the scope of all that is comprehended in this commonly referred to "Great Commission," lies the hope of the world.

So, for the Christian individual, or church whether within a nominally Christian nation or the professedly atheistic, Communist nation—there seems but one course to pursue to be infallibly safe. It is diligent, wholehearted obedience in the face of all obstacles to the marching orders, "Teach all nations whatsoever I have commanded you * * * make disciples of all nations * * * preach the Gospel to every creature." This is the "light that shineth in darkness, and the darkness has never overpowered it." If it took the failure of a contemporary summit meeting, to give impetus to the nearly forgotten issues of that other in the long ago, so be it. In any case, there are certainly evidences to warrant the supposition that concerning the summit meeting of 1960, God was there.

Harvard's Class of 1910

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 23, 1960

Mr. HUMPHREY. Mr. President, a college class which on its golden anniversary could boast of either a Heywood Broun, a Walter Lippmann, or a T. S. Eliot in its numbers could be justly proud of its influence on our Nation. All of these men have had a great impact on American thought and action.

John Herling, in an article in the Minneapolis Star of June 15, 1960, entitled "Harvard's Class of 1910 Rode Comet's Tail to Fame," reports the achievements of this extraordinary class and some of the influences in the recent history of our country and at Harvard which contributed to this record.

I ask unanimous consent that this fine article by John Herling from the Minneapolis (Minn.) Star be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARVARD'S CLASS OF 1910 RODE COMET'S TAIL TO FAME

(By John Herling)

(EDITOR'S NOTE.—John Herling, who writes from Washington frequently for the Star's editorial page, is himself a graduate of Harvard, class of 1928. Herling studied under Charles Townsend Copeland, the famous "Copey," in the latter's last year on the faculty and as a newspaperman has known many of the illustrious sons of 1910.)

Fifty years ago—in June 1910—an impatient class of 600 men stormed out of Harvard College. They had no time to waste on past glories or on alumni prescriptions for success or failure. In May 1910, Halley's comet had swept into the terrestrial skies. The Harvard class of 1910 grabbed hold of the comet's tail and rode it.

What was so unusual about the class of 1910 that calls forth extravagant comparisons? What is unusual about any group of alumni 50 years after? Usually, little enough. But looking back, the sons of this class of 1910 have won even from the skeptical muse of history murmurs of wonder and appreciation.

In 1910 William Howard Taft was President of the United States, Charles Evans Hughes just edging his way into the Supreme Court for the first time. Teddy Roosevelt was warming up for the Bull Moose campaign by hunting big game in Africa. Woodrow Wilson was leaving Princeton to run for Governor of New Jersey.

Even then, the world loomed uncertainly ahead in a decade of some doubt, little hesitation and great optimism. When they entered Harvard, the members of the class had been told by Charles William Eliot, its president, that the "university's aim is to allow each man to think and do as he pleases and the tendency is to allow this more and more."

Seldom before—or since—in the history of a college did men take advice so literally and energetically.

Here were some of the men in the class of 1910 who took it to heart and mind: Alan Seeger, poet; John Reed, journalist and revolutionary idealist; Walter Lippmann, political writer; Thomas Stearns Eliot, Nobel Prize winning poet; Heywood Broun, columnist and humanitarian; Senator Bronson Cutting, pre-New Deal progressive; Robert Hallowell, portrait painter; Henry Shepley, architect; Clarence Cook Little, university president and cancer researcher; Harlow Shapley, astronomer; William Francis Gibbs, marine engineering genius; John Cudahy, once Ambassador to Poland; Robert Edmond Jones, trail blazer in theatrical design; Chester I. Barnard, president of the Rockefeller Foundation; Stanley Cobb, physician; Stuart Chase, writer; Hamilton Fish, Jr., Congressman; and all these far from the half of it.

What a class this was. The graduates developed at different speeds, in diverse ways. Some maintained a steady gait of accomplishment; others rushed to brilliant, sometimes tragic conclusions.

But the page 1 names represent only the visible part of the class' accomplishment. Judged by inclusion in Who's Who, about 10 percent of this class has won more than average recognition. What makes a class like that?

The climate of the times might have something to do with it. But the weather was not much different a year or two or three before or after 1910. This class was the end product of President Eliot's 40 years of leadership at Harvard. In Cambridge he had assembled one of the greatest faculties of the century.

Harvard's magnificient goad was, of course, William James, great psychologist and greater teacher. He would always remind his students that the main job for a Harvard man was to find an antidote for Harvard. His injunction to them and his age to find the "moral equivalent of war" was both an intellectual and a practical exhortation.

George Santayana, the poet-philosopher, disdainful of everything but quality and beauty, attracted small classes, and as far as he was concerned, the smaller the better. He gloried in mediation as a way of life.

Then there were George Herbert Palmer in philosophy and Hugo Munsterberg in psychology; in literature and writing there were LeBaron Russel Briggs, Charles Townsend Copeland—Copey himself—George Pierce Baker, who soon founded the 47 Workshop, the school for playwrights, and George Lyman Kittredge, who made Shakespeare a man about town, and there were Albert Bushnell Hart and Charles Homer Haskin in history and Frank Taussig in economics.

The intellectual magnetism of such a faculty was bound to attract a certain number of students. The chances are, however, that many of them would have come to Harvard anyway. Nevertheless, the spirit of self-expression had found a center in Cambridge.

This class had been baptized by depression in 1907-08, a small affair when compared with the shambles of 1929-33. But it was enough of an economic earthquake to rock that generation back on its heels. In politics, in arts, and in economics, individual and social experiments were beginning to bubble and burst.

When William James exhorted college students to beware the "Ph. D. octopus," there was a warm answering chuckle among the undergraduates. Even the graduate students began to have second thoughts.

At the top of its form, the class of 1910 divided almost evenly into about two equal parts between the professions and business.

There were 68 teachers, 66 lawyers, 33 doctors, 27 engineers, 24 writers, and related folk, 14 gentlemen farmers, 13 in government service, 12 architects, 11 accountants, 10 clergymen, 5 musicians, 5 artists, 2 legislators.

On the business side, there were 87 bankers and brokers, 66 manufacturers, 45 merchants, 17 insurance men, 16 in real estate, the same number in transportation and 7 in advertising.

Viewed by its contemporaries in college, this class was considered slightly inferior because it provided less than its expected quota of football talent. However, Hamilton Fish, Jr., 1910's gift to football and Republican valhalla, did achieve immortality as a tackle on Walter Camp's All-Time All-American football team, long before he won renown as an early head of the house un-American activities committee.

The poet, Alan Seeger, was the first of the Class of 1910 to win an international reputation with his "I Have a Rendezvous With Death," the perennial of poetry anthologies. As an undergraduate, he lived his own intensive inner life. There was then no inkling that Seeger would die by bayonet on some "disputed barricade."

What was he like as an undergraduate?

"My books were my friends," he wrote. "The opening to me of the shelves of the college library, a rare privilege, was like opening up the gates of an earthy paradise. In those dark alleys, I would spend afternoons entire, browsing among old folios, following lines of research that often had no connection with my courses, following them simply for the pleasure of the explorer discovering new countries."

John Reed drew this half-teasing, half-serious sketch of him shortly after graduation:

"A timid footstep—enter then the eager
Keats-Shelley-Swinburne-Medieval-
Seeger;
Poe's raven bank above Byronic brow,
And Dante's beak—you have his picture
now;
In fact he is, though feigning not to know
it,
The popular conception of a poet.
Dreaming his eyes are steadily alight
With splendors of a world beyond our
sight."

The war had hardly started in 1914 when Seeger joined the French Foreign Legion to protect "the glory and the beauty" of Paris and of France. He said simply, it was for him "of supreme importance * * * not to be on the winning side, but on the side where my sympathies lie."

John Silas Reed was one of the unforgettables of the class of 1910. When William James said, "Our undisciplinables are our proudest product," Reed was the kind of fellow he had in mind.

Reed brought to Harvard the breezy Northwest, and the example of his father, a devoted follower of Teddy Roosevelt, who had appointed him U.S. marshal for Oregon to enable him to crusade against the "malefactors of great wealth."

Almost from the start, his classmates were made aware of the phenomenon called John Reed. Edward Eyre Hunt, the class poet, later a State Department official, says "he had in him something wild and restive and western, a breath and a spaciousness which broke bonds almost as soon as they were set."

Reed's career was jammed into just 10 years; out of Harvard in 1910, dead and buried in the Kremlin wall in 1920, who had always refused to be fenced in by Harvard. When death by typhus overtook him in Moscow, he had begun to fret openly at the deceitful shenanigans of totalitarian politics.

Generous and idealistic urges drove Reed on the road that led him to write "Ten Days That Shook the World," the 10 days of the Bolshevik coup d'etat. He would have squirted scornful laughter at the Soviet rulers who, after his death, purged his book of all facts and thoughts deemed dangerous to the revised history of the Soviet regime. Reed packed a lifetime into the decade of his post-Harvard life.

Reed described himself as an "activity" man. He had a roaring sense of humor which Harvard could not curb. Editor of the college highbrow magazine, the Harvard Monthly, and as Ibis of the Harvard Lampoon, the comic paper, he led cheers in the stadium when the Harvard football team was captained by another classmate, Hamilton Fish, Jr.

After leaving Harvard, Reed bummed his way in part around England and the continent. Returning, he announced his plan to make a million dollars and marry a French girl. He abandoned that project. Instead, he covered the textile strikes at Paterson, N.J., and later on the coal strikes in Colorado.

He reported the Mexican wars, and especially the campaigns and rampagings up and down of Pancho Villa. First suspicious and hostile, Villa soon learned to like the "gringo," would try to stage his battles to suit John Reed's deadlines for the Metropolitan Magazine. He dubbed Reed "El Pugnose."

In the Reed tradition, Heywood Broun first made a brilliant success as a newspaperman. He had come out of the First World War with a mild fame as a sports writer turned war correspondent. He became one of the great columnists of the twentys and thirtys and founder of the American Newspaper Guild. Many of Broun's columns were paeans of praise for Reed and/or Charles Townsend Copeland, the famous Copey, who taught both of them English composition.

Looking backward, an important difference between Broun and Reed is that Broun lived long enough to break clean with the Communists who had tried to hold him captive in the thirties and to pervert into totalitarian channels Broun's generosity and leadership.

When Broun died a few months after Stalin signed his pact with Hitler, the New York Times said: "No journalistic personality in our time was more distinct. Heywood Broun disagreed with many people, but no one could ever have hated him. He disagreed with himself. He wandered among ideas, never claiming to be consistent. He was consistent only in the qualities that were born in him—in humor, in courage, in endless and painstaking, kindliness for the poor, the weak and those whom he thought oppressed."

Broun preceded Walter Lippmann on the World, but Lippmann outlasted him. As editor of the World, Lippmann wrote editorially while Broun wrote columns that more often than not conflicted sharply with the paper's official position—conflict which broke wide open on Broun's attack on President Lowell of Harvard during the Sacco-Vanzetti case.

Lippmann was always considered mature, steady as a rock. Even as an undergraduate, he seemed always to have operated intellectually with precision and clarity. Graham Wallas came from Britain to teach at Harvard and exerted powerful impact on many undergraduates, including Lippmann, Broun and Reed. But Lippmann's intellectual preeminence is in a class by itself, probably the most unusual tribute a professor ever paid a student, the world famous Wallas dedicated his book to Lippmann, when the latter was barely out of his teens.

Edward Eyre Hunt called Walter the "Manhattan Zeus."

Lippmann romped through his undergraduate courses in 3 years. By the time graduation time had come for the others, he had achieved an M.A. and had put childish things behind him. He was not yet 21.

Lippmann's position as a commentator on politics and foreign affairs is the summit. How did Lippmann look at 23? In one of Walter's descents to friends in Greenwich

Village, Reed records his impressions in a mixture of pride and exasperation:

Lippmann, calm, inscrutable,
Thinking and writing, clearly, soundly, well;
All snarls of falseness swiftly piercing through,
His keen mind leaps like lightning to the true;
His face is almost placid—but his eye—
There is a vision born to prophesy.
He sits in silence, as one who said:
"I waste not living words among the dead."
Our all-unchallenged Chief. But were there one
Who builds a world, and leaves out all the fun—
Who dreams a pageant, gorgeous, infinite,
And then leaves all the color out of it—
Who wants the human race, and me,
March to a geometric Q.E.D.—
Who but must laugh, if such a man there be?
Who would not weep, if Walter L. were he?

This large-scale ribbing did not deter Lippmann from producing an enormous output which under his surgical eye he has seldom permitted to become a "chaos of clear ideas." The human race is not marching to Lippmann's Q.E.D., but a good part of it does read his luminous columns with almost dedicated regularity.

Thomas Stearns Eliot was the first Nobel Prize winner to come out of the class of 1910. Twenty-five years ago, he wrote wistfully to Leon H. Little, the Boston banker, then secretary of the class of 1910, "I wish I could really write a good play." He has managed.

Fifty years ago, Eliot wrote the ode for 1910 which the class sang at graduation. His heavy emphasis, at the start, was scholarship. After studying for, but not bothering to take his Ph. D. at Harvard, he dropped teaching and graduate studies and went into banking (Lloyd's of London). From banking, he moved into publishing and likes to describe his occupation as a company director.

In 1923, as the byproduct of a breakdown brought on by a double career as a banker and poet, Eliot's "Waste Land" appeared. Eliot was no longer unknown. Ezra Pound had tailored the Eliot poem for publication. But Eliot's undoubted gratitude to Pound did not prevent his impish remark several years later, that "I am obliged to spend a great deal of time answering letters from Ezra Pound, but my firm (Faber & Faber) pays for the stamps." Eliot has been a British subject since 1927.

What did Harvard have to do with his development? He studied philosophy under George Santayana and Irving Babbitt whetted his interest in comparative literature and in oriental religions. But from then on, he was on his own.

The class' outstanding legislator was Bronson Cutting, later Senator from New Mexico. He was studious despite his wealth. He made Phi Beta Kappa. Laid low by tuberculosis during his fourth year at college, he was shipped to New Mexico on a stretcher. He recovered his health and founded a political career as well.

He devoted himself to archaeological research, perhaps the most unique apprenticeship for a political career in American history. Cutting used to carry on a bilingual political campaign in Spanish and English. He considered himself a progressive Republican.

He became a national figure, senator in 1927, before Franklin Roosevelt was elected Governor of New York. With La Follette of Wisconsin and Johnson of California, he welcomed the advent of F. D. R. to Washington and supported new deal legislation.

Cutting got himself elected as a Republican, but his disappointment curdled his relations with Roosevelt, whom he regarded as a parvenu liberal. He died in a plane crash en route to New Mexico. He was an aggressive defender of civil liberties and made a special point of breaking down the social barrier between his American and Spanish-speaking constituents.

This selection of some careers in the fabulous class of 1910 points no moral. Though they attended the same college, many were determined and cheerful nonconformists.

True, they benefited by large helping of mutual aid and esteem, especially in the early days, but they went their own ways. They dramatize the antithesis of organization men. They rejected uniformity. The best of them expanded in vision as they grew in competence.

Summary of Replies to a Questionnaire—Part I

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 23, 1960

Mr. PILLION. Mr. Speaker, on February 15, I sent 115,000 questionnaires to every household in the 42d District of New York. A memorandum of the issues relating to the questions was also sent. It outlined the facts and arguments pro and con.

A total of 7,800 replies were received. I was gratified with the response to this survey and with the large number of valuable and sound suggestions from the people of this district contained on the questionnaires.

The tabulated results will be inserted in the RECORD in four parts. The first part will contain the questions and the replies to "Foreign Policy—Disarmament"—"Peace"—"Lend Lease," and "Defense—Missiles—Space."

The second part will consist of the questions and replies for the section entitled "1961 Budget and Taxes—National Debt—Interest—Gold—Inflation."

The third part relates to "Castro and Cuba" and "Agriculture."

The final part covers "Education" and "Hospitalization, Surgical Insurance for the Aged—Forand Bill."

The tabulated results for the first part follow:

QUESTIONNAIRE

FOREIGN POLICY, DISARMAMENT, "PEACE," LEND LEASE

1. Do you agree with the U.S. policy that disarmament must be accompanied by a foolproof inspection system? Yes, 6,497; no, 181.

2. Do you believe that the Soviet has permanently abandoned world domination by communism as a basic goal? Yes, 239; no, 6,467.

3. Do you believe that the exchange of visits by the various heads of states (personal diplomacy) is in the interest of world peace? Yes, 5,333; no, 1,225.

4. Do you believe that the United States should remain firm on retaining the present "free" status of Berlin regardless of consequences? Yes, 5,946; no, 645.

5. Do you believe in a massive reevaluation of our cold war effort, support the payment of necessary taxes, for the following programs?

(A) Reorganize the Defense Department to produce more armament and more adequate defense. (B) Find means to more effectively combat the Soviet ideological and propaganda campaign for the support of the uncommitted peoples of the world. (C) Shift our foreign policies and our diplomacy from a defensive to a more offensive emphasis. Yes, 5,414; no, 765.

6. Do you favor acceptance of about $500 million as full payment of Russia's lend-lease debt of $2.6 billion? Yes, 1,116; no, 5,657.

7. Do you favor a U.S. trade loan to the Soviet of about $5 billion? Yes, 359; No, 6,143.

8. Do you favor a cutoff of our lend-lease negotiations with an announcement that the United States will select an anniversary date for the lend-lease debt and announce each year to the world the Soviet debt with interest, its failure to pay and a request for full payment? Yes, 5,398; no, 959.

DEFENSE, MISSILES, SPACE

1. Do you believe the present annual expenditures of $45 billion for our military gram is about right? Yes, 3,492; no, 1,924.

2. Shall the Joint Chief of Staff arrangement and the three service Secretaries (Army, Navy, and Air Force) be abolished in favor of a single Defense Chief of Staff to make military decisions? Yes, 3,913; no, 2,422.

3. Do you believe that the United States is especially vulnerable to nuclear weapons fired from Soviet submarines? Yes, 4,220; no, 1,821.

4. Do you favor a "crash program" of about $10 to $15 billion per year to develop an anti-missile missile to speed up our missile program and otherwise regain military superiority for the purpose of increasing our capability to deter war and would you support the necessary taxes therefor? Yes, 4,119; no, 2,001.

Tributes to Frieda B. Hennock

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, June 23, 1960

Mr. MAGNUSON. Mr. President, the Washington Post editorially has paid a well deserved tribute to the late Frieda Hennock Simons, who, the editorial states:

As the first and only woman member of the Federal Communications Commission * * * was among the most vigorous champions of educational television.

I concur wholeheartedly with the statement of the Post's editorial writer that she—

Leaves a monument more substantial than marble, though it exists only in thin air.

I ask unanimous consent that the editorial, which appeared in the Post of June 22, be printed in the Appendix of the RECORD, together with an article from the New York Times of June 21, dealing with the life and accomplishments of Mrs. Simons.

There being no objection, the editorial and the article were ordered to be printed in the RECORD, as follows:

[From the Washington Post, June 22, 1960]

FRIEDA B. HENNOCK

Frieda B. Hennock leaves a monument more substantial than marble though it exists only in thin air. As the first and only woman member of the Federal Communications Commission, Miss Hennock was among the most vigorous champions of educational television. Even after her FCC term ended in 1955, she continued her campaign for more "schoolhouses of the air" until her death on Monday at the untimely age of 55. Her efforts bore fruit. Some 257 channels—or 10 percent of the total—have been reserved for educational TV stations, and more than 50 educational stations are expected to be in operation by the end of this year. Miss Hennock was rightfully proud of her part in reserving a portion of the airwaves for purely educational purposes.

Miss Hennock was also a forthright dissenter of a kind that has been sorely missed on the regulatory agencies in the past few years. During her 7-year term on the FCC, her outspokenness sometimes vexed commercial broadcasters and grated the nerves of some potentates in Congress. If on occasion she erred through enthusiasm, her insistent demand for high standards of broadcasting seems more pertinent than ever in light of the low frequency scandals that have jarred the airwaves.

[From the New York Times, June 21, 1960]

FRIEDA HENNOCK SIMONS DEAD; LAWYER, 55, HAD BEEN ON FCC—MEMBER OF AGENCY FROM 1948 TO 1955 WAS ADVOCATE OF EDUCATION TELEVISION

WASHINGTON, June 20.—Mrs. Frieda Hennock Simons, former member of the Federal Communications Commission and an early leader in the cause of educational television, died today at George Washington University Hospital. She was 55 years old. She underwent surgery for a brain tumor on Thursday.

A brown-eyed blonde and an outspoken woman of independent spirit, Mrs. Simons was for several years one of the most striking figures in the Capital's public life. She was the only woman to serve on the FCC.

She was married to William H. Simons, a real estate man here, shortly after leaving the FCC in 1955. At that time, she entered the private practice of law and shared offices with her husband.

CONSIDERED ACTING CAREER

Mrs. Simons was born in Kobel, Poland, the youngest of eight children. At 6, she was brought to New York. She attended the Brooklyn public schools and Morris High School in the Bronx.

In her late teens she began to think of a stage career, but at 18 she decided on law.

She started as a clerk in a Wall Street law office and attended the Brooklyn Law School at night. She received her bachelor of laws degree and was admitted to the New York bar in 1926.

In the court of general sessions, she appeared as defense counsel for two brothers in a first-degree murder case. She won an acquittal for her clients and won freedom for accused persons in a half dozen other murder cases.

In one instance she accepted legal work in a real estate concern, saved $3,000 from fees and then spent the sum to defend a man charged with murder in a payroll robbery.

"I'm glad I was a criminal lawyer when I was very young," she once recalled. "Knowing these people gave me an adult sense of values."

DEMOCRAT AMONG REPUBLICANS

Mrs. Simons was the first woman to become a partner in the New York law firm of Choate, Mitchell & Ely, and was the only Democrat among Republicans in the concern. She was active in city politics and was assistant counsel to the New York State Mortgage Commission when she was named to the FCC in 1948.

At a hearing on her nomination, a Republican Senator asked her what she knew about radio.

"Only that I've raised a lot of money for radio programs for [Franklin D.] Roosevelt," Mrs. Simons replied with typical candor.

She is credited largely with the fact that 257 TV channels have been set aside exclusively for noncommercial, educational use. She also had sharply criticized FCC grants that she thought tended to concentrate in one ownership too much control over mass communications.

Before leaving office Mrs. Simons proposed that, in major political campaigns, candidates of the major parties be given equal air time free to present their cases.

NOMINATED FOR FEDERAL BENCH

In 1951 President Harry S. Truman nominated her for a Federal district judgeship. The Bar Association of New York opposed her, and she was never confirmed by the Senate.

President Eisenhower did not offer her reappointment to the FCC in 1955.

"My voting record speaks for itself," Mrs. Simons commented later. "Having fought the interests, I was not the least bit surprised that I was not reappointed. Monopolistic forces control the entire field of TV."

Richard A. Mack, of Florida, was appointed in her place. He resigned in March 1958 as a result of disclosures of the activities of Commission members by the House Legislative Oversight Subcommittee.

Just Imagine

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. BARR. Mr. Speaker, today I am inserting in the RECORD an editorial from the Indiana Catholic which, I believe, merits the thoughtful consideration of every Member.

This editorial constitutes an honest and straightforward examination of the religious issue by a newspaper with a long record of dedicated service to my community. It is my opinion that this statement brings into focus an issue that should never be a derisive influence in our Nation.

I should like especially to call the Members' attention to a wonderful teaching of St. Thomas Aquinas to the effect that the principal purpose of human law is to bring about the friendship of man to man.

The editorial follows:

JUST IMAGINE

If the Vatican is anxious to have a Catholic in the White House, its semiofficial paper, L'Osservatore Romano, has not yet got the word.

Last week the Vatican daily published a front page editorial that had the effect of a broadside aimed right at Senator JOHN KENNEDY's personal crusade to convince American voters that a Catholic does not take political orders from the hierarchy.

The editorial was not aimed at the United States but at a threat to the church in Italy. It did, however, dig into the heart of the problem of the Catholic in politics that currently keeps American Protestants in a dither. And it did it in a language open to misunderstanding by people who imagine that a Catholic mayor, for instance, must confer with his Father confessor before deciding which direction to order for a one-way street.

Imagine what thoughts stirred in the head of an Ohio River Baptist as he read the headlines in his Louisville Courier Journal: "Catholic Paper Says Church Must Guide Flock Politically." By the time he reached the last paragraph of the story and learned that a Catholic, according to the Vatican's own paper, "may never disregard the teachings and directions of the church but must inspire his private and public conduct in every sphere of his activity by the laws, instructions and teachings of the hierarchy," he most certainly must have concluded: "The preacher was right, dagnabit; we can't afford to elect a President who must take orders from the Pope."

There was nothing wrong with the Osservatore editorial from the standpoint of the Italians for whom it was written. They needed it—every word of it. The authority of the church has always rested lightly upon their shoulders—rather more lightly than elsewhere in the world, Catholic tourists from other nations are sometimes surprised to discover.

It was not necessary to spell out for the Italians that the church recognizes the autonomy of the state and was not claiming authority over politics as such nor the right to dictate how citizens should vote. But these things are not clear to non-Catholics. And our quarrel with the Osservatore editorial is that it did not sufficiently take into account the effect of its wording outside Italy.

The political-religious problem in Italy today is unique; it is also extremely serious. There is danger that the Communists and leftwing Socialists (whose philosophy is all but indistinguishable from that of the Communists) may take over the Italian Government if the Catholics in the Christian Democratic Party do not remain united. Once in a position of power, the Reds would undoubtedly attempt to eliminate religion from the schools, pass marriage laws Catholics consider immoral, muzzle the Catholic press, and in every way possible eliminate religious influence from education and public life.

The church is particularly worried at this moment because there is a rift within the Christian Democratic Party. One faction wants to join with the leftwing Socialists in the hope of forming a government that would obtain social legislation they feel is needed in Italy. The Italian bishops and the bulk of Italy's Catholics have decided this is too great a risk. The bishops have, therefore, been urging Catholics to close ranks and present a strong front against the Red enemy. Catholics who are of the other persuasion are opposing the bishops, telling them to stay in the sanctuary and leave politics to the politicians.

This should be a familiar complaint to American Protestant clergymen, who of late have been taking quite a lot of backtalk from the laity for their attempts to apply Gospel teachings to social and civic problems. We live in an age of secularism, when even practicing Christians think that religion should remain inside the churches and that the clergy have no business mixing religion into the affairs of the world.

For an American Protestant to understand the problem faced by the church in Italy it should be sufficient to imagine a situation like the following: Supposing that in Indiana a fascist political party suddenly appeared as a serious threat, that it was known to desire the abolition of all gambling and liquor control laws and advocated public support of parochial schools, that it was, moreover, particularly opposed to the Methodist Church and dedicated to eliminating

all influence of methodism from education (including DePauw University) and civic life. What, then, would the Methodists have to say to their own members who denounced Methodist leaders for their unwillingness to collaborate with the fascist party?

This is no exaggeration. This is a fair example in terms we can appreciate of the political-religious problem Catholics face in Italy. The Italian bishops may be misjudging the situation; they claim no guidance from on high in these matters. But this is the way they see it, and they know their anticlerical Socialists; they have lived and struggled with them for more than 100 years. Rightly, therefore, does the Osservatore editorial observe that it is then up to the ecclesiastical authorities, and not to the arbitrary decisions of individual Catholics, to judge the moral licitness of such collaboration.

Such is the unusual case of the church finding it necessary to give a political directive—a rare and exceptional directive for a rare and exceptional case.

This is not to say, however, that it is unusual for the church to teach the principles men need to know for social and civic life. This is a prime duty of the church. But, seemingly, some Italian Catholics—like some of their counterparts here—are questioning the right of the church to speak out on social and political matters.

The Osservatore editorial warns against "an absurd distinction" being "made between a man's conscience as a Catholic and his conscience as a citizen."

"The church has the right and the duty," the editorial says, "to enlighten and aid consciences to make the best choice according to moral principles and those of Christian sociology."

This is the essence of the Osservatore editorial. It applies to Catholics anywhere in the world: to De Gaulle in France, Adenauer in Germany, or a Catholic President or dogcatcher in the United States.

Nothing frightening to a Protestant here. A Catholic in public life applies the principles of his religion, as a Protestant applies his.

It is not sufficiently appreciated that ecclesiastical direction does not depend upon the caprice of Pope or bishops. Shortly after the Vatican Council defined the infallibility of the Pope, the Catholic bishops of Switzerland issued a joint pastoral letter to calm the fears of Protestants who got the idea that the Pope would be issuing new and subversive orders at whim to Swiss Catholic citizens. They had this to say about the power of the Pope (and Pius IX approved it):

"He is tied up and limited to the divine revelation, and to the truths which that revelation contains. He is tied up and limited by the creeds already in existence and by the preceding definitions of the Church. He is tied up and limited by the divine law and by the constitution of the church. Lastly, he is tied up and limited by that doctrine, divinely revealed, which affirms that alongside religious society there is civil society, that alongside the ecclesiastical hierarchy there is the power of temporal magistrates, invested in their own domain with a full sovereignty, and to whom we owe in conscience obedience and respect in all things morally permitted, and belonging to the domain of civil society."

But what if Protestants don't like what a Catholic officeseeker must believe, about contraceptives or divorce, for instance? There's the rub. But only because Protestants have not been properly told about something else Catholics believe.

Catholic theology holds that not all that is sinful ought to be forbidden by law. St. Thomas Aquinas clearly taught in his treatise on law that: "Human law regards the mass of men, the greater part of whom are imperfect in virtue. And therefore human law does not forbid all evil acts from which men of virtue abstain, but only the more serious vices from which the greater part of men are able to abstain. Other wise imperfect men, being unable to obey such precepts, would fall into worse evils."

And Aquinas further taught that: "The principal purpose of human law is to bring about the friendship of man to man." If a Catholic politician hasn't enough sense to know what friction and civil discord he would stir up by trying to outlaw contraceptives and divorce in the United States, he hasn't any business running for Marion County commissioner, let alone for the Presidency.

So the Catholic lawmaker or executive of the law, though he accepts for the direction of his own life all that the church teaches in faith and morals, must decide for himself whether or not those teachings are to be embodied in civil law. Here he is the expert, not the bishop or Pope, and his decision will depend partly at least upon what the people will support or not support; it will be different in a country like Italy than in a country like the United States.

If this doesn't convince you, then by golly don't vote for a Catholic. This is still a free country.

The Challenge of the Sixties

EXTENSION OF REMARKS

OF

HON. J. T. RUTHERFORD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. RUTHERFORD. Mr. Speaker, one of the more able Members of the House is my colleague from Texas, Congressman JIM WRIGHT. Congressman WRIGHT delivered a very thought-provoking and inspiring message before the Texas Motor Transport Association in Dallas on June 10. The address follows:

THE CHALLENGE OF THE SIXTIES

(By Congressman JIM WRIGHT, Texas Motor Transport Association, Dallas, Tex., June 10, 1960)

Once to each civilization comes an opportunity for enduring greatness, and we in America are upon the threshold of that opportunity.

Today most of the world looks hopefully to us—not only for bread but for inspiration—not only for material assistance but for spiritual leadership and moral example.

It is our chance profoundly to influence the future. It is our opportunity to be big and not petty, to demonstrate not only what we are against but what we are for, to justify the American dream, not as a flower that has begun to fade in the autumn of its existence, but as a young and virile plant capable of producing buds of an ever brighter color for each succeeding springtime.

Can we rise to this challenge? Can we demonstrate that for once the mantle of world leadership has fallen to a nation which wishes not to dictate, or dominate, or exploit but patiently to help create the atmosphere of freedom and human dignity and of nonviolent local self-determination in which all men may live in peace?

A GOOD BEGINNING

We have made a good beginning. For a hundred years we have started no wars and entered them only in defense of principle. We willingly forsook colonialism to grant the Philippines their independence when they asked for it. We have displayed the humility to extend the hand of helpfulness to our fallen foes in a manner unprecedented in human history.

In the past 2 years, we have redeemed our solemn promises to Alaska and Hawaii. We have shown that this form we call democracy is workable not only for Caucasians but for Orientals and Polynesians as well. We have by example demonstrated that a nation may grow, not through military aggression, but by others coming to us and voluntarily asking to share our perils and our responsibilities.

OTHER CIVILIZATIONS

Yet other civilizations, also blessed with a spark of greatness, strutted across the stage of world ascendency only to fade and wane, their brief bright promise unfulfilled.

The Egypt of the Pharoahs developed learning but not understanding, and was buried in the sands beside the Nile.

Jerusalem the golden, after flourishing under David and Solomon, disintegrated, quarreled internally, split into two kingdoms, and was never again the same.

The Greeks wrestled mightily with philosophic problems and bequeathed us an intellectual inheritance rarely matched in history. Yet even the splendid aristocracy of Athens became corrupt, abandoned its idealism, sought forcefully to impose its will upon others, and never recovered from the Peloponnesian War.

Rome, gifted with lawmakers and warmakers but cursed with a degenerate patrician class, surfeited in the excesses of its own prosperity and became cruel and lustful until it rotted from within.

WILL WE BE DIFFERENT?

Are we different? Will we be equal to the time? Or weary of the crusade for world idealism and flounder on the shoals of selfish preoccupation?

Will we be in truth "one nation, under God, indivisible" or will be disintegrate before the onslaught of selfish pressures which divide us into cliques and factions?

Will we have the vision to grasp the immense challenge of education, and thus claim the vast promise of the future? Or will we be charmed by the surface trappings of education and quibble in petty puerility over who goes to what schools while the future rushes on and leaves us?

In the cauldron of economic competition, will we establish the American economy as one capable of meeting the expanding needs of an exploding population? Or will we prove our worst critics right who decry the American economy as a crumbling relic, now stripped of its strength by our individual indulgence?

In the decade that lies immediately ahead, will America be on the rise on on the wane? This is the challenge of the sixties.

A LOOK IN THE MIRROR

Let's take a long, hard look at ourselves as we enter the 1960's. Let's be honest. Let's measure both the good and the bad. We are rich.

On the credit side, the average American family has more real income today than it has ever had before. I'm talking about spendable dollars, after taxes * * * and I'm talking about what those dollars will buy in spite of inflated prices.

According to official Commerce Department statistics released just this month, the average American has more real buying power than he has ever had in his life.

The typical family income, after taxes have been paid, and adjusted to compensate for increases in the consumer price index, is still $1,100 better than it was in 1947 and almost $1,900 better than it was in the boom year of 1929.

Perhaps even more important, this prosperity is more generally shared among all of America's families. What we have seen in the past 15 years since the end of World War II has been the most phenomenal expansion of a middle income group in history.

Today, more than 65 percent of the Nation's families enjoy incomes in excess of $4,000 annually as compared with 37 percent at the close of the war. This is the widest dispersion of buying power that any society has ever achieved.

Since 1947, the number of families in the $10,000 and above income group has increased from 5 percent to 14 percent; while the number earning less than $2,000 a year has shrunk from 25 percent to 14 percent. This is undoubtedly the most spectacular social and economic revolution of all time, and it would seem to bode well indeed for the future of the American economy. But we're in debt.

This does not tell the whole story, of course. The truth seems to be that, while Americans have more money than ever to spend on the good things of life, we are rapidly reaching a point at which they cannot spend it because they have already spent it.

Installment payments are taking an ever bigger bite out of the typical family's paycheck at the first of every month.

While our total buying power after taxes has increased by about 22 percent, our total mortgage and installment indebtedness has skyrocketed to more than nine times what it was in 1947.

And in just the past 6 years, the amount of this liquid buying power which is annually siphoned away from the typical American family in interest charges has more than doubled until today it stands at $24 billion a year.

A standard joke of the past few years has been that you can sell the average American anything at all just so long as the down payment is low enough. This is no longer quite true. Since he is already loaded down with payments, he will buy anything today only if the down payment is low enough and the amortization period long enough.

It is only one more step until the typical American will be the man who is spending a third of his income paying for things he has already worn out * * * and this man, whatever his income, is no longer a choice customer.

But for the time being at least, on balance, we are pretty well off financially * * * better off than any people have ever been in the history of mankind.

OUR CHANGING MORAL CODE

And now what about the moral fibre of the Nation as we face the challenges ahead with spending money in our pockets? Americans are going to church in unprecedented numbers; yet we are beginning to sense a gnawing self-doubt about the Nation's moral code.

The recent highly publicized payola investigations and the resignations of several administrative officials of Government who were exposed as the financial beneficiaries of those whom their agencies were supposed to "regulate" have been the latest, but by no means the first, in a sordid series.

Repeated disclosures have revealed too-prevalent a pattern of relaxed ethical standards in high places where the public has a right to expect absolute integrity. The Hoffa-Beck scandals pointed up the shameful picture of men misappropriating funds with which they were solemnly entrusted. Even certain Members of Congress itself have been found guilty of abusing the public payroll. "If the salt have lost its savour, wherewith shall it be salted?"

We need in all of this to keep our perspective. It is necessary to remember that most successful businessmen are not Goldfines. Most labor leaders are neither Becks nor Hoffas. Most Congressmen neither employ realtives nor rent their front porches to the Government. Most appointees in the executive branch are not financial beneficiaries of selfish interests * * * just as most teen-agers are not delinquents and most television performers are not palpable frauds.

But there has been enough of it to make us all a little sick at our stomachs. For the past several months, as a member of the Federal Highway Investigating Committee, I have been delving more and more deeply into the highway program and have seen increasing evidences of both grand and petty graft.

Some highway contractors have knowingly, deliberately, willfully, cheated the public by using inferior materials and building the roads to substandard specifications. And in this they have been abetted by some highway officials.

Some so-called public servants have used their positions to purchase condemned property from the State they are supposed to be serving and then to sell it at enormous profits. Some have tipped off friends to the location of the routes, permitting the friends to buy lands in the highway's path at low prices and then approving purchase of the same lands with public funds at greatly increased prices.

In the past 4 years, we have spent $11.5 billion, much of it money paid in taxes by members of your industry, on the Federal highway program, and during this time the estimated cost of completing the Interstate System has risen from $27 billion to $41 billion.

Through all of this, I've had to keep reminding myself that most highway contractors, most suppliers of materials, most State and Federal highway officials are honest.

Most are like our highway heads in Texas where the only known incident of corrupt practices was discovered quickly by the State highway department itself and those responsible were immediately dismissed from the job and brought to justice.

Yet one who remembers when public-spirited citizens willingly gave their land for a highway between Weatherford and Ranger cannot help wondering what has happened now when a substantial number of people apparently can convince themselves that they are not cheating anyone so long as they are just cheating the Government. The trouble is that they are cheating everybody.

AGE OF THE "GOOF-OFF"

What, indeed, has happened? A national magazine recently said we are falling into what it termed a "group morality" which makes everything all right as long as it is being done by everybody.

Social critics have given us various labels. We have been called an "organization State," an "acquisitive culture," an "affluent society."

But the most stinging criticism is that which has labeled us as the age of the "goof-off"—the era of the job half done. From coast to coast our country unfortunately seems to have become populated with laundrymen who won't iron shirts, waiters who won't serve, manufacturers who deliberately build things to wear out and workers who engage in featherbedding, executives whose mind is on the golf course, students who take cinch courses, professors who teach cinch courses, institutions which offer cinch courses, organizations that sell academic degrees, people who buy academic degrees, public officials whose primary concern is not to lead, not to think, not to express opinion, but simply to stay in public office.

Further, we have moved into the new era of the 2-hour lunch, the all-day coffee break, the misleading advertiser, the paid-off disk jockey, the company credit card and the extravagant tax free expense account, the rigged television show, the dishonest butcher. Those who engage in one form or another of moral depravity range from the high-school flunky who wants to become a beatnik to the Congressman who puts his bar bill on the public voucher.

The Nation suffers from a national neglect that has institutionalized payola, imperfection, and complacency. Since it is easier to deceive than to perfect, we have mistakenly equated deception with the American way of life an one disc jockey stated it. And those of us who have mutely sat back and observed recent exposés as so much entertainment, have contributed our share to the national guilt. We give deception the complacency upon which it can thrive.

Am I unreasonably harsh in this appraisal? Maybe so. I hope so. There are magnificent examples of decency to inspire us. There is still much good mingled with the bad. If I overemphasize our failures, it is only because I am convinced that ours is a nation with a purpose and that we stand in danger of forgetting our mission as a people as we face the opportunities and challenges of the future.

OBSTACLES IN THE PATH

Briefly, let's scan the horizon and see some of the specific obstacles which loom like mountains and foothills in the path of the next 10 years.

The 1960's are certain to see a sharpening of the titanic competition between two opposing national philosophies. The unwritten pages of history are waiting to see whether this decade will tip the scales in behalf of the Soviet Union or the United States.

The Russians at least are quite specific about their goals.

They expect by the mid-1960's to achieve military superiority.

They expect by the end of the next 10 years to pull even with our economy in major productive capacity not in gross national product or the total volume of consumer goods, but in heavy industry, in machine tools, in water and electric power production.

They expect by the end of the decade to have captured the leadership in Asia and Africa and to have reduced the newly created republics of these vast areas of the world to economic dependence upon Soviet trade.

Let's not underestimate them.

Although the Soviet gross national product is only half ours, it is presently growing at a rate twice our own. Their industrial output, not more than one-third of America's in 1955, is closing the gap at an amazing 8 percent annual rate.

Briefly it amounts to this:

A nation with less than half our own GNP, living at about a third of our national standard of individual consumption, is spending as much on military strength as we are; ruthlessly and purposefully exploiting the ferment and the turmoil in the underdeveloped two-thirds of the world * * * wooing, threatening, boasting, sacrificing for its vicious cause of domination and deliberate destruction of democratic nations.

A nation that only recently rode in oxcarts now sends rockets to the moon. A nation once grossly inferior in industry now outproduces us in machine tools. A nation that was once almost completely illiterate now has an educational establishment that turns out twice as many scientists and engineers as ours. A society of peasants is now a great industrial complex. And this is one of the challenges of the '60's.

The key to this challenge was clearly given by a former high Government official who said in Washington last week that the basic difference between Russia's expectations for the 1960's and our own is this * * * Russia bases its hopes upon specific goals and upon a faith in its own ability to fulfill them; while we have no definite goals for the '60's and base our expectations upon the vague hope of Russian failures and a general faith in external circumstances, wholly independent of any clear-cut plan for our own.

OPPORTUNITIES FOR GREATNESS

We would be hasty, of course to say that we must improve our own performance only to compete with the Russians. Competition with another nation should not itself become the foolish fetish of our generation. Rather for the sake of ourselves and our children as well as the welfare and lot of humanity we should undertake the tasks with which the sixties so dogmatically challenge us.

Every challenge is an opportunity for greatness.

Stored in the warehouses of this land is enough grain and foodstuffs, surplus to our needs, to feed the hungry mouths of children and turn what has become a costly burden into a providential blessing and an instrument of peace. It takes only a little imagination.

Our cities are growing at an accelerated pace, and it takes only a little vision and a lot of intelligent application to help them grow in an orderly and well organized way so that they become examples of a proud society and not unplanned suburban sprawls which will create only shinier slums for the future.

Our land has been blessed with enough good soil and water and mineral resources to serve our needs well into the future if we conserve them and use them with the intelligence of an inspired society with a vision of the future.

The growing demands of a growing population will require a more efficient use of our rivers, our forests, and our mines. Conservation will be an ever-growing challenge of the sixties.

The challenge of education alone is enough to command our most earnest minds. By 1970 we shall need 1,500,000 new teachers—more than the total number now in service—if we are to maintain the present classroom number. Let it never be the epitaph of our civilization that we were so materialistic that we built buildings and forgot teachers or erected stadiums and forgot libraries.

You know something of the challenge of transportation. During the first decade after the war, automobile registration doubled. By 1955 there was a motor vehicle for every 700 feet of lane in both directions on all the roads and streets of the Nation. By 1970 there will be more than 80 million vehicles on the roads. To design and build a highway system capable of serving as the main arteries of the Nation's commerce is a challenge that dwarfs the little plans of little minds.

Air traffic is increasing at a pace which demands a bold and visionary approach if we are to prevent a traffic jam in the skyways.

We must demonstrate the self-discipline to begin a systematic plan of retiring the national debt which today consumes 11 percent of the national budget in interest alone, instead of simply letting it grow and inure to our children while we drift without fiscal plan or purpose.

And these are some of the challenges that face us in the sixties.

Walter Lippmann has raised the question as to whether a free society, depending as it does upon public support for its policies, can show the resiliency and the sustained will to endure the stresses and strains of a world in ferment.

The answer is we can * * * if we want to.

The capacity of America is unlimited. It is adequate to meet the challenge of the sixties * * * but not if we continue to spend more on sports than on science * * * more on scotch than on schools * * * more on entertainment than on education * * * more on carnivals than on culture * * * more on clothes than on conservation and more on cocktail parties than on cancer research.

It is not enough to know the price of things. More importantly, we shall have to learn the value of things.

What we need is a strong sense of national purpose, steeped in the realization of our historic opportunity. Long ago Emerson wrote that what America needed was "someone to inspire us to do what we can."

"The great menace to freedom," wrote Justice Brandeis, "is an inert people."

TWO WAYS

We are all familiar with the legend of Rip Van Winkle. * * * He fell asleep in 1769 and slept for 20 years. When he began his historic snooze, George III was his King and his country was a subservient colony. When he awakened some 20 years later, George Washington was President and his country was an independent Republic.

Old Rip slept through a revolution * * * an unprecedented revolution that witnessed to those who were awake the birth of a dramatic social and political movement * * * the democracy of America which has changed the face of the world.

We can meet the challenge of the new age in two ways * * * Rip Van Winkle's way of complacent comfort, superific contentment * * * or the way of survival, an alert and purposeful assault upon the challenges that lie ahead.

If we take the first way, we need only sleep. If we choose the second, we may need at times to sacrifice * * * but in sacrifice and striving is the fulfillment of the soul.

United States Faltering in Caribbean Invites Disaster

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. WALTER. Mr. Speaker, for many months I have observed from various angles the worsening situation to the south of us in the Caribbean. Fortunately for the United States, the people of our country and the Congress have been alerted to its nature in substantial degree by the efforts of my distinguished colleague from Pennsylvania [Mr. FLOOD].

In and out of the Congress, he has spoken with rare courage and insight. His collected addresses aimed at clarifying the status of U.S. sovereign control of the Canal Zone are a major contribution unique in Isthmian history, and merit publication as a Government document.

Thus, it was with genuine gratification that I have read his June 12, 1960, address on the Caribbean and Panama Canal over the Manion Forum Network, which follows:

U.S. FALTERING IN CARIBBEAN INVITES DISASTER

(By Hon. DANIEL J. FLOOD, Member of Congress for Pennsylvania)

DEAN MANION. Blame for the blowup of the summit conference will be gladly assumed by millions of American patriots who have vigorously protested against such meetings for years. Since we had everything to lose and nothing to gain in this evil encounter, it is indeed fortunate that it did not take place.

But our troubles with Khrushchev's international visitations are not over—not by any means. He will visit Cuba and Castro next and the United States is in no position to protest after having opened its doors to him at Camp David, last September.

Khrushchev's Latin American lieutenants have completed the conquest of Cuba. The big Kremlin mouthpiece is coming to that country now to organize the next step in the Communist drive for Panama. It is far more important for Congress to frustrate this impending Communist campaign for the Caribbean than it is for its committees to cry about the spilt milk of appeasement in Paris.

For what Congress and the country knows about the dangers now surrounding out vital interests in Panama, we are principally indebted to the research, eloquence and patriotic dedication of Congressman DANIEL J. FLOOD, of Pennsylvania. The entire country must be made to hear this important story and I am ever so grateful to this distinguished man for what he is doing in this cause and for his presence at this microphone to tell you about it. Congressman FLOOD, welcome to the Manion Forum.

Mr. FLOOD. Thank you, Dean Manion. It is indeed an honor and privilege to address this vast audience of the Manion Forum network. I do appreciate your generous comments about my contributions in alerting the Congress and the Nation to the communistic forces in the Caribbean that are now converging on the Panama Canal as the key target in what has become a fourth front.

During the present session of the Congress the questions of the sovereign control of the Canal Zone and Panama Canal have been extensively debated. There is little new of basic nature that could be added to what has already been presented.

Yet, because of the failure of our Government, in both the Legislative and Executive branches, to take a firm, forthright position with respect to our just rights at Panama, the Isthmian canal policies of the United States have degenerated into dangerous uncertainty. It is imperative that these policies, now under challenge, be made definite.

Many will recall the attempted mob invasions of the Canal Zone on November 3 and 28, 1959, requiring the use of force by Canal Zone police and the U.S. Army to repel the invaders. Under radical leadership, some of it communistic, the prime purpose of these mobs was to plant the flag of Panama in the Canal Zone as the symbol of Panamanian sovereignty over that vital strip of land.

These two attempts of the invaders failed, but their real objectives are still uppermost in their minds, and these are sovereignty over the Canal Zone and eventually nationalization of the Panama Canal.

It is significant that, subsequent to these two abortive efforts of Panamanian mobs, the Foreign Minister of Panama, Miguel J. Moreno, Jr., made extensive foreign travels, including a visit in Egypt to present Panamanian viewpoints and to be briefed on Egyptian experience in regard to the Suez Canal.

While there, Foreign Minister Moreno had ample opportunity to discuss the problems of the Panama Canal with Egyptian officials who had succeeded in bringing about nationalization of the Suez Canal. It is significant, too, that Panama and the United Arab Republic recently established diplomatic relations with each other.

Meanwhile, what had happened at Panama? Following the attempted November 3, 1959, invasion, the Government of the United States, instead of a stern warning against such future attempts, sent a diplomatic emissary to Panama to appease those stirring up the trouble.

This emissary, with the approval of his superiors in the State Department, issued a public statement recognizing Panama as "titular" sovereign over the Canal Zone and, according to Panamanian sources, agreed that the flag of Panama might be displayed in the Canal Zone to show such sovereignty.

In addition, the President of the United States himself, shortly afterward, publicly expressed the belief that Panama should be allowed to fly her flag in the Canal Zone to show Panamanian "titular sovereignty."

These declarations, made without the consent of either the Congress or the treaty-making power, reflect a credulity and naivete on the part of high U.S. officials that are simply unbelievable. The hoisting of the Panama flag would be the symbol of complete surrender and would be so hailed by Panama and universally interpreted.

Moreover, these irresponsible statements startled the people of our Nation, and they have deluged the Congress with letters expressing strong opposition to what they consider a pending surrender of our treaty rights at Panama.

In this connection, I have yet to find one U.S. citizen well informed on Isthmian problems who favors such surrender. I have never seen an experienced Panama Canal official, present or former, or any member of the Armed Forces who has served on the Isthmus, who does not vigorously oppose such an ignominious retreat from our solemn treaty responsibilities.

WHO ARE THE TRAITORS?

In fact, many are demanding to know what are the influences in our Government that have permitted United States-Panama relations to degenerate to the degree they have.

To them, I would add the question: What more could be accomplished by open, bold, and shameless treason than has been done at Panama through the processes of vacillation and appeasement?

The responsible officials of our Government who have talked in such loose terms about permitting the display of the Panama flag over the Canal Zone have never had any assurance from the Panamanian Government that such display would mean no more than a recognition of its "titular sovereignty," or, more accurately, its mere reversionary interest in the sole event of the United States ceasing to operate the Panama Canal.

Moreover, it is certain that the Panamanian Government would never make such an agreement but would hold such display as our recognition of the complete sovereignty of Panama over the Canal Zone.

In view of the wide knowledge of the Isthmian question in the Congress, it is not strange that the House of Representatives, after a notable debate on February 2, 1960, passed, by overwhelming vote of 381 to 12, House Concurrent Resolution 459.

This resolution expressed the sense of the Congress that any variation in the traditional interpretation in the 1903, 1936, and 1955 treaties between the United States and Panama involving the provisions of such treaties concerning territorial sovereignty shall be made only pursuant to treaty.

This action by the House was not merely a routine vote of our membership, but a reflection of strong views of the American people on a matter in which they are vitally interested. As such, it served as a rebuke to those, in and out of Government service, who, by naive intentions or devious methods, would undermine our position of exclusive sovereign control over the Canal Zone and Panama Canal.

Unfortunately, at the solicitation of the Secretary of State, House Concurrent Resolution 459 has not yet been passed by the Senate, his opposition being on the basis that such action might "offend" Panama. This, in effect, is the same as saying that its approval by the Senate would anger Panamanian mobs and the radical politicians who take their cues from them.

Returning now to the question of displaying the Panama flag over the Canal Zone to indicate what is loosely called "titular sovereignty," this is not a meaningless gesture of good will as some of our naive leaders would have us believe. The flag has but one meaning and that is sovereignty.

For this reason, its display would be but the first step in the Panamanian program for eventual nationalization. The second step would be to secure its international recognition as evidence of full sovereignty. Then the way would be clear, in a legal sense, for the rest of their program through the most expedient means with the example of Suez before them.

The attitude of our Department of State touching these questions has undoubtedly given to our Latin American neighbors and the world at large the impression of weakness, timidity, and an excessive zeal for appeasement.

When considering this gravely important Isthmian question, we should never lose sight of the fact that the Panama Canal is a part of the coastline of the United States.

The flag of our country there is the symbol of our status as a sovereign people over the constitutionally acquired domain of the Canal Zone. The day another flag is raised over the Canal Zone will, indeed, be tragic and bode ill for the future of the United States.

As previously indicated, our problem is not restricted to the Panama Canal but it covers the vast area of the Caribbean recognized long ago by Admiral Mahan as the Mediterranean of the Americas.

CUBA AN OUTPOST OF KREMLIN

The great island of Cuba, close to the United States and located on the northern approach to the Panama Canal, has become a Soviet captive and its government an articulate instrument for Communist subversion in other Latin countries.

On the southern approach to this strategic waterway, we have Venezuela, which has been a center for planning the agitation, infiltration subversion, and armed attacks that are designed to transform Latin American countries into Soviet provinces, just as has been done in Cuba.

The seriousness of this situation was emphasized on February 26, 1960, by the President of the United States in his address to the Congress of Brazil. Describing the great issue of our time as "freedom or slavery," he stated that the people of our Nation would consider it intervention in the internal affairs of an American state if any power, "whether by invasion, coercion, or subversion, succeeded in denying freedom of choice to the people of any of our sister republics."

These strong words clearly uphold the Monroe Doctrine and its application to new dangers now arising; and the Congress, by positive declaration, can and should lend its full support to this end.

For resolving these problems there is a practical and definite program, which is not based on a blind devotion to the past but on a realistic appraisal of the present and the future:

First, reaffirmation of our historic policy of exclusive control of the Canal Zone and Panama Canal.

Second, announcement by our Government that no hostile, other provocative demonstrations or invasions will be tolerated in the Canal Zone or within the strategic vicinity of the Panama Canal.

Third, reactivation, under the direct control of the Chief of Naval Operations, of the Special Service Squadron for continuous display of the U.S. flag in the Caribbean area and other missions of diplomatic character.

Fourth, proclamation by our Government that the Canal Zone is a constitutionally acquired territory of the United States.

Fifth, extension of the Monroe Doctrine to include penetration and subversion.

The time for proper action by our Government has long since passed. The situation in the Caribbean becomes more critical every day. It thus becomes imperative that the Congress, which, under the Constitution, must assume and discharge such grave duties in questions of foreign policy, should consider and pass measures along the lines of those now pending in both House and Senate.

These measures make unequivocal declarations for the previously indicated extension of the Monroe Doctrine and the reaffirmation of our treaty-based and long-established Isthmian Canal policies.

May I ask this great audience: "Why should we wait for new blows to fall? To falter in our duty is to invite disaster."

DEAN MANION. Thank you, Congressman DANIEL J. FLOOD. My friends, somewhere in this cowardly search for an accommodation with communism our leaders have lost the courage to defend America's vital interests.

Send this startling speech to your Senators. Tell them not to wait until new blows fall upon the American flag. The time to act is now.

Americans are sadly lacking in information about our sickening attitude toward the issues of Panama, Cuba and the entire Caribbean area.

This great speech by Congressman DANIEL J. FLOOD, of Pennsylvania, is the first to place these burning questions before the American people on a nationwide network.

We urge all corporations and individuals to order printed copies of this address for distribution.

Consultants Report, Migrant Farm Labor

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 22, 1960

Mr. SMITH of Mississippi. Mr. Speaker, as a part of the discussions regarding farm labor problems and the efforts to maintain a steady and continuing supply of food and fiber to the American consuming public, much reference has been made to a so-called consultants report.

The Secretary of Labor, sometime ago, named a panel of four to make an appraisal of the situation. Named were the Reverend Monsignor George C. Higgins, Mr. Glenn E. Garrett, executive director of the Good Neighbor Commission; Dr. Rufus B. vonKleinsmidt, chancellor of the University of Southern California; and former Senator Edward J. Thye of Minnesota.

During the hearings before the Committee on Agriculture, the question was asked of the Assistant Secretary of Labor, "Who in this group represented the growers, the employer?" Secretary Brown replied that the so-called consultants were picked on the basis that no one represented either of the principal parties at interest.

Mr. Speaker, it is inconceivable that actions should be based on the recommendations of four men who were picked because they knew so little about the problem. It is my privilege to represent a great alluvial area in the State of Mississippi whose citizens farm for their livelihood and whose fields produce much of the crops which sustain our Nation. These people know the problem firsthand. An organization they have formed to represent them, the Delta Council, has made a study of this so-called consultants report. From a background of firsthand knowledge and experience, Mr. Miller P. Holmes, president of the Delta Council, has written me a letter that will be of benefit to all Members in seeking properly to appraise the value of this so-called consultants report. Please remember that Mr. Holmes is not a director of any social action group, he is not an executive director of any international organization, he is not the chancellor of any school, and he is not a former public officeholder—he is just a good farmer and a substantial citizen of his community who has been honored by his neighbors as president of their agricultural association.

His letter and analysis of this situation will be of interest and value in a study of the problem facing us today:

DELTA COUNCIL,
Stoneville, Miss., March 23, 1960.

To: Subcommittee on Equipment, Supplies, and Manpower, House Committee on Agriculture, Hon. E. C. Gathings, chairman.

Hon. FRANK E. SMITH,
Member of Congress,
House of Representatives.

Mr. Chairman and gentlemen: Delta Council, an organization representing the 18 delta and part-delta counties of Mississippi, wishes to respectfully submit the following recommendations and conclusions concerning Public Law 78 and the consultants report on the Mexican farm labor program.

We recommend the extension of Public Law 78 as proposed in the bill introduced by the chairman. We further strongly endorse the provision as proposed by Representatives DIXON, MCINTIRE, FISHER, and MCMILLAN that would prohibit the Secretary of Labor from issuing regulations pertaining to wages, hours, and working conditions of domestic labor under the Wagner-Peyser Act.

Failure to extend Public Law 78 will mean that many farmers will not be able to secure labor necessary for crop production and harvesting. This would result in a great loss to farmers individually and to the agricultural economy. In some cases involving perishable food crops, it could mean that certain commodities would not be available to the consuming public or that across-the-counter prices for such commodities would be considerably increased due to the limited supply.

Public Law 78 has been effective in carrying out the basic objective intended by Congress, i.e., making it possible for farmers to obtain needed agricultural workers from Mexico to fill seasonal labor shortages. Public Law 78 has accomplished this objective in an orderly manner without adversely affecting the domestic work force. In addition, the existence of a legal system of obtaining needed foreign workers has almost eliminated the wetback problem.

In any program in which a large number of people are concerned, it is almost inconceivable that some dissatisfaction would not be encountered on the part of individuals. Employers have had to adjust their operations to meet program requirements that in some cases have appeared to be impractical. In other cases, individual workers have not proven satisfactory. Others have broken their contracts and have either returned home or sought employment elsewhere. We feel sure that in certain cases both employers and employees have had justifiable grievances. On the whole, however, the program has been very successful and has been in the national interest.

CONSULTANTS' REPORT

The consultants appointed by the Secretary of Labor have pointed out that the Secretary has found it extremely difficult to administer section 503 of the act which prohibits the authorization of Mexican employment unless the Secretary determines that: (a) domestic workers are not available, (b) use of Mexicans will not adversely affect wages and working conditions of domestic farmworkers, and (c) reasonable efforts have been made to attract domestic workers at wages and standard hours of work comparable to those offered to Mexican workers.

With regard to these so-called problem areas, we wish to comment as follows:

The fact that domestic workers are not available in sufficient numbers in a given area is the prime criteria used in determining eligibility for certification. Such determinations are made based on studies and recommendations of Employment Service representatives within areas of demand. These recommendations are as accurate and reliable as is possible to obtain. The development of such information by the office of the Secretary would result in a duplication of effort that would require many additional employees.

The consultants have recommended that the objective of the Secretary should be to reduce reliance on Mexican labor. They recommended that this be accomplished by (a) limiting the ratio of Mexicans to domestic workers on individual farms and (b) limiting the number of Mexicans in any particular crop area to a specific proportion based upon the previous year's experience.

Both of these recommendations, in our opinion, are entirely impractical. First of all, some areas of production have a very limited supply of domestic farm labor. A rigid rule that would gear the number of Mexican workers to what would amount to a nonexistent supply of domestic workers would mean that such farmers would be denied the use of any farm labor.

The limiting of Mexican farmworkers within crop areas to a specific proportion based on previous years' experience entirely overlooks the fact that acreages of certain crops and weather conditions vary from year to year. Farming is a hazardous and high-risk undertaking at best. Weather conditions during planting, growing, and harvesting seasons have a decided influence on the volume of production and quality of agricultural commodities. Rather than impose needless restrictions, it would appear that the Department of Labor's objective should be to render a more effective service by helping to supply workers to farmers who need additional labor and jobs to workers who desire agricultural employment.

Recommendations of the consultants appear to be based on the conclusion that farmers will automatically use Mexican workers in preference to domestic workers and that the Secretary of Labor is therefore obligated to set up a complicated police system to prevent employers from discriminating against domestic farm labor. This is not the case and such a conclusion is erroneous. Considering the cost of transportation, housing, insurance, and other guarantees, Mexican workers are more costly than domestics. What appears to be a preference for Mexican workers in some areas is due to the fact that domestic workers are not available for farm employment and employers know that Mexicans, who are willing and able to work in agriculture, are readily available.

EXPERIENCE IN THE MISSISSIPPI DELTA

To illustrate the fact that preference is not given to Mexican nationals, we wish to briefly review the experience in the Mississippi Delta since World War II. This area is recognized as one of the most highly specialized cotton production areas in the world. Cotton production in the 18 delta and part-delta counties in Mississippi averages about 1 million bales per year and accounts for the major share of farm income. The loss of farm labor during World War II resulted in an acute shortage of workers needed for crop production. Faced with this shortage, farmers turned to Mexican nationals as the most logical and conveniently available supply of agricultural labor, and large number of braceros were used in the area for several years. During this period, Delta Council worked closely with the Mississippi Employment Service and with the regional USES in developing the farm labor program. After several years' experience with foreign workers, delta farmers, working through Delta Council and with the cooperatiton of the Mississippi Employment Service, decided that the best interests of all could be served by concentrating on the utilization of domestics and discontinuing the use of Mexican nationals. Such a program was undertaken, however, with the firm understanding that Mexican nationals would be made available if shortages developed and crops were threatened by domestic farm labor scarcities.

During the next 2-year period, representatives of Delta Council, along with representatives of the employment service, extension service, and production and marketing administration, U.S. Department of Agriculture, participated in 47 out-of-area county forums with the objective of obtaining cooperation of farmers and business leaders that would lead to the release of farmworkers in those counties for seasonal use in the delta area. Assurances were given that local labor supplies would not be disturbed when needed at home and that an all-out effort would be made to assure their return. At the same time, the Employment Service initiated a stepped-up effort to help obtain more effective utilization of local labor pools through day-haul operations from larger towns within the area and those located immediately adjacent to the area. As a result of these intense efforts, farmers were able to obtain needed supplies of labor from domestic sources. They were aided in this effort by very favorable weather conditions. Also, following 1955, cotton acreage was drastically reduced because of acreage controls and marketing quotas. This resulted in some less demand for farmworkers plus a slightly larger supply from town labor pools because of migration from farms to nearby towns.

During this same period, Delta Council, working with the employment service and in cooperation with growers in Florida, developed a system through which off-season farm employment opportunities are made available to Mississippi farmworkers. Several thousand workers now participate in this program. In addition, crews are sent from

Mississippi to a number of other States for off-season employment in agriculture.

Although these sustained and intense efforts have been pursued for a number of years and Mexican nationals have not been utilized within the area since the initiation of the effort, the State has continued to lose farm labor. Also, the composition of the labor force has changed to a marked degree. It now consists of a higher proportion of older and younger people. Workers in these age groups are not as productive, and production rates, especially in weed and grass control, have dropped off sharply. Workers in the younger age group also offer problems to farmers who are doing their best to comply with child labor laws. Farmers, especially who have large operations, find it difficult if not impossible to accurately screen day-haul crews to eliminate workers under 16 years of age. The fact that many younger workers are accompanied by their parents further complicates the problem.

The expansion of cotton acreage within the delta in 1959 under the "choice program" posed many problems to delta farmers. Preseason planning meetings were held with the Employment Service in an effort to obtain effective utilization of all available farmworkers. Full use was made of the newly initiated Delta Weather Forecasting Service to pinpoint areas of possible rainfall and unfavorable weather so that workers could be routed to other parts of the area. Shortages did occur at several points; however, generally favorable weather conditions and the all-out effort of the Employment Service to channel needed workers into spots of acute demand prevented losses from taking place.

We cite these experiences in the Mississippi Delta to illustrate the fact that farmers desire to utilize domestic workers when the supply is available. The delta was fortunate in that it had a potential supply of farm labor conveniently located. Other areas are not so fortunate and, in spite of the efforts of individuals and organizations, such farmers must depend upon Mexican nationals.

While not now utilizing Mexican nationals, delta farmers are strongly in favor of the continuation of the program and the extension of Public Law 78 which they helped to develop. If the loss of farm labor continues in the State, however, delta farmers will once again find it necessary to utilize Mexican nationals.

COSTS UP—PRICES DOWN

It appears to us also that the consultants approached their study more from the standpoint of sociology than from economics. They gave no evidence of any consideration being given to the position of agriculture in comparison to other segments of our economy or to the fact that farm income has been dropping while production costs have been increasing at a rapid rate.

The report of the consultants makes mention of the fact that agriculture has been historically a low-wage industry. They state, "During the past decade, the wage differential between agriculture and industry has been widening steadily, and it may be inferred that the use of foreign workers in agriculture is partly responsible." Cotton was cited as a crop in which wage rates were unchanged or lowered between 1953 and 1958. No mention was made of the increases in production costs during this period or the decreases in prices that farmers received for their cotton. The fact is that the average price received by U.S. cotton farmers declined 6 cents per pound between the beginning of 1951 and the end of 1957. This amounts to $30 per bale. Prices declined even further in 1958 and 1959. At the same time, production costs continued to climb.

Cotton, along with other segments of agriculture, faces the perplexing difficulties common to a transition economy. Southern agriculture in particular has been going through the throes of a technological revolution. While great gains have been made, serious gaps still exist in the mechanization of cotton production. While it is true that man-hours per acre have been reduced sharply from the 160 required under the man and mule method of cotton production, hand labor requirements are still high, with weed and grass control representing the biggest bottleneck. Because of these gaps, cotton farmers now have the high expense of full mechanization without the economies that have accrued to certain other segments of agriculture from mechanized practices.

In an effort to increase yields and reduce unit costs, farm operators are using more fertilizer, farm machinery, insecticides, herbicides, and all kinds of agricultural chemicals. They have also adopted new practices such as deep tillage and supplemental irrigation. Since 1945, the use of nitrogen on farms has increased 175 percent. Tractor numbers on farms in the United States have tripled since 1940, and the total volume of all machinery and equipment on farms has almost tripled during the same period. A recent study by Dr. Grady B. Crowe, economist, USDA, and Dr. Rupert Johnston, economist, Mississippi Extension Service, showed that the investment per worker on a 600-acre mechanized delta cotton plantation increased from $2,220 in 1940 to $24,000 in 1956.

In addition, the study revealed that prices paid for production items have undergone a sharp increase. Between 1940 and 1955, wage rates for hired farm labor rose 200 percent, farm real estate values increased 150 percent, farm machinery prices went up 115 percent, farm real estate taxes rose 115 percent, and fertilizer prices increased about 60 percent. Since 1955, costs of these items have continued to rise.

Another significant fact is that cash costs of nonfarm goods and services included in crop production expenses accounted for more than 60 percent of total production costs in 1957. Farmers now spend almost four times as much for nonfarm goods and services as they did in 1940. The cost of these items has little or no relation to the prices that farmers receive for their commodities. When farm prices drop, they are likely to remain more or less constant or may even go up as a result of increases in industrial wages. This accounts, to a large extent, for the cost-price squeeze that cotton farmers are finding so acute.

On a typical delta cotton plantation of roughly 600 acres of cropland, production costs since 1940 have risen 165 percent. Most of this increase took place in hired labor, power and machinery costs, insecticides, fertilizer, and ginning. At the same time, cash or out-of-pocket expenses rose 145 percent.[1]

In conclusion, it appears that the report of the consultants was predicated to a large degree on the fact that farm wages are below nonfarm wages. This is an indisputable fact. They seek, however, to solve this problem by imposing restrictions and regulations that would tend to raise farm wages without dealing with the basic causes of the disparity. Such action would increase the cost-price squeeze and would adversely affect large segments of the agricultural economy.

Also, we certainly do not agree that the Secretary should be given unlimited authority to promulgate rules and regulations as he deems necessary. Neither do we believe that the Secretary should have authority to develop so-called sufficient controls and checks, as has been recommended. We are not cognizant of any occasion in which local and State employment services have been charged with dereliction of duty in carrying out the intent of the Mexican national program. The granting of either of these recommendations would result in more centralized control, more bureaus, and more Government employees.

The present system of advisory committees is an effective medium for advising the Secretary on farm labor programs and problems. We therefore oppose the establishment of a tripartite advisory committee as recommended by the consultants.

Respectfully submitted.

MILLER P. HOLMES,
President.

Pony Airlift

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 21, 1960

Mr. CUNNINGHAM. Mr. Speaker, during the past several weeks a Subcommittee of the House Committee on Post Office and Civil Service has been busily engaged in examining the activities of the Post Office Department in the field of transporting 4-cent letter mail by air.

The Post Office Department has maintained that it is able to transport this mail by air without paying any more in overall costs than is currently being paid for surface transportation. The Post Office Department is also making claims of drastic service improvements.

In its philately section on Sunday, June 19, the New York Times included an item on the pony express. The Times article explained how the Post Office Department has announced that it will not use jet airplanes to carry first day "pony express" covers westward from St. Joseph, Mo.

The Post Office Department said it has had to discard its plans because the flight schedule could not be worked out, and therefor first day covers from the respective points will be dispatched through ordinary mail channels. Many postal patrons feel that the schedules on transporting 4-cent letter mail by air have not been very well worked out and as a sponsor of a bill to eliminate the so-called airlift I feel that the Post Office Department has not worked out the necessary congressional authority to enable the operation to be continued.

Mr. Speaker, I am concerned over the way in which the Post Office Department has continued to expand its unauthorized transportation of 4-cent letter mail by air, even though the House Subcommittee on Appropriations has specifically asked that there be no extention and even thought the full Committee on Post Office and Civil Service has approved a bill directing that the operation be discontinued. The reported bill, H.R. 12595, should be approved swiftly on the floor of the House of Representatives and the Post Office Department should immediately take note of official expressed congressional displeasure and desist from any further experimentation with this type of mail transportation.

Daily Digest

HIGHLIGHTS

Senate passed numerous sundry bills.

House rejected farm bill and passed bills on social security and supplemental appropriations.

Senate

Chamber Action

Routine Proceedings, pages 12938–12948

Bills Introduced: 12 bills and 2 resolutions were introduced, as follows: S. 3723–3734; and S. Res. 344–345. Page 12940

Bills Reported: Reports were made as follows:

H.R. 9541, to amend the Federal Property and Administration Services Act with regard to material tests and fees (S. Rept. 1664);

S. 2561, authorizing construction in the Nation's Capital of a monument in memory of Theodore Roosevelt (S. Rept. 1665);

S.J. Res. 152, to create a commission to formulate plans for construction in the D.C. of a memorial to Woodrow Wilson (S. Rept. 1666);

S. Res. 334, providing for the retention of staffs of appointed Senators for not to exceed 30 days from termination of such appointment (S. Rept. 1667);

S. 3557, to expand and extend the saline water conversion program, with amendments (S. Rept. 1668);

S. 2587, requiring congressional approval for public land withdrawals in excess of 5,000 acres for facilities of any Government department (S. Rept. 1669);

H.R. 12263, authorizing conclusion of an agreement for construction by the U.S. and Mexico of the Amistad Dam on the Rio Grande, with amendments (S. Rept. 1670);

H.R. 9702, authorizing certain payments of deceased members' final accounts without the necessity of settlement by the GAO (S. Rept. 1671);

H.R. 5040, to clarify the reemployment provisions of the Universal Military Training and Service Act, with amendment (S. Rept. 1672);

H.R. 11787, authorizing continuation of flight instruction for members of the ROTC until August 1, 1964 (S. Rept. 1673);

S. 3558, authorizing the transfer of certain Federal property to the government of American Samoa (S. Sept. 1674);

H.R. 8212, relating to the procedure for ordering certain members of the Reserve components to active duty (S. Rept. 1675);

H.J. Res. 627, authorizing U.S. participation in the International Bureau for the Protection of Industrial Property (S. Rept. 1676);

S. 3733, to place Naval ROTC graduates in a status comparable with Naval Academy graduates (S. Rept. 1677);

S. 3734, relating to the definition of total commissioned service of certain naval officers (S. Rept. 1678); and

H.R. 12705, to delay for 60 days in certain cases the applicability of law relating to humane slaughter of livestock (no written report). Page 12939

Bills Referred: Two House-passed bills were referred to appropriate committees. Page 12938

Humane Slaughter: H.R. 12705, to delay for 60 days in certain cases the applicability of law relating to humane slaughter of livestock, was received, referred to Committee on Agriculture and Forestry, reported by that committee without amendment, and passed without amendment. This action cleared the bill for the President. Page 12945

Public Lands—Florida: Senate passed with committee amendments H.R. 8226, to add certain lands to Castillo de San Marcos National Monument, Fla. Pages 12948–12950

Public Lands—Massachusetts: Conference report on H.R. 5888, authorizing transfer of certain land in the Boston Naval Shipyard to the Massachusetts Port Authority, was adopted. Page 12950

Helen Keller: S. Res. 336, extending greetings to Miss Helen Keller on her 80th birthday, was adopted. Pages 12953–12954

Exchange of War Vessels: Senate concurred in House amendment to and cleared for White House S. 2618, authorizing the exchange of certain war-built vessels for

Problems of Railroads

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, June 24, 1960

Mr. SCHOEPPEL. Mr. President, Mr. Ernest S. Marsh, president of the Atchison, Topeka & Santa Fe Railway Co., made some pertinent remarks the 14th of June before the members of the Association of American Railroads.

We have had considerable legislation this year pertaining to the railroad industry, and I recommend this article to the Members of this body, as it throws light on a good deal of legislation as it has developed in the Interstate and Foreign Commerce Committee, and then in the Senate proper.

Mr. President, I have been informed by the Government Printing Office that printing the address of Mr. Marsh will require approximately 2½ pages of the RECORD at a cost of $202.50. I ask unanimous consent that the address may be printed in the RECORD, notwithstanding the additional cost.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ERNEST S. MARSH, PRESIDENT AND CHIEF EXECUTIVE OFFICER, THE ATCHISON, TOPEKA & SANTA FE RAILWAY CO., BEFORE 1960 ANNUAL MEETING OF THE ACCOUNTING DIVISION, ASSOCIATION OF AMERICAN RAILROADS, JUNE 14, 1960, CONRAD HILTON HOTEL, CHICAGO, ILL.

As president of one of the many railroads serving the great transportation center of Chicago, I would like to join in Mayor Daley's hearty welcome extended to all of you here today so graciously by Mr. John Duba.

It is a pleasure indeed to have this opportunity to appear before the annual meeting of the Accounting Division of the Association of American Railroads and I want to express my sincere appreciation to your chairman and program committee for the honor in having this place on your program. There are several reasons why I am particularly happy over the distinction to be invited to speak to you on this occasion.

It was back in 1941 as auditor of disbursements that I attended an annual meeting of the Accounting Division out in Denver, Colo. I take great pride in being not only a former active member but now an honorary member of your fine organization.

So you see, I have at least some firsthand knowledge of your worthy objectives and your procedures in accomplishing those purposes through cooperative efforts of standing committees and special committees, and through these annual meetings.

I have thought these meetings have a special value for the railroad industry, not only as the clearinghouse for results of important committee activities during the year, but also as the means of establishing and maintaining personal contacts, which are especially important in interroad relations. Few other industries have so many men who must work cooperatively with their counterparts in other companies on a day-to-day and month-to-month basis as in the railroad accounting departments.

It is only through the railroads with their almost unlimited capacity to move things from where they are to where they are needed that our vast marketing and distribution system has built the high standards we Americans enjoy today. It is only through the railroads and that system that we can continue to enjoy those standards. Believe me, it is a complex business in which a maximum of teamwork and cooperation is required for successful performance.

I have at times made the understatement that our function in the economy is rather simple—that we are in the business of moving something or someone from one place to another. Our every thought in daily operations and in long-range planning must necessarily be directed to performing that function in a most efficient and economical way.

One aspect of our business is far from simple and provides a convenience to the public that is unique but almost taken for granted. I refer to that technique which makes it possible to do two things at the same time, (a) to compete, and (b) to work in cooperation.

We are not merely moving goods from one place to another on our own railroad, not just conducting a business of our own with our own plant to serve our own customers. It is much more than that.

Actually we constantly serve the public in a great national transportation organization in which two or three or a half dozen, or if need be, 12 or 15 separate railroad companies, each an independent enterprise, all join together to move a single consignment of goods between the most distant of points. They cooperate with each other and with the shipper—a shipper may go to any railroad agent at any station in the United States and arrange in one transaction for the shipment of his goods to any other place in the United States regardless of the number of roads that might be involved in hauling it from one place to another. This could never have come about, nor could it be continued, without the great contributions from railroad accounting officers.

The accounting officers were probably the first of railroad management teams to recognize the value and necessity for cooperation within the framework of an official association. The record shows that the first meeting for formation of the original Association of American Railway Accounting Officers was held here in Chicago on December 7, 1887, and your organization has had continuous existence ever since, becoming the Railway Accounting Officers' Association in 1918, and since the mid-thirties as the Accounting Division of the Association of American Railroads.

In my 42 years of service on the Santa Fe, I think I have never had a greater respect and admiration for the work of accounting officers than during the past 3 years that I have served as president of the company. Your group plays a most important part in this business.

The accounting department comes in contact with every phrase of railroad activity from the executive department to the section gang. Obviously, the protection of revenues and maintaining the integrity of receipts and disbursements are indispensable functions. Beyond that, your importance extends not only to record keeping and preparation of reports and statistics, but of still further significance is your responsibility for interpreting the results to insure that unfavorable comparisons, undesirable trends, abnormal ratios, and all of that are brought to the attention of the chief executive and officers of other departments for review, investigation and further attention. That relationship and cooperation in the management team is an essential, and I cannot emphasize it too strongly in this period of high costs when even closer scrutiny is imposed by shrinking profit margins.

You and your committees have accomplished outstanding progress in producing improved performance through new methods and electronic machine applications. You deserve the applause and appreciation of the whole railroad industry. It is, I repeat, an honor to address this meeting and I appreciate the opportunity to make these remarks.

We are now in a brand new era of competitive transportation accompanied by a severe inflationary spiral and there are grave problems and great challenges before you. I have every confidence you will meet these with success in the same spirit and determination you and your predecessors have exhibited in the past.

In the railroad industry it seems that we always have had problems and it may be fair to say that we always will. Still, I believe I have never seen a time when we face so many uncertainties.

Probably most, if not all of you, are aware of these problems and some of you may feel much as I do that discussing them here is equivalent to talking to ourselves. Still, I have never seen the time when there is greater need for facts to produce a correct understanding of the current and prospective situation. We must not become bored or complacent. We need more friends with a sound appraisal of our problem and it is with the hope that you in turn may help in stimulating clear thinking among your friends and associates that I mention a few of these problems.

When I say we are in a brand new era, I mean that this is a time which demands good, clean, comfortable and pleasant passenger service. An era that puts emphasis on fast dependable freight service and intensified efforts to reduce cost of operation and maintenance.

An era where we must recognize the inaction of Congress to give us fully adequate remedies to provide competitive equality with other forms of transportation. A keenly competitive era in which we must do more things to help ourselves, both service-wise, ratewise and costwise.

A good service and competitive rates are necessary to attract more business and a sustained high volume is needed for efficient utilization of the plant and lower costs per ton mile. Costs for ratemaking purposes should be realistic and forward looking, based upon the increased volume that could be attracted rather than upon statistics of the past without inclusion of that volume. Only in this way can the railroads achieve

their full potential and the public receive the benefit of the most economical form of transportation.

Certain recommendations have been made to help in removing competitive inequality of the railroads. Among these are:

(1) The Nation's entire transportation system should be subject to regulation, but only as much as necessary for the protection of the public;

(2) Regulation should not usurp management's right to manage;

(3) No form of transport should be either handicapped or favored by Government;

(4) Government subsidy of any of the costs of competing transport as a defense against monopoly should cease, inasmuch as the threat of monopoly in the transportation field no longer existed;

(5) Inland waterways should pay all their own costs;

(6) Highway transport should bear "its fair burden" of the cost of highways, plus its share of the general tax load;

(7) Airlines should ultimately pay their own way.

How do those appeal to you? Aren't they all good, sound, and equitable recommendations as of today? It might surprise you to know that they were made by a National Transportation Committee created in 1932, including former President Calvin Coolidge as chairman, Bernard Baruch, former New York Governor Al Smith, and other prominent Americans.

Usually the recognition that a specific problem exists is about half of the solution for it but actually the difficulties of the railroads have been recognized and have been a subject of studies and reports by boards, commissions, and committees for a quarter of a century. Still few fundamental remedies have been adopted and most of the basic causes of our difficulties are with us today.

Today we see on every hand that the failure of our Government to adopt the plainly needed reforms recommended years ago is causing deterioration of earnings in the railroad industry and harming our efforts to take full advantage of modernization and technological improvements designed to give better service and keep costs to the public at the lowest possible level.

Their continuation will jeopardize more hundreds of thousands of railroad jobs and the investments of other hundreds of thousands of American citizens—men, women, children, and institutional investors who have put money in railroad securities with the rightful expectation of receiving a fair return.

I mentioned the recommendations of the National Transportation Committee in the early thirties, then later President Roosevelt appointed the Joint Committee of 1938, comprising three railroad executives and three labor leaders. The committee recommended fair and impartial regulation of all modes of transportation. It recommended the establishment of tolls for inland waterways and relief for the railroads from grade-crossing elimination costs.

Back in 1947, President Truman told Congress that he believed it unwise to place the entire burden of expanding, improving, and maintaining the airways upon the general taxpayer. In 1950, he reiterated his demand that the airlines become "increasingly self-supporting in the near future."

In 1957, President Eisenhower, in his budget message to Congress, said, "The time has come when consideration should be given to requiring the users of the airways' facilities to share the cost of providing this service." Yet little has been done to remedy the recognized injustice.

In fact, the situation is reversed to such an extent that the Government right now is looking for new ways to help the airlines because their fares in competition with surface transportation are being maintained at levels which will not support costs and the requirements for new equipment.

Then, there was the Senate committee study of the national transportation system, which, after lengthy hearings, resulted in an extensive progress report in 1951, citing the need for impartial transport regulation, the unfairness to railroads of lavish subsidies to their competitors, the financial problems faced by the railroads and the need to allow railroads to make competitive rates.

Then, of course, the Cabinet Committee Report of 1955 which, among other things, recommended greater freedom for the railroads in competitive ratemaking.

Two years ago the Surface Transportation Subcommittee of the Senate Committee on Interstate and Foreign Commerce—the Smathers' committee—conducted extensive hearings and investigations into the deteriorating railroad situation out of which came the Transportation Act of 1958 generally conceded to represent desirable and worthwhile legislation but only a partial step in the right direction.

Now in 1960 we have the report of the Department of Commerce entitled "Federal Transportation Policy and Program" submitted after a long study at the request of the President in his budget message last year for a reappraisal of Government policies.

Generally, this report advocates a gradual lessening of Government regulation with the transportation system being regulated by the same forces as the rest of the American free enterprise system. I find myself in wholehearted agreement with the majority of the recommendations contained in the report, particularly those which afford the railroads a more nearly equal opportunity to compete for traffic.

The recommendations of the 1960 report bear much similarity to those I mentioned earlier as coming from the National Transportation Committee in the early thirties. I should very much dislike the present report to fall by the wayside as have so many of its predecessors—that should not be permitted to happen. Measures should be adopted to insure that the recommendations will be actively progressed either through legislative or administrative action whichever is appropriate.

All of the distinguished bodies who have studied the railroad situation over more than a quarter of a century have come up with the conclusion that something needs to be done to strengthen the railroad position in the interests of the public and the Nation during peacetime and wartime. Just why Congress has never really come to grips with this problem is not too clear although my analysis suggests that they have a feeling that nothing could happen other than the effect upon the railroad industry itself, and Congress has not seemed to worry too much about that.

The real point and the point I want to emphasize is that great harm cannot be done to the railroads without doing great harm to the whole economy and the American people. It is a slow deterioration but if allowed to follow its present course, it could have an end result that Congress and the whole country might wish to prevent—the eventual end of private ownership of the railroads, then of other agencies of transportation, and perhaps other businesses.

As I said, we must recognize this inaction and do everything we can to help ourselves. Still, it is for this reason that I say here today you can be of assistance in producing a clearer understanding of the true situation among your friends and associates.

The disadvantage of inequality in a keenly competitive field is further aggravated by the problem of survival in this era of inflation. It seems to me that the inflationary trend is going to be with us for a long time. The constant pressure for higher costs for labor and material and more and more spending by governments is taking us down a road that is certain to bring severe results to the Nation's economy and its people, just as it has done in other countries where inflation has run its course.

The cost basis today is pricing much business out of the market and pricing our people out of jobs. There are hundreds of examples of the growing sale of foreign goods in this country. The import of foreign steel is growing terrifically. Another spectacular example is the steady rise in the number of small foreign cars to be seen on the streets and highways.

It is no secret that many purchasers of merchandise and other articles are going to the foreign markets. Many large companies are sending more and more buyers overseas to replenish their inventories. Many do not like it, but are under the necessity of meeting their competition.

Is there any wonder we have unemployment? Through the cooperation of business, Government, and labor it should be stopped somewhere along the line before it is too late.

The inflationary spiral that is so common to all industry is making it increasingly difficult for the railroads to have available funds for all desirable and needed improvements. It is probably appropriate to say that the increases on the railroads have just about followed the national pattern in other basic industries. However, it is fair to say also that this inflationary spiral hits an industry like railroads harder where prices are not so easily nor readily adjustable and where labor costs take up such a large proportion of operating revenues.

These pressures bear more heavily on the railroads too because of the high ratio of investment in physical plant and equipment and the necessity for carrying on a substantial capital expenditure program on a regular basis. To illustrate the long-term cumulative effect of competitive conditions and constantly rising costs of doing business, I would like to give you a comparison that seems particularly revealing.

Back in 1929, our best peacetime year prior to World War II, the Santa Fe had 16.6 billion revenue freight ton miles. In 1959 this increased to 36 billion. Total revenues amounted to $267 million in 1929 with a net railway operating income of $68.7 million.

By 1959 the total revenues were $634 million, more than 2½ times as large as 1929, yet the net railway operating income was actually less at $59.6 million, even after including $6.5 million of a temporary nature by reason of tax amortization of certain facilities for which necessity certificates were granted.

We have had no increase in our take-home pay in 30 years despite the fact that the physical volume of business more than doubled when measured in revenue ton-miles handled, and despite the further fact that the total money investment in road and equipment went from $1,094 million to $1,879 million, an increase of 72 percent.

Now, when it is considered that we need to provide modern equipment and facilities at several times the costs of the late twenties to handle an increased physical volume, the squeeze that is taking place becomes abundantly clear.

Probably the most interesting feature of the comparisons between 1929 and 1959 is that, even with the increased volume, we were able to come as close as we did to the net railway operating income of 1929, in view of the terrific increases in the costs of wages, materials and taxes. How we were able to show even this inadequate result is somewhat of a long story. In a few words, the comparison was aided by doing things to help ourselves—largely by a concerted program of modernization and improvement of the

physical plant with the adoption of new technologies and techniques, in which every department of the railroad participated. The accounting department centralized its activities and modernized its procedures, including among other things a timely installation of an electronic data processing center in our Topeka general office.

Of course, productivity has increased but wage increases have far outdistanced that improvement. The April 1960 monthly comment by the Bureau of Transport Economics and Statistics of the Interstate Commerce Commission shows that during the 1947–59 period, average compensation per hour paid for increased from $1.20 to $2.59, a rise of 115 percent, and that productivity measured in gross-ton-miles per employee hour paid for increased 58.6 percent—a splendid improvement in efficiency averaging almost 5 percent per year.

For the real index, however, the one that affects the results—gross-ton-miles per dollar of compensation—they showed a decline of 26½ percent during this period.

The inflationary pressures are felt keenly in our financial ability to make capital expenditures. We are providing many expensive frieght cars especially designed to take care of the particular needs of shippers, including of course, the popular DF or damage free cars, mechanical refrigerator cars, covered hopper cars, covered gondolas, air-slide cars, and we shock control cars utilizing a sliding underframe principle. The cost of new freight cars today is simply amazing in relation to prior periods.

As we march ahead with modernization and try to keep step with new equipment and methods, we can never consider the job fully completed, because what was modern yesterday may be obsolete tomorrow. The past has seen great changes in the railroads, but it takes a terrific amount of money to keep going ahead with the improvements needed to maintain the type of up-to-date service that will attract revenue and translate a part of those revenues into earnings.

Earnings are grossly inadequate and depreciation accruals are quite unrealistic. They completely disregard what should be the first essential of any business concern; that is, it should cover its full cost of merely perpetuating the business before it can be considered to have made a profit or to have a taxable income. To the extent that depreciation accruals fail to provide money for replacements to stay in business, the profits are overstated and largely taxed away.

We did have hopes of getting some help from Congress in 1958 that would have gone a long way toward remedying this undesirable situation. As a matter of fact, the Smathers bill, as it came out of the Senate Committee on Interstate and Foreign Commerce, contained a provision for a "construction reserve" which would have permitted us to set aside funds for capital improvements and deduct them from taxable income of the year, with the requirement that they be used for such improvement purposes within a 5-year period. If not so used in 5 years, the funds would then become taxable with certain penalties.

Because of opinion that the construction reserve fund constituted a tax measure and should have originated in another committee of Congress, the provision was lost by an amendment on the Senate floor, which eliminated it from the bill without prejudice.

Such a construction reserve would enable management to plan ahead and undertake desirable improvements necessary to meet transportation demands adequately. With such a reserve I am confident the industry would do much more modernization and replacement and would do it faster.

Congress provided treatment somewhat similar to the construction reserve in the Merchant Marine Act and, of course, everyone is familiar with the substantial public expenditure being devoted to waterways, highways and airways. They represent advance appropriations of tax money for improvements relating solely to transportation. All the railroads ask is some advance treatment of their own money, also for improvements relating to transportation.

In my opinion, there is no subsidy or Government gift at all attached to the constructioin reserve proposal. No more than the cost of the property—less salvage—can ever be deducted through depreciation charges. The actual cost is simply deducted sooner.

Certainly there would be no long-term loss of tax revenue to the Government. Quite likely, there would be no immediate decline. There might even by an immediate increase in tax receipts, as conceivably the adoption of the construction reserve could so stimulate capital expenditures as to put taxable income in the hands of builders and suppliers and their employees right down to the source of raw materials to such an extent that the Federal Treasury would realize greater net tax receipts.

The 1960 report of the Department of Commerce recognizes that in contrast to other transport equipment, depreciation rates for railway equipment fail adequately to reflect the obsolescence of motive power and rolling stock. It states that "such rates require a continuation of present review, and adjustment in detail to insure parallel principles for tax purposes with other forms of transport. * * *" The industry needs a better treatment of depreciation for tax purposes and everyone seems to agree it would be nothing more than fair treatment for Congress to take care of this inequality.

Another grave problem lies in the labor field. You are all familiar with the efforts the railroad industry has been making to remedy certain obsolete rules that require payments for work not done or not needed, commonly called featherbedding. I am sure I do not need to detail this problem to you.

I will merely remark that probably the two most important and costly issues involved have to do with:

(1) Firemen on freight and yard diesel locomotives, and

(2) The dual basis of pay which provides for minimum day payments predicated upon speeds of 12½ miles per hour in freight service, and 20 miles per hour in passenger service.

Personally, I have not looked upon these applicable working rules as having been forced upon the railroads by labor, nor have I looked upon them as resulting from any unwise concessions or lack of appropriate handling on the part of railroad management. They are carryovers from another era that have become outmoded with the passage of time and the development of new technologies, the adoption of which at huge capital expenditures has enabled us to perform the same operation with a far greater degree of speed and efficiency with modern power and facilities.

We are not blaming anyone for the evolution that has taken place nor is it our purpose to carry on an attack upon anyone or any group—certainly not upon our faithful and efficient Sante Fe employees who we are proud to say are doing what we think is an excellent job under the rules of the game.

Our attitude has been that any rules, laws or practices that have become so outmoded by progress should be reviewed to determine what revisions are needed to make them conform with the current situation.

The wage increases awarded this month by an arbitration board and recommended by an emergency factfinding board further emphasize the necessity for early review of outdated work rules to afford appropriate relief from burdensome provisions that no longer conform to modern operations.

I have talked a lot about problems because we seem to have an unusual number of them today, but I want to say that I do not lack confidence in the future of American railroading. I believe that with an equal opportunity and fair treatment to which we are entitled, we will be healthy and strong and continue to be the backbone of the American economy. I believe it is the obligation of all of you and of every American citizen to do what he can to bring about fair treatment and I earnestly solicit your support.

Thank you very much and wishing that you have a highly successful and enjoyable annual meeting here in Chicago.

High School of Commerce, Springfield, Mass., Graduation Exercises, June 13, 1960

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 21, 1960

Mr. BOLAND. Mr. Speaker, the High School of Commerce in Springfield, Mass., is one of the finest commercial secondary institutions in this country. It has contributed much to the well-being of its own locality and to the thousands of students that have passed through its doors. Founded and built in 1915, its function was to give special business training, development of punctuality, industry, self-reliance, and trustworthiness. Today, Commerce High prepares students for college, nursing, or business. Throughout its existence it has had a long list of dedicated teachers. The principals who have supervised the curriculum from its birth to the present day have been outstanding educators. Its record of accomplishment has added immeasurably to the excellent reputation that Springfield's school system enjoys throughout the Nation.

Mr. Speaker, it was my honor to be invited by Principal Philip A. Sweeney to deliver the address to the graduating class of 1960 of the High School of Commerce on June 13. Under unanimous consent, I include the address, program, and list of graduates as part of my remarks:

Your honor, Mayor O'Connor; chairman of the school committee, Mrs. Lynch; superintendent of schools, McCook; Principal Sweeney; members of the faculty; President Dolan and members of the class of 1960; their parents, family, and friends, first let me express my gratitude for the invitation which makes possible my presence here this evening and the honor you pay me by the invitation to speak to you on this happy occasion.

When your principal and my friend, Mr. Sweeney, asked me, sometime ago, to be your guest speaker, I felt then and I know now that my talents would not be equal to the task. For this is no ordinary, run-of-the-mill affair. Indeed, it is a movingly deep, significant event in the lives of all who are presented tonight to receive their diplomas. For the High School of Commerce class of 1960, it is the first time and the only time that it will experience this event.

For an occasion so important and for an event that so swells the emotions, it is not an easy task to put words together that will spell out momentous or lasting impressions. Perhaps this is not too important. It seems to me in a high school or any graduation, it is the awarding of the diplomats that pales everything else into insignificance.

But guest speakers are thrown in for good measure and they have become part and parcel of the graduation ritual.

When Eleanor Larson interviewed me for your fine high school paper, Commerce, I quizzed her on what I should talk about. A good newspapwoman, she suggested that I talk about 5 minutes.

With a few minutes leeway, I have taken her advice. Too many years back to remember, in the very place you now sit, I sat, with starched collar, tight shoes, and rented jacket. As with you, we had things to do and places to go before the day was ended. With us, and some of your parents will recall, it was Sam's diner. Of course, that was before the days of house parties, Howard Johnson and Friendly with their three deckers and awful-awfuls.

Well, what counsel to give you or what wish to hold? As I look into your clean, fresh, beautiful faces, I can tell you what I wish. I wish I were 17 again.

For these, indeed, were and are the wonderful years. Teenage and high school. Rose-hued, fragrantly fresh, excitingly pleasant days. Always on the move but always moving forward in development and ability. I am sure that as you now pause and reflect, you are shocked by the raipdity with which your high schol days have raced by. As a matter of fact, it seems only yesterday that you were taken by hand of devoted parents to start in kindergarten or first grade. Surely, you can recall the untutored, self-taught answers of those days.

From those very first days, the educational process set in, and slowly, but steadily, you advanced in wisdom and learning.

And tonight you step across another threshold of life—you enter a new era and a new phase. Some of you will go on to business schools and colleges, others will find their place in the great field of nursing and public health, most of you will seek and find employment. But, for all of you, the scenery will change, the values of life will increase, responsibility will begin to grow heavier.

The rather carefree high school days will become a lovely memory. It will not now be so important to you that Frankie Avalon, Rickey Nelson, or Conway Twitty were replaced in the record race or hit tunes by Bobby Rydell, Bobby Darren, or the Everly brothers.

Within a few years, you will be moving into legal maturity and adulthood. What the future has in store for each of you, it is impossible to foretell.

None of us doubt, for all of us know, that we are living in a marvelous, magnificent, ever-changing period. The fusion and fission of the atom—the incredible exploration of space—the miracles of aviation and electronics—the fantastic progress in medical research that portends the ultimate conquering of the diseases that afflict mankind—all of these you are now witnessing, and they have played or will play an important part in your future. For you, life itself will be longer and healthier than for any of the grown adults you now know. Life expectancy has jumped remarkably over the past 25 years. It will expand even more in the next 25. So, you have very, very many years ahead of you.

I am sure you are also aware that you are living in a dangerous, difficult period. That is why you have to continue to develop your character, your ability—whether through further college study or the practical education that comes through experience or self-study. It might very well be that, in your time, just as have your parents, you will be called upon to make sacrifices to keep freedom alive, the Nation strong and democracy safe.

There is something to an editorial I read the other day which said "Our age is likely the blackest and brightest in human history; the most destructive and the most creative; the most humanitarian and the most barbarous; the most pagan and the most religious. What direction the world takes tomorrow depends on the rising generation of today."

You are the rising generation. The future belongs to you. To meet its challenge, there is a need that you make a success of yourself—of your own personal life. I do not mean success which is measured by the material considerations of fame and personal gain—or the attainment of high place and prestige. But rather, that true success which is the crown of all those who honestly, earnestly, do their best and live the every day, simple life with all that it involves in the practice of the commonplace duties of every day—that consists in the unselfishness of motive, the integrity of purpose, the passion for fairness.

No one else can purchase these attributes for you. The way can be pointed by training and loving parents. But the sort of a person you will make of yourself—how you will be regarded—whether people will admire and respect or despise you—all this is in your hands.

No matter where your lot may be cast, no power on earth can keep you from making a real person of yourself. Only you can choose the direction in which you will go. Every day you can say to yourself: Without capital, without influence—even in spite of the opposition of others, I can be true to myself. I can be a real woman or a real man and make my life a masterpiece. I am the only enemy I shall ever have. The only one who can wreck my personal career, keep me from being a success is the man or woman living inside my own skin. There is no destiny, no fate, that can ruin me. Under God, I am my own maker, my own destiny. "I am the master of my fate * * * the captain of my soul."

You have had a magnificent start to cope with the problems of the future. You have looked forward for years to this day—one of the crowning achievements of your young life. Your parents—self-sacrificing, devoted, loving—have toiled and lived for this day. For the part they have played in the success that is yours tonight, you can never repay. Teachers who have inspired and taught you and brought you to this moment are entitled to your gratitude.

This thanks and gratitude can best be expressed by doing the very best you can in whatever task is yours. By so doing, you will be a credit to Springfield's outstanding educational system, the High School of Commerce you love so much, to your devoted teachers, to your wonderful parents.

Yes, the future belongs to you. May God grant you the ability, the courage and the wisdom to face it with confidence and to meet it with unbounded success.

GRADUATION EXERCISES, HIGH SCHOOL OF COMMERCE, SPRINGFIELD, MASS., MONDAY, JUNE 13, 1960, AT 8 O'CLOCK, MUNICIPAL AUDITORIUM

PROGRAM

Organ Prelude: Prelude in F Minor, Bach; Folk Tune, Whitlock.

Processional: Pomp and Circumstance, Mr. LeRoy Hanson, organist, Elgar.

"Star-Spangled Banner," class, choir, chorus, and audience, Smith.

Invocation: The Lord's Prayer, High School of Commerce girls' choir, Walter D. Nickerson, director, Malotte.

Hymn of Praise, Mozart.

Three Wishes, Roff.

One World, O'Hara.

Greetings from the school committee, Mrs. Mary M. Lynch, chairman.

Address: "The High School Graduate's Responsibility for the Future," Hon. EDWARD P. BOLAND, U.S. Representative, Second District, Massachusetts.

Presentation of class for graduation, Philip A. Sweeney, principal.

Declaration of graduation, Dr. T. Joseph McCook, superintendent.

Awarding of diplomas, Hon. Thomas J. O'Connor, Jr., mayor.

In appreciation, Bert Dolan, president, class of 1960.

Benediction: The Lord Bless You and Keep You, choir, Lutkin.

Recessional: "Pomp and Circumstance," Elgar.

MEMBERS OF THE GRADUATING CLASS

Ann Marie Abair, Judith Carole Abbe, Carolyn A. Agen, Brenda Dawn Agnoli,[1] Sandra Ann Aiken, Marianne Ames, Dorothy R. Arabik, Grace Catherine Arillotta.

Amos Lee Bailey, Barrie R. Baker, Laura Mae Barry, Beverly Ann Barufaldi, Ruth D. Beaulieu,[1] Joan Becker, Marvin E. Becker, Lucille Ann Bedard, Carol Ann Begley, Richard Belden, Elizabeth Frances Bell, Joan-Ann Bell, Charles H. Bentley, Ida Marie Bernardes,[1] Rosemary Katherine Beturne, Roy Edward Beusee, Carole Ann Bianconi, Annalouise Almeda Bieard, Sandra Lee Bielecki, Dianne Marie Bisi,[1] Carol Ann Black, Rita Blais, Gail Patricia Blanchard, Sandra Joy Blanchard, Patricia Ann Bordeaux, Ann Ellen Borecki, Rosemarie May Borowik, Hazel Borrette, Elizabeth Borst, Rita Marie Bourcier, Maureen Rita Bourque Cherie Carmen Bousquet,[1] Judith Thurston Bradway, Karen Irene Brauns, Karen Ann Bressette, Robert H. Brosnon, Carole Ann Brown, James Edward Brown, Sandra Harriet Brown, Joanne Olive Brunt, Sandra Vicki Bryant, Margaret Ann Buchanan, Catherine Marie Buldrini, Geraldine Ann Burke, Carol Ann Burrell, Judith Ann Burt, Pamela Joan Butler.

Cecelia Ann Calabrese, Louis A. Calabrese, Mary Ellen Cameron, Rose Marie Theresa Casali, Jane Marie Caserio, Rosemary J. Cavanaugh, Frances June Champagne, Patricia Lee Chapin, Elaine Alice Choiniere, Nancy May Clark, Joanne Consolini, Eleanor Rose Ann Cote, John W. Coughlin, Jr. Annette Marie Cox, Barbara Joan Coyle, Geraldine Giles Cullen.

Joanne Marie D'Amato, Linda Daniele, Helen Anne Daubmann, Judith Ann Davignon, Dorothy Mary Delarm, Annette R. Demers, Gloria Ann DePalo, Theodore Paul Dernago, Jr., Irene B. Desmarais, Anna Isabelle DiNoia, Bert Dolan, Dennis Robert Donahue, Catherine Marie Donnellan, Joyce Beatrice Dorman, Rena Helen Douglas, Linda Ann Dressel, Barbara Ann Dunn, Irene Jeanne Duquette,[1] Carolyn Margaret Durkee, Martha Angela Dziura.[1]

Address by Adlai E. Stevenson

EXTENSION OF REMARKS

OF

HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Friday, June 24, 1960

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Adlai E. Stevenson to the Illinois State Bar Association on June 23, 1960. I commend the address to my colleagues.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ADLAI E. STEVENSON TO THE ILLINOIS STATE BAR ASSOCIATION, WAUKEGAN, JUNE 23, 1960

As leaders of the bar you are leaders of thought in your communities. My purpose here is to plead with you as thoughtful citizens to encourage sensible, rational discussion of the situation of our country in the world.

A few weeks hence, we Americans will be engaged in a political campaign in which the principal issue must be America's ability to meet successfully the challenge of the Soviet Union. There have been several previous opportunities for us to face up to this great challenge realistically. One opportunity was after the Suez debacle in 1956. Another was when the first sputnik was launched in 1957. A third was last year when Khrushchev told us face to face that we would lose our world leadership.

We did not take advantage of those opportunities. But today we Americans are finally beginning to realize that in Russia and China we face a giant political, economic, and ideological force in the world, and that force is making headway, especially in the poor and underdeveloped areas of the world.

Two recent events have shocked Americans into facing this fact. Last month our handling of the U–2 incident not only undermined our reputation for wisdom and competence but jeopardized our whole system of bases encircling the Soviet Union. And a few days ago in Japan we suffered another reverse in our efforts to meet the Communist challenge. As James Reston wrote in the New York Times: "At best the United States has lost 'face' in the Near East; at worst, it has lost Japan."

The intemperance of Khrushchev's attacks on the President created a natural sympathy for the President which left us with too little awareness of the disaster the summit fiasco was to the United States. So we were not prepared for the later shock of realization that the President's visit to a friendly nation like Japan would be dangerous not only to him but to that nation's government.

But the extent of the disaster in Japan and the ultimate fate of the new security treaty is not yet clear. What is clear is that the proposed visit by the President to Japan has accomplished just what it was intended to prevent—the Kishi government's authority has been destroyed and the new treaty imperiled. Already, powerful Japanese newspapers are proposing a renegotiation. We can only hope that the majority in Japan know that with the mainland in Communist hands Japan's security depends on the United States.

These setbacks, coming as fast as they do after mounting evidence that the power and influence of the United States has been slipping in the scales of world balance for several years, have underscored the need for a full and frank discussion of our international situation during the coming campaign.

It will do us no good to blame the Japanese riots solely on the manipulations of a few Communist agitators. Instead of looking for excuses, we should be asking questions:

Why didn't we foresee the consequences of the U–2 incident in Japan?

If Communist agitators are wholly to blame—how were they able to mobilize such passion and numbers in a friendly, allied country?

Why is there so much opposition to a security treaty with the United States?

When other governments on which we lavished praise and money are overthrown by crowds of students shouting for freedom—as in Turkey and Korea—is it a sign that we are out of touch with the changing current of opinion?

Is it possible that students, professors, and ideas carry more weight in Asia than guns, soldiers, and military pacts?

How can things get so mixed up that the natural antiwar feeling of so many people expresses itself in anti-Americanism?

These are just a few of the questions that must be discussed in the coming campaign. And on the need for such discussion there should be no disagreement between our two parties. But if we are to talk usefully about our foreign policies—on which survival literally depends—then we must do so in a political atmosphere free of accusations, of innuendo and of irresponsibility. Without an honest search for truth, democratic debate quickly degenerates into a demagogic slugging match.

I realize—better than most—that it is not easy to keep such discussion rational in an election year, when political passions and ambitions are aroused. No Democrat can ever forget the campaigns of 1952 and 1954

when we were called "the Commicrit Party," when "20 years of treason" was the not uncommon title of attacks on the Democratic record, and when we Democrats were reviled for being soft on communism and for fighting the Communists in Korea—all at once.

Today we are in danger of the same kind of deceitful and self-defeating politics. I say self-defeating because this sort of partisan nonsense not only debases democracy, but also actually weakens our capacity to meet the growing and changing challenge of our century.

Let me give you an example. In 1958, Vice President NIXON warned us that the Soviet economy was growing at a faster rate than ours and that "economic competition between the free world and the Communist world may well decide the world conflict."

And yet, when I called attention to the pace of Soviet economic growth 4 years earlier, Mr. NIXON accused me of "spreading pro-Communist propaganda" and doing "the cause of the free world great damage."

But the real damage, of course, has been done by those who preferred to score partisan points rather than face up to the fact of Soviet growth, power, and thrust. As a result, we have lost valuable time.

Today we cannot afford to lose any more time. And that is why I am concerned lest our political bloodstream is not yet completely purged of the virus of McCarthyism.

Surely the question of whether the Nation is wisely, shrewdly, and competently led is our main subject of discussion. Yet for criticizing the administration's handling of the U-2 incident, Senator KENNEDY has been warned on the floor of the Senate "to relieve himself of the suspicion of appeasement."

Surely, Governor Brown of California cannot be suspected of Communist sympathies. Yet Mr. NIXON'S Los Angeles campaign manager announced this month that a big Democratic vote in the primary would give aid and comfort to Khrushchev and Chou En-Lai.

Surely it should be clear by now that there is no party of appeasement in America. Yet in Texas, a State Republican convention cheered a speaker who said that the Russians would welcome a Democratic victory because "their record shows they are easy to deal with."

A Republican leader in Congress recently hailed Mr. Khrushchev's harsh words for NIXON as the best endorsement he could have. This kind of talk only invites the equally craven counter-charge that the Russians—knowing American reaction to their insults—are deliberately trying to elect a Republican administration.

Discussion of our foreign policy in this year of crisis must not be confined to such charges and countercharges. The decisions we have to make are too important.

We must decide how to restore the American power position and at the same time advance the cause of peace.

We must keep in mind that our chief problem is still how to deal with the Russians and the Chinese. It is not a matter of who is soft and who is hard, but of who is wise and who is stupid.

We know that no leader of either party is a Communist sympathizer. We know that all are concerned with the challenge of the Soviet system to our way of life and with the danger of war to life itself. We know that all are committed to the common goal which President Eisenhower has defined as a lasting peace with justice.

Therefore any debate on foreign policy should be concerned not with the goal but with the means by which we propose to achieve it. And any useful debate must deal with the hard facts, not irrelevancies. For only a serious discussion of our predicament will ever produce the new ideas and policies that we need so urgently.

Perhaps a President could be elected by a campaign of branding as disloyal every attempt to consider alternatives to the administration's handling of our foreign affairs. But if he were, his hands would be so tied that he would be unable to negotiate with the Russians.

This was the case of the first Eisenhower administration, which was so committed to a rigid policy of military pacts and massive retaliation that its policymakers could not take advantage of the change in Soviet tactics after Stalin's death.

Back in 1953 I described the change in these words: "Stalin's methods have not paid off. I think we can expect more subtle, more challenging, more divisive tactics. We can expect Communists to encourage and exploit every sign of weakness, distrust, misunderstanding or jealousy between us and our allies; they will probe the soft spot in the free nations and tempt the underdeveloped areas with both economic and emotional lures. And they will try to invade the trade."

This is what has happened. But I doubt if Mr. Dulles was able, until it was too late, to consider this revolutionary change and the opportunities it presented, in a calm and rational way. For he remained a prisoner of the soft-on-communism bombast of the bygone campaigns.

I can only repeat—if we have another such campaign, then we may wind up unable to deal with Russia at all. And in today's world that inability could spell the end of the human race.

So I want to make clear as briefly as I can what seems to me the dangers and opportunities of our relations with the Soviet Union.

The dilemma is obvious. On one hand, the Communists want world revolution. They want to dominate a satellite world of friendly states. We don't know where or when they may use force to that end. We do know that the Chinese high command and many Russian leaders regard even temporary deviation from the aim of world domination as appeasement.

But on the other hand, it is also clear that Khrushchev fully appreciates that nuclear war can destroy us all, and that pursuit of world control by war or even by an unchecked arms race can lead, in Marx's words, "to the common ruin of both contending parties."

Thus the Soviet leaders are both tough and apprehensive. They want to win but they don't want to die.

Our task, therefore, is to match toughness with toughness and apprehension with apprehension. On the side of toughness, we must maintain military power sufficient to discourage large or small aggression, and we must be united enough with our allies to prevent any nibbling away at the edges. And to do either demands a dynamic movement toward greater unity, because static alliances invariably break up. So we should be grounding our real strength in the creation of a permanent economic and social union in the Atlantic world. I believe that this union could also undertake jointly with the United Nations a revolution of economic modernization in the decisive underdeveloped areas of the world where the Communists are working so hard.

But on this fundamental basis of strength, we must seek by every means to remove the awful risks of pitting our strength against each other. The major task here is, of course, to achieve general and complete disarmament under international control. This is—this must be—the first aim of our dialogue with the Russians.

One of the reasons for the decline of American prestige and influence has been our Government's hesitation about pursuing this aim of worldwide enforced disarmament. In the single most important issue of our time, our Government has left the initiative to the Soviet Union.

The greatest danger of a nuclear war is not that the Russians will launch an attack. The greatest danger arises out of the likelihood of an accident. And if measures are not taken soon to prevent nuclear weapons from coming into the possession of additional nations, the risks of accidents will multiply in geometric proportion. Not only will it lie within the power of an unpredictable number of political or military leaders to trigger a holocaust; but a single rebellious military commander will be able to set the world in flames.

There can be no deterrent to war by accident. So a top priority in the formulation of new foreign policies must be a determined approach to prevent the further dissemination of nuclear weapons. The tragedy—the almost inexplicable tragedy of our time—is that the United States, with no expansionist aims and with everything to lose through a continuation of a state of international anarchy, did not take the leadership in the world's quest for arms control and peace under law.

Instead the impression is spreading that the United States does not really wish to disarm. Our hedging over the atomic testing agreement, the abrupt announcement of a unilateral end to the test ban, our frequent aggressive pronouncements—all these have raised doubts as to our sincerity. Today, negotiations at Geneva are at a standstill, and Russia is again threatening to seize the initiative and transfer the proceedings to the whole United Nations in August—much to the embarrassment of our allies, who don't want to be forced into the position of voting against the Afro-Asian bloc, or of being on our side and apparently against progress in disarmament.

Therefore, on the side of conciliation and understanding, we are going to have to summon more imagination, vision, trust, and sustained action than we have in the past. These are policies that deeply concern the world, and about which there has not been enough discussion and understanding at home.

But if there is to be constructive discussion in the months ahead, then the level of our campaign debate must rise above cheap charges of appeasement. I don't know whether Khrushchev wants to help elect NIXON or not—nor do I care. I don't know whether he wanted to help the Democrats when he was praising Eisenhower a few weeks ago—nor do I care.

What I do know is that Khrushchev's aim is American weakness and disunity. So I suggest that both presidential candidates this year pledge themselves in advance of the campaign to keep Mr. Khrushchev out of our national debate. Our elections have always been our own business. Let us keep them that way.

And let us conduct this campaign as Americans who respect each other's rights to disagree and who trust each other's good faith and patriotism. For not only our survival but all people's survival turns on our fortitude, our vision, our patience, and good sense.

We have much lost ground to recover. Self delusion has betrayed us too often of late. If we do not seek the truth—and speak the truth—about our predicament, we shall never recover the world's confidence and respect; instead we shall become a country of the mute and blind.

So I pray that in the coming campaign both parties will discuss the issues with a sense of the solemnity of our responsibility, and with some understanding that the whole human family is involved in the sanity and decency of our debate.

Dealing with the Russians is in all conscience the most difficult problem a nation

has ever faced. Neither party is likely to get it all right or all wrong. So let us attack each other's mistakes. But let us never attack each other's motives. Let the argument be conducted in a manner worthy of freemen.

Panamanian Tribute to Governor Potter

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. FLOOD. Mr. Speaker, under leave accorded, I am delighted to include as part of these remarks the very fine editorial tribute to Gov. William E. Potter, now retiring as Governor of the Canal Zone, which appeared in the Star and Herald, Panama, R.P., in its May 12, 1960, issue.

In the latter part of Governor Potter's 4-year term, his duties and responsibilities required him to deal with firmness with two attempted mob invasions of the Canal Zone by radical extremists of Panama, aided by Communist influences. Under the most difficult circumstances, he met these situations effectively. He could not in justice have pursued any other course than that which he followed.

It is gratifying, therefore, to note this commendatory tribute by such a conservative and highly respected newspaper as the Star and Herald. Coming from a loyal Panamanian source it means much and indicates what must be the mature judgment of thoughtful Panamanians.

The editorial follows:

HONORS FOR GOVERNOR POTTER

When representatives of virtually all Canal Zone labor organizations band together in honoring outgoing Gov. William E. Potter it would appear that the Governor's term of office has endeared him to many residents of the Republic as well as to his own fellow countrymen in the Canal Zone.

Among those who have perhaps learned to appreciate him best are the members of the Panama Rotary Club who have regarded him as a real buddy. This may be ascribed partially to the fact that the Governor has an unusually good command of Spanish, an attribute which is by no means common to the average North American residing in this young Republic.

One can point to many nephews—and perhaps more nieces—of Uncle Sam who call this isthmus home, yet who have made little or no effort to learn this rich Latin language which is so varied in its vocabulary of diminutives and superlatives.

This fact alone has greatly increased the popularity of Governor Potter among his Latin neighbors. Another language makes another man, it is said. It undoubtedly makes for better understanding of the joint problems between Panama and the Canal Zone. And that friendly fact has been sorely needed in not too recent problems arising between the two jurisdictions.

It has even been suggested—unofficially we admit—that a year or more of Latin should be added to the courses of all U.S. schools. It would be valuable for all who live on this isthumus and would be additionally helpful for those who cross the Atlantic and mingle with the nationals in the countries they visit. It would aid all those who travel abroad or through the Americas.

This venerable newspaper has enjoyed very friendly relations with Governor Potter and takes this opportunity to wish him well. We submit that his relations with the local press have ever been fair and honest and wish him the best of everything wherever he may go.

"The Day After Tomorrow"—Graduation Address

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Friday, June 24, 1960

Mr. CURTIS. Mr. President, each year it is inspirational to be a part of graduation time and attend commencement exercises. Whether we be parents, or friends, or just interested spectators, it is an edifying experience to witness our young folks receive that first recognition in the academic world, a high school diploma. Permit me to remind the Senate that, while our children's lot is the happiest and most pleasant of any nation in the world, there is still a depth of understanding and an admirable intellectual attainment within them. A prime example of this attainment is the address delivered at Central High School, Omaha, Nebr., on June 11, 1960, by Dave Weddle, a graduating senior. His remarks, entitled, "The Day After Tomorrow" fully deserve the interest of the Senate.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE DAY AFTER TOMORROW

The student of modern history will always be amazed by America's progress. We have come from the covered wagon to the automatic transmission; from candles and cowpaths to cyclotrons and turnpikes; from an upstart, revolutionary government to a world power—staggering achievements in less than 200 years. Whether America's future will be as successful as her past depends on us, members of the most critical generation in history. Most historians, statesmen, and men-on-the-street predict that in our age the world will find either peace or death. Tonight we're taking the first step into that age. We have just completed 4 years of training for our future. Our education has tempered our maturity with sensitivity, and we are now aware that the world is not as peaceful as our own backyards on Sunday afternoon. The interest our teachers have taken in our preparation has made us realize that there is a crisis coming for which we must prepare.

In the coming years we will be called upon to use all our education, all our maturity, and all our sensitivity to strengthen this Nation. This strength must come from unifying tolerance, competent leaders, and alert citizens. America's most popular poet, Longfellow, once said: "All your strength is in your union. All your danger is in discord, therefore, be at peace henceforward, and as brothers live together." The basis of America is its people, working together, held together by understanding. Understanding we have learned from social studies and history, at basketball games and club meetings. High school has taught us to forget that people are white, black, yellow, and red, and to see everyone in striking shades of red, white, and blue. Twenty-five hundred years ago an ancient writer tersely commented: "Union gives strength." Today his remark gains force as we realize that the greatest contribution our generation can make to our country is to bury the Civil War—prevent prejudice and hatred, such as once caused our Nation to erupt in blood and smoke, from sapping the strength of our democracy. We should raise our children without bigotry; we should accept our fellows on the basis of what they can do for America, not on what color or culture they spring from; we should let old blindnesses die with past generations.

But just living quietly together with one another will not make America strong enough in our age. We must create leaders from among the members of our own generation, those loyal to America's traditions, yet with enough imagination and courage to launch us in new waters, if the need arises. Attempting to develop America's strength without such leaders to direct our actions as a country would be like trying to use an IBM machine without first plugging it in. These leaders will have the privilege to take our property, limit our freedom, and sacrifice our lives. Where will we get such people to govern our cities, our States, and our country? Whom shall we choose to shape the policies of freedom? We shall choose ourselves. In the final analysis, we must become our own leaders. Perhaps the President of 1988 isn't here tonight, but some of 1988's lawyers, doctors, scientists, and housewives are. We will lead in different fields and in different capacities, but we must all lead. We must have the initiative to shake off stupefying regimentation, for which our fad-crazy generation is noted, and to develop our creative abilities. We need less Presleys and more Van Cliburns, less beatniks and more leaders.

As citizens we must pursue the educational principles we have learned, keeping well-informed on foreign affairs and voting intelligently—not only for President, but also for mayor, councilmen, and county officials—and to back our ballots with action. We must not allow ourselves to become happily comfortable with a television set, suburban home, and savings account, while our foundation of democratic processes rots beneath us, neglected.

When we have fully developed tolerance and personal leadership in our country, we will be strong enough to tackle our international problem. A problem that is most startling, whose solution will require all our knowledge and training. A force defies us on every front. We don't know quite what to name it. History has never seen anything like it before. It centers in Moscow, Russia, and has clamped its strangling control over half the world's population. Our American leaders have withstood it, but still our enemies flourish, for America is not yet strong enough to conquer them. Therefore, we must gird ourselves to face the problem because in a few years we will be fighting the cold war—with businesses and taxes; as lawyers, as engineers, as ministers, as voters. We must understand the challenge facing us and realize that if we are to relax from international strain, we must either establish peace with Russia or destroy her. The third alternative—Russian conquest of America—we shall optimistically ignore. But we will remember it and its probability will prod us in our efforts.

It is time we recognized the harshness and intensity of our enemies that we may realize the seriousness of their challenge. I wonder if the Hungarian and South Korean teenagers thought that they would ever

really meet Russian tanks and guns? Do we comprehend that such suffering could engulf Americans? Do we realize that the Russian leaders have held only one goal—world domination? They cannot allow us to exist and remain consistent with that goal. Do we understand that the Communists have so reduced our international prestige through propoganda that the President's Press Secretary was mobbed by angry leftists just yesterday morning? Have the last 4 years opened our eyes to the reality that world tension is not a game? Consecration, dedication, sacrifices, victory—these are not words reserved for the American vocabulary alone; our enemies are also well acquainted with these words of life and death. They have yielded their whole beings to their State for the promise that America will be crushed. They attack us with religious zeal.

How have we answered such fervor, such sacrifice?—with a bloodless stockpile of armaments. We have developed our military resources to that ironic place where we dare not unleash our own power for fear of destroying ourselves. However, I am not attempting to diminish the importance of technicians, physicists, and chemists, for many of us will assume these positions, which are our great line of material defense. But I'm speaking of the spiritual battlefront where every American may serve. This country's great philosopher, Ralph W. Emerson, said: "Great men are they who see that spiritual is stronger than any material force." Yet at a time when billions of dollars are being spent for arms, the missionary efforts of all faiths are in need. We have looked for peace down the sights of rifles and have found none. May we realize the victories are won with spiritual light as well as military thunder. America can answer this challenge only if we recharge our sagging spiritual vitality. We stamp on our coins: "In God We Trust"; and then place our faith and hope in our businesses, paychecks, and new cars. While our increasing church enrollment feeds our "Sunday righteousness", our crime rate, juvenile delinquency, and immorality shock the world. Our people prefer comic books and the sports page to the Bible; recently three Brazilians began training to be foreign missionaries to the United States. A few years ago, Mussolini said that Western capitalism was decaying; while World War II raged, we had to admit that El Duce was right. Do we need a Mussolini today to show us that our spirituality is decaying? Must we bleed through another war before we see our need to restore the mental and spiritual discipline to our people? Let us realize that there is a relation between our faith, our values, and America's survival.

We will soon replace our elders in the life-and-death struggle with atheism. The outcome will depend on how well we use our education to strengthen America and how skillfully we use that strength in the world. Today we leave high school; tomorrow we will complete our higher education; and the day after tomorrow we will hold the reins of America in our hands. The destiny of the free world will then lie in our strength and its hope in the promise of our victory.

ABC Report

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 24, 1960

Mr. THORNBERRY. Mr. Speaker, in the June issue of the Texas Parade, a very excellent magazine published in Texas and devoted to the story of good roads, appears a splendid article by the editor and publisher of the magazine, Mr. William B. Alderman, entitled "The Real Scandal of Interstate Highways."

After reading the article, I know that the Members of Congress will also find this fine article by Mr. Alderman to be of special interest. Therefore, I ask consent that it be included in my remarks. The article is as follows:

THE REAL SCANDAL OF INTERSTATE HIGHWAYS—DECISIVE MEASURES FOLLOW EVIDENCE OF WRONGDOING IN ADMINISTRATION OF NATIONAL HIGHWAY PROGRAM WHILE NATIONAL POLICY CONTINUES TO DIVERT ROAD USE TAXES TO NONROAD PURPOSES

(By William B. Alderman)

Several Congressmen including one from Texas have recently sent to people in their districts questionnaires which included the question, "Do you favor a pay-as-you-go basis for Interstate Highway construction even if it requires a raise in the Federal gasoline tax?"

Representatives O. C. FISHER from the San Angelo district reported 58 percent answered yes, 34 percent no, and 8 percent had no opinion. Oddly enough, these answers came from Texans who lived largely in communities not on any interstate route.

The inference from all the surveys is that there is still a substantial grassroots support on behalf of the interstate program. It remains to be seen if this sentiment will be strong enough next January to influence Congress to continue building interstate highways at the present rate, financing them as previously arranged or setting up still more taxes.

The 1959 law increased the Federal gasoline tax from 3 to 4 cents per gallon until June 30, 1961. After that time an estimated $750 million of about $1.5 billion Federal road use taxes now going into the general fund would be earmarked for highways. This is the approximate amount brought in by the temporary 1-cent increase in gasoline tax. The administration has indicated the temporary gasoline tax should not only be continued, but increased and that the diversion of the $1.5 billion road use taxes to the general fund be continued as in the past.

There are forces now at work that could have a very adverse influence on the future of the interstate program and the fair treatment of those who pay more than $3.8 billion annually in road use taxes.

Over the years motorists have not objected strenuously to more taxes for building highways and this has been worked around both statewide and nationally to result in road use taxes going for many things other than roads.

Such an objective will be achieved if the Congress next January fails to follow up on the 1959 law which proposes to reduce the amount of the Federal road use tax diversion.

For various reasons and motives there has been criticism of the entire highway program which stemmed from a few isolated exposures of wrongdoing and some instances of outright misunderstanding.

For example, in recent weeks there have been investigations of dishonesty in connection with the Skelly bypass near Tulsa, Okla. Inspectors, on the Oklahoma State payroll, confessed that they doctored laboratory samples, falsified reports, and failed to take effective action to correct alleged irregularities in construction. A shocked and disgusted Bureau of Public Roads took the following immediate and forthright action on this instance:

1. Ordered more tests and reports on all Federal projects than have been required in the past.

2. Notified the State of Oklahoma that the inspectors who testified that they made false reports are no longer acceptable to the Bureau for work on any Federal aid project.

3. Required the State of Oklahoma to make full restitution of any Federal funds which may be proved to have been paid for unacceptable work.

4. Ordered placards setting forth the Federal criminal penalties for fraud to be posted on every Federal aid project.

(NOTE.—The Federal Government does not pay directly for highway work, but reimburses the various States who do and who are held responsible for its performance under plans and specifications.)

So in this celebrated exposure of dishonesty, the Federal Government has not been cheated. Effective steps have been taken to discourage a repetition in any State. And the full facts of the incident leave no justification to imperil the whole nationwide highway program because one pocket of dishonesty has been uncovered.

In the area of misunderstanding, it is quite common to hear talk of extravagance. Ellis L. Armstrong, Commissioner of Public Roads, touched on this facet eloquently at a recent address in Dallas before the chamber of commerce central highway committee. He noted that the Interstate System was ordered built to carry the kinds and volumes of traffic expected for 1975; that it is good economy and good sense to build for the days ahead.

"Real waste and extravagance," he said, "would be to build something that became obsolete the day the opening ribbon was cut."

Most knowledgeable observers will agree that in Texas and in the Nation there has been more of this kind of waste and extravagance than of the kind relating to building too far ahead for a dynamic, growing America.

Armstrong went on to say that a dirt road would be cheaper than a 4-lane surfaced highway, but in an area of high traffic volume it would be a waste of anybody's taxes. "What may seem extravagant from one point of view is true economy from another," he pointed out.

He said, "The real cost of highways is measured by the cost of highways per vehicle-mile of travel. On our urban interstate routes, which cost the most per mile of construction, the returns are the greatest. Here actual travel is the most economical as the vehicle-mile cost of the highway will be about a half cent. This compares with about three-fourths of a cent on the Federal aid ABC system and a cost of 1.5 cents per vehicle-mile on farm-to-market roads."

Presently there are about five inveatigations of the highway program being conducted from the national level. Up to this time none of them has uncovered wrongdoing that has failed to meet immediate and decisive corrective measures. As for charges of extravagance and waste, Commissioner Armstrong said none of those which were specific have stood up under examination.

The multibillion-dollar Federal highway program is about the most heavily policed activity of the Government. The policing is a notable public service when it points up the need for corrections that are immediately made in procedures. It is a great disservice to the public when it is made a springboard for wild charges which tend to undermine public confidence in what is one of our Government's best administered and most useful programs.

One of the most eagerly awaited products of any of the investigations is the report from the Secretary of Commerce, due next January 3, dealing with cost allocation. It is to help guide the next Congress among other things to evaluate the benefits highways bring to groups other than those who use them for transportation. The report may give some valid basis for further argu-

ments on behalf of using a larger portion of road-use taxes for roads.

This is indeed the capstone for any sound highway finance policy, whether State or National. Over the years there has been no dispute of the theory that those who use the roads should pay for them. It should properly follow that taxes levied for roads should be used for that purpose. But herein lies the seed sprouting most of the controversies that have plagued modern highway programs since their inception.

EXTENT OF FEDERAL ROAD USE TAX DIVERSION

The following is a breakdown of the $3.8 billion of Federal road use taxes collected during the year ending September 30, 1959, which was just before the 1 cent per gallon "temporary" increase in Federal gasoline tax went into effect.

For highways:	
Gasoline tax	$1,716,345,000
Diesel fuel tax	56,849,000
Tires, tubes, etc	296,317,000
Vehicle use	34,984,000
50 percent of truck and bus tax	123,331,000
Total to highway trust fund for highways	2,227,826,000
To general fund:	
Automobile excise tax	1,204,639,000
Parts and accessories tax	174,830,000
Lubricating oil tax	76,565,000
50 percent of truck and bus tax	123,331,000
Total to general fund for nonhighway purposes	1,579,365,000
Total Federal motor vehicle excise tax collections	3,807,191,000

Clairvoyance or Propaganda

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 23, 1960

Mr. REECE of Tennessee. Mr. Speaker, the events of the past few months make it quite clear that the Communist conspiracy is still an effective instrument and that the cold war is being prosecuted relentlessly by those who have nothing but contempt for the liberties which we cherish.

A publication has recently come to my attention entitled "The Minority of One." It is published by the Minority of One, Inc., Post Office Box 6594, Richmond, Va., and its publisher states that—

Regrettably, this publication is printed in a not unionized plant due to the local unavailability of a unionized printing plant.

It is rather amazing that an elaborately printed magazine in several colors could be sold on the newsstands without any advertising. The publisher states on the masthead, "No commercial advertising accepted."

Mr. Speaker, my colleagues may wonder why I am bringing this publication to their attention. In an article published before President Eisenhower left for Paris, on the front page of this publication it predicts the failure of the summit conference in these words: "Toward the Summit, a Predetermined Failure?"

I am inserting at this point in my remarks, the entire statement in which this virtually unkown publication accurately predicts that an accomodation with the Russians was impossible:

TOWARD THE SUMMIT: A PREDETERMINED FAILURE?

As the summit conference approaches, there are many indications that more effort goes into preventing than into promoting a settlement of major international issues. President Eisenhower's and Secretary of State Herter's damping of undue optimism respecting the conference is of great importance, not because they are speculating on Soviet intentions but because they have an unmistakable knowledge of their own intentions—and success at the summit is impossible without their willingness and cooperation.

The American reception of Soviet concessions with regard to a nuclear test ban raises grave doubts as to our Government's willingness to stop the arms race. Such doubts are raised not only by critics of the administration; influential groups within its ranks admittedly oppose a nuclear ban. And without a nuclear ban, a reduction of conventional weapons is unachieveable.

It seems that something has gone very wrong in Washington: proposals that we submitted to the Soviets, in the now revealed hope they would be rejected, were essentially accepted and coincide to the last iota with past British overtures seeking a nuclear ban. Somebody goofed in estimating Soviet readiness to compromise. When the Soviets accepted our demand of divorcing underground tests from all other atomic tests, instead of celebrating, we were caught by surprise, and urgent consultations were held to verify, possibly for the first time, whether we meant what we had been contending throughout.

The protagonists of continued cold war within the administration and the industry found staunch support from Konrad Adenauer who, alarmed by a prospect of a new international reality in which Germany would no longer "need" to be armed, came to Washington to whisper into the President's ear advice he was eager to listen to. Prime Minister Macmillan's efforts obviously did not suffice to turn the tide: stripped of the phraseology of psychological warfare, the Eisenhower-Macmillan "accord" in substance rejected the Soviet proposals. The reaction of Senator CLINTON P. ANDERSON, the cold-warring, ban-opposing Chairman of the Joint Congressional Committee on Atomic Energy, testifies to the predoomed character of the plan: "I haven't objected to what the President is trying to do, because I think that's quite a way from the Russian proposal". And right he is.

The President's unwillingness to act on a moratorium on underground A-tests beyond the term of his office is a new attempt to maneuver the Soviets into a position of rejection and opposition. In fact, the President put himself in the untenable and precarious position of claiming that this country cannot make commitments beyond his term of office. If he lacks authority to do so, certainly the Congress of the United States does not.

Our counter-proposals also betray an obvious contradiction. While we have been opposing the application of a test ban to underground explosions claiming such explosions to be undetectable, now we demand the "impossible"—that international inspection also apply to underground tests, which would be prohibited by a brief moratorium.

There are still more basic indications to bear out President Eisenhower's lack of optimism with regard to the summit conference. While it is true that the American economy, if properly inspired and guided, does not necessarily depend on a war industry, it is also true that a cessation of the cold war would necessitate far-reaching adjustments. Should our war industry be brought to a sudden halt, there would be no escape from a large-scale depression that would take many years to overcome. This is obvious, and were the prospect of an international accommodation real, the administration would be deeply involved in planning the necessary overhaul of our economy. As long as the administration shirks this primary responsibility, there is no reason to believe that it truly wants any arms reduction. In fact, in the absence of such planning one must assume that the administration does not even accept disarmament as a realistic possibility. Such far-reaching pessimism cannot be based on an evaluation of the antagonist's true wishes; one can only be that positive about his own intentions.

It seems that our Government subscribes minutely to the economic theory of our arms producers: Any amount of society's organized spending is "creeping socialism" but $40 billion of organized spending on weapons epitomizes a "free economy." As long as this is the economic doctrine of our Government, it will keep preventing a relaxation of international tensions and "peaceful intentions" will be no more than the slogen of its psychological warfare advisors.

World public opinion succeeded in inducing our leaders to meet at the summit but it has not inspired the sincerity needed at that meeting.

Our administration has learned the importance of pretending to melt the cold war but its basic objectives have not changed. If this pessimism should be borne out by events to come, the meeting at the summit, coming as it does in response to man's prayers and hopes, will hardly justify even the inconsequential amount of money and effort it will consume.

Mr. Speaker, as a further indication that this particular publication should be carefully reviewed by the House Committee on Un-American Activities as well as by the Federal Bureau of Investigation, it is noteworthy that it attempts to defend the entire Castro regime in Cuba in an article which appears immediately after predictions concerning the summit. I request leave to insert this article at this point in my remarks:

THE COST OF TRUTH

In this issue the leader will find a statement, by a number of prominent authors and other personalities, challenging the truthfulness of the American press in its depiction of the current situation in Cuba. This statement originally appeared as a paid advertisement in the New York Times.

This publication's assessment of the Cuban situation (see among others "Something Has Got To Give in Cuba," February issue) coincides with that of the Times advertisement.

The importance of the statement is not confined to the issues at hand. In addition to putting our Cuban image straight, it is one of the unfortunately infrequent protests of men of conscience against setting our national goals and policies on false assumptions and propagandistic distortions. It is a principled and an implied rebuff of a typical chauvinistic pragmatism that makes us read justice into every passing expediency. It proves that the American intellectual has an alternative to compliance with the corruption of our power elite. It is a challenge to that portion of McCarthyism which outlived its infamous personification. It is an act of self-assertion on the part of our intellectual greats who have so often

forfeited their social leadership to the militarist and plutocrat. Finally, it is a fulfillment of a long-neglected obligation of our intellectual aristocracy to awaken the conscience of the Nation.

If the drive of the Fair Play for Cuba Committee succeeds in reversing the thoroughly hypocritical policy our State Department has been pursuing, it will not only help Cuba but first and foremost the American people themselves. We will be saved from our own capacity for the big lie, and, though specifically pertaining to Cuba, the awakening might arouse our moral sensitivity to many other challenges.

The men who sponsored the Times announcement did not need a ghostwriter to express their thoughts. Why then did they need to purchase advertising space in the Nation's largest newspaper to denounce propagandistic lies? Certainly, the columnists and editorialists quoted and rebuked in the statement did not need to pay for the privilege of spreading lies; on the contrary, they were handsomely paid for it. How come so eminent a group of individuals had no way of correcting our knowledge of Cuban affairs except through personal monetary sacrifice? Why didn't our newspapers seek their views and information as a matter of editorial policy and news value? Why did they have to be paid to open their columns to the truth and then only in the dissociated, neutral manner of an advertisement? Have we fallen so far into the abyss of hypocrisy that truth has no chance unless commercially peddled a la "liver" pills?

The effort of the Fair Play for Cuba Committee could not be more praiseworthy, and one wishes to encourage its prominent participants to exert a more embracing influence on our national thinking and policies. Perhaps it is time they provided their leadership and prestige to consolidate fragmentized liberal efforts in this country to establish a prominent national organ that could potentially reach every American adult and that could bring to him the truth and the voice of conscience in a more assertive manner than a paid advertisement in a paper that must be bribed into accommodating the truth.

WHAT IS REALLY HAPPENING IN CUBA?

From Havana come charges of sabotage, economic aggression, counterrevolutionary intrigue, air raids on Cuban canefields sugar mills, homes. Against this background, the great news agencies and a powerful section of the U.S. press raise a barrage of equally grave accusations. What can we believe in the welter of conflicting reports?

"We only report the facts," U.S. newsmen are accustomed to say. Is this true? Compare the following "facts."

Communism: "A pro-Communist state has been established in Cuba with the clear objective of bargaining with Soviet Russia for the munitions of war * * *"—Sokolsky in the New York Journal-American. True or false?

False. Not a shred of evidence has been produced to support such allegations as the one above, charges consistently used to create a smoke screen behind which the social objectives of the Cuban revolution can be attacked and sabotaged. Cuba's recent trade pact with the Soviet Union represents an effort to find new markets for Cuban sugar, and to obtain, not arms, but agricultural implements and industrial machinery for which credit has been denied in the United States. Many other American republics trade with the Soviets—as does the United States itself. Cuba's Communist Party is a tiny minority, with about 16,000 members. In the 1959 labor election, Communist candidates won in only 8 of the 243 locals of the 500,000-member Sugar Workers Federation, and none was elected to the executive council of the national labor organization, the C.T.C. In international affairs, Cuba finds its natural affinity with the other small, underdeveloped nations of the world. It is true that a profound social and economic revolution is in progress in Cuba, and that the sweeping reforms that are being inaugurated undoubtedly must affect the $1 billion U.S. investment in the island. But only those who equate communism with all forces that threaten the staus quo of property interests will find the Cuban revolution "communistic." Efforts to drive a wedge between the Roman Catholic Church and the revolutionary government, on the issue of communism, have been forcefully repulsed by the church itself. To quote the latest of several recent declarations on the subject, Msgr. Manuel Rodriguez Rozas, bishop of Pinar del Rio, says: "There is perfect harmony between the church and the state." "Our revolution," says Fidel Castro, is not communistic but humanistic."

Confiscation: "In Cuba, Castro is stealing American property with impunity."—U.S. News & World Report.

False. Although the word "confiscation" has often been used by the press in a context which would suggest illegal seizure, nothing has been stolen from any American—or any Cuban. The Agrarian Reform Law, designed to diversify Cuban agriculture and to give 100,000 landless peasants a stake in their own rich agricultural country, conforms in all respects with international law and the practice of all civilized countries. In some cases, it has been necessary to put property under the supervision of Government representatives (a process known as intervention), pending a decision as to formal, legal expropriation. Owners whose property is to be expropriated (much as it would be acquired by condemnation in the United States, to meet any legitimate public need) have been promised compensation in 20-year Government bonds, bearing interest at the rate of 4½ percent. This compares favorably with, for example, the U.S. land reform program imposed on Japan by General MacArthur after World War II, providing for compensation in 24-year bonds, at 3½ percent. The Cuban bonds have been printed and await only the proper signatures.

Chaos: "All that now remains is for Castro to give the word, and the terror, the ruthless hunting down and shooting of Fidel's opponents, will begin."—Newsweek.

False. Despite the above prediction, November 3, 1959, and the incessant references to "terror," "chaos," and "dictatorship" in the U.S. press, the great work of revolutionary reform and reconstruction now in progress in Cuba is going forward in an atmosphere of extraordinary optimism and energy, as any tourist can testify. The island is being governed by a provisional government under the Constitution of 1940, which is notable in the Hemisphere for its liberality. Cubans—and visitors to the island—remain freer in many respects than do U.S. citizens. For example, no police permit is required for a public meeting or demonstration, as in New York City. There is no censorship, not even a libel law. A foreign newsman needs no special visa, as he would in the United States (a tourist card will do), and no restriction is placed on his movements. Even the air raids on Havana—the occasions of real terror, and in one instance of the death of two Cubans and the wounding of 45—have failed to force the Government to take any but the most obviously urgent security measures. Despite an attempted invasion from Santo Domingo, a widespread counterrevolutionary conspiracy, and numerous small acts of sabotage and terrorism on the part of former Batista henchmen, the Government has refrained from invoking the death sentence against convicted counterrevolutionaries. Newsweek notwithstanding, not one of these has been shot.

"What have we done * * * ?" asks a new and hopeful generation of Cubans, viewed with hostility in Washington and Wall Street, accused of "impudence" for seeking their independence, threatened with economic and diplomatic "isolation" in the hemisphere.

Perhaps their crime is their youth. (The average age of the Cuban revolutionary leaders is 29.) Perhaps they have aspired toward too much, too soon. (Three thousand low-cost housing units built in the first year of revolution, more than 7,000 classrooms, hundreds of miles of new roads, 500 flourishing agricultural cooperatives, thousands of jobs created in new industries established through the voluntary contributions of a million Cuban workers.) Perhaps the explanation is simply that there are, in the United States, powerful interests bent on frustrating the primary purpose of the revolution: to give Cuba back to the Cubans.

It is true that the young leaders of the Cuban revolution have little patience with considerations of profit and loss, in the face of poverty and human need. Nor have they any saving experience with the amenities of public relations, or the intrigues of dollar diplomacy, or the sophistry of journalistic "facts" which distort truth. But if so, they are in the American tradition. Certainly they deserve a hearing. This much the American tradition owes them. This much we, as Americans, owe them.

Would you like to know more of the truth about revolutionary Cuba as it is today?

This public appeal for fair play for Cuba has the support of a group of thinking individuals, holding a variety of political persuasions, representing no one but themselves, linked here by a single common concern—for the overriding principle of justice which is always at issue, wherever partisan interest clashes with simple truth. Mr. Speaker, all of us in America have the right to form our own personal views on national policies, but I have never seen a publication which so blatantly attacks most of the ideals and beliefs of the American people in a special column entitled, "Of What I Am Ashamed." So that this obvious new effort to infiltrate the American intellectual community may be revealed, I request leave to insert the publisher's comments in this article at this point in my remarks:

OF WHAT I AM ASHAMED

Of the U.S. Advisory Commission on Information for urging that this country's propoganda machinery be given full Cabinet status.

Of the administration's hospitality extended to Generalissimo Franco's Foreign Minister Fernando Maria Castiella.

Of the Axacan Memorial Award bestowed on Fernando Maria Castiella, Spanish Foreign Minister, by the Georgetown University.

Of President Eisenhower's tongue in cheek response to recent press queries on his opinion of lunchcounter segregation.

Of former President Harry S. Truman's defense of segregationist store practices in the South.

Of the State Department's refusal to permit Representative CHARLES O. PORTER, a critic of the administration's nonrecognition policy, to travel to the Chinese mainland.

Of the furor raised by CARL VINSON, chairman of the House Armed Services Committee, against the Reverend Henry Gooch for delivering a sermon at West Point advocating racial intermarriage.

Of the fines imposed by Judge Eugene Loe of Montgomery, Ala., on 13 white and 7 Negro defendants for their "crime" of having lunch together.

Of the racist hooligans in various communities in Florida and Georgia involved in what seems to be an organized compaign of physical assaults on Negroes demonstrating for equal rights.

Of the appointment of a former FBI investigator of James R. Hoffa to the three-man board of monitors of the Teamsters Union.
